III. The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

New York. 148 5th Ave., near 20th St.
Washington, 817 Market Place.

Sun Painting.

The question where to go in order to obtain a good photograph is not a momentous one when it is known that the Studio of Pach Bros., the Artistic Photographers, who have won golden opinions for their skill, is located at 935 Broadway, corner 22d St. Their instantaneous photographs of children are unexcelled. Groups of families and friends a specialty. Pach Bros. point with pride to their selection as class photographers by the leading colleges of the country.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back THE NATION and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to LII., *i. e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering, state the volume-number wanted. Address

THE NATION, BOX 794, New York.

The Nation.

NEW YORK, THURSDAY, MARCH 17, 1892.

The Week.

AMONG the various methods of meeting the emergency caused by Lord Salisbury's refusal to prolong the *modus vivendi* in Bering Sea, the most fantastic is that proposed by Senator Morgan of Alabama. His plan is to go on and ratify the treaty of arbitration, but to "retaliate" by suspending the privilege of bonded transportation of Canadian goods over our territory. This would be cutting off our own nose to spite our face. It is an advantage to American railroads to carry Canadian goods from the seaboard to inland Canadian points. All that we can do is to drive such business away from New York, Boston, and Portland to Halifax. Goods landed at New York destined for Manitoba may pay freight money to American railroads for eighteen hundred miles. If destined for British Columbia, they may pay for a correspondingly larger distance. There was a time when such a threat as that now proposed would have been less puerile: that was before Canada had a transcontinental railway of her own. But what, it may be asked, are we to "retaliate" for? According to the hypothesis, we are ratifying a treaty of arbitration. A treaty always implies amity and reconciliation. Are these to be promoted by turning around and scowling at the other party? The idea is unworthy of serious attention. The political capital, if any, to be made out of retaliation will accrue to the party which has charge of its execution. There is always some Democrat willing to run ahead and clear the road for a Republican victory. Mr. Bland has performed this office in the House. Mr. Morgan seems eager to do the same in the Senate.

Ex-Secretary Bayard has added his voice to the chorus of warning to the Democrats in Congress touching the Bland Silver Bill. "I don't pretend," he says, "to read between the lines of the late votes and action in the House of Representatives—if it means shrewd and cunning finesse, the strategy of concealed motive, I can only say it is playing with fire and is treating a question of the gravest public import in an unworthy manner; but if the votes mean what they say on the printed face, then I say the hour has struck for the Democratic masses to arouse themselves and examine their individual consciences and sense of duty to the country." That hour is fast approaching. It is set for the 22d, 23d, and 24th days of March, and the place is the House of Representatives. The Southern Democrats have the decision of it mostly in their own hands. They say that there is a demon in their rear, called the Farmers' Alliance, which is driving them onward whether they will or no. There is another demon in the rear of both, called negro supremacy, and it is our belief that if the Silver Bill passes the House, whatever may be its subsequent fate in the Senate or elsewhere, the last state of that man will be worse than the first. The Northern Democrats will be disabled, the Republicans will return to power in all branches of the Government, and will pass their Force Bill, with whatever accessories may be needed to carry it into effect, and the public sentiment of the North will acquiesce, saying: "Negro supremacy cannot give us anything worse than a dishonest dollar any way."

The Bar Association has done its duty to the public and the profession by adopting by a large majority a resolution to appoint a committee to inquire into Judge Maynard's connection with the "taking of an election return from the office of the Comptroller of this State." This was introduced by Mr. Carter in a grave and temperate speech, of which the most pregnant sentence, as regards Judge Maynard, was this:

> "There appears to be very strong *primâ-facie* evidence, but for all we know there may be some answer or explanation. If there be, how welcome it would be to all of us. But it is time it was given."

That is to say, although this *primâ-facie* evidence has been before the public for three months, and has been causing much shame and scandal, Judge Maynard has not thought fit to take the slightest notice of it, while drawing a salary for a place for which the very first qualification is the possession of public confidence and respect. The opposition to Mr. Carter's resolution came from Mr. Delos McCurdy, whose facts were disputed successfully by Mr. E. P. Wheeler, and whose argument was in the main that he (McCurdy) would in Judge Maynard's place have done the same thing himself; which Mr. Coudert disposed of neatly by observing that in that case Mr. McCurdy also would be investigated. The noblest Roman of all Judge Maynard's friends was, however, Mr. Roger Foster, who made the old-fashioned objection to "throwing mud" and making "political capital," but was forgiven unanimously, on the suggestion of Mr. Coudert, on account of his "youthful innocence and impetuosity." On the whole, the proceedings were marked by a very healthy tone, and the usual apologists for rascality were conspicuous by their absence.

There was a peculiar fitness in the presence of Mr. Nelson Smith, the Chairman of the Tammany General Committee, at the Bar Association meeting (just referred to), to oppose even an inquiry into Judge Maynard's case. The objects of his Committee are three in number: (1) public plunder; (2) the proper distribution of the plunder; (3) the provision of means of escape from justice, of the plunderers. It is, therefore, in a certain sense the *duty* of the Chairman to attend all gatherings having for their object the improvement of the machinery for the detection of crime, and, as they say in England, "watch the case," even if the bearing of the proceedings on the work of the Committee be only indirect or remote. In nothing has Tammany in this city displayed more interest during the past thirty years than the impurity of the bench. Its good nominations for the judicial offices have all been extorted from the organization by threats, and even then have been made only for a valuable consideration in money. The better the candidate, the more it makes him pay in cash for the permission to run, knowing that the better he is the more hurtful to the Society he may prove if elected. There is probably no more odious phrase in Tammany even to-day than "an upright and fearless judiciary." Mr. Smith, therefore, showed himself a faithful officer in appearing in such a crowd as the Bar Association, and letting at least one manly voice be heard in favor of judicial rascality.

The Hon. Bourke Cockran's views on national politics are always instructive, furnishing as they do the best attainable exhibit of the condition of the Tammany mind on questions of high public interest. If the Custos Mores is not a thinker on such questions, there is none in the wigwam. Mr. Cockran says that in his belief the "Democratic party is stronger than any issue that political emergency or expediency may suggest," that the "Democratic party will outlive free silver, free trade, or tariff reform, and will win the greatest triumph in its history in the coming election," that "Senator Hill, or some other equally as good Democrat, will be nominated, and the ticket will sweep the country," and that as for the "silver question, it is not a political issue," and as to Hill's attitude towards it, he does not believe from Hill's veto record as Governor he "would veto any measure, were he President of the United States, which had the endorsement and approval of a majority of his party." Taking the usual amount of Cockran wind out of this statement, it amounts to saying that free silver is not a political issue, but if it is, Hill is on that side of it which has the most votes. That silver is a political issue, both Hill and Cockran will discover if they try to carry New York State with a candidate or platform suspected even of doubt on the question of free coinage.

The first Republican State Convention to choose delegates to the National Con-

vention was held in the President's own State Thursday, and it instructed its representatives to give Harrison "their earnest and unswerving support by working and voting for his renomination so long as his name is before the Convention." The spectacular effect of this declaration in favor of "Indiana's favorite son" was sadly marred by the bitter opposition of the delegation from Allen County (Fort Wayne and vicinity), whose leader, ex-Congressman White, made a virulent attack on the President and declared that, if he should be nominated, he would be beaten in his own State by 35,000 majority. The office-holders who ran the Convention almost drowned White's voice, and such disjointed utterances as were audible did not indicate that the anti-Harrison movement was based upon any principle. Indeed, it is notorious that the whole secret of White's opposition, and of his chief backer, a millionaire electric-light man named McDonald, is Harrison's refusal to let them control the patronage of the Fort Wayne district. McDonald contributed liberally to the Harrison campaign fund in 1888, and his friends say that he was promised the privilege of naming the Postmaster of Fort Wayne, but that Harrison did not keep the promise when he reached the White House. White ran for reëlection to Congress in 1888, and was beaten, but claimed that his services and sacrifices gave him the right to name the postmasters in the district under a Republican President—a claim which Harrison refused to recognize. Neither of them, therefore, has any right to expect a particle of sympathy in their present attitude. There is no room to doubt that the overwhelming majority of Indiana Republicans favor Harrison's renomination, though in his own State, as everywhere else, there is an almost entire lack of anything like enthusiasm in his favor.

The opening of the annual State campaign in Rhode Island must turn public attention to an electoral system in that Commonwealth the anomalies of which are even now very inadequately realized, and which surpass those of any State, not excepting Connecticut. From the King Charles charter, granted in 1663 and in force until 1842, Rhode Island inherited both the "town rule" idea and a majority law, each of which is still pushed to extremes. Thus in her Senate, under the last census, 8,000 people in the small towns have the same number of members as 250,000 in the larger towns, and in the lower house 220,000 people have 32 members, while 124,000 people have 40 members. Last spring, although the Democratic candidate for Governor had a plurality of 1,254 on the popular vote, he lost his election because the Legislature, in a total membership of 109, had a Republican majority of 51 on joint ballot. Alone, of all the States of the Union, Rhode Island still applies the majority law to the election of Congressmen and of State Senators and Representatives. For example, in the large city of Providence, at great cost and trouble, the election machinery must be started up over and over again so long as a single candidate for the Legislature obtains a mere plurality. One curious outworking of this system is that the "Machine" politicians of Rhode Island often strive to prevent a majority at the first pollings, so as to "tire out" the better class of voters by repeated elections, and let the poorest candidates get a majority at the last. A very striking commentary is this "survival of the unfittest" on the theory of the Puritan originators of New England majority laws, which was that by secondary and repeated elections bad candidates would be weeded out and only the fittest survive. In the State Senate, where Providence, with a population of 132,146, is equalized with Jamestown, which has a population of 707, the Republicans always have a majority and resist obstinately any change in the Constitution.

Mr. J. S. Clarkson is suffering from what is technically known as "a bad case of big head." For three years he has been hungering for a place in the Cabinet, and now he has concluded that he ought to have the Presidency. Congressman Dolliver of Iowa, who is his great admirer, declares that "he is the best available Presidential timber." Mr. Clarkson's strength at home is shown by the fact that he has "bossed" the Republican party of Iowa for a good many years, taking it in hand when it used to carry the State by from 50,000 to 75,000, and that the last two elections for Governor have resulted in the choice of Democrats. His strength with the independent voters in the doubtful States of the East may be judged from the fact that he has just had published a eulogy of Quay as "the greatest political general that the first century of partisan American politics has developed." Of course the idea of Mr. Clarkson's candidacy is too ridiculous for consideration, but the fact that he himself takes it seriously shows what a fool a long course of "practical politics" will make of a man.

The recent municipal election in Portland, Maine, is of interest to all who are watching the drift of public sentiment regarding prohibition. For the first time in more than twenty years, the Democrats swept the city, electing not only their candidate for Mayor, as they have done twice before since 1869, but also a majority of the City Council, which disposes of a host of minor offices. Under the Republican incumbent there has been of late a vigorous attempt to enforce the prohibitory law, and this was the chief issue in the campaign. The *Press*, the leading Republican newspaper of the city, says that there can be no doubt as to the meaning of this verdict, which it says will strengthen the movement to make the repeal of the amendment a leading issue in State elections. Many of the Democratic leaders have favored this policy for years, but others have denounced the suggestion as almost suicidal. It is true enough that three or four years ago it did not look as though there were any chance of making headway against prohibition in Maine, but it is also true that six or eight years ago it looked as though the Republicans of Iowa had done a very shrewd thing in making prohibition a party principle. Since then the Democrats have twice elected a Governor who ran on a platform calling for the repeal of the law, and many shrewd Republicans say that their party can never hope to carry the State again until they unload prohibition. The change would be no greater if we should find Maine carried on a repealing platform within three or four years. Many of the loudest advocates of prohibition in public are Republican politicians who do not practise it in private, and who would stop preaching it the moment they became convinced that there were "no votes in it."

It is fitting that we should take notice that a bill is pending and under debate in the House to put wool on the free list and to make important reductions in the duties on woollen goods. Under ordinary circumstances such a measure would command universal attention, but the truth is that the vote taken in the House the other day on the Bland Silver Bill has completely extinguished the public interest in the wool bill and all other tariff bills. We said very soon after the present session began that if the silver question were an issue at all in the campaign of the present year, it would be the sole issue, and that it would be impossible to make it a half-issue. It is possible that President Harrison may get up a foreign disturbance which will serve to shelve both silver and the tariff, but if the campaign goes forward as it has begun, and if the House passes the Bland Bill, the tariff question will disappear as completely from this contest as though it had never been an issue in American politics. The silver question will take its place, with an election law, adapted to the exigencies of the Southern States, in the background.

The sayings of the tin-plate liar have not been much noticed of late, but he has been as busy and as unscrupulous as ever. The evil spirit entered into Mr. Cronemeyer again and caused him to write a letter to the Western Canned Goods Association, which letter was published in the Chicago *Grocer* a short time ago. In this communication Mr. Cronemeyer said:

> "Two years ago the duty was only 1 cent per pound, or $1.08 per box, and a box of coke tin plate cost in New York $5.20; to-day the duty is 2 2-10 cents per pound, or $2.37 per box, and the price of coke in New York is $5.35 per box; increase the duty $1.30 per box, increase the price only 15 cents per box."

This letter was passed over by the Association in silence. Probably the members,

being themselves purchasers of tin plate, were struck dumb. The price of coke plate "two years ago" was $4.45 to $4.50 per box, as published in the *Iron Age* of that date, not $5.20, as Mr. Cronemeyer put it. The present price, $5.35, as given by Cronemeyer, shows an advance of nearly $1.00 per box. The *Tariff League Bulletin* so far improved upon Mr. Cronemeyer that in its issue of February 26 it quoted Cronemeyer's letter as a resolution of the Association to which it was addressed. The *National Provisioner* of March 12 exposes this misrepresentation. It should be added that Mr. Cronemeyer is the man who published and distributed a circular before the passage of the McKinley Tariff, saying that he could make tin plate in this country at a profit under the old rate of duty of one cent per pound, and that he could prove it to any intelligent spectator.

The *Sun* produced Tuesday the military record of Gen. Russell A. Alger in so far as relates to his exit from the military service of the United States. From this it appears that Gen. Custer on the 16th September, 1864, reported Col. R. A. Alger, Fifth Michigan Cavalry, absent without leave since August 28. He had applied for leave of absence, which had been refused. He had done so two or three times before. "I have now authentic information," writes Gen. Custer, "that he is staying at one of the hotels in Washington, and that he has been placed on duty in the latter city as the member of a general court-martial." This paper was forwarded to Brig.-Gen. Wesley Merritt, commanding the First Cavalry Division, who endorsed it in this way:

> "The case mentioned within is the third in which Col. Alger has absented himself from the command without proper authority since the commencement of the present year's campaign. Severe measures should be taken to prevent a recurrence of this evil."

The paper went to Maj.-Gen. Torbert, Chief of Cavalry of the Middle Military Division, who recommended that Alger be "dismissed from the service for absence without leave, subject to the approval of the President." The paper was received by Gen. Sheridan September 18, who wrote as follows:

> "Respectfully forwarded. I understand that Col. Alger is on some duty in Washington, but it is evident that he has left his command without authority, and it appears that he has done so before. I have always considered Col. Alger a good officer, but cannot excuse his conduct or withhold my approval of the recommendation of his immediate commanders.
>
> "(Signed)
> "P. H. SHERIDAN, Major-General."

Two days later (September 20) Alger sent in his resignation, and it was accepted. It appears, therefore, that he was not actually discharged the service for absence without leave, but that such a recommendation had been sent through the regular channel to Washington, subject to the approval of the President. Such approval was anticipated by Alger's resignation.

Mercier's withdrawal from Quebec politics by resigning the seat to which he was chosen in the election which has resulted in so positive a condemnation of his administration, leaves only his trial in a criminal court to complete the disgraceful story of his career. A Tweed in the boldness and effrontery of his methods, he is in a fair way to receive a Tweed's punishment. The result of the Canadian election is a cause for general congratulation, because it affords another proof of the fact that, however corrupt powerful leaders may become, a large majority of the people may always be depended on to rebuke them when the issue is squarely presented. Mercier hoped confidently for success at the polls because he could appeal to the strong national feeling of his French-speaking constituents and to his religious affiliations, pointing to the Queen's representative, who necessarily was prominent in the proceedings against him, as English-speaking and Protestant. It is worth noting, too, that in Canada, as in the United States, appeals to party fealty have been the most powerful means of preventing an earlier reform of political abuses. Just as the *Tribune* has assisted the baser element by urging support of a straight Republican ticket in this city instead of a general union against Tammany, and of a straight (although perfectly hopeless) Republican ticket in Louisiana instead of a union of all the elements opposed to the lottery, so appeals to party (combined with race and religious) feeling in Canada sufficed to give Mercier power long enough to line his pockets. It is curious in the light of to-day to recall the fact that last summer, when the official investigation of Mercier began, the *Tribune*, an anti-Tory newspaper (outside of its London bureau), levelled a powerful leader at the Tory antagonists of the Quebec Premier, calling him "possibly the ablest and certainly one of the most successful of the Liberal leaders," and characterizing the steps taken by the Lieutenant-Governor to oust him as "tyranny."

The reception accorded Emperor William's Brandenburgh speech by the German press is highly significant. Most of the papers printed his remarks in full without any comment. A few ventured to print in full-faced type its more startling words and sentences, while others reprinted William's foregoing "suprema lex regis voluntas" and "sic volo sic jubeo," as if they were the best commentary on his latest deliverance. Some journals printed alongside his intimation that those who did not agree with him should leave the country, the twenty-seventh article of the Prussian Constitution, which says: "Every Prussian has the right to give free expression to his ideas by word of mouth, writing, printing, or pictorial representation." The *Vorwärts*, the organ of the Social Democratic party, took in especially bad part the Emperor's suggestion that his opponents should go into exile, and said: "One does not carry his country along on his shoe-soles." A courageous editorial in *Die Nation* gave utterance to the feelings of German Liberals, and we should hope of all educated Germans, in saying:

> "The belief that princes have been endowed by heaven with extraordinary wisdom has no longer any depth of root in our time. To us of the incredulous present, monarchs appear as but men like other mortals. Their high and influential position binds them, it is true, to do great things, but they are as much exposed to the danger of making mistakes as any other man."

The article closed with words which we should suppose would have called for an immediate visit from the police:

> "Whoever orders us to follow him blindly through thick and thin, lays upon us the duty of answering, clearly and plainly, no!"

However, it does not become us in this country to condemn the Emperor for insisting that there shall be no murmur of opposition to his public policy. The same claim is made by our rulers, or at least in their behalf. Saturday's *Tribune* asserted that "it is removed from actual treason only in degree" for a newspaper to venture to differ with the Administration in regard to the demand for a *modus vivendi* in Bering Sea, or to insinuate that political considerations may enter into the problem both here and in Eugland. What is this but the stark absolutism and assumption of infallibility of the German Emperor?

The harm done Brazilian credit by the political chaos of the country during the past two years is well seen in the quotations of the 4 per cent. Brazilian bonds on the London market. The overthrow of Dom Pedro in November, 1889, had but a slight effect upon those securities, which were then quoted at 71, and in all of the year 1890 never sank below 73, at one time being as high as 85. But the irresponsible goings on of Fonseca drove them lower and lower, and when he finally dissolved Congress and assumed supreme power, they fell to 49. They have now recovered to about 59, but are not likely to go much higher for the present. A very bad impression has been made in London financial circles by the revised estimates for 1892, which betoken a deficit of no less than $50,000,000. This is a good deal of a drop from the boastful surplus of $30,000,000 which Baron Lucena was announcing, through the Brazilian consulates in Europe, just before he went down in the final smash with Fonseca. Still, the foreign indebtedness of Brazil does not exceed $150,000,000. Most of it has a long term to run, and the resources of the country ought to make it a perfectly safe investment. But political demoralization counts for a great deal in the judgment of financiers, and it will take Brazil many years of peaceable and orderly government to get back her good credit of three years ago.

A TEST OF THE PEOPLE.

IT is a happy coincidence that Mr. Cleveland's letter consenting to the use of his name as a candidate for the Presidency appears the same week that Mr. Hill makes his electioneering trip through the South. The circumstance brings into vivid contrast the characters and the methods of the two men who are most talked of for the leadership of the Democratic party. As that party numbers half of the voters in the country, the decision which it is to make is of far more than partisan concern; it will prove, in a sense, a test of the American people.

Mr. Cleveland writes that, if he were to consider only his personal desires, and his individual ease and comfort, his response would be promptly made, and without the least reservation or difficulty; but that he recognizes his obligations to the country and his party as making such private and personal considerations entirely irrelevant. He proceeds to state his views as to the proper attitude for a citizen to occupy towards the Presidential office, as follows:

"I cannot bring myself to regard a candidacy for the place as something to be won by personal strife and active self-assertion. I have also an idea that the Presidency is preeminently the people's office, and I have been sincere in my constant advocacy of the effective participation in political affairs on the part of all our citizens; consequently I believe the people should be heard in the choice of their party candidates, and that they themselves should make nominations as directly as is consistent with open, fair, and full party organization and methods. I speak of these things solely for the purpose of advising you that my conception of the nature of the Presidential office, and my earnest conviction that all the voters of our party should be wholly free in the selection of their candidates, preclude the possibility of my leading and pushing a self-seeking canvass for the Presidential nomination, even if I had a desire to be again a candidate."

After expressing his earnest anxiety for the success of the party, as meaning increased national prosperity and the increased happiness of the people, Mr. Cleveland closes with a warning as to the peril of the party. "I am confident," he says, "success is still within our reach, but I believe this is a time for Democratic thoughtfulness and deliberation, not only as to candidates, but concerning party action upon questions of immense interest to the patriotic and intelligent voters of the land, who watch for an assurance of safety as the price of their confidence and support."

Mr. Hill is also giving the people his measure as a public man. He is the first Democrat to hold a commission in the Senate from New York, for ten years. His term of service began with last December, but he did not occupy his seat at all during that month. After being sworn in early in January, he absented himself for nearly two months in order to pull wires for a midwinter convention in his State, and see that his machine ground out a Hill delegation to the National Convention. He is hardly warm in his seat in March before he again abandons his post to go South and try to "work up a Hill boom" in that part of the country. Up to this time nobody knows his attitude as to the burning issue of the day. His first day's speeches show that the country is not to learn anything from them. They are full of rhodomontade about the brilliant prospects of "the grand old organization," and the wonderful record of the grand old organization as "the party that has maintained the right of habeas corpus," etc., etc., but say no word as to what its position is, or ought to be, regarding the fundamental question of honest money. The reason for Mr. Hill's silence regarding the overshadowing issue was frankly stated the other day by his warm admirer, the Washington correspondent of the Atlanta (Ga.) *Constitution*, who wrote that journal:

"Senator Hill will show his hand plainly when the Silver Bill is considered by the Senate. He is not the man to dodge an issue, though, *in view of the division of sentiment in the country, he would perhaps prefer not to have to vote right now*, but when he does, his vote will be for free coinage."

Here we have photographs of the two men—the one boldly announcing his position on the silver question, when time-servers predicted that such frankness would ruin him; the other telling the representative of a New York newspaper, while the issue is pending before Congress, that he "will not cross that bridge until he gets to it," and hoping that, "in view of the division of sentiment in the country," he may not have to declare his position at all. The one telling his party that it has already been guilty of such folly that the best which can be said is that "success is still within our reach," but only on condition that it gives the patriotic and intelligent voters of the land "an assurance of safety as the price of their confidence and support"; the other telling it that it can win under a leadership which aims to avoid taking sides on the chief issue, though, if compelled to a decision, it will choose the wrong side, and trust to "organization" to win. The one regarding a nomination for the Presidency not as "something to be won by personal strife and active self-assertion," but as an honor to be awarded by the people, through "open, fair, and full party organizations and methods"; the other convening snap conventions in midwinter, and "running his own canvass."

The Democrats of the country are to decide between these two men and their respective attitudes towards the Presidency. The personal aspect of the case is of the least consequence. The really important question is whether what Cleveland represents and stands for, or what Hill represents and stands for, commands the support of a party which contains half of the voters in the country. The issue is thus a test of the American people—whether, after a century's experience of our form of government, they prefer for their highest office a self-seeking shuffler, who works for the Presidency as a ward politician works for the place of Alderman, or an honest man who always has the courage to state his position on any question, and who leaves the people entirely free to accept or reject him.

THE BERING SEA CORRESPONDENCE.

THE text of the Bering Sea treaty now before the Senate provides for the arbitration of all the points in dispute, and also of one point not in dispute. The latter, which is found in clause 4 of article 6, submits to the tribunal of arbitration the question, "Did not all the rights of Russia, as to jurisdiction and as to the seal fisheries in Bering Sea east of the water boundary, in the treaty between the United States and Russia of the 30th of March, 1867, pass unimpaired to the United States under that treaty?" In the correspondence published last year Lord Salisbury said that he was prepared to concede that point without arbitration. Why it should be included now, we do not quite understand. Perhaps it is put in to give some éclat to Mr. Blaine for his learned arguments in support of the position that we took by the treaty of cession all that Russia had to give.

If the treaty should be ratified as it now stands, the question of renewing the *modus vivendi* of last year would be left open. The arbitration would go forward to its conclusion with or without such renewal. The question of present moment, therefore, is whether such damage is likely to result to seal life, or to the seal monopoly, or to both, during the present year, by the non-renewal of the *modus vivendi* that the five or six years of accomplished work looking to a settlement of this question ought to be thrown overboard. In answering this question there is another which inevitably comes up, viz.: What will be the consequences to seal life of no settlement at all? Here we must take account of the petition presented by Senator Squire the other day, of which the *Congressional Record* has the following note:

"Mr. Squire—I present a petition of the Chamber of Commerce of the city of Port Townsend, respectfully setting forth that the present status of the Bering Sea fishery works a grievous hardship to our fishermen by depriving them of rights and privileges which they enjoy in the North Atlantic Ocean, in which they are encouraged and protected by the Government of the United States. Therefore, the Chamber of Commerce respectfully asks in this petition that some action be taken by Congress by which the same laws which are now in operation on the North Atlantic regarding fisheries shall be extended to the waters of the North Pacific, Bering Sea, and the Arctic Ocean, and all waters bordering upon American territory; that the products of the open sea be declared free and open to all, and that American fishermen have the same rights in the waters of the North Pacific that they now enjoy in the North Atlantic Ocean."

A petition asking, in behalf of Pacific Coast fishermen, the same rights as those enjoyed by Atlantic Coast fishermen, can hardly be denied. That we should prolong indefinitely a controversy which carries with it a denial of such rights to our own people would be a grievance not to be defended in the forum of politics or of morals.

Touching this *modus vivendi*, the correspondence shows that, before the arbitration was agreed upon, Sir Julian Pauncefote notified Mr. Blaine that the *modus vivendi* would not be renewed. This is

perhaps the most important new fact disclosed by the correspondence. In his despatch of March 7, 1892, Sir Julian says:

"In the course of the correspondence which then took place, it was distinctly notified to your Government that the *modus vivendi* would not be renewed for the following season. You will find that, at the close of the memorandum enclosed in my note to Mr. Wharton of June 6, 1891, I stated, under instructions from my Government, that 'the suspension of sealing was not a measure which they could repeat another year.' "

A notification given in writing nine months ago cannot be taken as a surprise now.

Moreover, suppose the owner of an American ship should enter Bering Sea this season and proceed to catch seals three miles from shore and should be seized by an American cruiser, or prevented from exercising his trade, and should incur loss thereby, would he, or would he not, have an action for damages against the captain of the vessel so seizing or preventing him? Could that officer plead any orders of the Treasury Department or of the President of the United States as a justification, unless those orders were in consonance with law? What are the laws applicable to the subject? We find them, together with a compendium of the diplomatic correspondence, in a small volume just published, entitled 'The Bering Sea Controversy,' by Stephen Berrien Stanton, Ph.D., of the New York bar. The law touching the supposed case is section 1956, Revised Statutes, in these words:

"No person shall kill any otter, mink, marten, sable, or fur seal, or other fur-bearing animal within the limits of Alaska Territory or the waters thereof."

In 1889 this subject was brought again to the attention of Congress. There was pending in the House, on the 28th of February, a bill which had originated in the Senate relating to salmon fisheries in Alaska. An amendment was offered by Mr. Dunn of Arkansas, reciting "that section 1956 of the Revised Statutes of the United States was intended to include and apply to all the waters of Bering Sea in Alaska embraced within the boundary-lines mentioned and described in the treaty with Russia dated March 30, 1867, by which the Territory of Alaska was ceded to the United States." This amendment was adopted without a division. The bill was returned to the Senate and referred to the Committee on Foreign Relations. It was reported back on the 1st of March with a recommendation that the amendment be not concurred in. Senators Sherman and Morgan spoke briefly on it, saying that the subject was of too serious and important a character to be passed upon at the close of a session and without time for deliberation. The House amendment was rejected without a division. A conference committee was appointed on the bill, which reported, in place of the House amendment, a proviso "that section 1956 of the Revised Statutes of the United States is hereby declared to include and apply to all the dominion of the United States in the waters of Bering Sea." Appended to this conference report in the House was the following statement in writing:

"The effect of the amendment is to leave out of the House amendment the words that are descriptive of the boundaries of the waters of Alaska.

"POINDEXTER DUNN,
"BENTON MCMILLIN,
"C. N. FELTON,
"Managers on the part of the House."

Therefore, section 1956, Revised Statutes, remains unchanged in meaning, although the words "dominion of the United States" were added.

Last year the executive branch of the Government entered into an agreement with the executive branch of the Government of Great Britain that both would prohibit the taking of seals in Bering Sea, and would authorize the seizing and detaining of vessels offending against the prohibition. When the *modus vivendi* was broached last year, Lord Salisbury applied to Parliament for authority to enter into it. Such authority was given by an act (54 Vic., c. 19), which empowers her Majesty, by Order in Council, to prohibit the taking of seals by British ships in any part of Bering Sea defined by the order. No such authorization was asked by our Executive from Congress, for the obvious reason that the asking would have been a confession that it did not then exist, whereas the contention has been that legislative authority was already conferred by section 1956, Revised Statutes. That a doubt has hung over the question, however, was made very clear by the trepidation caused by the *Sayward* case in the Supreme Court. It is needless to say that the assumption of power by the executive branch to prohibit American seamen from taking seals in Bering Sea beyond the three-mile limit covers nobody with a shield.

Although Lord Salisbury did not exceed his authority when he entered into the *modus vivendi* last year, the probability is that President Harrison exceeded his authority when he entered into it. Perhaps there would be difficulties in the way of enforcing American sailors' rights in the premises, but those rights are none the less clear. They are whatever Congress has made them. They cannot be abridged by mere act of the Executive. Any officer enforcing an order not sanctioned by law does so at his peril. The Supreme Court has declined at present to consider the question whether our jurisdiction extends beyond the three-mile limit or not. But it would undoubtedly consider the question at a time when it was no longer in controversy with a foreign Government, and where the property of American citizens was alone involved.

The work of Mr. Stanton to which we have made reference furnishes a quotation from the last edition (1891) of Woolsey's celebrated work on International Law, with which this article may be fitly closed:

"The recent controversy between Great Britain and the United States, involving the right of British subjects to catch seals in North Pacific waters, appears to be an attempted revival of these old claims to jurisdiction over broad stretches of sea. That an international agreement establishing a rational close season for the fur seal is wise and necessary, no one will dispute. But to prevent foreigners from sealing on the high seas, or within the Kamtchatkan Sea (which is not even enclosed by American territory, its west and northwest shores being Russian), is as unwarranted as if England should warn fishermen of other nationalities off the Newfoundland Banks."

THE INTER-STATE LAW AT THE WEST.

THE Chicago *Tribune* publishes two pages of facts and opinions upon the workings of the Inter-State Commerce Law. All persons interviewed state that the act to regulate commerce is very unsatisfactory in its actual effects upon business in the West; yet, as might be expected, they do not agree among themselves as to the things about which complaint should be made, or as to the best remedy. In short, while dissatisfaction is evident, there yet remains no consensus of opinion as to what the railroad problem really is.

Ex-Gov. Anthony of Kansas says flatly: "If we could haul our wheat from Kansas fields to Liverpool markets at one dollar a ton, that wheat would not bring a cent more to the Kansas farmer than now. When rates go down, it is the consumer, not the producer, who gets the advantage"—a statement which, if true, would take the ground from under all the Western demands for low tariffs eastward. On the other hand, the Secretary of the Kansas State Board believes that "discrimination is the last thing the West ought to kick about. It is discrimination that has brought the Nebraska farmer into competition with the Massachusetts farmer and driven the latter out of business." Gov. Boyd of Nebraska is reported as saying: "The man who ships 100 cars a day should have a better rate than the man who ships only one"—the very principle complained of by the majority of those quoted. The *Tribune* thinks that rebates are paid by every Western road, and that the Inter-State Act in this particular is a complete failure. The names of the Chicago grain-dealers who have these cut rates are given for each road. One grain-buyer at Lincoln, Neb., gives the following example: "Reynolds Bros. of Toledo, in connection with their New York correspondents, Milmine, Bodman & Co., are able to control buying for the New York market. The corn must be shipped to them in care of the Wabash Railway at Chapin, Ill. If this corn which they are paying me 37 cents for at Chapin is sent to New York at tariff rates, it will show a loss of 3.76 cents on every bushel." As a milling firm in Wichita expressed it, "one man's business ability is put up against another man's cut rate, and the result is exceedingly unsatisfactory to the man who hasn't the inside railroad arrangement." Of one prominent Western road it is stated that the amount of the rebates reached such proportions last year that the Auditor was at a loss to know how to handle the account, and a special meeting of the Board

of Directors had to be called to devise some way of absorbing the cash rebates.

But the fact that payments of drawbacks were made to favored shippers has long been known. To find a remedy is not so easy. The general opinion, as gathered by the *Tribune*, was that pooling must be permitted. Just as unequal taxation is worse than high taxation, so discrimination demoralizes trade and upsets all values. Various forms of pooling were suggested, one plan even going so far as to provide for putting all earnings into the hands of a commission in which Government officers should have a majority, and the railway men only a minority. It was felt by all that unrestricted competition between the carriers was mainly responsible for unequal rates, and that something ought to be done about it. The State Commissioners of Iowa and Minnesota reported peace within their respective boundaries.

Mr. Anthony went into the general question of railway rates, displaying some decided opinions on the situation and the causes of the present complaints. He stated that the law and the Commission had started in to do too much. "As it is to-day, the Commission assumes to superintend the general management of railways. I want to see an Inter-State Commerce Commission—not an inter-State railway superintendence. If we could pull up 1,500 miles of road in Kansas, we could make better rates." Then, as if to show that after all each man looks at the general railway problem from the point of view of his own local interests, the ex-Governor made an elaborate argument to prove that only those cities which are on navigable waters should be made basing or rerating points. The object, of course, was to show that Kansas City (a city in Missouri) had no good ground for claiming control of the jobbing and grain business of interior Kansas, and hence that the Kansas Board was right in ordering rate reductions for the benefit of Kansas towns which had the ambition to become trade centres.

So, apparently, the Chicago *Tribune* has confirmed the opinion that things are not as they should be, though as to the remedy, the only suggestion of any value is that of permitting some form of pooling or other kind of good understanding among the carriers. This is advocated on the ground that to cure the disease—unjust discrimination—we must remove the cause; anything short of that would prove a mere palliative. On the general question the Kansas ex-Governor also had something to say: "At the heart of this railway question are two widely opposite views as to the form of power of the people in the regulation of the affairs of railway corporations, and these are held by equally high authority. Judge Brewer of the United States Supreme Court has held that rates could not be lawfully reduced below a point of earnings equal to the cost of operation, maintenance, payment of interest on debt, and a reasonable dividend on capital stock. Stated in this broad manner, this principle puts a premium on fraud by encouraging fictitious stock issues. As opposed to this view, Judge Bradley holds that a railway company is the trustee of the State, and has no right to raise questions about bondholders or stockholders. The State, being the creator of the corporation, has the power to destroy all that it created, the power to tax it out of existence by low rates. Under that view this State could confiscate the ownership of all roads in Kansas, with no appeal to any part of the law. It seems to me that neither of these views is just and reasonable. Law is sense. Law is reason. The father and mother control their child, but if they were to exercise their power by depriving the child of liberty and life they would become amenable to the great natural law. The charter of a corporation creates obligations of reasonableness and just treatment on the part of the State. The fundamental disagreement as to the form of power, illustrated in these opinions of Judge Brewer and Judge Bradley, must be reconciled before great progress can be made." After the reconciliation of theories must come the difficulties inherent in the attempt at application to practical affairs.

THE BOSTON PRESS.

THERE is no city in the United States in which the condition of the newspaper press presents more interesting problems than Boston. It is, we think we may say, the only city in the Union except New York which has had since the war a newspaper intended especially for the more educated and fastidious class, and edited with special reference to their tastes and ideas. This place was filled for many years by the Boston *Advertiser*, but within a few years the *Advertiser* somehow lost its hold on its old constituency, and ceased to receive its former welcome from the dwellers on Beacon Hill and "the new land" on the Back Bay. It was not in its best days a powerful organ of any variety of opinion, but it was eminently safe and respectable. The editorial articles were generally such as none but the really base and wicked would try to controvert; they offended no one's susceptibilities, and the news was decent, wholesome, and full. By what turn in human affairs, owing to what foreign treason, or malice domestic, the *Advertiser* lost the proud place of the true Bostonian's "vade mecum," and "unum necessarium," which followed him in his peregrination or rustication all over the country, we are not here, as the orators say, to explain. The fact is, however, that about seven years ago, if we remember rightly, it was repudiated by the old real Bostonians, and became a rattling party organ, under the management of Mr. Cabot Lodge as the "directing Director" of a proprietary corporation.

Its old subscribers then transferred their affections to the *Boston Post*, which suddenly rose from the position of an old "Hunker" and "doughface" sheet into that of the favorite paper of the Beacon Street and Cambridge people, the cultivated, particular, and especially the Mugwump class. Of this class, in fact, we may say, under new proprietors it became the organ. It was filled with their hatred of good men of the Republican persuasion, like Blaine and Clarkson and Quay and Wanamaker, and gave free expression to the frightful economical and historical errors of the Mugwump heresy. It, too, like the old *Advertiser*, was eminently respectable. No priest, as they used to say of the good soldiers of the seventeenth century, hesitated to mention it in his prayers, no woman to associate it in her mind with honor, no father feared to leave it on his parlor table, or allow it to go down to the kitchen when the family had done with it. But it had a struggling existence. It was able, honest, and pure, but it soon began to appear that the public to which it appealed was no longer able to support a journal of that description. Either the constituency had grown smaller or had grown more exacting in the matter of news than the readers of the old *Advertiser* had been. This last explanation was probably the true one. The *Post* was not "newsy," and was not "breezy," and to succeed now a newspaper must be either newsy or breezy, or both. Consequently, after a gallant struggle, and the expenditure of much money, the *Post* was transferred to a "bright young journalist" of the Pulitzer school, who soon made the unfortunate sheet the terror of the various neighborhoods in which it once had been a welcome guest. Its old readers no longer recognized their quondam friend in the battered, red-nosed, buttonless-waistcoated, and jocular blackguard who now sought admission to their breakfast table, and promptly kicked him out of their houses.

These unfortunates have now gone over to the *Herald*, which really is an excellent newspaper in most respects. It has all the important news; the editorial articles are ably written, well-informed, and advocate the opinions in politics which most Americans of the educated Boston type hold. But there is one respect in which it is not excellent, and this is, to the class of which we speak, the most important of all. It gives a large space to murders, suicides, seductions, trials of ministers for immorality, elopements, adulteries, and scandals of every description, and illustrates these events with the hideous pictures with which all newspaper readers are now familiar. Consequently, it is not a family paper in any true sense of that term. It is a paper which fathers and mothers have to hide when they have finished reading it, or have to examine carefully before they let the boys and girls get a chance at it.

Even when it is at its purest, the pictures make it an odious sight on a library or parlor table in a respectable household. It seems a daily lesson in vulgarity and ugliness. The editor, we are informed, has been remonstrated with by these unhappy parents, but his answer is that he makes his paper to sell, and leaves the moral training of the young to the clergy, or words to that effect.

Under these circumstances, what is old Puritan, cultured Boston to do? We offer, as an answer to this question, a suggestion which we think has merit. Let it get the proprietor of the *Herald* to agree to put all his required crimes and scandals on one detached or detachable sheet, and make up the rest of his paper for family reading. Let him then offer to the public a distinctly marked "Indecent Edition," containing everything, or a "Decent Edition," without the scandal sheet. Let subscribers, at the office or through the newsdealers, indicate which edition they desire, and have no other served to them at their houses. Would not this solve the problem, and might the plan not be adopted in other cities which have no decent public large enough to support a newspaper of their own?

A CROSS-SECTION THROUGH NORTH CAROLINA.

EDENTON, February 17, 1892.

FORTY years ago, Frederick Law Olmsted visited North Carolina and summed up his judgment of the State as follows: "Industry is almost entirely rural, and there is little communication or concert of action among the small and scattered proprietors of capital."

The impressions of a less observant traveller, who is spending a few days in going over the country roads on foot, seem to show that the State has not greatly changed. As soon as one gets off the main commercial arteries of the Richmond and Danville and Seaboard Air-Line Railroads, and follows the old east-and-west highway to the coast, he finds himself not simply in the middle of this century, but in the end of the eighteenth century. As in colonial times, the islands outside Albemarle and Pamlico Sounds confine the State on the east, and the mountains on the west. There is not an important seaport in the State, nor a considerable manufacturing town, nor very productive mines, nor a great city. Wilmington, the largest place, has but 20,000 people. The ancestors of almost all the inhabitants were in the State a century ago; probably no State in the Union so closely adheres to the social and political traditions of the pre-Revolutionary period. North Carolina is the type of the natural development of an American community, much influenced by slavery, but little influenced by coal and iron, foreign immigration, commerce, or Northern capital.

To the Northern man, and particularly to the pedestrian, the winter climate of central North Carolina seems perfect. An occasional boisterous day is offset by half-a-dozen of bright sunshine, with the clear, invigorating air of a New England October. In the midst of the brown leaves of last year, hardy flowers start up; on the coast the palmetto is seen. The western third of the State I know only by hearsay; but in the central rolling region, twelve easy hours from Washington, are hundreds of sites for people who would like to find winter sunshine north of Florida. A New York capitalist is just contracting to build a hotel at Chapel Hill, and it is safe to predict that many others will follow. The views are charming, the country-side interesting, and the shooting good. On the coast there are surface indications of a less favorable climate. One suspects evil when he hears a bride confide to her husband that "in Plymouth she had regular chills every other day till Christmas"; or when a voice in the corridor of the hotel asks an invisible person whether he "has taken his quinine yet."

The beautiful midwinter weather hardens the roads. The picturesque troughs worn by two centuries of travel in the hills must sometimes be full of mud. Even in winter, driving is not easy: many of the streams have waited for bridges since Carteret's time. Nor are the roads likely to improve, now that cross-country railroads are penetrating the whole State. There is a delightful flavor of stage and steamboat travel about these new roads: the signal to the engineer is a yodel from the lungs of a negro, inspired by the order: "Holler 'im back!" and the reason for the delay of a train is stated to be: "Slow captain on board." Along the roads are grouped, at rather frequent intervals, the farm-houses—the word plantation is hardly used. The inquisitive traveller finds little to detain him: a group of children gathered about the fire of "fat pine" in the open chimney; rude and worn furniture; two or three women thoughtfully rubbing their gums with the snuff-stick. The prevailing type of farm-house has an outside chimney on each end, no veranda, and half-a-dozen little squalid outbuildings about it. Only in or near the towns do more elaborate mansions appear.

Most of the towns are unpleasing. Hillsboro is apparently much the same that it was when Cornwallis left it—a collection of shabby houses rich in the traditions of great men. Here I found the tombstone of the Signer of the Declaration of Independence, "Hon. William Hooper, Esq., eldest son of the Rev. William Hooper, late Rector of Trinity Church in Boston, New England . . . Educated at Cambridge College." Here are the quaint records of the courts, with the uproarious addenda of the Regulators of 1770: "THOMAS RICHARDS vs. ROBINSON YARD. General issue *not but Plea of Abatement. Plaintiff pays all & gets his Body Scourgd for Blasphemy.*" The river towns, like Tarboro and Plymouth, have all the original ugliness of a Western prairie county-seat, with the accumulation of the dirt of a hundred years.

In striking contrast to these towns is the beautiful place from which I write. A row of handsome square houses stands on an attractive water-front. The court-house of 1716 is elegant in proportions and finish. The interior carving of the Bond mansion (1758) and its furniture are hardly to be surpassed in New England. St. Paul's is a colonial church and has the colonial silver and well-kept records, including a ringing declaration of the vestrymen of June 19, 1776. Outside the town, but visible from my window, is "Hayes," a beautiful mansion upon the grounds of which lie Justices Johnson and Iredell of the United States Supreme Court. The house contains many interesting portraits, including a characteristic head of Clay, and a fine old library. With its stately architecture, its magnificent trees, and its surrounding negro quarters, it is that typical Southern mansion which we have all expected some time to see. This lovely coast, but four hours and a half south of Old Point Comfort, seems destined to become a winter resort.

Such mansions as Hayes are rare in North Carolina because, from colonial times down, there has been little wealth. The dominant element in the State is, as one of the number expresses it, "all poor together." Poverty, however, means a dearth of ready money, but not of substantial comfort, or of a wholesome old-fashioned culture based on Shakspere and Gibbon. All people of "family" throughout the State appear to know all the other people of family, and they know also the ramifications of marriage and relationship. The Northerner fortunate enough to be admitted to the privileges of this great club finds it very delightful. The University town of Chapel Hill is especially attractive, both from its unusual neatness and from its being the most intellectual place in the State. With very scanty means the University is upholding a high standard of education, and has adopted a broad and modern system which cannot fail to make it a power in the State. There are other promising colleges, especially Trinity, which has found an avenue to the liberality of a tobacco king. Secondary education is very defective, and a gentleman who has made an address in each of the ninety-six county-seats of the State advocating an increase of the State appropriation for common schools, says that it is impossible to secure money enough to keep them open three months in the year.

Before going to North Carolina, three preconceptions as to the condition of the South had gained lodgment in my mind: that the negroes were improving; that the relations between the races were working themselves out satisfactorily; and that the white people were doing all that could be expected of them. All three ideas have been much disturbed. There is a small class of cultivated negroes, a sprinkling of black professional men, and a very few who have a little money; but the greater part of the race moves in a nether world of great ignorance and of greater degradation. No one who has not seen them can appreciate the slowness of their advance. The race is picturesque: from the town negro coachman, in tall hat, flashy jacket, and checked trousers, a fashion-plate for a minstrel troupe, to the wood-chopper working for six dollars a month for Johns Johnson, and courting one of his girls—all are cheerful and polite. At one of the railroad stations, day before yesterday, I was approached by a prepossessing black, who gave me to understand that he was "looking for a nice man to take him South and set him to work." "What are your wages?" "Kain't git more'n thirteen dollars around here." "But I'm not going South; I'm going North—going to Boston." "I'd just like to find a nice man to take me to Boston." Farm labor is the chief employment of the negroes. The owner of the largest cotton mills in the State says that he employs only one negro, a drayman. More of them work in tobacco factories, and there are some negro mechanics and even brakemen. Black Johns Johnson says that "a nigger can't make another nigger work: he'd like to give his boys a thrashing every morning before they went out to work." "The trouble with the nigger," said one black to me, "is that the nigger is a coward. The nigger wants to be well controlled." The complaint is general that even white men cannot control their hands, and that they are very irregular in their work: one gentleman makes it a practice, when he has a load of wood, to engage three or

four to cut it: possibly *one* may come when he agrees. Steady six days' work is almost unknown. There is much intemperance, and even among sober men no habits of saving. Land is not dear: tracts of bottom land on the coast once worth fifteen dollars an acre now go begging at a dollar and a quarter; but for the last twenty years the negroes have bought little or no land. They have not gained much in common-school education since 1870; they are not gathering property, and, above all, the race seems morally to stand about where it did in reconstruction times.

"It is hard," says a white lady plaintively, "to get on with servants who have no honesty and no virtue." Even among the thriving and prosperous country and village negroes, the standards of conduct are unspeakable. Let one example suffice. Two neighbors, both Northern ladies, in a very intelligent town, arrange for their two cooks to live in one little house: with those two black women live their four illegitimate children. To dismiss the servants is not worth while, because there is every reason to expect that the successors would be of the same character. Among such creatures are brought up the children of white families. The girls, by some miracle, grow up as fresh and pure as though there were no such contamination; but it is demoralizing to the boys. The starting-point of self-respect and admiration for a high character seems lacking among the negroes. The preachers, who are almost the only leaders, are justly distrusted. Mahone is said to have made it a principle to buy up the preachers in Virginia. A returned convict feels no sense of disgrace among his own people. The long continuance of slavery is not wholly responsible for this degradation; it is a defect in the character of the race. Yet upon this partially civilized substratum rests the economic development of the State. A fair type of the labor system is a scene witnessed at a station the other day: in the foreground four white men superintended the switching of some cars; in the background a negro with a mule team furnished the raw material. The baggagemaster touches the trunk, the black porter lifts it. Without negro labor the State would starve.

In such a condition of mutual dependence, one would expect at least friendly relations between the races. Outward good nature there is, but almost no confidence. An ingenious professor in the University is trying to find out what the negroes think about by a series of categories propounded by a barber. If he succeeds, he will learn what no one else seems to have found out. The negroes live a separate life, with their own rumors and alarms. A servant who had probably heard some reference to the Chilian imbroglio, the other day inquired anxiously whether "it was true that there was gwine to be another wa' and Miss June 'll have to come home from up North." There are graceful amenities between old slaves and former owners, but the races distrust and dislike each other. I have heard an ardent North Carolina Republican say, before a black servant: "When I see a nigger driving a mule, I always wonder why the mule, as the superior animal, does not drive the nigger." I have seen a black boy plant himself squarely in the track of a procession of school-girls on their way to church. The white man has little confidence in the character of his black neighbor, and the negro little regard for the opinion of his white neighbor. Nowhere is this absolute distrust so manifest as in politics. The negro vote is not suppressed—it is in a minority in the State at large; but in the black counties it is simply not counted. The State Legislature elects most of the county officers. The white people are literally in terror lest somehow, by their divisions, the negroes should get such political power as they had in reconstruction times. "We dare not divide," says a native North Carolinian; "we dare not divide even on the question of improving our roads." The mechanism of political development is stopped.

It is now impossible to say how far slavery accounts for the deplorable failure of the State to work out of the present social and political deadlock. The conviction borne in upon my own mind, against its preconceptions, is that the white race is not doing its duty. The State is poor: the little money spent on schools is chiefly paid by whites, and is fairly divided among white and black children. But the people have no heart in negro education; they are passively hostile to the schools kept up by Northern philanthropy; they make little distinction between educated and ignorant blacks. The remark made to me by a public man of great intelligence is a vigorous, but not an exaggerated, view of the temper of the whites. "We don't want the negroes to get educated or to get rich," said he; "the more educated they are and the richer they are, the worse it is for us. It is a big stick in their hands." In other words, education suggests to the North Carolinian organization, combined force, negro supremacy, some vague kind of social equality. The Southern people are fond of talking of "two civilizations"; they seem to set the negro out of their moral world; they feel no responsibility for his degraded state, and no impulse to help him to raise himself out of it. His most demoralizing vices are accepted as unavoidable evils, like mosquitoes and ticks. The whites suffer from the low standard of negro character more than the negroes themselves, for they have more to lose.

When the question of remedy arises, no one seems able to suggest. A former North Carolinian and ardent Republican thinks something may be done by "files of soldiers"; that has been tried, and has altered for the better the character of neither race. The division of the negro vote, which seems so potent to outsiders, is deprecated by the best men in the State, as likely to bring in an era of wholesale bribery. There is no movement of population, like that in Alabama, whereby the black counties get blacker and the white counties whiter. The establishment of educational qualifications and acceptance of the lessening of representation in Congress cannot command a popular vote. The despair of the question is shown by the solution proposed by an able lawyer and jurist: he thinks the only hope is to colonize the great body of the blacks in Mexico; with a spirit of candor he adds that at present each county is entitled to a license fee of one thousand dollars from every person who, within its limits, persuades another person to emigrate from the State. The negro problem and the race problem are unsolved; education might not solve, but would certainly palliate them; and education is "a big stick in their hands." Truly, "the fathers have eaten sour grapes, and the children's teeth are set on edge."

ALBERT BUSHNELL HART.

THE EXHIBITION OF PALERMO.

PALERMO, February 14, 1892.

OF exhibitions there is no end, say many, and the fact cannot be denied. The collection, classification, and exposition of the products of modern art, science, invention, industry, and agriculture is a feature of the second half of the nineteenth century, and a very beneficial one it seems to us. This of Palermo is especially interesting because so little is known of the island, even on the Italian continent, that whatever tends to place the facts and figures, the progress and amelioration, of the islanders in evidence, is a gain to themselves and a factor in the general advancement of the nation.

The exhibition, from an artistic, industrial, and social point of view, is a very decided success. I fear the same cannot be said from the financial side of the question, as visitors from Italy are few. England and Germany are fairly represented, but very few Americans appear on the visitors' list. Yet if it were only known how perfect is the climate, how delightful the sojourn, how perfect the service of the hotels, the carriage, tram, and omnibus service; the facilities for travel by land and sea, the charming excursions to be made with no fatigue in the neighborhood of the Golden Shell, the genial hospitality of the inhabitants—Palermitans and resident English, who fraternize even more than at Rome—it is probable that for American travellers Palermo would soon become a favorite resort. The steamers come from Naples to Palermo in twelve hours. You go on board at Naples about six, dine well, sleep comfortably, and wake up in the harbor of Palermo in time to land and breakfast; the conductor of the hotel that you may have chosen coming on board to take you and your luggage off without any trouble or fatigue. During the last three months this service has considerably improved, while the railway service is, if slow, sure. Those who dislike a sea voyage even of twelve hours, by going up to Reggio, Calabria, from Naples, can cross over to Messina in an hour, and thence go by express to Palermo, via Catania, a city well worth a visit if only to get a perfect view of Etna, now snow-crowned and verdure-clad. Taking train at half-past two, you arrive in Palermo at nine, without once changing carriages.

Public security is perfect in the city, where you are not pestered with beggars, and where the streets are clean and well lighted, and the theatres—from the magnificent Politeamo, or Grand Garibaldi Theatre, where all the best operas are performed, to the little Garibaldi Theatre, where the famous Mafiusi are now represented—equal to any on the Continent. There is no better way of getting a general idea of Palermo and the Golden Shell than to ascend the tower of the Exposition, enter the elegant elevator, and in a brief minute you reach the platform, forty metres above the level of the gardens, and feast your eyes on a panorama unrivalled in the world. Palermo, nestled in her shell of green and gold, girt by valleys, sheltered by mountains mirrored in the azure sea, canopied by her sunlit sky, appears in all her splendor, her gentle fascinating beauty. Even the rugged, massive Monte Pellegrino presents its kindest aspect; verdant slopes, stretches of cornland, pine trees, and orange groves, with villas sprinkled in their shelter—there the tip of Monte Cuccia, here Monreale; in the plain and on the slopes of Montepellegrino and Billiemi the villages of Mondello, Partanna, Pallavicino in their olive groves and lemon terraces. The port below is crowded with shipping, flags of every nation floating in the breeze. In front, the boundless sea stretches to the horizon, and on the right Cape Zaffarano rises a very sapphire from the waves. Here again, Bagheria on the heights, Ficarazzi, whose fertile surroundings

you will admire every time you take the train along the north of the island, and there isolated and immortal Gibilrossa, echoing still Garibaldi's exulting words to Bixio: "Nino! Tomorrow in Palermo!"

Looking down on the Palermo that the Duce entered on that morrow and rescued, you have the whole building of the Exposition at your feet, with its cupolas and towers, its gardens and fountains, the huge stone pines, the Abyssinian village and Russian mountains, and you feel that it is time to descend and see the treasures that the great galleries and separate edifices contain. There are plenty of plans of and guides to the Exposition, but, alas! as yet no catalogue save for the art and sculpture galleries; but as you enter by the chief ingress to the magnificent *Sala delle feste*, which is used as a ball-room or concert-hall or skating-rink, as the case may be, you can select any one of the twelve divisions which are subdivided into sixty-five classes and again into 173 categories. Foreigners generally make at once for the Gallery of Monumental Sicily, which is a novelty as far as Italy is concerned. This gallery is devoted to models of the ancient monuments of the island; to fragments, facsimiles, designs, pictures, and plans thereof. One of the most admirable is the Temple of Segesta, that monument of Greek art which forms such a notable feature in the landscape as you stand on the Pianto dei Romani, retracing the battlefield of the not less wonderful victory of Calatafimi. The temple is roofless, its thirty-six columns intact but incomplete, for the inhabitants of Segesta never finished their temple, owing, some say, to the invasion of the Carthaginians, 409 B. C.; later, to the sack of the city by Agathocles, 307 B. C., when the city was almost destroyed, but the temple spared. Of the theatre there is only a splendid photograph. Another interesting model is that of the Arabo-Byzantine Castle of Salemi, where Garibaldi, on the 12th of May, 1860, planted the Italian tricolor; and there is the Porta di Garibaldi through which he entered Marsala. One of the Gigantes from the great temple of Jupiter at Girgenti is erect, showing its original function as column to support the roof of the temple. The sepulchre of Antonino Grignano at the Carmine of Marsala, two capitals from the Duomo of Cefalu, the tribune of Gagini in the Church of S. Maria in Nicosia, and the baptismal fount of the Duomo, are among the treasures represented. A visit to the Monumental Gallery will assuredly inspire travellers to see the monuments in their original homes.

Near to this gallery is the Sala dei Ricordi Patria, not as complete as that of Turin, perhaps, but affording a perfect history of Sicilian revolutionary history and the numberless failures resulting in the final success; the portraits of martyrs and heroes, the chains they wore, the tattered flags, the red shirts pierced with bullets or torn by bayonets, and (a relic that is shameful to behold) the *bersagliere* rifle-ball that pierced Garibaldi's foot on the Bitter Mount, laming the Liberator for life. Here the student of Italian may pass hours with delight, for there is a perfect library of revolutionary lore, pamphlets, proclamations of the committees, popular songs in vernacular, while the curtain in the background is that very same one painted on the 28th of May, 1860—representing Garibaldi, calm and beautiful, giving his orders to the officers by the side of the fountain (*pretoria*) while the bombs were falling right and left—which has served as the *sipario* of the Garibaldi Theatre, the delight of the Picciotti and red shirts then as now. Students of popular customs, traditions, costumes, and superstitions will delight in the ethnographic exposition arranged with infinite care, intelligence, and expense by the genial patriotic folk-lorist, Prof. Luigi Pitrè, a doctor who lives among the people, author of the 'Library of Popular Traditions in Sicily,' 'The Sicilian Vespers according to Popular Tradition,' 'Popular Songs,' etc., etc. In the centre of the room is the *caretu*, the common cart so characteristic of every Sicilian city, painted with the history of the troubadours, or of Garibaldian battles, or of saints and martyrs, Madonnas and pagan gods. The mule, with its splendid harness and trappings, was carefully prepared in the University of Palermo. There is the *coffa*, or basket used for pressing the grapes; all the terracotta utensils, some really beautiful, most curious *gottu*, the drinking-glasses of the peasants, and costumes innumerable. Two from the Piana dei Greci are gorgeous in silk and gold, the *piddèmi*, the common dress of the women, and the ordinary peasant costume of the men about the country of Scicli and Modica, where, by the way, the peasants still live chiefly in grottoes hewn in the rock—palatial residences if compared with the caves and cellars of Caltanissetta. The collection of amulets or charms against the evil eye, accidents on land and on sea, against convulsions in children, to secure easy teething, etc., is very curious. Significant is the collection of knives, long and slender, some opening suddenly by merely throwing out the hand, others by touching a spring—formidable all; such as, if it were possible to sequestrate at one fell swoop, would vastly diminish the woundings and murders in the mining districts. There is a formidable *pecoraio*, or goatherd, dressed in black goat-skin trousers and white kid jacket—another class too apt to use the fatal knife to defend their own flocks or to steal those of their neighbors. But they serve this class to better purpose also, for to the *vistiamari*, herdsmen in general, *i.e.*, of cattle, pigs, goats, and sheep, belongs an exquisite collection of musical instruments—the *zufolo*, the *piva*, and the *nacchere*—which they manufacture themselves in their long solitary hours, learning the songs and tunes from their fathers and transmitting them to their children. They are famous, too, for their sculptures and etching. A bit of wood and a heated needle, and your herdsman or boy designs exquisite figures and arabesques. A *zufolo* work of Giuseppe Navarra, some peasant unknown to fame, is a perfect art treasure. With his knife, a piece of wood, or the horn of his cattle, he forms his drinking-cups, his knives and forks, his presents to his betrothed of needle cases, purse, vase for holy water—for himself snuffbox, flasks, saltcellars, etc. Some of the figures graven on the pumpkin bowls, wine and water flasks are really exquisite, as are some of the figures and arabesques of the *pilligrinu* flasks of terracotta. The bottoms of the bottles and glasses of horn are made of cork and perfectly fitted—dovetailed, as the peasants use neither glue nor nails, still less screws. The rapidity with which they work is remarkable: they seem to work always. Sitting, watching, or walking with their flocks, you see them graving on a cross (the crucifix is one of their favorite productions); when you stop them on the mountain to speak to them, they answer, but do not cease from their work. And even as their ornamental objects, so the tables, chairs, and peculiar stools of their own manufacture. Among the specimens is a wonderful cow collar whereon are graven the figures of Garibaldi and Victor Emanuel with groups of angels bearing tricolor wreaths and crowns; the Castle of Salemi, with the national banner floating, and the battlefield of Calatafimi, with the Bourbons in full flight. This is the work of a peasant, Giuseppe Sala of Santa Ninfa, wrought by him after his liberation from the galleys of Favignano in 1860. The muleteers are also artists in their own line. These *Burdunari* make the harness and trappings of their mules out of pieces of cloth, velvet and silk of divers colors, working in arabesques figures of animals with exquisite taste.

Curiously characteristic of the Sicilian peasant is the wall dedicated to the votive offerings, to the pictures of miracles performed and recorded in fulfilment of the vow made in the hour of peril. There is a rough picture of the battle of Dogali—peaks crowned with Abyssinians, the Italians fighting and falling on the slopes; a boat sailing in the clouds contains the *anime dei decollati*, the popular belief in the efficacy of the prayers of "beheaded victims" being general. A soldier of Dogali in the thickest of the fight made a vow that he would present an offering to their church if they brought him safely out of the battle; he was one of the few who did escape, and this picture is his ex-voto, and his name is signed "Girimina Giovanni of the Twentieth Infantry Regiment, January 26, 1887." Another, dedicated to the same "souls," bears the name of a *picciotto* saved by their intercession from the hoofs of the Bourbon soldiery. Others are dedicated, "Viva Maria Santissima dei Miracoli."

Side by side with these expressions of the religious sentiments of the populace are their favorite theatres of marionettes, showing the feats of "Orlando and Rinaldo in Babylon," "The Death of Morgante." Their favorite books are all on these subjects. There are popular editions as late as 1887 of the 'History of the Paladins of France from King Pepin up to the battle of Roncesvalles,' "this being the sequel to the death of Carlo Magno." Above the glass case containing the earliest editions are the signs most in use in the country: "Bonu vinu senza viulinu" (Good wine without poison—the *u* is always substituted for the *o* in popular lingo), "Casa grande di loeri con acqua corrente" (A big house to let with running water—a great desideratum in Sicily). Even of this interesting collection there is no catalogue, but the diligent Pitrè is preparing one, and it will form one of the chief posts of interest for the lovers of folk-lore and popular manners and customs.

Another distinctive feature of Sicily is the section devoted to mines and mining operations. The able head of the College of Mining Directors has actually excavated sufficient soil to create a mine where you descend and see all the operations and material, while on the walls and tables are charts and plans of the chief mines, models of the machinery used for the extraction of the mineral, its fusion by the various processes, etc. Here, too, you have sulphur in the rough, refined and purified, with pictures of the pits (but not of the *carusi!*). So for the marbles in which Sicily abounds.

Highly satisfactory is the department devoted to the work done in the various charitable and industrial schools, especially those of the orphan asylum of Naples, "Ecco Homo," where the lace work in imitation of every stitch known is perfect. The work of the blind school "Prince of Naples," directed by Maruscelli, is so varied and perfect that if I had not often seen it done there, I should doubt the fact of the workers being blind. Casanova's Insti-

tute for the street Arabs of Naples makes a capital figure. The works in bronze and silver, the ebony and ivory cabinets, the exquisite jewelry and cameos, besides some excellent articles of furniture, agricultural implements, show the progress made by the boys who live at home and attend the schools only during the day. The artistic and industrial schools of Sicily also show great progress, while the work of the prisoners in the penitentiaries and reformatories is only too multiform and abundant. "See," said a workingman who was taking me over some of the industrial sections, "how the prison work undersells us. That bed in iron and gilt-bronze is sold at 150 lire; it can't be turned out by an honest craftsman for 250 lire, and so on to the end of the chapter. The prisoners are well housed, fairly fed and clothed; we starve in hovels, often don't get a decent meal a day, are at times a week or more without work, so that the temptation presents itself to commit some crime and be taken in and cared for!" Of all questions the social question is the most complicated, and every day is growing more so. "Of what use is it to produce and perfect our productions?" said a large wine-grower and maker. "Look at the new tariffs now sanctioned in France: the duties on the fifteen principal articles of Italian importation into France are increased 800 per cent. on the old general tariff, 600 per cent. on the conventional tariff, and many of these articles are the chief products of Sicily. Even their pistache, used for ices and the preparation of brawn and pork, is raised 900 per cent. without any apparent motive, as the pistachio nut does not grow in France." "And now," said another proprietor, "the manufacturers of the north of Italy are going to sacrifice us southerners, whose only resource is agriculture, in the negotiations with Switzerland."

Such lamentations dampen delight in the manifest progress which this exhibition demonstrates, yet the fact remains, and progress is progress after all. Alas that space compels me to close without a word on Florio's pavilion, where, besides the grand show of wines and wine casks, the whole history and mystery of tunny fisheries is revealed—a mimic fishery modelled on the gigantic *tonnara* of Favignana occupying half the room, the basin containing the various departments, the nets, the very fish. Every operation is shown, while the actual tunny is in tin boxes of a few ounces or fifty kilos containing the delicate morsels which are now sold at such low prices as to form one of the staple articles of food all over Italy. But Florio, the father of Sicilian commerce, stands alone and must be treated with special honor.

Correspondence.

"PRISONS OF AIR."

To the Editor of The Nation:

Sir: For the first time in my life I am compelled to remonstrate against a criticism. As a rationalist, not as an author, I must ask of your justice relief from an implication, in your paragraph concerning 'Prisons of Air,' that it sanctions notions of "dooms and weirds." The book contains no "woful doom of the Redleghs extending through nine generations in fulfilment of a gypsy's prophecy." The doom is transmitted solely by a youth's weakness in crediting a fortune-teller's silly prediction, which gradually saps his courage. My serious study of the operation of a trivial superstition on a strong character, and its far-reaching results, being ignored, I am placed by your authority with those who believe, or cater to, the vulgar superstitions which I have shown based on nothing, but turned by credulity into prisons.

Moncure D. Conway.

New York, March 3, 1892.

[Our account was wholly with Mr. Con way as author. Readers of his book must judge between us.—Ed. Nation.]

WITCHCRAFT, ETC.

To the Editor of The Nation:

Sir: As was to be expected, comments unfavorable to us, as a nation, have been elicited from the British press by Dr. Buckley's revelation that "witchcraft is, at the present time, believed in by a majority of the citizens of the United States." Yet who can maintain, with the least well-grounded positiveness, that any particular section of Christendom has a distinguishable advantage over its other sections, as regards freedom from credulity? Here in England, what an old author calls mateologues are, certainly, full as numerous as almost anywhere else. Having lived for five and twenty years in the country, during which time I have mixed freely with rustics of all classes, I have come to doubt seriously whether the people about me are not quite as much enslaved to silly beliefs as the gratuitously commiserated idolaters with whom I rubbed shoulders so long in the East. Parenthetically, I also doubt whether, in all points of honesty, in humanity, and in right conduct generally, there is a pin to choose between the two social wholes.

As to London, the existence of the Thirteen Club is, assuredly, significant. But, more especially, one is to take account of the wide diffusion, in Great Britain, of such inanities and insanities as spiritualism and theosophy, and of the legion who put faith in astrological almanacs, dream-books, ghosts, omens, charms, the evil eye, and what not of like character.

I have actually known an old lady, the wife of a General in the Army, who would never venture out for a day's shopping in case she saw anything in "Zadkiel" seeming to indicate that she had better stay at home. Again, a farmer near by lately confessed, in court, that he had entrusted five sovereigns to a gypsy, on her engaging to convert them into five hundred, to be found under a specified stone. Once more, only three miles from me, an ancient widow, decrepit and imbecile, recently fell under the suspicion of being a witch, and barely escaped with her life from an infuriated mob. A baby died suddenly; the crone had, shortly before, been heard to mutter something angrily to the baby's mother, who had insulted her; and the opinion, once expressed, was forthwith popularly accepted, that she had caused the death of the little one by incantations. Analogous local instances of childish folly, worthy of the darkest ages, that have fallen under my observation, I could produce in abundance. But I shall content myself with mentioning two.

One autumn I went to a cottage-woman to buy some honey. On her telling me that she had none, I inquired whether she had given up keeping bees. She replied that she had, and went on to give the reason. When her bees last swarmed, a hive of them alighted on the dead bough of a tree; and her husband died a few months later. It was the wicked behavior of the bees that killed him; and she had served the wretches in kind. I knew that she had six or eight hives; and why did she do away with all? She expressed her surprise at so thoughtless a question. Was not it likely that, if she had spared any of the bees, they might have taken it into their malicious heads to send her to join her husband? It weighed nothing, with her, that, when he died, he was well on past seventy, in spite of heart disease, and though, for half a century, he had governed his practice as if he thought the chief end of man was the consumption of gin and beer.

I now pass to a gentleman of liberal education, of more than ordinary ability in his profession, and conspicuously religious. Conversing with him, one day, I was led, by something, to remark that, by good fortune, I grew up among persons wholly untainted with superstition, adding that I was, myself, similarly untainted. "But are you quite certain," he asked, "that you have nothing of what you so lightly call superstition?" A repeated "quite certain" drew from my interlocutor the demand, addressed with a searching look, "Do you mean to say you would plant ivy?" "Why," I replied, "eight years ago I planted ivy all along one side of this house, and already it has climbed some fifteen feet." "Well," returned my ultrafidian friend, "nothing could induce me to do as you have done. If I were to plant ivy, I am confident that I should soon after hear of the death of some relative or friend." Argument being, under the circumstances, manifestly in vain, I did not waste a word in attempting it. An English gentleman may, then, still be such that, in a brain well furnished with languages, living and dead, and half a dozen ologies besides, he has a corner for the most fatuous of absurdities.

In somewhat closer connexion with the subject of witchcraft, I come to the seventy-second Canon of the Church of England, which, as will be seen, with true charity, or false, constructively exempts Ahriman and his imps from all ecclesiastical molestation save episcopal. The Canon, under the sanction of which, it may be noted, recourse has been had to exorcism within the last hundred years, is headed, "Ministers not . . . to exorcise but by authority," and is, in part, as follows:

"No Minister or Ministers shall, without the licence and direction of the Bishop of the diocese first obtained, and had under his hand and seal, . . . attempt, upon any pretence whatsoever, either of possession or obsession, by fasting and prayer, to cast out any Devil or Devils, under pain of the imputation of imposture or cosenage, and deposition from the ministry."

By this Canon, which is still unrepealed, the "discerning of spirits," at least in one sense, is confined to Bishops. Theologians may be able to account for this restriction; and to them the justification of it must be remitted. It is explicit, however, that the faculty of infallibly distinguishing the presence of an emissary of Satan is an exclusive privilege of the episcopally consecrated. But, since these sacrosanctities are credited, by the anointed insight of James I., with having at their command the most potent of specifics for the abounding diabolism of their Christian fellow-subjects, why, in the interest of the community, do they and their subordinates neglect to resort to its employment?

Your obedient servant, F. H.

Marlesford, England, Feb. 22, 1892.

PSYCHOLOGY IN AMERICA.

To the Editor of The Nation:

Sir: Recent discussion in the *Nation* concerning science in America leads me to call attention to the part taken by this country in the advance in psychology. The newly issued works by Prof. James are the most important contributions to psychology since the publication of Prof. Wundt's 'Physiologische Psychologie' in 1874. The two volumes by Prof. Ladd on 'Physiological Psychology' are standard works in England as well as here. The text-books by Murray, Dewey and Baldwin are (with perhaps the exception of that by Sully) the best recently written in English. The *American Journal of Psychology* was the first special journal of the kind, and the only one until the establishment, two years ago, of the *Zeitschrift für Psychologie*. There are four philosophical journals published in America, all of which give much space to psychology. *Mind* is the only philosophical journal published in Great Britain, and it has been largely supported by American contributions. The retiring editor, Prof. Robertson, wrote in his valedictory last October: "The later volumes of *Mind* have included a good proportion of experimental research; but it can hardly have escaped attention that it has been contributed mostly from without, by American hands—the same hands that have been or are now organizing psychological laboratories over all the breadth of their own land."

It is a fact that our leading colleges and universities have psychological laboratories fitted up both for research and for instruction. The first courses of psychological instruction in which students worked in a laboratory (as in chemistry or biology) were given in America. The first professorships of psychology, distinguished from philosophy, were established in American universities, and there are now a large number of these. Psychology is a required study in most of our colleges, and advanced elective courses are usually offered. These courses are followed by many students and with interest. Recently at the University of Cambridge, with over 3,000 students, there were only three attending courses in psychology, and one of these was an American. At Oxford the study of psychology seemed to stop with Aristotle. The general interest in psychology in this country is shown by the numerous articles in the popular journals and by well-attended lectures. This winter at Columbia College Prof. James addressed an audience of perhaps 500, and Prof. Thompson, on a subject so technical as "Materialism and the Physiology of the Nervous System," had an audience of perhaps 200. This would scarcely occur in any foreign city.

America has during the past ten years contributed more to pyschology than any country except Germany, and it is rivalling Germany. I think, indeed, that America does its fair share of work in physics and biology, and more than its share in political economy and sociology. Psychology was the last philosophic discipline to become a natural science. It was needful that physics should prepare the way for biology, and biology for psychology. During the first part of this century the most important scientific advances were made by physics, afterwards the greatest progress was made in biology; now it seems likely that the mental and social sciences will become leading. In view of this, the important part taken by America in the advancement of these science sseems significant.—Yours truly,

J. McK. Cattell.

Columbia College, N. Y., March 8, 1892.

EXPERIMENTAL PSYCHOLOGY.

To the Editor of The Nation:

Sir: Your review of Prof. Lombroso's book, 'The Man of Genius,' in the *Nation* of February 25, shows, I think, that his method of inquiry is of very little value. His first induction (in reference to the connection between genius and stature) more especially seems open to various objections, and though much labor must have been bestowed upon the subject, how many great names are omitted, and how many obscure names are brought in seemingly because some account of stature was accessible! Your statement of the case at once brought to mind Lotze, who was a remarkably small man, and who, in his lectures on psychology, would mention as a notable fact that excellence in mental powers, also culture and refinement, were usually accompanied by smallness of stature. His listeners smiled, perhaps, and the small men in the audience felt "big" for the time being; but no further signs of mirth were perceptible, the Professor being much honored.

Of all the subjects of study concerning our own nature there is none that we would pursue more eagerly, if some sort of success seemed attainable, than the nature of the human mind, its forces, aptitudes, capabilities, and the conditions favoring their development. But it must be confessed that all this study is still in its infancy, and that only lately some attempts are being made at an experimental psychology. We were wont to treat psychology about as Seneca treats physics in his 'Naturales Quaestiones,' namely, by philosophizing about it. And this method, indeed, has its advantages, for the less we know of a thing, the easier it is to philosophize about it; the generalities flow more easily when not hampered by awkward facts, and these fine generalities are just indefinite enough to allow each reader to accommodate his own notions to the author's learned-sounding phrases.

The most valuable power of a scientific mind is the power to draw correct inferences from given premises, and scientific geniuses are superior to other minds chiefly in this logical power. Let us here make a useful distinction. He who can see a remote and difficult inference is *tiefsinnig* (deep); whereas he who perceives all the premises that must be taken into ac count as bearing upon the conclusion in question, is *scharfsinnig* (acute). Now it is true that no measurements of judgment exist, and it seems tacitly understood that they cannot be made. Nevertheless, judgment is that faculty which more readily than any other lends itself to grading, if not to numerical measurement. The problems often given in the text-books of logic suggest something of the kind. It must be possible to arrange sets of questions that can serve to test the judgment of people; and I may add that I have gradually collected a number of such questions which I have employed with this result, that by repeated trials their relative difficulty was pretty well ascertained and the questions could be arranged accordingly in a rising scale. If any one should here interpose the question, But whom do you find willing thus to have his measure taken at the risk of being put down as a dunce in the first or second degree? the answer is that young people in the class-room commonly enjoy the sport very much. Of course they are not told about the grading of the questions.

One of the earliest questions I used arose out of the following incident, of which I have personal knowledge. In a small town in Illinois a boy was bitten by a dog and it was feared that the dog was mad and would soon show signs of hydrophobia. A lively discussion arose. It was said by some that the dog must be killed, for if the dog got the hydrophobia, so would the boy. "Useless," said others; "the killing of the dog could do the boy no good after he has been bitten." "Of course it would," retorted the others, "for it is quite sure that if the dog gets mad, so will the boy." Simple as this thing appears, the village was actually divided into two contending parties, so that finally a deputation of two men was sent to this city to inquire of a renowned surgeon whether or not the dog should be killed. "You had better kill the dog," was the doctor's reply. Now, how great was the percentage of the people in the village unable to arrive at the correct conclusion? Suppose it was 30 per cent., how should this question be graded upon a scale of 10? By a scale of 10 I mean this: imagine all possible questions arranged according to their difficulty into ten degrees, No. 1 being so easy that any adult not an idiot will solve it, and No. 10 so difficult that only the highest intellect will solve it.

Now, before presenting further examples, I must premise an important consideration in the choice of questions. They should be so chosen that the subject-matter is practically equally well known to all concerned, as it was in the above dog incident, the question not hinging upon the nature of the poison or any scientific matter. I will now select the following example: I have two spiral springs similar to those used upon the trucks of railway-cars. I place the two springs upon the floor side by side, and, putting weights upon them, find that each spring is pressed all the way down by a weight of 100 pounds. Now I place the one spring on the top of the other and again apply weights. The question is what weight will press *both* springs all the way down. Simple as the solution may seem to many, the question is not answered correctly by more than 40 per cent., and is analyzed correctly by less than 20 per cent., according to a number of trials made.

Let me present another example. We have a steam-boiler filled with cold water. The boiler is tightly closed, but has a pipe fitted in, which is also filled with water communicating freely with the water in the boiler. This pipe at the other end is connected with a force-pump. We work the pump and produce a certain pressure in the boiler. Now, while the pressure lasts, we close a valve between the boiler and the pump. What now about the pressure in the boiler? Is it still there or not? This question is answered by a considerably smaller number than the one about the two springs. But upon substituting a rubber bag for the iron boiler, it becomes at once very much easier.

Here is a neat little question: A life-insurance agent from one of the larger towns of Illinois caught many people of my acquaintance in one of the smaller towns by the following simple talk: Our company, said he, is a mutual company and it has about ten times as many members as any other company. The consequence is, that when a member dies and an assessment has to be made to pay the loss, there falls to each of the surviving members a much smaller sum to be paid than would be the case in a smaller company.

These few examples will suffice to show the method of procedure. Now it would be desirable to bring together more material than can be collected by one person. If several persons who will take an interest in the matter

would join, there might be made a valuable collection.

One remark as to those persons who are most apt to solve these logical questions. It is not the scholars commonly called "quick," nor is it the slow, nor those who excel in arithmetic or algebra. But a rule that seldom fails is this, that a scholar who is good in geometry will prove good also in all sorts of logical questions, so that observation agrees with what we should expect according to Plato.

Respectfully, WERNER A. STILLE.

ST. LOUIS, March 2, 1892.

ARMY OFFICERS FOR INDIAN AGENTS.

TO THE EDITOR OF THE NATION:

SIR: In view of the frequent allusions to the subject in and out of Congress, might it not be well to diffuse generally the information that the President may, under section 2062, Revised Statutes, detail an army officer to execute the duties of Indian agent whenever it may seem expedient to the chief Executive? It may, or may not, be advisable to transfer the Indian Bureau to the War Department. The immediate management and control of all Indians may be transferred to army officers without necessity for any legislation, and such control would, in the opinion of many wise men, be an unmixed blessing to all concerned—saving and except, possibly, the army officers.

An opinion is very prevalent that some new laws are required before a change can be made in the present methods.

Very respectfully, S. A.

AMILTON, O., March 3, 1892.

GERRY, NOT MORTON.

TO THE EDITOR OF THE NATION:

SIR: Your review of Mr. Hale's so-called 'Story of Massachusetts' is on the whole so commendable that it is sad to see it conclude with so serious a lapse as the transfer to Governor Morton and some nameless Whig clergyman of the racy old anecdote of the Federalist Parson Osgood of Medford, and the first Thanksgiving Proclamation of Elbridge Gerry, the Jeffersonian Governor. Of course errors about matters of oral tradition are to be dealt with leniently, but they ought to be pointed out before they crystallize into the "lies agreed upon" which Mr. Wendell Phillips says constitute what we call history. *

CAMBRIDGE, March 8, 1892.

Notes.

MARBOT'S Memoirs are to be published in English by the Messrs. Longman, and at once.

It is said that M. Alfred Maury, who died in Paris on the 12th of February, has left behind him for publication some memoirs of more than ordinary interest. M. Maury was some time director of the National Archives and librarian of the Tuileries, and had been a member of the Académie des Inscriptions et Belles-lettres since 1857. He was one of the most erudite scholars of our time, a doctor in letters, of law, of mathematical sciences, and interested in all knowledge. It was he who said of modern languages that the first ten gave a student some trouble, but that afterwards it was all plain sailing. He was a great teller of stories literary and political.

G. P. Putnam's Sons announce 'A Manual of Musical History,' by James E. Matthews, with illustrations; an illustrated 'Pronouncing Handbook Dictionary'; 'The Art of Golf,' by Sir W. G. Simpson; and 'Earth-Burial and Cremation,' by Augustus G. Cobb.

Houghton, Mifflin & Co. have in press 'A Day at Laguerre's, and Other Days,' sketches by F. Hopkinson Smith; 'The Unseen Friend,' by Lucy Larcom; 'San Salvador,' by Mary Agnes Tincker; 'A Fellowe and his Wife,' by Blanche Willis Howard and William Sharp; and 'Favorite Flies and Their History,' an illustrated book for anglers by Mary Orvis Marbury.

A selection of ten sermons made by the late Mr. Spurgeon will be issued by E. P. Dutton & Co. under the title, 'Messages and Multitudes.'

Frederick Warne & Co. will add to their "Chandos Classics" Mme. D'Arblay's Diary and Letters, annotated, and prefaced by Macaulay's essay.

Mrs. Sutherland Orr's compact 'Handbook to the Works of Robert Browning' (London: Geo. Bell & Sons; New York: Macmillan) has reached a sixth edition—the second since the poet's death. Its chief distinction from its immediate predecessors lies in the fact that the references have been conformed to the latest issue of Browning's works, of which the volume closes with a chronological bibliography and an alphabetical list. There can hardly be any need of another revision of this conscientious performance.

The latest volume in the companionable little "Stott Library" (Macmillan) is Wordsworth's Lyrics and Sonnets edited by Clement King Shorter. It bears on the title-page a vignette of the poet, and shows Dove Cottage as a frontispiece. A brief Wordsworth chronology is another feature, with a list of the significant editions of his works, and mention of his biographers, editors, and critics. Mr. Shorter would have excluded 6 of the 164 poems from Matthew Arnold's selection, and he admits to his own several which Arnold's taste rejected, and is able, by expiration of copyright, to make use of Wordsworth's later "improvements" (rightly or otherwise so called). His arrangement is his own and is reasonable; the sonnets are not massed except when related among themselves in point of subject or of time. To each poem its date is affixed.

Mr. Keltie adds twenty pages to his 'Statesman's Year-book' for 1892 (Macmillan), partly to be accounted for by two new introductory tables, viz., of the World's Money and the Forest Area of Europe. For his tables he borrows from Wagner and Supan's 'Bevölkerung der Erde' the estimated population of the earth in comparison with Mr. Ravenstein's, the two agreeing within twelve millions. New to this edition are also four maps, two of which (political Africa and the Pamir frontier) relate to important international questions. The present volume is further enriched by the censuses of the leading countries of the world.

Prof. George Bruce Halsted, whose valuable translation of Lobatchevsky's 'Non-Euclidian Geometry' we noticed the other day, has now published a translation of Bolyai's celebrated work on the same subject. The translator says in his introduction: "This strange Hungarian flower was saved for the world, after more than thirty-five years of oblivion, by the rare erudition of Prof. Richard Baltzer. In the second edition of his 'Elemente der Mathematik,' in 1867, Dr. Baltzer called attention to this remaking of geometry, and the name Bolyai was at last given its place in the history of science. Before that, the father, Wolfgang Bolyai, seems to have been the only person who really appreciated the work of his son John Bolyai." We are told that "Bolyai, when in garrison with cavalry officers, was challenged by thirteen of them at once. He accepted all, stipulating only that between each two successive duels he might play a bit on his violin. He was victor thirteen times." He left a manuscript of a thousand pages which has never been examined by a competent mathematician. The work now translated will be seen by most of those who are specially interested in the subject, for the first time. It is historically of the deepest interest, but, as an introduction to the subject, is inferior to the work of Lobatchevsky. Prof. Halsted's publication confers, however, an even greater boon upon mathematicians than his other translation.

A welcome contribution to the history of North German architecture is 'Das Mittelalterliche Riga,' written by W. Neumann and issued by the Historical and Antiquarian Society of the Russian Baltic provinces. It is a folio volume with frontispiece, twenty-six plates, and numerous woodcuts, and costs twenty marks. It is printed by Julius Springer in Berlin.

The manual of 'The Roman and Italic Printing Types in the Printing House of Theodore L. De Vinne & Co.' not only answers its end of displaying the typographical resources of the leading establishment in this city, including the presswork (here put to the test by numerous illuminated initial letters in many tints), but, by its preliminary discourse to the would-be bookmaker, and by its happy selections, conveys a great deal of information, practical and bibliolatrous. It is, in fact, a readable book.

From Longmans, Green & Co. we have the first number of a new quarterly, the *Investor's Review*, of which the purpose is well indicated by its title, though one must go further than the cover to get an idea of its able and vigorous editing. The objects of the magazine are full and frank discussion of current questions of finance, analysis of company balance-sheets, and classification of public securities—all done in the interests of buyers of securities, not of sellers. To prevent any suspicion of bias in favor of the latter, the editor, Mr. A. J. Wilson, announces that no financial advertisement of any kind will be received; and explains the somewhat high price of the *Review*—$6 a year—by the fact that he thus cuts himself off from an important source of income. We should say that it would be cheap at any price to the English investor, since it would prevent him from again blindly throwing away his savings in the Argentine Republic and elsewhere. We have nowhere seen a more trenchant exposure of the crazy and criminal methods of Argentine finance than that in this first number, which also has noteworthy articles on "Spain and her Debts," "Mr. Goschen's Currency Proposals," with many instructive examinations of mining companies, brewing corporations, etc.

Liebhaberkünste is the title of a new bimonthly journal of decorative art, the first number of which has just been issued by R. Oldenbourg (Munich and Leipzig). It is rich in illustrations and patterns for embroidery and all sorts of ornamental work on wood and porcelain, and promises to furnish the newest information on these subjects. The subscription price is three marks quarterly.

The Cambridge *Tribune* published a "Lowell memorial number" on February 20. This contains the latest portrait of Mr. Lowell, together with a number of views of Elmwood, both within and without the house, and por-

traits of the poet's father and of his first wife. The text of the number is by various hands, and is of various degrees of interest and value. Perhaps some of the brief sketches signed by names unknown beyond the limits of Cambridge have as much biographical freshness as any of the rest. Prof. Norton's contribution, however, may be excepted from this remark. He says, we observe, of the rough draught of Lowell's "An Indian Summer Reverie," that it contains "some verses which, so far as I know, have never been printed, but which . . . deserve to be known, and are sure to be prized alike for their personal and local interest:

"'Propt on the marsh (a dwelling now) I see
The humble school-house of my A B C,' etc."

The greater part of these verses appeared in the introduction to the first series of the "Biglow Papers."

A late number of the Levant *Herald* gives some account of a ceremony and custom which, though they appear to be of yearly recurrence in the Holy Anatolian Church, may yet be little known to Western ritualists. On the Feast of the Epiphany, after divine service, the clergy, accompanied by the congregation, leave the church and proceed to the shore of the Bosphorus, where, after certain prayers, a silver cross is thrown into the water, symbolizing the Baptism of Christ. Hardly has the cross disappeared in the sea when a crowd of divers, who have held themselves ready, plunge in after it, and usually, after a brief scramble, some one of them brings it up. The lucky diver who secures it has the right to keep it throughout the day, and goes about with a companion or two through the town, showing it, and receiving in return the coppers of the faithful. We believe that there is nothing like this ceremony in the West, though the wedding of the Adriatic by the doges, and the feeing of the Christmas waits and the customs of boxing-day in England, seem to present some points of approach to it.

Appalachia for January (Boston: W. B. Clarke & Co.) has an article on the Middlesex Fells, with a new map of that romantic region, which wise laws and public spirit seem likely to secure as an ultimate addition to the metropolitan park system, already without a peer in this country, if in any. And as the winter is passing, we may as well repair an omission to speak of the July number, with its topographical map of Mt. Monadnock, and its beautiful view of the San Antonio Mountain in Southern California.

Two articles in the *National Geographic Magazine* (Washington) for February give a permanent value to the number. One is Gen. A. W. Greely's observations on Bering's first voyage, in connection with its cartography, illustrated by a reproduction of De l'Isle's *Carte Générale* of 1752. This paper usefully supplements Mr. W. H. Dall's studies concerning the same navigator, and gives copious extracts from the itinerary of a Russian officer familiar with both Bering and De l'Isle. The other paper, by Israel C. Russell, has to do with the height and position of Mt. St. Elias, which is claimed as United States territory and "practically a corner monument of our national domain."

The prenasal fossa is discussed by Dr. Thomas Dwight, Parkman Professor at Harvard, in an eight-page reprint from the February number of the *American Journal of the Medical Sciences*. Skulls exhibiting the feature in question are described and figured, and it is shown to occur only in man and the seal, a distinction being made between the fossa and the gutter (occupying a similar position) in the apes and other mammals. The fossa is of frequent occurrence in the Pacific islands, and especially so in Java. In a locality in Bavaria, Ebrach, it is said to reach a percentage of thirty-two. To the author it is indicative of lowness of race. Absent in the anthropoids, he says, it cannot be due to reversion or atavism, and its presence in animals so far apart as men and seals cannot be accounted for by similarity of external conditions. He further says: "The occurrence of the fossa prenasalis in man and seal implies a relation between distant animals other than that of heredity. It must be due to a law which we can grasp but vaguely, resting on a common plan, and, to some extent, on common tendencies." We should prefer to account for the occurrence of the fossa in the two cases by means of common tendencies resulting from similarity in effort and usage, rather than by supposing the existence of a law not at present recognized; and we should expect the peoples in which the fossa appears to have possessed habits—possibly of grasping, holding, or tearing with the front teeth—in a measure similar to some obtaining among the seals.

The Boston Museum of Fine Arts is exhibiting the Hermes of Praxiteles and the Venus Genetrix, colored by Joseph Lindon Smith in the light of our archæological knowledge and of his own instinct as a painter. An explanation of this experiment, by Mr. Edward Robinson, Curator of Classical Antiquities in the same institution, has been published by the Museum and will be found to possess exceptional interest.

Westermann & Co. send us the second part of Vogel's grand map of the German Empire published by Perthes at Gotha. Its two plates represent Schleswig and the Strassburg section, stretching east and west from Metz to Mannheim.

At the February meeting of the Royal Geographical Society, Mr. J. Theodore Bent gave an account of his explorations among the ruins in Mashonaland, South Africa. Those known as the Zimbabwe are the most extensive, covering a vast area of which the centre is a circular building "which is a perfect specimen of an ancient phallic temple," with massive walls, monoliths, three entrances, and "marvellous interior arrangements." Upon a hill above it was a fortress of extraordinary strength, within which was another temple with an altar built of small granite blocks; near this were found quantities of soapstone *phalli*. Its semicircular outer wall was decorated with pedestals five or six feet high, bearing carved birds resembling a vulture. Buried in the earth were iron bells, fine barbed copper spearheads, fragments of pottery of excellent glaze and workmanship, pieces of Persian and Celadon china, and soapstone bowls carved with representations of hunting scenes, processions, animals, geometrical patterns, and one inscription. Not far off stood a "gold-smelting furnace made of very hard cement," crucibles of the same material, tools for extracting gold from the furnaces, burnishers, and crushers. There were also heaps of "quartz casings from which the gold-bearing quartz had been extracted prior to crushing." As the ruins are far from any gold reef, it is evident that the people who mined the gold chose this place for their capital because of its peculiar defensive advantages. Who these were is not yet clear, though Mr. Bent does not hesitate to say that they were of Arabian origin. As to the time in which they lived, one thing only is certain, that it was before the days of Mahomet.

"E. S. S." writes to us from Ann Arbor:

"The reference in a recent criticism of Mr. Hale's 'History of Massachusetts' to his principle of not going further than the war of 1812, reminds me of an amusing error that appears annually in the catalogue of the University of Michigan. In the requirements for admission to the course for A.B., one of the items is 'History: the History of the United States as far as the close of the Revolutionary War.' Whether the Faculty perpetuate it as a mild joke, or allow it to remain through oversight, I do not know."

Mr. George William Curtis succeeds James Russell Lowell as honorary Vice-President of the Egypt Exploration Fund. The Rev. Dr. W. C. Winslow will continue to act as honorary Secretary for America, in coöperation with forty-two local secretaries.

—A correspondent writes to us from Oxford:

"The Oxford University Dramatic Society gave on February 24, at the New Theatre, the first of a series of eight performances, 'reviving' the 'Frogs' of Aristophanes. The performance was uncommonly entertaining, although nearly two-fifths of the great original were, for one reason or another, omitted. It was wise to consult the convenience of the Dramatic Society and to dispense with the entertaining scenes with the Maidservant and the Tavernkeeper; it was prudent and perhaps unavoidable that the Contest of the Poets should be curtailed by 200 lines. Although the central point of interest in the play was undoubtedly somewhat shifted by this last omission, the audience was certainly better able to follow the portions given than it would have been to understand the whole scene, which was within the comprehension only of an Athenian public during the few years when the dramas minutely alluded to and parodied were fresh in every one's recollection. Among the characters whose comic proceedings were most enthusiastically applauded was the *Corpse*. In fact, the wild and persistent calls which resulted in the dead man's reappearance gave a farcical climax to the episode which was thoroughly Aristophanic, though not provided for in the text. The lesson in rowing given by *Charon* to the god *Dionysus* borrowed some of its merrymaking zest from familiar scenes upon the Isis and the Cam, and fairly brought down the house, while the rollicking fun in the part of *Xanthias*, as played by Mr. Lyon of Trinity, was positively infectious. A tendency to overdo the burlesque, noticeable in the too copious laughter of *Heracles*, the exaggerated helplessness of *Dionysus*, and elsewhere, had at least the advantage of helping those unfamiliar with the Greek to take the points. The contrast between *Euripides* and *Æschylus* was perhaps not quite the one intended by Aristophanes, but it was well marked and perfectly well grasped by the audience. *Euripides* figured rather too much as the effeminate man, and might indeed have been mistaken for *Agathon*; but the comic travesty of Æschylean song given by Mr. Ponsonby of Balliol—who was *Euripides* after being the *Corpse*—was one of the great successes of the performance. Dr. Hubert Parry's music was uncommonly modern, and yet gave great emphasis to the wonderfully telling contrasts of the play. The funereal march-strains when the *Corpse* was borne in had something of the humor of Mozart; the serious and really beautiful song of the *Mystae* was interrupted by reminiscences of the Boulanger March used to express the political turpitude of *Theramenes*. A similar effect was obtained by the sudden introduction of the 'See-saw' waltz, but the happiest inspiration of them all led Dr. Parry to give his Chorus, successively describing the manner of Euripides and that of Æschylus, first the page's song from Meyerbeer's 'Huguenots,' and then a few most uncompromising bars from Beethoven's ninth symphony. The dancing of the Chorus was most pleasing, having something of the swing peculiar to well-known parts of 'Patience' and 'Pinafore.' The scenery was appropriate, especially the Lake of Acheron, from beneath whose waters the song of the Frogs was heard while three or four frogs' heads emerged rhythmically around the boat of Charon."

—An old contributor writes:

"I had just reread Ritschl's merciless review of Madvig's 'Adversaria,' in which the Danish scholar's false quantities are not spared (Opusc. iii. 164), when I opened a volume of 'Abhandlungen aus dem Gebiet der klassischen Alter-

tumswissenschaft Wilhelm von Christ zum sechzigsten Geburtstage dargebracht,' and began with the 'Carmen Salutatorium' by J. Menrad, who is known as the author of a creditable piece of work on contraction and synizesis in Homer. Where his master Christ studied, I do not know; but many a sexagenarian scholar of Ritschl's school would rather have died at fifty-nine than have lived on to be congratulated in a poem that begins with the portentous blunder *Iam lux ter vĭcies*. To be sure, *vĭcies* is no worse than Madvig's *nātasse* and *păletur*, and Latin verses are an anachronism; but the anachronist should possess and use a *Gradus ad Parnassum*, under penalty of having his verses considered *perparvi valoris*, as a German Latinist wrote the other day."

—Prof. William James has produced an abridgment of his important treatise upon Psychology, with some additional matter for the use of beginners (Henry Holt & Co.). His "natural science" method, which consists of ignoring all general doubt, is carried even further in the briefer than in the fuller work. An epilogue is appended for the further defence of this method, but to no avail. Students of molecular physics presume, for reasons that seem good to them, that certain things are absolutely true of the universe in every part, such as the tridimensionality of space, its infinity, the law of action and reaction, the principle of energy, and the like. These universal truths, as they are held to be, have a basis in experience, but are extended so far beyond the domain of observation as to be fairly termed metaphysical. In many branches of physics it is easy to show that they are near enough true for practical purposes; but in molecular discussions the question of the truth of such things has to be sifted to the bottom, on pain of leaving a grave doubt over the whole subject. In psychology the same thing is far more true. The list of metaphysical positions is longer, and they are far more dubious; so much so that students of psychology have hitherto considered metaphysical discussions as unavoidable. Such discussions have by no means been omitted by physicists, although the present unsatisfactory state of molecular theory is in part owing to the small aptitude of laboratory men for the kind of thinking requisite for the solution of such problems. Prof. James's method practically comes to keeping the most general questions out of the focus of distinct apprehension and thus entrapping himself, or at least the reader, into confident but dangerous and unexamined assumptions. To have pointed these out all along would not have made the book much longer nor seriously harder for the student.

—The horticulturists of Paris were greatly surprised, a few weeks ago, by the display at the Halles of a flower hitherto absolutely unknown to them. Several boxes of bright-green pinks were put on sale. Pinks of all other colors have abounded: white ones are common, red ones have been a great deal too common; but no human eye had ever seen green ones before, except, perhaps, as the *Temps* rather wickedly said, in impressionist pictures. The flowers took at once with the public and sold rapidly at a couple of francs each. But the police, suspecting some mystification, and doubting lest the flowers might be in some way harmful, seized all that were exposed for sale, and sent them to the public chemist for examination. M. Girard recognized at once the fact that the coloring was artificial, and soon discovered the way in which it had been done. The stems of fresh-cut flowers had been dipped in a color-bath. The color mounted up the stem by capillary action and was reduced there, but was reoxidized in the petals when it came in contact with the air. The flower preserves its aroma. Further investigation disclosed that this discovery had been made accidentally by some girls who were at work upon artificial flowers. Many other flowers, especially narcissuses and lilacs, can be colored in the same way as the pinks, and the discovery seems likely to give rise to a new and horrible industry.

LOUNSBURY'S CHAUCER.—I.

Studies in Chaucer, his Life and Writings. By Thomas R. Lounsbury, Professor of English in the Sheffield Scientific School of Yale University. 3 vols. Harper & Bros. 1892.

THE publication of three large volumes of 'Studies in Chaucer' from so competent a pen as that of Prof. Lounsbury may without exaggeration be called an important event in the history of American scholarship, and the fact that these Studies are not merely *ad clerum* makes it also an important event in the history of American letters. The eight chapters of which the work is composed are independent of each other, and fairly entitled to be termed monographs in the strictest sense of that much-abused word.

The first two chapters are biographical. In chapter i. what is known of Chaucer's life is lucidly told, with due citation of evidence, and such theories as can muster a respectable body of adherents are critically considered. In chapter ii. — "The Chaucer Legend" — the fables that have taken the place of fact in many accounts of the poet are collected and exposed. This relegation of legendary matter to a separate essay is a happy device. By means of it, the first chapter gains a straightforwardness which it could not have if the author were obliged constantly to clear the way of obsolete absurdities. But, even after this setting aside of the demonstrably untrue, there still remain problems enough to tax the powers of the clearest-headed biographer. To the examination of these Mr. Lounsbury brings sound common sense and a judicially sceptical frame of mind. He is also master of an easy, flowing style—leisurely, but not diffuse or prolix—and of a pleasantly subacid humor. As a result he has produced not merely the most scholarly life of Chaucer yet written, but by all odds the most readable. That his leisurely pace now and then beguiles him into repetition, and that his humor occasionally induces an epigram of doubtful validity, are trifling faults that the grateful reader will be glad to overlook.

In the vexed question as to the year of Chaucer's birth, Mr. Lounsbury states with characteristic fairness and perspicuity the arguments for 1340 and for an earlier date. 1328 he of course rejects; but he finds it impossible to accept 1340, which has of late received a sort of conventional authentication. On the whole, he is disposed to favor "a time between 1331 and 1335" as being "in accordance with all the conditions implied in the references made to his age by Chaucer himself or by his contemporaries." There is little to allege against this proposed date, and that little is pretty satisfactorily answered. The deposition in the Scrope-Grosvenor case is too indefinite to argue from; the station of Chaucer in Prince Lionel's household is unknown to us; the 'Book of the Duchess' can hardly be the 'Ceyx and Alcyone' which the poet wrote in his youth.

While, however, one may admit that there is nothing cogent against Mr. Lounsbury's date, his affirmative arguments are not entirely convincing. He produces in evidence a number of passages in which Chaucer is referred to as "old," either by himself or by his contemporaries. If Chaucer died at the age of sixty, he reasons, these passages, some of them written a good while before his death, become at once unintelligible. Of the four passages quoted from the poet himself, that from the 'Legend of Good Women' is too vague, and that from the 'House of Fame' is too jocular, to be accepted as a chronological datum. The third is the 'Envoy to Scogan,' conjecturally put in 1393. In this Chaucer not only makes his friend call him "olde Grisel" (old gray horse) and insinuate that he is somewhat frisky for his years, but speaks of himself as "hoar and round of shape," and, inferentially, as unlikely to succeed in affairs of love. Further, he hints that he has given up versifying:

> "Ne thinke I never of sleep to wake my muse
> That rusteth in my shethe stille in pees;
> Whyl I was yong, I putte hir forth in prees."

The jocose "olde Grisel" is, of course, inconclusive, not merely because it is jocose, but because, whatever may be thought the proper time of life for a man to give up philandering, there can surely be no necessary impropriety in a man of fifty-three calling himself stout and gray-haired, and suggesting that younger gallants have the advantage of him. But the reference to the dormant Muse seems to Mr. Lounsbury decisive. "He is now a veteran, and he feels no disposition to lag superfluous on the stage. In the crowd of aspirants he could bear his part . . . when he was young," etc. To express himself thus, he thinks, Chaucer must have been at least sixty.

The difficulty with all this is that the passage, if taken so seriously, proves too much. The third of the lines just quoted needs little pressing to make it testify that all Chaucer's long poems were written in his youth; and this is a statement hard to reconcile with the facts. If Chaucer was born in 1340, his Muse was emphatically among the prees till his forty-eighth year—till his fifty-third or fifty-seventh year, if we accept Mr. Lounsbury's 1331–35—and this time of life cannot be called youth. In brief, it is unsafe to use the language of the 'Envoy' for Mr. Lounsbury's purposes. Chaucer's words are quite consistent with his having been a hale and hearty man in late middle life, who was inclined to laugh at himself as an oldster—just as he had in the 'Troilus' described himself, with mock humility, as the *servus servorum* of Love—and who had either forsworn love-verses, to which in his youth he had been addicted, or given up poetical composition altogether for a time. The latter alternative would suit well enough with the business on which Chaucer was engaged in 1393. He was superintending the cleaning and repair of roads, dykes, and ditches along the Thames—an occupation not altogether favorable to inspiration.

The fourth passage is the Envoy to the 'Compleynt of Venus,' in which occur the lines:

> "For elde, that in my spirit dulleth me,
> Hath of endyting al the soteltee
> Wel ny bereft out of my remembraunce."

But this language is shown by the poem itself to be exaggerated; for the 'Compleynt,' as Mr. Lounsbury himself says, "is one of [Chaucer's] feats of poetical strength" in the handling of a difficult and artificial metre. Chaucer is always fond of apologetic allusions to his insufficiency, and there is nothing absurd in supposing that, at the age of fifty-nine or sixty—old enough to call himself advanced in years—he should assign *elde* as an excuse for his self-alleged, but imaginary, deficiencies in skill. In all this we are not arguing in favor of 1340—for which we have no especial prepossession—or against 1331–5, with which we have no quar-

rel. We are simply contending that it is not safe to use these four passages as evidence in the question of Chaucer's birth.

Of the references to Chaucer's age made by his contemporaries, only one is of any importance. This is the well-known message from Venus, near the end of the first or "royal" version of the 'Confessio Amantis.' The language there used appears to Mr. Lounsbury ridiculous if addressed to a man of fifty-two or fifty-three, and that would be Chaucer's age if he was born in 1340 and this version appeared in 1393. It seems not to have struck Mr. Lounsbury that, if the "royal" version be referred to 1386 (a date which he is disposed to favor) and Chaucer's birth to 1333 (a date which falls within his proposed limits), the age of the poet would still be but fifty-three, and the words of Venus would be as inappropriate as ever. In fact, however, the terms of the message may without violence be made to bear an interpretation different from that ordinarily given. She has just informed Gower that he is too old to devote himself to her longer, and she bids him convey to "her disciple and poet," Chaucer, the following injunction: "In the flower of your youth you wrote many ballades and virelays in my honor, wherewith all the land is filled. Now that you are old, it is time for you to quit my service. As a fitting valedictory, therefore, make your testament of love, as Gower has made his shrift." Thus explained, "to set an end to all his work" is a suggestion not that Chaucer cease writing when he has made his testament of love, but merely that he cease writing amatory verse or that he abandon the service of Venus; and either of these things he might without impertinence be called upon to do at the age of fifty. Younger than this he surely was not; for the 'Confessio Amantis' in its first form was pretty certainly finished after 1390. This date is satisfactorily fixed by a marginal note to which attention was first called by Karl Meyer in his interesting dissertation, 'John Gower's Beziehungen zu Chaucer und König Richard II.' (Bonn, 1889). Mr. Lounsbury does not mention Meyer's essay, and clings to the old date, 1386 (or earlier), which rests on theory alone.

In the debate on the parentage of Thomas Chaucer, Mr. Lounsbury takes what seems the only tenable position since Prof. Hales's appeal to Gascoigne. It is carrying incredulity very far, he thinks, to suppose that the Oxford Chancellor can have been mistaken about the famous commoner who was his contemporary and almost his neighbor. In some ways, however, Mr. Lounsbury has been more than fair to the opposition. Lydgate wrote two poems in honor of Thomas Chaucer, in neither of which is there any mention of the poet; and this is thought to create a difficulty. The difficulty vanishes when the poems are inspected. They were both composed, according to Shirley, in 1414, when Thomas Chaucer was setting out for France on a diplomatic errand, and are thus of an altogether occasional character. The first depicts the grief of the family and friends of the ambassador at the thought of his departure, and foretells their loneliness while he is gone. Here is no place for an allusion to a fourteen-years-dead father, unless it were lugged in as Sancho did his proverbs. The second is ostensibly addressed to a woman, and has the refrain, "But when I see my lady dear!" Here there was no possibility of alluding to Geoffrey Chaucer, had he been ten times the father of Thomas. In his description of the Chaucer seals, Mr. Lounsbury has again admitted more than the opposition has any right to demand. The first letter of [*G*]*HOFRAI*, he says, has disappeared and we know nothing of it. But Mrs. Haweis, whom he cites, says merely that the first letter is "illegible," and Hunter speaks of it as "indistinct." In the engraving which accompanies Hunter's note (*Archæologia*, xxxiv., 43), the presence of the letter is clear enough; the only question is what the letter shall be called.

In one respect Mr. Lounsbury has done the cause of sobriety in conjecture especial service in this chapter. He has pointed out the tenuity of the evidence on which we are sometimes asked to believe that Chaucer's wife was a shrew and his married life "a failure." And he has followed up his advantage by exposing (in chapter ii.) the pretty romance which it is now the fashion to speak of as "Chaucer's long, early, and hopeless love." He might have added another illustration if his case had needed it. If the methods used in constructing the story of Chaucer's wooing were applied to the 'Confessio Amantis,' we shudder to think what a "heart-tragedy" might be made out of the life of the respectable and prosy Gower. The data are plentiful, and the dissertator who takes our hint will find them astonishingly precise.

Chapter iii.—"The Text of Chaucer"—contains an interesting exposition of the dangers which environed the tradition of an author's works in the age of manuscript. In his illustrations of scribes' blunders, Mr. Lounsbury is for the most part well-advised; but in one important instance we are obliged to disagree with him. In the famous line, "An he ne wol don hem no dishonour," at the end of the Wife's ironical praise of the "limitours and other holy freres" who have banished the fairies by their pious presence, he wishes to restore *but* for *no*, on the ground that *no* makes "the conclusion tame and utterly pointless." With all his feeling for Chaucer's humor, Mr. Lounsbury has missed the point here. The remark, "Of course the holy friars will not hurt women," is naturally to be taken in the same spirit as "husbondes ben alle goode," or

> "How mighte a man have any adversite
> That hath a wyf? certes I can not seye."

"In an age when the business of transcribing texts was mainly carried on in the monasteries, it was no difficult matter for a copyist to persuade himself that he was doing the Lord a service when he converted an attack upon a religious body into a commendation of it by an expedient so simple as the substitution of a *no* for a *but*." Now, in the first place, few persons have ever taken the line for commendatory, even in the form in which the editors offer it. Again, does Mr. Lounsbury think that Chaucer's Adam Scrivener was a monk?

A convenient account of the printed editions, from Caxton's in 1478 to Morris's Aldine text, succeeds this examination of the manuscript sources, and is followed by remarks on the versification of Chaucer, and the labors of modern scholars in ascertaining his language and metre. Mr. Lounsbury offers just tribute of praise to the admirable Tyrwhitt; but he speaks too slightingly of Thomas Wright, who, whatever his deficiencies, was widely learned in mediæval literature, and put his learning to uses that have left all succeeding students deeply in his debt. A lighter case of injustice is the charging of Prof. Skeat with an unnecessary emendation—"or *Theseus* brende Thebes the citee"—which that scholar withdrew some three years ago. Mr. Lounsbury has evidently overlooked Mr. Skeat's amended note, which is more satisfactory, indeed, than his own comment. The services of Prof. Child, the founder of the scientific study of Chaucer's language, and of Dr. Furnivall, the indefatigable director of the Chaucer Society, are duly recognized, and the chapter closes with a statement of what remains to be done in text-criticism and in exegesis.

The chapter on "The Writings of Chaucer" is divided into two parts. The first deals with the tests commonly used in establishing the Chaucerian canon, and gives what information is needful about all the spurious or doubtful works except one—the 'Romaunt of the Rose.' With regard to the other works that have been attributed to the poet on insufficient grounds, Mr. Lounsbury is substantially in accord with the best accredited modern criticism. He finds it hard to give up 'The Cuckoo and the Nightingale,' but he decides that the balance of probabilities is against it. He is not quite accurate, however, in saying that this poem "does not violate a single one of the metrical tests." In the second part of the chapter, devoted to the 'Romaunt of the Rose,' Mr. Lounsbury arrives at a conclusion so different from the prevailing opinion that his elaborate monograph of more than 160 pp. will no doubt receive the closest scrutiny. He believes that the extant fragmentary version is entirely from Chaucer's hand. His criticism of the evidence against this view is interesting and brings out some points hitherto overlooked; but, except in the matter of the "vocabulary test" and perhaps of the "strange-rhyme test"—two criteria far from indispensable to the case of the separatists—he has not done his opponents much damage. The "*-y*, *-ye* test," in itself all but decisive, comes off unscathed. The "final *e* test," perhaps the most important of all, is very oddly treated. Inadvertently, no doubt, for nobody can suppose that he has deliberately suppressed the evidence or was ignorant of its significance, Mr. Lounsbury has neglected to apprise his readers of the existence of between one and two hundred cases in which the rhymes of the 'Romaunt' violate Chaucer's usual practice with regard to final *e*. The effect of this omission on the validity of Mr. Lounsbury's results is obvious.

There are other errors in this part of the monograph, but we have barely space to speak, in the briefest terms, of Mr. Lounsbury's affirmative arguments. These all come under the head of identity of style, but may be roughly classed as (1) the argument from the usage in common of "certain individual words and brief phrases"; (2) the argument from parallel passages; and (3) the argument from synonyms. The first of these is of little importance. The third can be mathematically demonstrated to be based on erroneous assumptions. The second cannot be admitted in evidence until Mr. Lounsbury's long lists have been reduced to their lowest terms by the excision of idioms, literal translations, and literary commonplaces. Such excision will reduce these lists to proportions no longer impressive or even particularly noteworthy. In spite, then, of Mr. Lounsbury's very skilful conduct of his case, we must be allowed to accept the theory that the 'Romaunt' translation (with the possible exception of the first 1,700 lines) is not Chaucer's, but the work of imitators—for this theory satisfies all the conditions of the problem better than Mr. Lounsbury's hypothesis, and does not, like that, come into violent contact with insuperable difficulties in dialect, metre, and grammar. Dr. Kaluza's observations with regard to the first 1,700 lines of the poem are not mentioned by Mr. Lounsbury, even in his Appendix, though in the body of the book he cites a letter of Skeat's in which they are discussed. This omission is much to be regretted, for it would

have been interesting to see how Mr. Lounsbury squares the facts noticed by the Königsberg scholar with his own theory.

To "The Learning of Chaucer" we can give but a word. In this admirable dissertation Mr. Lounsbury has collected all that is known of the subject. Yet the chapter is far from being a mere compilation. The author's own contributions are considerable, and his criticism of the conclusions of other investigators is of the highest value. The essay is henceforth indispensable alike to the tyro and to the adept. Particularly interesting is Mr. Lounsbury's estimate of Chaucer's obligations to Dante, which is very different from that of Skeat and Ten Brink, but seems judicious. His theories about Chaucer's relations to Petrarch and Boccaccio are less probable. One is glad, however, to have him controvert the opinion, "current rather than well-considered," which a recent English advocate of the separation of the study of literature from the study of philology has summed up in the amazing dictum, 'But for the 'Decamerone' we should never have had the 'Canterbury Tales.'" In one respect the essay is defective: due weight is not given to the influence of the metrical romances on the style of Chaucer. But on this point Mr. Lounsbury is in full agreement with most historians of literature. Here and there a trifling error or omission has escaped the author's eye. Maximian, for example, is not included in the list of authors whom Chaucer may have known. In the paragraph on the Physiologus the reader is for once not made acquainted with the results of recent scholarship; a reference to Lauchert would have solved all the problems raised by the passage from St. Jerome, in which, by the way, the received reading is apparently *physiologos*. But these minor blemishes go for nothing in comparison with the general excellence of a thoroughly satisfactory piece of work.

The sixth chapter consists of two short essays —"The Relations of Chaucer to the English Language" and "The Relations of Chaucer to the Religion of his Time." The first of these lays no claim to be regarded as a contribution to the as yet unwritten history of the growth of a literary language in England. It was intended for the general reader, and is therefore chiefly taken up with the correction of two gross errors — the assumption that Chaucer spent his days and nights in consciously attempting to refine the English tongue, and the idle fancy that he debased or at any rate extensively altered it by a large importation of French words. Mr. Lounsbury has, of course, no difficulty in disposing of these figments. He seems, however, to lay too much stress on the influence of Chaucer in fixing the East Midland as the dialect of literature and of educated speech. At all events, we miss an estimate of other influences without which Chaucer's would perhaps have failed to be definitive.

BOOKS ABOUT THE STAGE.

Hamlet from the Actor's Standpoint. Its Representatives and a Comparison of Their Performances. By Henry P. Phelps. New York: Edgar S. Werner.

The Art of Acting, in connection with the Study of Character, the Spirit of Comedy, and Stage Illusion. By Percy Fitzgerald. Macmillan & Co.

Playhouse Impressions. By A. B. Walkley. London: T. Fisher Unwin; New York: Charles Scribner's Sons.

Twenty Years at the Play, and Dramatic Table Talk. By Clement Scott. London: The Railway and General Automatic Library.

The Stage Fright; or, How to Face an Audience. By Adolph Kielblock. Boston: George H. Ellis.

Mr. Phelps, already favorably known to collectors of theatrical books as the author of a history of the drama in Albany, has now begun a series of volumes on the stage history of famous plays, with a volume on the most famous of all plays, "Hamlet." Mr. Phelps sets out to do for the *Hamlets* of all the actors what Mr. Mason did recently for the *Othello* of a single actor, Signor Salvini; that is to say, he considers in turn and at some length the personation of the greatest of Shaksperian characters by the greatest actors of the English-speaking stage, from Richard Burbage and Thomas Betterton to Mr. Edwin Booth and Mr. Henry Irving. He gives us first a chronological account of "The Hamlets of the Stage," a general description of each actor's conception of the character and of his performance as a whole, quoting freely from contemporary critics. Then he considers, one by one, the chief scenes of the play—the scene with the ghost, for example, that with the players, that with the Queen, that in the churchyard; and he shows us how each great actor acted this particular bit, what his arrangement of the stage was, what his reading of the text, what his illustrative "business." This division of the volume is that which is probably the most valuable, for it serves to bring out emphatically the fact that Shakspere wrote his plays to be played, and that he devised them so that the accomplished actor can find his account in the performance even of the smaller parts. Just now there is a tendency to consider Shakspere simply as a poet, and to forget the fact that he was a practical playwright as well, the most successful and popular of his time. But to overlook Shakspere's mastery of the stage is to neglect the fundamental condition which made his plays what they are. It is a real help to the understanding of Shakspere's greatest tragedy that Mr. Phelps has provided us with in this volume; he has done his work well, and it was very well worth doing.

The one fault a critic could find with 'The Stage History of Hamlet' is that the book itself is ill made. The page is sprawling and the presswork mean. And this is also the one fault to be found with 'The Art of Acting,' which forms part of a so-called "Dilettante Library," and which is as ugly a book as any recently sent from the press. Its page is cramped, its type is ill-chosen, and its cover is some strange abomination of imitation alligator-hide. But the contents were worthy of a better setting. Mr. Percy Fitzgerald, as all readers of his Lives of David Garrick, the Kembles, and the Sheridans know to their sorrow, is a careless bookmaker, himself well read in the history of the English theatre, but turning out books lacking in symmetry and in grammar. The style of the present volume is not irreproachable, and it is not as well planned as it might be; but it contains wisdom, and its sins may be forgiven. Although it is not a well-printed book, and although it is involved and slovenly, and sometimes inconsistent, nevertheless it is, in its way, one of the few books which one could put into the hands of a young actor; and how rare books of this quality are no one knows who has not sought them. Cibber's 'Apology,' Churchill's 'Rosciad,' Lamb's dramatic essays, Sarcey's 'Comédiens et Comédiennes,' Legouvé's 'Soixante Ans de Souvenirs,' and a scant half-dozen more—and we are at the end of the list. With many apt anecdotes and illustrations, Mr. Fitzgerald enforces sound doctrine on subjects as various as tone, distinction, breadth, facial expression, gesture, stage business, and the like.

No contrast could well be sharper than that which is forced upon every reader who happens to take up Mr. Clement Scott's 'Thirty Years at the Play' just after reading Mr. A. B. Walkley's 'Playhouse Impressions.' Mr. Clement Scott is the theatrical critic of the London *Daily Telegraph*, and he writes the sort of English which has "the largest circulation in the world"; he is always cock-sure and for ever gushing. Mr. Walkley writes the dramatic criticisms of the new and vigorous London weekly, the *Speaker;* he is a scholar, and although he swaggers overmuch, he is a gentleman. Both of these London critics love the theatre; both have a wide experience—Mr. Walkley in libraries as well as in theatres; and Mr. Clement Scott in the playhouses themselves—apparently he has never read anything but the newspapers. Mr. Walkley represents the immediate future of the London stage, ready for any advance, and welcoming any return of literature into the playhouse. Mr. Clement Scott represents the immediate past of the London stage, given over to strained adaptations from the French, to the tea-cup-and-saucer comedy of Robertson, and to the empty melodrama of the new Adelphi school of Mr. G. R. Sims and Mr. Robert Buchanan and their fellows. Mr. Walkley is frankly a follower of the impressionistic methods of M. Jules Lemaitre, easy generally, witty frequently, although sometimes not without effort. Mr. Clement Scott is frankly a British Philistine of the extremest type, resolutely conventional in middle-class morality, uneducated in any exact sense of the word, illogical, narrow, intolerant of light—in short, an ideal contributor to the *Daily Telegraph*. Of course Mr. Clement Scott virtuously denounces the plays of M. Dumas *fils*, and he hates intensely the plays of Ibsen. So we find his little book full of vulgar self-sufficiency and cheap reminiscence, almost valueless except in so far as it is a revelation of a character probably common enough in the lower grades of British theatrical journalism.

Mr. Walkley's volume has a value of its own. Whatever his failings, it is almost unfair to him to link his name with Mr. Clement Scott's. Mr. Walkley knows the history of the drama —he can find a Latin original for a French play adapted into English. He knows his Sarcey and his Lemaitre; he has theories of his own, plausible if not convincing, like the difference between presentation and representation set forth on p. 175. He is less insular than Mr. Clement Scott, who, indeed, is rather parochial than insular; but there is abundant insularity in his final remarks on the performance of the "Taming of the Shrew," on p. 41. The book is often brilliant and stimulating, and represents a healthy revolt against the childishness which now and then dominates theatrical criticism; and so it is welcome.

The little book on 'Stage Fright' which Mr. Adolph Kielblock has prepared is more abundant in examples than it is rich in remedies. Stage fright is an indisputable fact, and its victims are never certain that a cure is permanent. Mr. Kielblock gives advice and suggests various devices by which stage fright may be overcome. But at bottom they amount to this: Do not let yourself be frightened. Nevertheless, some of the hints he proffers may be of use to young actors, speakers, and performers.

Katalog einer Richard Wagner Bibliothek. Von Nikolaus Oesterlein. Leipzig: Breitkopf und Härtel. 3 vols.

MOST of the visitors to the Musical and Theatrical Exhibition to be held in Vienna next summer will doubtless devote a few hours to Oesterlein's Wagner Museum, a remarkable collection by a remarkable enthusiast. Here is a museum consisting of three large rooms filled with books, pamphlets, busts, photographs, medals, letters, and other manuscripts, Bayreuth and other first programmes, cards, newspaper clippings, and an endless variety of curios pertaining to Wagner and his operas. This collection was made entirely and unaided by Herr Oesterlein, who has devoted all his leisure time to this object for the last twenty-four years, and expended vast sums of money from his private purse. What makes this the more remarkable is that he is not a music-teacher, nor a professional musician, but a business man, whose interest is merely that of an amateur, although he has studied harmony and written a few pamphlets on Wagner's works at Bayreuth and in Vienna. It was in 1868 that the perusal of 'Oper und Drama' made such a deep impression on him that from that moment he became a most ardent disciple of the master. His plans for a Wagner museum were slowly matured, and in 1887 the museum was opened with musical ceremonies, including the singing of the "Wachet auf" by members of various local choral societies, conducted by Hans Richter. The museum is decidedly worth seeing, and it will some day be of inestimable value to musical historians and biographers. At present, owing to lack of room, many of the documents are difficult of access, but Herr Oesterlein hopes before long to be able to secure more ample quarters for them. He hopes and expects that some other admirers of Wagner will help to provide the necessary funds. Philistines have often sneered at him and his museum, but these Philistines are the very persons who, had they been born thirty years later, would have wondered why no one had started a museum like Oesterlein's, and filled it with Wagner documents while they were still accessible.

It is not so much to the museum, however, that we wish to call attention in this notice as to Herr Oesterlein's catalogue of his collection. This is a gigantic undertaking—three volumes of 322, 356, and 518 pages. In these volumes there are about 20,000 entries of the various objects referred to above. Under appropriate divisions we find enumerated all of Wagner's own writings, musical and literary, and most of the books, pamphlets, etc., that have appeared regarding him in various countries. Especially valuable are the numerous references to newspaper articles (all of which, be it understood, are in the museum). Non-German newspapers are not very liberally represented, and Mr. Oesterlein would be grateful for gifts in this direction; but the important articles on Wagner and his works that have appeared in German and Austrian newspapers are almost all enumerated. Under one heading, for instance, will be found the pertinent contents of musical periodicals like the *Signale*, *Neue Zeitschrift*, etc., from the beginning of the Wagner movement. In many cases, especially in the third volume, Herr Oesterlein has not only given the date of the paper, but cited a sentence or two which would be most likely to interest an amateur or biographer. This, with the section on comic papers, makes very interesting reading; it includes many of the laughable comments on Wagner's early operas, and the prophecies about their speedy disappearance.

The volumes are beautifully printed in large type, and the only objection that can be urged against them is the over-elaborateness of the classification. But this does not affect the value of Herr Oesterlein's work, which is a monument of patient research and utility. The writer of this notice tested its data freely in the German libraries last summer, and found them absolutely accurate.

The Book Bills of Narcissus: An Account rendered by Richard Le Gallienne. Charles Scribner's Sons. 1892.

WHAT is the life of the modern youth—not him whose "habits are good" and there is no more to be said, but the youth with ideas in his head and passions in his heart who goes faring into the greenwood and finds freshness in the new day? No one really knows; but now and then in some indiscreet book one gets a glimpse of it. Narcissus was such a youth; and in these few pages there is just such a mixture of the elements at their kneading work as belongs to the growing time of man. To a sympathetic and tolerant mind, not to be bored by the comedy of salad days, the volume is entertaining, and possibly illuminating. When one finds Mr. Pater's 'Marius,' Sinnett, 'Richard Feveril,' 'Sigurd the Volsing,' Browning's 'Dramatis Personæ,' jostling 'Sartor Resartus,' 'Walden,' Walt Whitman, Zanoni, and Marcus Aurelius, in the intellectual influences of the hour, he may be sure the youth is "modern" to the finger-nail; and out of such miscellaneous impulses and moods working in the "artist" (it used to be called the "poet") nature, what spirit of the new age will be evoked? Read 'Narcissus' if you would have an inkling of it. There you will find an attractive nature, soft to every thought or mood or even whim, yielding in every fibre of his unconscious selfishness, giving out egotism at every pore of sensation or sentiment, and withal wholly charming in the impression he makes—a mind comically adrift and a heart altogether at home with love-adventure; just a sapling of the dilettanti—but phrases are varied in vain to describe the new birth of æsthetic time.

The author who thus delivers his friend over to the Philistines makes the betrayal cleverly enough; he writes with ease and enjoys the dropping of the words, the distillation of the honey as it must seem to him, and occasionally he lights the page with a fine perception of what makes gentle and lovely character, or even keeps for an entire paragraph in a strain of what the school would call eloquence. The sketches of life, particularly that of the household life of the Whitmanite, which is the best chapter, are effectively and at the same time smoothly done; the children's verses, and the children themselves, in the aforesaid household, are sure to be welcome to any child-loving heart; but (otherwise Narcissus would not be Narcissus) there are other scenes that are certainly not for the "home-circle"—let us call them "unmoral" scenes. It is, as has been indicated, a singular little confession, a very modern one, infantile modern; but, above all other things, it has frankness like that of youthful unconcern, only dimly beginning to guess its own comedy. It will be smiled at—the ungentle may even call it silly; but, notwithstanding, it is a spring flower in the not quite pellucid stream of youth, and shows the eddies and currents of the last decade. The author seems to threaten more. Let him not carry out such a purpose; "youth's sweet-scented manuscript" not only must, but should, "close."

The Works of Robert Herrick. Edited by A. W. Pollard. London: Lawrence & Bullen; New York: Scribners.

THIS is the latest addition to the fast-increasing list of Herrick reprints or anthologies, and in many ways the most notable of them all, though not so handsome as the famous Pickering edition or the Edinburgh reprint of 1823. Mr. Pollard has made a wise selection in excluding from his edition the almost uniformly dull or obscene epigrams that so mar the complete reprint, and numbering the remaining lyrics with reference to their omission, thus making it possible, he says, "to print the Epigrams in a detachable appendix," which is or is not—this he does not say—to be printed; but Palgrave's sterner excision of the trivial numbers, sacred and profane, still makes his 'Chrysomela' the edition that pleases most, and least fatigues, the reader. Mr. Pollard's two small volumes, however, are for both the scholar and the reader. For the reader (that is, for *some* readers), he has modernized the quaint and often delightful spelling of the first edition. For the scholar he has enriched his work with foot-notes, collected notes, and appendices, which not only show admirable care and learning, but are entertaining enough to disarm even such a hater of notes as Miss Repplier, especially where they describe the English festival rites, customs, and superstitions, with allusions to which the "Hesperides" so teems; and the edition is provided with two indices—one of personal allusions and one of first lines.

It also prints for the first time in any collected edition (if not at all) several manuscript poems not found in the "Hesperides"—most of which prove, as Mr. Pollard holds, that Herrick was a writer who knew how to edit his own verses. One of them, however, contains some notable lines, of which these on the female virtues are, perhaps, the best (p. 263):

> "Obedience, wise distrust, peace, shy
> Distance and sweet urbanity;
> Safe modesty, lov'd patience, fear
> Of offending, temperance, dear
> Constancy, bashfulness, and all
> The virtues less or cardinal."

Mr. Swinburne for this occasion supplants Mr. Dobson as preface-writer, in which capacity he is, as usual, entertaining, though he has, as usual, next to nothing to set out with all his brave manner. Yet, even so, it is something to be really grateful for that the Tory Tyrtæus suffered the text of Herrick's stout-stomached loyalty to the King, his patron, to pass without hanging upon it a jeremiad against the treasonous Gladstone and the unspeakable Celt.

Lady Mary Wortley Montagu: Select Passages from her Letters. Edited by Arthur R. Ropes, with nine Portraits after Sir Godfrey Kneller and other artists. New York: Charles Scribner's Sons.

THE series of social and literary portraits to which this volume belongs, has been useful in renewing for a generation overburdened with a desire for multifarious knowledge, the features of men and women who are fading out of their picture-frames. We have had Horace Walpole, Fanny Burney, and Mrs. Thrale, and now Lady Mary has her turn. She is a figure not to be forgotten among the Englishwomen of her century; the coarse impress of the time is set both on her life and her letters, and she was both a woman of note and an intellectual woman, and therefore conspicuously exemplifies the age. But neither her career nor her letters attract the finer and higher interest of men, nor do they appeal to any other than the historical curi-

osity to know what a contemporary of Pope and the early Georges did in that day and thought of the doings of that world. She must be praised for strong personal qualities and for excellent literary judgment; and the spice of adventure that still entered into travel in those times adds an accidental attractiveness to her individuality. The pleasantest part of her life was the last score years of foreign residence, which were the occasion of her best letters. The account she gives of her affairs is full of reality, and that necessarily takes hold of the mind and makes one forget the essential triviality of the subject. The criticism she makes on the books of the age, Richardson and Fielding and the rest, is a valuable chapter for the history of literary taste in England, and is, besides, very sound in judgment and true in feeling. Her work, as a contemporary reporter of the age, is of a different class from Walpole's, but it supplies a new centre of interest in the most gossiping of our centuries, and must remain of capital importance in literary history. Nevertheless, it is as "Sappho" that she most provokes curiosity, and we may remark that the present editor decides against the scandalous story of Pope's proposal to her as being the source of his enmity and its consequent satirical portrait. He finds no more cause for the explosion of irritability in Pope than the pin-prick of his vanity by her wit in the celebrated "pastoral letter" episode, or some equally trivial incident left unrecorded. Like most of Pope's victims, she gains in reputation because of the assumption of his injustice. The charges he specifically made against her are satisfactorily disposed of; and there remains only the strong-minded, rather slovenly, and yet socially brilliant woman, coarse but not repellent as the taste of that day went, and much distinguished for courage, vivacity, and good sense. This Lady Mary is well portrayed in this abridgment of her correspondence. The portraits, which are always attractive in this series, are of Lady Mary, her husband and son, the Princess Caroline, Pope, Congreve, Swift, Richardson, and Sarah, Duchess of Marlborough.

Glimpses of Nature. By Andrew Wilson. Harper & Bros. 1891. 8vo, pp. 247. Illustrated.

BOOKS like this one on natural history are always welcome. To have allowed the numerous chapters it contains to remain buried in the scattered pages of their original appearance, in the *Illustrated London News*, would really have been an injustice to the author and a cause for regret to his readers. The essays are all short; the average in the forty-six is little more than five pages. They treat of a variety of matters, and, whether relating to spiders, salmon, mesmerism, the mistletoe bough, the spleen, or whatever else, are full of life and entertainment. By means of a few salient features, without embarrassment from details, the author interests his reader, makes him feel slightly acquainted with his topic, and arouses a desire to learn more about it at some future opportunity. As a pleasant introduction for a stranger serves to wake a friendly concern in all that pertains to him, so these bright little notices induce a wish to meet the subjects of them again. In their suggestiveness they have a value even beyond that of the information they contain. The enthusiastic style of the writer fixes in the mind what he presents, though there may be little more than enough in the descriptions and illustrations for the purpose of identification. If in his enthusiasm the author occasionally is betrayed into exaggeration, the reader does not appear to be shocked by it, but rather is inclined to accept the statement, making due allowances. When told that the tortoises of the Galapagos Islands are so large that a man might easily sit on the back of one and be conveyed by the animal without the latter being aware of the burden he was carrying, we readily believe the creatures are very large and strong, but question somewhat whether Prof. Wilson will insist that the tortoise would not know the man was there if it carried him.

THE

Sauveur Summer College of Languages.

SEVENTEENTH SESSION

Will be held at *PHILLIPS EXETER ACADEMY, EXETER, N. H.*, from July 11 to August 19.
For board and rooms address Miss Fanny Faulhaber, Exeter, N. H.
DR. L. SAUVEUR, Copley St., Roxbury, Mass.

THE UNIVERSITY OF TEXAS.

Applications for the Professorship of Romance Languages in the University of Texas are respectfully invited. Also applications for the Professorship, *ad interim*, of Latin during the session 1892-'93, the Professor of Latin having been granted leave of absence. For particulars address
F. W. BALL, Fort Worth, Texas.

Make Two Hundred

CAKES with Royal Baking Powder and every one will be whiter, sweeter, lighter, finer flavored, more delicious and wholesome than cakes made with any other baking powder.

The last spoonful in a can of Royal Baking Powder will be found as good as the first, and the last cake will be as light as the first, because the Royal has keeping qualities which all others lack.

A spoonful of Royal will go further than a spoonful of any other powder because it is the purest.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,

NO. 59 WALL STREET, NEW YORK.

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

The Nation.

NEW YORK, THURSDAY, MARCH 24, 1892.

The Week.

If the Free-Coinage Bill passes the House through the deliberate absence, and consequently the virtual support, of Republican members who oppose it and whose constituencies oppose it, the delinquents will make a great mistake, both from the party and the personal point of view. Mr. A. P. Hyde, the leading Hartford Democrat, put the case rightly when he declared that "free silver would be the ruin of any party or individual that supported it." The *Nation* has repeatedly expressed its opinion that the passage of a free-coinage bill by the Democratic House would be disastrous to the party. But it may prove equally disastrous for the Republican Representative who connives at its passage. It is a public duty for every member of the House who believes that free coinage would injure the country to do everything in his power to prevent the passage of such a bill. He may think that its passage would hurt the Democratic party, but, if it would also harm the country, he is likely to find his constituents rebuking him if he winks at harm to the country in the hope of thereby hurting the opposition party. The man who refuses to do his duty as a patriot in the hope of personal profit is pretty sure in the end to suffer the just penalty of the traitor.

The St. Louis *Globe-Democrat*, which ought to be good authority as to such a matter, ridicules the position of "the timid Republicans of the East" who are talking about the necessity, or imagined necessity, of making some "concessions to the silver element of the West." It declares that the extent and potency of the silver sentiment of the West are ludicrously overestimated by some of the Eastern papers, and that they are quite as much astray as to the feeling even in the silver-producing States regarding the urgency of silver legislation at this time. The *Globe-Democrat* says that "the Republicans of the West, as a whole, are opposed to free coinage"; that "if the scheme were submitted to the popular vote of the Republicans residing west of the Alleghenies, or even west of the Mississippi, it would be overwhelmingly defeated"; that "outside of Colorado, Montana, and Nevada this doctrine finds no favor in the party, and even in those States the leading papers are advising their Representatives in Congress to display no undue haste in pressing this matter." The St. Louis newspaper goes still further. Not only does it declare that "the Western Republicans are not asking for any 'concessions' from the Eastern end of the party on the silver question," but it adds:

> "Strong and decided ground against the opening of the mints to silver must be taken by the National Convention. There must be no truckling or cringing to the miners and speculators. The clumsy, tricky, and dishonest utterances of the platform of 1888 on silver cannot be repeated safely this year. Western Republicans will stand no such shuffling, hypocrisy, and falsification in 1892."

This is the right sort of talk, and it is refreshing to hear it from the heart of the Mississippi valley. "Clumsy, tricky, and dishonest" are the proper adjectives to characterize the silver plank of the Republican platform of 1888. It was this deliverance of the Republican party which started the present agitation for free coinage. It was a deliverance which, it was claimed, was demanded by the Republicans of the West, and it is reassuring to be told by a leading Republican journal of that section now that "Western Republicans will stand no such shuffling, hypocrisy, and falsification in 1892."

The President on Wednesday week issued his first proclamation imposing duties at his own discretion. It applies to sugars, molasses, coffee, tea, and hides imported from Colombia, Hayti, and Venezuela, and suspends the free admission of such imports from those countries, which must hereafter pay certain specified rates of duty. The recent decision of the Supreme Court established the constitutional power of the President thus to put on and take off duties, but it did not show that it was in the public interest for him to possess the prerogative. It is contrary to the whole theory of our system of Government that the Executive should have the right thus to exercise the taxing power at his personal discretion. For this is what it is—a matter of Benjamin Harrison's opinion. The essential part of the proclamation reads as follows:

> "And whereas, *It has been established to my satisfaction* and I find the fact to be, that the Government of Venezuela does impose duties or other exactions upon the agricultural and other products of the United States, which, in view of the free introduction of such sugars, molasses, coffee, tea, and hides into the United States, in accordance with the provisions of said act, *I deem to be reciprocally unequal and unreasonable.*"

This is the language and the attitude of a sovereign—not of an official executing a law of the Legislature. The "effete despotisms of Europe" are accustomed to this sort of thing, but the theory and the practice of representative government in America have hitherto been that the taxing power belonged exclusively to the legislative branch of the Government. Under the reciprocity section of the McKinley Bill, Congress parted entirely with this prerogative concerning certain articles, and turned over to the President the imposition or removal of taxes upon them as he might deem best, and for as long or as short a time as he might deem best. The effect may not be disastrous in this case, but the principle is wrong, and the practice might lead to grave scandals if it were to be adopted as a permanent rule. Even before the issue of the proclamation, the price of Venezuela coffee to consumers in this country advanced four cents a pound on the strength of rumors that Mr. Harrison "deemed" it his duty to impose a tax upon it.

It would be strange if there were not felt in Venezuela a peculiar resentment at the action of President Harrison in levying a discriminating duty on the coffee and hides imported from that country. In the first place, the condition of our trade with Venezuela has been more satisfactory than in the case of perhaps any South American country—that is to say, it has been steadily expanding, has not been one-sided, and has built up a prosperous line of American steamers. Moreover, no Spanish-American country has been of late years so eager to be on good terms with the United States as Venezuela. She has shown hearty acceptance of the Monroe doctrine, and was quick to second the "America-for-Americans" talk at the Pan-American Congress. That she had selfish reasons for such a course may be admitted. She no doubt looked for help from the United States in her controversy with Great Britain as to the true boundary of British Guiana. In fact, she has repeatedly sought the good offices of this country in that dispute, and has obtained them. Secretaries Evarts, Frelinghuysen, and Bayard each made representations to the Court of St. James's looking towards a peaceful settlement of the quarrel. Mr. Blaine did not move in the matter during his first incumbency of the Secretaryship, though he seems to have done so latterly. But now all the good feeling brought about by these friendly relations is seriously imperilled by the retaliatory duties levied on Venezuelan products by the President's proclamation.

When the first telegraphic summary of the decision in the worsted-goods case, known as the United States, Appellants, vs. Ballin, Joseph & Co., by the Supreme Court, came from Washington, the *Tribune* concluded promptly that the Court had approved of Speaker Reed's course in the House in the Fifty-first Congress. It said that it had decided that "he was not a Czar"; that "he was attending to business"; that "the Court had decided, without a dissenting voice," that the members whom he counted in order to form a quorum "were there"; that it declared that "the Constitution had provided a cure for

wilful absence, and that wilful silence cannot then be made to render the House as incompetent as it had been before the cure was worked"; and much more of the same sort of thing. Commenting at the time (March 3) on these youthful inventions, we said:

"The Court holds that the rule adopted by the Fifty-first Congress for 'counting a quorum' was within the competency of Congress. . . . The propriety of such a rule is not passed upon by the Court, and obviously could not be."

These are elementary facts of American jurisprudence which every man who undertakes to discuss the powers of the Speaker ought to know. A man who undertakes to discuss these powers without knowing them ought to be a "disgrace to journalism," and some day he will be. The Supreme Court has not and cannot have any opinion about the "advantages or disadvantages, the wisdom or folly," of Reed's methods. It does not know and cannot know whether he was "a Czar" or "a tyrant" or not.

The full text of the decision has now come to hand. On the question raised in the pleadings, "Was the act of May 9, 1890, legally passed?" the Court says that there is nothing on the face of the bill, or in the journal of the House, "to suggest any invalidity," and that the journals of the House are to the Court conclusive proof as to the proceedings of the House; that the question whether a quorum was present when the bill was passed is, for the Court, settled by the journal. The presence of a quorum was ascertained under Speaker Reed's Rule XV., and as to the validity of this rule the Court says:

"*Neither do the advantages or disadvantages, the wisdom or folly, of such a rule present any matters for judicial consideration.* With the courts the question is only one of power. The Constitution empowers each house to determine its rules of proceedings. It may not by its rules ignore constitutional restraints or violate fundamental rights, and there should be a reasonable relation between the mode or method of proceeding established by the rule and the result which is sought to be attained. But within these limitations all matters of method are open to the determination of the House, and it is no impeachment of the rule to say that some other way would be better, more accurate, or even more just. *It is no objection to the validity of a rule that a different one has been prescribed and in force for a length of time.* The power to make rules is not one which, once exercised, is exhausted. It is a continuous power, always subject to be exercised by the House, and within the limitations suggested, absolute and beyond the challenge of any other body or tribunal."

It is not always easy to determine whether the State Department is "run" by the newspapers or whether the newspapers are "run" by the State Department. There was much perplexity on this subject when the Chilian difficulty was pending, and it was enhanced in that case by the course of the Navy Department, which seemed to be on the point of usurping the editorial functions of the State Department. Latterly, however, the State Department seems to have recovered its lost ground. In the Washington *Star* of March 15, for example, we read this:

"A State Department official said to a *Star* reporter this afternoon that in his opinion Salisbury was purposely delaying his answer until the sealing fleet had a chance to clear for Bering Sea. When they have gone so far that any attempt to stop illegal poaching for this season would be a failure, he will agree to a renewal of the modus pending arbitration. It would be too late then, and any agreement on the part of Great Britain would be a mere piece of political clap-trap, but according to the *Star's* informant the dilatory tactics of Salisbury during the past fortnight would justify no other conclusion in the matter."

In France, or Germany, or any country which has powerful armed neighbors, and where the issues of peace and war hang on a thread, such things could not be published with impunity. Any official who could be identified as the author of such dangerous impertinence would be dismissed from office and lodged in a fortress for a term of years, and the editor of the paper would be heavily fined. In this country we allow everybody to print everything, trusting to the good sense of the public to reject whatever is anonymous and sensational as probably false. Nevertheless, there is a residuum of belief that the anonymous and sensational thing may be true, and that although the "official of the State Department" would no more make such a statement over his signature (which is the only way he ought ever to make one) than he would walk in the street without any clothes, yet that this is what the whole State Department thinks. It is high time that some discipline were exercised to maintain common decency in the Department. If a newspaper which pretends to report the views of officials of the Department refuses to disclose their names, a rule should be posted forbidding any person connected with that paper from having access to the Department. This would be notice to the public that all interviews purporting to give the views entertained in the Department are fabrications. We cannot see any other way to preserve for the Department the respect that ought to be entertained for it by the people.

Although Harrison has secured the Indiana delegation to the National Convention, his opponents in the Republican party do not stop their efforts to prevent his renomination. Their opposition is based upon the assertion that he cannot carry his own State again. The chief newspaper organ of these Republicans is the Fort Wayne *Gazette*, one of the most prominent party organs in the State. Mr. N. R. Leonard, editor of the *Gazette*, has recently written an "open letter" in which he says that Harrison's renomination would, in his judgment, be a political mistake, and that he feels that a large number of the party in Indiana concur with him in these views. Mr. Leonard's reasons are thus frankly stated:

"Mr. Harrison is not a strong candidate so far as Indiana is concerned. It is more than doubtful whether he could carry its electoral vote this fall, were he renominated. In 1888, with the utmost assistance that could be given him by such men as Dudley and Huston, he only carried the State by the meagre plurality of 2,348.

There is a distinct recognition here of the fact that Harrison owed his narrow majority in 1888 to the "blocks-of-five" methods pursued under the direction of Dudley. The passage of the ballot-reform law has of course put an end to these methods, even if Dudley had the disposition to assist Harrison again. If Harrison could carry the State by only 2,348 plurality in 1888, when Dudley conducted a boodle campaign in his behalf, it certainly seems reasonable to expect his defeat in a fair election this year—reasonable, that is to say, if the issue between the two parties be the same in 1892 as it was in 1888. If the issue is shifted so that Harrison stands as the representative of sound money and honest finance, there will be no need of bribery to help him to carry the State. An honest election under the secret-ballot law will give him the State by a majority many times larger than "blocks of five" could secure four years ago.

The action of the Iowa Republican State Convention in endorsing Mr. Harrison, and choosing delegates to Minneapolis nearly all of whom favor his renomination, shows the hopelessness of the attempt to defeat the President's renomination. Iowa is Clarkson's State, and his old paper, the *Iowa State Register*, came out strongly in favor of electing Blaine (meaning thereby anti-Harrison) delegates; but the scheme was ridiculed by all the other party journals of any standing, and Clarkson himself was rebuked by receiving the smallest vote given any of the four delegates-at-large. Everybody but the dissatisfied politicians has seen for months that the President was sure to be renominated; even they must perceive it after the utter failure of Clarkson's anti-Harrison movement in the State which he used to boss.

Clarkson is a man of the Hill type, and he followed Hill's example in regard to the Republican State Convention in Iowa for the choice of delegates to the National Convention. The custom has always been to call such conventions late in the spring, but Clarkson, who controlled the State Committee, decided to convene it this year only three weeks after Hill's snap Convention in New York. But the movement against bossism which Hill's methods provoked caused a reaction against Clarkson also, and when the Convention met he found that he had no control whatever over it, and that he could not carry out his plan of electing an anti-Harrison delegation. Moreover, the revolt against Clarkson's plot is leading to such an exposure of the man by his fellow-Republi-

cans as he has never had before. The *Floyd County Advocate*, for example, says of him: "This man Clarkson as Postmaster-General, and as an unblushing representative of the spoils system, did more to demoralize, degenerate, and subtract from the Republican party of the nation its manhood and the vigor of its strength than all other agencies united." There is no State where the demoralization wrought by Clarkson's methods is so evident as in Iowa, which used to go Republican by from 50,000 to 75,000 majority before he began to boss it, and has now twice elected a Democrat as Governor.

Judge Cooley contributes to the *Atlantic Monthly* for April a strong argument in favor of the taxation of lotteries by act of Congress. He examines the counter arguments that such taxation would be an encroachment upon the domain of the States, and that it would give an implied sanction of the Government to vice by sharing in the profits of gambling. These sophistical apologies for lottery swindling are thoroughly demolished. The taxation of State bank notes by Congress is held by Judge Cooley to have been a wise, constitutional measure, going on all fours with the proposed taxation of lotteries, except that more conclusive reasons can be found for attacking lotteries in this manner than for attacking State bank notes. Judge Cooley notices the recent access of loyalty on the part of the Louisiana Lottery people, who have promised to retire from business since the Supreme Court decided the postal case against them. He thinks that we shall be in a much safer position if we rely on a taxing law than on the promises of reformed gamblers. At all events, he says:

"It will be very well to fortify any present law-abiding determination on the part of the managers by a law they cannot evade. Then they can pension the military chieftains who have so long been in their pay to guard them against being tempted into the low tricks and cheats of common gamblers and confidence operators, and retire upon their millions. A law that effectually takes their business by the throat they will bow to with great respect; neither promises nor the 'honor' of gamblers will restrain them from breaking or evading any other, when they believe money may be made thereby. The seared conscience is not troubled with scruples about law-breaking."

Senator Saxton's joint resolution for a constitutional amendment transferring the power to decide contested-election cases from the Legislature to the courts, which was adopted by the last Legislature, passed the Senate last week almost without opposition. If it shall now be passed by the Assembly, as there is every reason to expect, the question will be ready for submission to the people for adoption. There can be no doubt that it will meet with popular approval, for since the experience which this State went through after the last election nobody except professional seat-stealers can wish to have the present system continued. That experience would not have been possible had the power to decide all contests for legislative seats been lodged in the courts. The County Canvassing Boards and the Board of State Canvassers would not have ventured to tamper with the returns had their proceedings been subject to final review by the courts rather than by a partisan legislative majority, a majority which in the present instance was itself a fraudulent one, obtained by conspiracy and theft.

We recently remarked upon the amendment to the Copyright Law, now pending in Congress, which requires an author to deposit a copy of his book for every State, to be given to the libraries of State "institutions." The Faculty of the University of Virginia have forwarded to the Virginia Senators and Representatives a protest against the amendment. They say that they "regard this bill on the one hand as excessively unwise, in that it would encumber our State University libraries with a huge mass of useless literature; and on the other hand as grossly unjust, in that it would afflict authors and publishers with a tax always oppressive in character and frequently burdensome in amount." The Virginia professors are evidently not to be bribed to wink at literary thieving by a promise of a share of the plunder.

We invite attention to the speech of Gen. Stevens of Massachusetts on the Wool Tariff Bill. Mr. Stevens speaks with the highest authority, being himself the largest individual woollen manufacturer in the country. He has the support of other large and well-known manufacturers, including Robert Bleakie, Jesse Metcalf, William B. Weeden, Rowland Hazard, and Arthur Lyman, some of whose letters he read endorsing the bill now before the House. After such a presentation nobody can affirm that the bill is inimical to the woollen manufacturers. It may be said that its reflex influence will be bad by inciting the wool-growers to attack the manufacturers, but is it not likely that men having such large interests in the subject as Gen. Stevens have taken this factor into their reckoning also? If they can face the jack-o'-lantern of the Ohio shepherds, other people need not borrow trouble about it.

A municipal election was held in Biddeford, Me., the other day, at which 2,153 votes were cast, the result being a Democratic majority of 385. Outsiders have no concern in the question whether the Government of Biddeford is administered by Republicans or Democrats, but there was one feature of this election which is of great interest to all who are studying the development of our institutions. The *Journal*, one of the local papers, declares that votes were bought by the wholesale. "There are in our city," it says, "between 600 and 700 persons [the whole vote just cast was 2,153] who possess no political principles whatever, who also possess the right to vote. They are in the market for the highest bidder. So accustomed are they to make merchandise of a sacred constitutional right that the mass of them do not offer to vote at any election unless for a cash equivalent in hand. There is no secret about this. The boodle men who traffic in votes do not deny these allegations; they not only admit their truth, but boast of their ability to deliver their goods." For years past similar charges as to the prevalence of vote-buying in Maine have been current, so that these allegations as to Biddeford do not come as an entire surprise. They show the crying necessity which existed for the passage of a secret-ballot law. Such a law goes into effect at the State election next September.

The 'State Register and Manual for 1892,' just issued by the Connecticut Secretary of State, gives us for the first time, though in clumsy shape and without any summary, the results of the present license law in that commonwealth. There are 168 towns in the State, of which we find that 82 have "license" of liquor-selling, 81 have "no license," from four towns there are "no returns," and in one town the last vote on the question was a tie. By the locality test, "license" has now apparently a slight majority of the towns, as compared, if we are not mistaken, with a ratio of about three towns to two against license during the first few years following the adoption of the present system, some seventeen years ago. But by the test of population the dominance of the license idea is much more visible in the State. All of the twelve towns containing cities have license, and of the twenty-two borough towns all but five. The twelve urban towns and the town of Stamford alone contain about half the population of the State, so that it is within bounds to say that license is accepted by towns having not less than three-fourths of the citizens of Connecticut, and probably a much larger proportion than that. Of the eighty-two towns which voted on the question last October, "license" won in fifty-eight, "no license" in only twenty-three, and in one town there was a tie. In the towns which can be strictly classed as factory towns only two, Manchester and Windham, have "no license," and in both this is due to special or transitory causes. The figures are of direct interest as indicating how license gradually outstrips prohibition in an old New England State, where both systems have worked side by side during a considerable time. Perhaps the foremost reason why "no license" diminishes under those conditions is that a town normally favoring prohibition, but adjoining a license town, finds that it suffers most of the ills of the liquor traffic without taking in any fees, and naturally prefers to license and tax an evil from which it must suffer anyhow.

SENATOR HILL IN THE SOUTH.

THE chief burden and constant refrain of Senator Hill's speech at Jackson, Mississippi, was Unity. We are accustomed to speeches in favor of the Union, and when any public man talks of the Union we know what he means. But when a public man lays great stress upon Unity, we know that he means something different from Union, although it may be consistent with that. What Mr. Hill meant to urge and advise by that term was "Unite on Me as a candidate for the Presidency." Probably this advice was prompted by late news from the Empire State showing that the Democrats had lost, since their midwinter Convention and since they "presented" Mr. Hill as a unique gift and favorable specimen to the party at large, all that they had gained during the last two years, and something more. No wonder that Unity is the burden of song of this troubadour. Unity is wanted more in New York than in Mississippi. Unity on Hill is impossible in the former, however it may be in the latter, and this fact will become increasingly manifest and prominent as the weeks roll on towards the Chicago Convention. Unity on Hill is impossible, because the people who will not unite on him are those who care nothing for offices, spoils, rewards, places, but only for good government. They cannot be reached by appeals or threats, because the armory of politics contains nothing that they want or fear.

Turning to Mr. Hill's speech to find ideas applicable to the immediate concerns of government, and especially to matters pending in Congress, we find that he is very much opposed to the present silver law. Probably Mr. Hill's hearers wanted to know what he was in favor of rather than what he was opposed to. If such was their expectation, they were disappointed. The New York platform, adopted by the same convention that presented Mr. Hill as an attractive specimen and shining example to the party at large, denounced "any silver dollar that was not of the intrinsic value of any other dollar of the United States." There was no doubt about the meaning of those words. If Mr. Hill had any respect for his own party in his own State, or if he had any self-respect, he would say something about this all-important deliverance when he makes political speeches to Democrats elsewhere. If he speaks on the silver question at all, he is bound to tell where he stands; but he does not. He merely tells where the Republicans stand, and he does not tell that correctly. But this is of less importance than Mr. Hill's failure to say what he is in favor of. He implies that he is opposed to the Legal-Tender Act, or to the legal-tender decision of the Supreme Court, or at all events to the method by which it was obtained. But he does not say anything on this point out and out. If he had said, "I, David B. Hill, am opposed to any law which makes paper of any kind legal tender," we could have understood what he meant. But that is not his way. He is as far from saying that as he is from saying that he is either for or against the free coinage of silver.

The Southern people are famous for their hospitality to visitors. When President Harrison, a year ago, fresh from his efforts to secure the enactment of the Force Bill, made his trip through the South, he was received everywhere not only with civility, but with hearty courtesy. After such an object-lesson it was certain that any Democratic politician from the North who should make a similar trip would be greeted by large crowds and loud cheers, such as Mr. Hill encountered last week. The important question is, what the courteous hosts really think of the "visiting statesman" whom they have entertained, and this is already as clear in the case of Hill as it was in that of Harrison. The New York Senator delivered his speech in the Mississippi Capitol on Tuesday. On Thursday a canvass was made of the Presidential preferences of such members of the Legislature as could be reached, and only eight out of seventy declared themselves for Hill, while thirty-one were for Cleveland, with scattering votes for Gorman, Boies, etc., and a considerable contingent for "the man who can win." A despatch from Jackson says that "the complaint is general among the Alliance men that Hill did not define himself upon any of the economic questions which they regard as of vital importance. One member expressed his opinion by saying that he (Hill) went back to where the world was nothing better than a vapor, took a general crack at creation, and failed to hit anything he shot at."

The failure of Hill's electioneering trip is evident when a canvass is made of the people as distinguished from the politicians. Columbus is one of the chief towns of Mississippi, and a despatch from that place says:

> "One hundred and fifty of the business men of this city were interrogated yesterday as to their choice for President. The result was: Cleveland, 99; Hill, 38; Boies, 6; Palmer, 3; Campbell, 2; Gorman, 1. Hill's speech at Jackson has been a disappointment to many people here, and has not gained him any new friends."

There is, perhaps, no part of the country where the people have more contempt for a coward than in the South, and a public man could not possibly do anything so well calculated to forfeit their respect as to address to them long speeches in which he is afraid to define his position on the burning issues of the day.

THE SECRET OF WARRIORISM.

OUR suspicion that a large proportion of the warlike literature which appears in our contemporaries when we have any dispute with a foreign Power is the composition of patriots under eighteen, receives ample confirmation from a despatch in the *Herald*, last Thursday. Daniel Webster's observation in 1842 is certainly also true of to-day:

> "The great body of the intelligent people of the United States desire, I have no doubt, a firm and settled peace. But there are here, as in some European States, agitators, uneasy and restless spirits, who desire change, disturbance, and a new state of things. But a little more powerful class among us is made up of men of some consideration also, who, although they hardly desire war, yet as little desire a permanent and settled peace. They rejoice in instances of collision, in all incidents which ruffle the waters, and in whatever makes probable war a subject of speculation and conversation. I quite regret to say that our public councils are not always free from feelings of this kind, and these feelings easily spread and kindle under the fanning of patriotic professions, and an apparent readiness to offer conflicts to the greatest Powers in the world."

Ample corroboration for this is to be found in the fact that we never have the smallest difference with a foreign Power, when our newspapers and some of our public men do not *at once* begin to talk of an appeal to arms, to count our ships and guns, to accuse the other side of "arrogance and insult," and "mendacity," and "hypocrisy," and "deceit," and to assure the President of the support of Congress in case he should immediately resort to hostilities. This naturally excites the astonishment of diplomatists in other civilized countries, and puts to shame those friends of democracy who have been promising the world an era of sweet reasonableness under democratic government. For the model of diplomatic discussion in those countries is that of two gentlemen seated at a table trying to clear up a misunderstanding or make a contract on a matter of business. Our model, on the other hand, often seems to be that of two hostile "toughs" who have met by chance in a bar-room, and are bent on clearing off old scores, each watching closely lest the other should "get the drop" on him. No better illustration of this could be desired than President Harrison's first message to Congress about the Chilian matter. It was full from first to last of the grossest insults to the Chilian Government, which in private life no civilized man would think of uttering without expecting to be knocked down by the person on whom they were heaped.

The cardinal rule of all civilized diplomatic discussion is, that war shall be treated from the first as a probability so remote as to be, for practical purposes, an impossibility; just as in a discussion between two gentlemen each absolutely ignores the possibility of his having to punch the other's head. If at the outset either one of them were to take off his coat and his necktie, and ask the other to feel his biceps, and interrupt the conversation with stories of his pugilistic prowess, he would be justly considered a ruffian.

There is no doubt that the newspapers are to blame for a great deal of this. But as our readers may remember, we have all along maintained that a large part of the wild talk on these matters in which the newspapers indulge must be due to the extreme youth of the writers to whom foreign topics are assigned in some offices, and particularly in that of our esteemed contemporary, the *Tribune*. We have all

along held that the impossibility of extracting from these journals any discussion of the law or the facts of an international controversy, was to be explained by the general and natural ignorance of boys on such subjects, combined with the ebullient, unreasoning patriotism which all youths feel between the ages of twelve and twenty. In every country in the world, it is the minors who are readiest to rally round the flag and hurl defiance against a world in arms. The "Marseillaise," "Deutschland, Deutschland über alles," "Rule Britannia," and "Hail Columbia" are in their respective countries sung by the boys with a fervor of which their elders know nothing. But in no country but our own are these youths allowed to stir up bellicose passions in the public press, and propose to fight first and negotiate afterwards.

The illuminating despatch in the *Herald*, of which we have spoken, came from Lyons, N. Y., and related to "young Walter Scott, son of Walter Scott, Chief Engineer of the Columbus Construction Company of Chicago, and grandson of J. T. Williams, editor-in-chief of the Dunkirk *Evening Observer*." He comes, it will be seen, of a journalistic family, and lives with his grandfather. His age is sixteen, and "out of school hours he assists in the mailing department" of his grandfather's newspaper. But he by no means confines his attention to these humble duties. He it was who sent that now famous letter to the London *Times*, threatening Great Britain with political effacement at the hands of an army of 2,000,000 Americans, transported in an enormous fleet of steel cruisers. Says the *Herald's* despatch:

"All articles that appeared in the *Herald* in regard to Chili were read and reread with increasing interest and avidity, and he would occasionally send for copies of the London *Times* so that nothing should escape his notice that had a bearing upon the view foreigners also took of the internal difficulties of that country, and upon its relations with the United States. In addition to his varied reading on the subject he has written hundreds of pages on the progress of Chilian matters and the causes of the misunderstanding between that Government and ours.

"He is entirely loyal to the Stars and Stripes, and the tone and criticisms of the English papers were too much for him to tamely listen to. He therefore determined, without consulting with any one, to give the *Times*, and through it the people of England, a piece of his mind. He signed a fictitious name, as he was afraid his letter might be rejected in case he told just who he was. He was much in earnest about what he wrote, but could not resist the temptation to indulge in more or less imagination when speaking of the boundless resources of the United States, its ability to raise powerful armies, capture Canada and invade England, blotting it from the map."

Now what became of these "hundreds of pages on the progress of Chilian matters and the causes of the misunderstanding between that Government and ours"? Nobody will believe that an ambitious journalistic boy threw them into the waste-basket after they were written. Unless we are grossly deceived, a large proportion of them appeared as "patriotic articles" in this city. The evasion all along in the columns of some of our contemporaries of any examination of the facts in the light of law, the daily threats to let our navy loose on the Chilians if they did not submit promptly, law or no law, the contempt heaped on their courts of justice, the unshaken belief that they were secretly preparing to fight us, and had men-of-war lying in wait in various creeks, bays, and coves around Cape Horn, in spite of their forlorn financial and military condition—all these were undoubtedly the product of a juvenile imagination fresh from tales of Indian adventure, lives of naval heroes and of noted pirates and buccaneers. In that happy land in which the boyish imagination loves to roam, fighting men never count the cost or haggle over the causes of a scrimmage. They never ask whether fighting will accomplish an object, for the fight is itself the object. They never inquire in what force the enemy is coming, but simply where he is, and the bigger his force the better they like it. That he is torn by such passions as hatred, and malice, and above all by envy, passes as a matter of course. Willingness to negotiate is the mark of a coward, and that the enemy should lie in his "false throat" every time he opens his mouth, is what might be expected from people who differ from the President of the United States. Not to support the President when he is "at quarters" stripped for action is the mark of "a traitor," and finally, a people of 60,000,000 must always be in the right in a dispute, else what would be the use of being 60,000,000? We have never happened, in truth, to come across stronger internal evidence of authorship than these Chilian articles afford. What a rattling "journalist" Master Scott will make at the age of twenty-one.

THE SAVINGS-BANK LAW.

THE officers of the principal savings banks of this State have again brought to the attention of the Legislature the severe restrictions imposed upon them by law in the choice of investments, the effect of which is to limit the rate of interest paid to the poorer classes on their savings to the minimum of about 3½ per cent. per annum. The principle upon which the present restrictions rest is a sound one. It assumes rightly that the classes who deposit their money in savings banks do not possess sufficient intelligence or commercial knowledge to form correct opinions on the soundness of securities or on the character of the men who manage these institutions, and hence that the State must intervene to prevent them from being duped and swindled. This is entirely wise and just. Without some such regulation, savings banks could not long exist. The poorly informed members of the community will put their money with those who offer the highest rate of interest and who tell the most plausible lies about the prosperity of their undertakings. Indeed, this tendency to run after smooth-talking rogues and to force money into their hands, especially if there is an air of mystery in their operations, is not peculiar to the unlettered classes. The Woman's Bank in Boston and the Grant & Ward "Bank" in New York are familiar and well-remembered illustrations of the openness to humbuggery of the higher circles of society. If the State had made arrangements by which the victims of Mrs. Howe and of Ferdinand Ward had been restricted in their investments to savings banks paying only 3½ per cent. interest, they would all be happier men and women, and the State Prison would not hold some of its present occupants.

The petition of the savings-bank presidents is very far from being radical. It asks permission to invest the money of depositors in the stocks or bonds legally authorized of any city incorporated under the laws of the State of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Ohio, Illinois, Wisconsin, Michigan, or Missouri, having at the time of the investment more than fifty thousand inhabitants, as shown by the last Federal or State census next preceding the investment, and a total indebtedness, including the issue of stock or bonds in which the investment is made, not exceeding 7 per cent. of the valuation of the taxable property therein, as shown by the valuation thereof made for the assessment of taxes next preceding the investment. Other restrictions are embodied in the bill. If the city or the State in which it is situated has ever defaulted, the bonds cannot be taken. It is provided also that no savings bank shall invest more than 25 per cent. of its assets in the stocks or bonds of cities situated out of this State, or more than 2½ per cent. of its assets in the stocks or bonds of any one of such cities, or invest in more than 5 per cent. of all the stocks and bonds issued by any one of such cities, or make any investments in the stocks or bonds of any city situated out of this State which have been or shall be issued to aid in the construction of any railroad.

The law of the State at present allows investments in United States bonds or in the bonds of any State which has not defaulted within ten years, in bonds of counties and municipalities in this State, and in first mortgages on land in this State. Now the petition shows that the deposits in savings banks in this State on the 1st of January, 1892, amounted to upwards of $588,000,000, while all the outstanding bonds of the General Government, the States, and the principal cities of this State, amounted to only $887,000,000. The bulk of this sum ($649,000,000) consists of United States bonds for which the competition of the national banks and of trustees acting under orders of courts, not to mention life-insurance companies and private persons, is excessive. Leaving these out, there remains only $238,000,000

of bonds of the kind allowed by law, and for these the competition of other investors is very keen. In addition is only the field of first-mortgage investment on land in this State. Such investments are not immediately available in times of panic; consequently the trustees of savings banks must be sparing in their choice of such securities. Moreover, they have to meet here the competition of life-insurance companies which are not affected by panics, since their liabilities fall due in a prescribed order.

We have never been able to understand the opposition to this moderate extension of savings-bank investments. The bill has been before the Legislature several winters in succession, and although recommended by the State Superintendents Hepburn, Paine, and Preston, and by the Chamber of Commerce of this city, it has always failed to become a law. The present petition tells us that "The only opposition to the bill comes from those who fear that an extension of the limit of investment will cause a rise in the rate of interest on municipal, town, county, and village bonds within this State, as the banks are now restricted largely to this class of investment." This is a very singular objection, applying, as it does, only to bonds hereafter to be issued. As to all bonds now outstanding the rate of interest is fixed. It will not be altered by the pending bill or by anything else. If that is the only objection to the bill, it ought not to weigh much against the interests of the million or more depositors in savings banks in the State.

THE GREAT AMERICAN NOVEL.

No impartial observer can have failed to note the decline, if not total disappearance, of the idea that a great American novel was bound to appear in the fulness of time, and that it might be looked for any day. This expectation was one of the fixed articles in the literary creed of the average American but a few years ago. It was like the anticipation of the golden age or the millennium — a belief more instinctive than reasoned, but all the stronger for that. Those more reflective spirits who paused to argue out the faith that was in them assured us that American culture had now reached, or was sure soon to reach, a stage when the requisite ability and the inspiration necessary were at command and were employed to so large a degree in the writing of novels that the happy combination was certain to be made some day, when the novel that could be called both great and American would come forth to meet the national aspiration and desire.

Nor did they leave us in ignorance of the marks by which we were to recognize that novel when we at last saw it. It was to be as fresh and radiant as a young giant, for one thing, without a suspicion of old-world weariness or despondency about it. Then it was to be as broad and fertile as the prairies, as sublime as the Rockies, as majestic as Niagara, yet withal winsome and tender, vigorous, strong, and brave—a work, in short, in which the whole land and all the inhabitants thereof should be presented in expressive epitome. With this idea and description of the novel that was to be, well in hand, there was a great deal of critical running to and fro and crying out "Lo here!" and "Lo there!" Now and then a positive critic or not too modest publisher would announce that he had finally got his hand on the great American novelist, but somehow that elusive creature always got away before the public caught sight of him. Such disappointments, repeated often enough, were certain to bring about a kind of old-world weariness on the part of those who had been so often deceived, and it is not strange that their faith has become slowly disintegrated. It is a long time now since we have heard or read a word about the coming of the great American novel.

Meanwhile, American fiction has distinctly forsaken the expansive and the illimitable to run after the contracted and the limited. Instead of a national novel, we now have a rapidly accumulating series of regional novels—or, rather, so far has the subdividing and minimizing process gone, of local tales, neighborhood sketches, short stories confined to the author's back-yard. Probably New England and New England character have had to undergo the extremest forms of this literary dissection. In one case the operator cut so ruthlessly through a nerve—we believe it was a Cape Cod nerve—that she was sued for libel, on the ground, we suppose, that her pictures of local eccentrics were, as the man said of a portrait of his mother-in-law, "deplorably like." But the process has not been confined to New England; what Miss Jewett and Mrs. Cooke and Mrs. Slosson and Miss Wilkins and all the others have done for that section of the country, has been essayed for the South by Mr. Cable and Mr. R. M. Johnston and Mr. Page and Miss Murfree and Matt Crim and Miss King, for the middle West by Mr. Howe and Mr. Garland, and so on. Indeed, it is becoming necessary for the novelist to hold himself down to a single minor specialty with the rigor of the German philologist who spent his life in the study of the Greek article, and died lamenting that he had not confined himself to the dative case of it. Thus one author has lately been congratulated by Mr. Howells for having so perfectly rendered the life of Philadelphia!

At the same time that American fiction has thus been leaving the prairies and taking up with a pasture, it has also, in some of its manifestations, grown a little shaky in its patriotism, and shown a sneaking liking for the effete monarchies of Europe, and a predilection for foreign themes in general. An English critic recently remarked upon the respect which certain novelists called forth for "their commercial agility." What he meant he explained as follows:

> "I mean the sedulous gentlemen with handbags who scour the earth for local color, bring it home, and deliver it at our doors. There is Mr. Marion Crawford, for instance—*in cœlum jusseris, ibit*—who, though by no means an old man, has already written with equal dexterity and truth of India, Hungary, Italy, Germany, England, and America. And perhaps we owe something more than our respect to him and his imitators. In childhood we used to be asked, apropos of cinnamon and spermaceti, by a Nursery Guide to Knowledge, 'Ought we not, as we consume these articles, to feel grateful to the mariners who procure and bring them at such risk from the ends of the earth?' So these writers compel our gratitude."

It must be confessed that at first sight this tendency of the modern American novel to cosmopolitanism or to parochialism bodes ill for the old dream of a comprehensive and purely native work of fiction that would embody, while it unified, all the diverse elements of our national character. Yet it may be that we are really on the road to that for the first time. Must not analysis precede synthesis? Is it not necessary to make a minute study of each local detail of character, before we can undertake a novel that shall be not one but all Americans' epitome? We throw out this suggestion to those who have abandoned the old philosophy of the American novel. If it be asked what one brain will be equal to grasping all the accumulated details and blending them into a harmonious whole, we reply, first, that there are possibilities in collaboration which have not been exhausted, and, second, that it would be peculiarly American to bring mechanical and labor-saving inventions into the service and creation of the great American novel. Are there not calculators and tabulators in the Census Office which work by electricity? There is a hint in that for the novelist of the future.

At any rate, we are firm believers in the doctrines of demand and supply, the man and the hour, and never despair of the republic. If a great American novel is a public necessity, come it will. Our philosophy in regard to it may be faulty, but if we only believe in the fact with sufficient stubbornness, and persist in expecting it and demanding it, one thing is certain—we shall not wake up some fine day and find that the great American novel was written and published years before without our knowing it.

"SIMULTANEITY" AND "EQUALITY" IN BRITISH LOCAL GOVERNMENT.

LONDON, March 8, 1892.

THE adoption of home rule by the Liberal party seven years ago took the average British elector somewhat by surprise. He had not been fully educated regarding the question: his mind had not been exposed to a gradual process of attrition, as had been the minds of the statesmen who had to bear the burthen and responsibility of Irish government. And when with such statesmen the remaining film of prejudice gave way, the elector was much in the state of mind in which the statesmen had

been ten years before. The Conservatives carried the elections of 1886 on the cry of "No home rule," but perfect equality—"simultaneity and equality" with Great Britain in all matters relating to individual freedom and local administration in Ireland. Their pledges had up to the opening of the present session been redeemed by the imposition upon Ireland of a degrading and perpetual coercion act, and by a land act the discussion of which occupied much of last session, and which had fallen as flat as their bitterest opponents among the Irish party had predicted. True, such peace reigned in Ireland as had not reigned for fifteen years. But those who have any real knowledge of the country and its people—those not connected with the official classes and so cut off from all possibility of real knowledge—know that this peace is due not to coercion or fear of coercion, but to the ameliorative effect of far-reaching measures of land reform, to the impossibility of any people permanently maintaining such a fever heat of unrest as had been maintained, and to the calming influence of the certainty that the legitimate aspirations of the country would be fulfilled whenever the Liberals came back to power. A candid observer would be bound to admit that the Nationalists themselves materially contributed to the mistaken assumption that coercion had led to peace. Even they had not fully realized the calming effect upon the masses of the agricultural population of the reforms they themselves had effected. They overestimated the capacity of their countrymen for sustaining a condition of continued unrest, and for making sacrifices in protest against a system which, with Macchiavellian astuteness, was put in force so as to cause the maximum of appearance and elicit the minimum of opposition; and their insistence that increased coercion would in the present conjuncture be followed by greater unrest has not been justified. They were not, however, mistaken in the belief that Ireland in the long run would less than ever permanently submit to the system imposed upon her, that she had been educated up to a conception of her rights and what she owed to her self-respect, as she had never before been educated. They had not sufficiently borne in mind that hitherto she had carried forward her claims in wild outbreaks of passion succeeded by periods of disheartening lethargy, rather than by steady persistence. Protestants might be tempted to believe that she acted with less persistent stubbornness than a Protestant people would have done under similar circumstances.

So matters stood at the opening of the session. Mr. Balfour might yet redeem the promises of his party in the matter of equality, and vindicate his capacity for constructive statesmanship, as he had already shown his power to rule by bayonet and truncheon. The Tories and their Parnellite adherents, loud in their demands that Mr. Gladstone should lay before the country the details of the Home-Rule Bill he would introduce if he and his party came into office, made no such claim upon Mr. Balfour regarding local government, and up to the moment when he rose to propound his scheme, no one outside the Cabinet had any inkling of its provisions. It was possible he might wield the power he undoubtedly holds to pass a great and effective measure as an alternative to home rule. Never were those more justified who have all along maintained that the lithe being, so ready in debate, nonchalantly reclining on the Treasury bench, would be proved wanting in real statesmanship. Few who witnessed will ever forget the scene that passed as he unfolded his measure—the bursts of ironical cheers and laughter from the Irish benches, the amazement and amusement of the Liberals, the want of enthusiasm among his own followers; his own unintentional summing up of Conservative policy in the aphorism with which he half apologized for the provisions of his measure, that "It is often better to do a stupid thing that has been done before than a wise thing that has not been done before"; the half-scornful way in which he sought to cover the threadbare character of his proposals by saying that "after all it is not a measure to be compared in importance to the Crimes Act, the congested-districts provisions of the Land Act, or even the Light Railways Act of last session." Now, however, that we have the bill in print, newspaper-readers are likely to hear more about it, and it may be interesting to note its principal provisions.

To understand the present system of Irish local government by grand jury, and the proposed changes, it is well to bear in mind that as Irish land was brought under Anglo-Norman and British sway, it was divided into counties, and these counties into bailiwicks or baronies, aggregations of native *seisrachs*, or plough lands, now town-lands. We have 32 counties, 325 baronies (of varying number in each county and varying in size from 1,700 to 310,000 acres in extent), and 62,205 town-lands. Then, under the modern poor-law system, the county is divided into 163 unions. Local government of counties is now conducted by grand juries, practically selected by the High Sheriff, who is appointed by the Lord Lieutenant. They represent in effect a narrow ring of Protestant land-owners. They are transitory bodies, meeting only for a few hours twice a year, and having no power, except in the county of Dublin, to appoint committees or other bodies to look after the execution of work when they are out of session. The business is conducted by officials, the more important of them selected by the Lord Lieutenant. To a certain extent work is initiated in "presentment sessions," on the recommendation of the principal ratepayers, who are chosen under a complicated system of selection. Of the £1,400,000 county rates levied over Ireland, about half is spent by the grand juries on roads and bridges. The other half is levied peremptorily by Government and spent on lunatic asylums, extra police, and so forth. The taxes are raised off the occupiers. One of the prime abuses of the grand-jury system is the control of the levy and expenditure of money for malicious injuries to person and to property. Large sums are frequently drawn from the people upon the scantiest evidence that the outrage or the loss was malicious. Upon a recent occasion a drunken militiaman, quartered by the Government in a county to which he did not belong, assaulted and injured a policeman. Every ratepayer in that county had to contribute to him "blood money" compensation, although they were entirely innocent of offence towards him. For the widow of Inspector Martin, whose death was largely due to the infatuation of the Government in attempting the arrest of a priest after mass and in his canonicals, the grand jury of County Donegal levied £8,000 on an impoverished district.

As has been well said, "The notion always is that the way to teach these devils [the people] is to make them pay, and any public feeling against an outrage is soon lost in indignation at the means taken to avenge it." The Irish grand-jury system has for the past forty years been acknowledged to be entirely out of accord with all notions of representative government. The Poor Law is administered in unions by guardians, one-half of whom, *ex officio*, are practically appointed by the Crown. The municipal franchise in Irish towns, except in Belfast, is restricted as compared to the Parliamentary franchise. It is not, except in Belfast, extended to women, as it is in Great Britain. An Irish town has, generally speaking, not one-fourth or one-fifth the number of municipal votes of an English town of equal population. The control of the police and of education is vested in Dublin Castle.

Under Mr. Balfour's bill, the virtual control of the police and of education is to remain vested in the Lord Lieutenant. Beyond eleven of the principal towns, the urban franchise stands unreformed; the Government propose to retain the power of appointing half the members of the poor-law boards. The grand juries stand, and are to levy for malicious injuries. Half of the taxes are still to be levied and applied peremptorily under precept of the judges. It is proposed to constitute county councils, elected on the Parliamentary franchise, with peers and women ratepayers included; voting to be cumulative, illiterates being disfranchised. From the grand juries, from the poor-law boards, certain limited powers are to be taken and confided to these councils. There is nothing in the proposals to touch the imagination or call forth national or local patriotism. What is given with one hand is taken by the other. Initiative in all matters necessitating the expenditure of capital is left with the grand juries, or to a joint committee consisting half of grand jurors and half of county councillors. Boundaries and conflicting authorities overlap, as Mr. Knox, a rising young Irish member, pertinently remarks in an article in the *Speaker:*

"As there are many areas, so there will be many authorities. The intelligent voter will have to watch the fifteen baronial councillors for his barony meeting at one town, the Poor Law representatives for his Poor Law division meeting perhaps at another, the fifteen county councillors for his division of the county meeting at a third town, the sanitary committee for his sanitary district meeting somewhere else, not to speak of the other local authorities: the governors of the lunatic asylum and of the county infirmary, the drainage boards, and perhaps the harbor boards, all of which will have the power to increase the burden on the occupier. The popular local man who had to attend on all these local boards would never find time for any business of his own. The honest man would too often give up the work in hopeless disgust. If Mr. Balfour had been designing a scheme for the purpose of encouraging corruption, he could not have been more successful."

Worst of all, perhaps, we have an insulting and enervating system of checks and control never sought to be imposed upon similar assemblies in Great Britain. This is contained in the fifth clause of the bill, and provides for the removal of councillors by the High Court Judges, on the petition of twenty cess-payers, "on the ground of corruption, malversation, or oppression, or of persistent disobedience to the law." This proposal is additionally harsh in that judges in Ireland do not stand indifferently between classes, or between the people and the Crown, but are for the most part Government and class partisans, and chosen as such. A lawyer of nationalist or land-reform proclivities, no matter what his abilities, would have no chance of receiving the ermine. Clause 5, as it appears in the printed bill, is even more retrograde than as propounded by Mr. Balfour

in his introductory speech, in that while the rich would have the power of harrying an obnoxious county council, the poor would be deprived of the power of resisting oppression by the provisions as to security being given for costs of proceedings. Next to Mr. Morley's scathing denunciations, the most interesting passage in the preliminary discussion of the bill was that which occurred when Mr. Chamberlain declared that, after all, the powers given to two Irish judges by clause 5 were no stronger than those confided to Judges of the Supreme Court in the United States. Mr. Bryce's reminder of the essential difference of the two cases was crushing and effective. Within the limits of a communication such as the present, it would be difficult to make clear the complicated provisions of a bill under which it is further sought to maintain a system of bureaucratic government in Ireland under the semblance of representative institutions. Enough, perhaps, has been said to enable the readers of the *Nation* to follow the drift of the discussions likely to ensue—if, indeed, Mr. Balfour is really in earnest regarding the fate of his measure.

D. B.

RENAN'S 'DETACHED LEAVES.'—II.

PARIS, March 1, 1892.

MICHELET showed, in his last works, a curious sort of sensual sentimentality, that was almost a morbid form of senility. It is not uncommon to see a man, after having led a life of severe labor, end in this sort of sensualism, throwing an eye of envy and of regret at the past, and longing for the emotions and sensations of youth. Who has better described this state of mind than Goethe, at the beginning of his immortal 'Faust'? There was a Doctor Faust in Michelet, and there is one in Renan. All the dull work of exegesis has not killed in him the natural man; his philosophical dramas, "Caliban," "L'Eau de Jouvance," the "Prêtre de Nemi," and especially "L'Abbesse de Jouarre," show us a Renan very much occupied with the passion of love. One of these plays was given at the Théâtre Français, and Renan much enjoyed its representation, as well as the wonderful talent of one of the actors, Mlle. Reichenberg, the very type of the *ingénue;* somebody said cynically, after the performance, in the foyer, when Renan was paying his homage to Mlle. Reichenberg: "Is he going to spend upon Reichenberg the money he has made with the 'Life of Jesus'?"

Read, for instance, the first chapter of the new 'Detached Leaves'*; it is entitled "Emma Kosilis." "She was not of perfect beauty, but her face had an indescribable charm. Her eyes were exquisitely languorous; her eyelids, which expressed the most imperceptible quivers of timid modesty, seemed to have a soul. Her skin was so fine that the least acceleration of life betrayed itself by fugitive blushes—the sign of a secret which she did not reveal," etc. So Renan goes on, describing a little Breton girl. At the age of sixteen, Emma Kosilis falls in love with a young man of twenty, Émilien. The description of Emma Kosilis's state of mind is very subtle; a Darwinian would simply say that she was following the instincts of the species; Renan says it in other words:

"Emma's love was innocent as it was unconscious. . . . For whole days she remained motionless, abandoned to an amorous languor, which she enjoyed in perfect quietude, as one enjoys a warm breeze without asking whence it comes. . . . Naturally she said nothing of her feelings either to the man she loved, or to her family, or to her companions. . . . Her timid bearing made easy for her, without the slightest hypocrisy, that air of indifference and premeditated abstraction which is inculcated in young girls. What she felt was so vague, her imagination was so pure, the conversations which she was in the habit of hearing had always been so proper, that the idea never occurred to her that there was anything culpable in what she experienced. . . . Any hesitation as to the nature of what made her so happy, and of which she did not know the name, would have seemed in her eyes as sinful as a blasphemy against God, against the Church, against its sacraments."

The crisis came. She heard one day that Émilien was going to marry Mademoiselle ———. She herself, a few days afterwards, as lay-sister, entered the community of the Ursuline Dames, in the little town of ———. It seemed all very natural; she became a perfect Sister, though she never even tried to banish from her heart the thought of the beloved. "She did not distinguish her love from her piety, nor her piety from her love. Her austerities, especially, were penetrated by it. She found in them an extreme charm. Feeling instinctively that a woman must either enjoy or suffer, she found in mortifying her flesh a sort of ecstasy. She felt a deep joy in thinking that she suffered all this for the man whom she loved, and in telling herself that she would never look upon any other man than he. Her state of vague love drew from the long psalmodies of the convent a sort of powerful stimulant and augmentation." She did not, however, take the vow; for five years she lived in this sort of dream. The wife of Émilien died. Emma felt now a great agitation; the two young children of Émilien were sent to her convent; the father came to see them. They saw each other again, they understood each other without a word; and, shortly afterwards, they were married. She kept above her bed her nun's scourge. She often reminded her husband of what she had suffered for him, and how, during five years, she had mortified her flesh so as to keep her love; with his permission she wore haircloth on certain days. She was as the elect: "Quod habent desiderant."

This short story, written in the best style of Renan, is a perfect specimen of his method, or rather want of method. Nobody ever looked with more curiosity on what Darwin called the mystery of sexuality. Renan wants the man to be conscious, learned, without any superstition; the woman of his dreams is unconscious, ignorant, superstitious. If metempsychosis were a reality,

"I should ask, as a recompense for my brain-work, to come to life again as a woman, in order that I might study the two ways of living which the Creator has established, in order that I might comprehend the two poetries of things. I have reasoned and combined enough. I should like, in another world, to speak as a woman, with a woman's voice, to think as a woman, to love as a woman, to pray as a woman."

The same idea occurs in "The Double Prayer," one of the short chapters of the book: "I am astonished that no theologian has maintained that the prayers of men and of women are of a different quality. The two incenses, borne by the angels before the throne of the Eternal, would compose, as they burned, the perfect incense." Renan fancies that he heard in the Cathedral of Quimper a double chorus—that of the men and that of the women. The chorus of the women begins thus:

"O God, I believe firmly in Thy goodness, which causes our hearts to beat, overflows in our milk, fills our breasts, nourishes our little ones, causes the tranquil languor of our eyes, feeds our tenderness. We are sure that Thy spirit is in us, when our breasts swell; the palpitation of our bosoms is Thy voice."

I must confess that, without being prudish, I find such talk highly improper—this odd mixture of religiosity and sensualism. It is almost painful to see two such men as Michelet and Renan, at the end of honorable, severe, and laborious lives, indulge in thoughts and images which fill the minds of depraved and impatient adolescence. The whole of this "Double Prayer" is of the same sort: the men are dull and the women are not nice.

I find the same preoccupations in the chapter entitled "Love and Religion": "There is a great truth—the fundamental identity of religion and love. Yes, the Bible and the Gospels, wonderful books in so many respects, are particularly so for the manner in which the relations of the sexes are handled in them." Sensualism and optimism—these two words represent the synthesis of the long speculations of Renan. In a long article on Amiel he criticises him for the mournfulness of his doctrines:

"We must increase the sum of human happiness. We must speak no more of sin, of expiation, of redemption; we must speak to man of gayety, of goodness, of indulgence, of good humor, of resignation. As the hope of a future life goes on diminishing, we must accustom these transient beings to consider life as supportable; otherwise they will revolt. Man can no longer be kept quiet except by happiness."

Is it so easy to give happiness to mankind? Is it enough to offer to us the pleasures of imagination? "All men," says Renan, "have imagination, that is to say, supreme joy, the enchantments which never grow old; with the exception of a few pathological cases, there is no life so gloomy that some ray of sunshine does not penetrate it."

Renan drifts, as you see, into the doctrine of Epicurus, only he is not the Epicurean of the old school, with his head crowned with roses; he is more sentimental, more idealistic, more of a dreamer.

"The most dangerous error in social ethics is the systematic suppression of pleasure. Rigorously correct virtue is an aristocracy; everybody is not equally bound thereto. . . . It is necessary that the masses should amuse themselves. For my own part, I have no need of external amusement; but I do need to feel that people are amusing themselves around me; I enjoy the gayety of others. Temperance societies are founded upon excellent intentions, but upon a misunderstanding. . . . Instead of suppressing drunkenness for those who require it, would it not be better to try to make it gentle, amiable, accompanied by moral sentiments? There are so many men for whom the hour of drunkenness is, after the hour of love, the moment when they are at their best."

Here we have a very candid expression of the new Epicureanism I was speaking of. I ask myself at times if there is not a perpetual irony in the sermons of Renan; does he not say: "We owe virtue to the Eternal; but we have the right to join to it, as a personal retort, irony. We play the farce which has been played to us. . . . We wish the Eternal to feel that, if we agree to be deceived, we agree to it willingly and knowingly. We are resigned to lose the interest of our virtuous investments; but we would not like to be exposed to the ridicule of seeming to have counted much upon it."

Such language is not edifying; there is something really unbecoming in this perpetual antagonism between Renan and the Eternal, playing tricks on each other, on a footing of intellectual equality; and at times Renan would almost make us believe that there is no equality, that the advantage is on the side of man,

*'Recollections and Letters.' Translated by Isabel F. Hapgood. New York: Cassell Publishing Co.

that he regains in acuteness of perception and of wit what he necessarily loses in time and space. Man is finite, but his finiteness condenses what is spread for the Eternal in the infinite.

I doubt if such speculations can do any good to anybody. I can better understand the "Philosophical Examination of Conscience," which ends the volume, for here we are in the domain of pure metaphysics, though even there Renan seems to be haunted by his usual thoughts, by his perpetual visions. He makes us think, at times, of Saint Anthony tempted in his solitude. Speaking of love, he says:

"The time during which man loves is the time of his fugitive life when he is at his best. The immense sensation which he feels when he thus emerges, in a manner, from himself, shows that he really comes in contact with the infinite. Love, understood in a lofty manner, is thus a religious thing, or rather a part of religion. Is it possible that this old remnant of relationship with nature could have been regarded by frivolity and folly as a shameful remainder of animalism? Is it possible that an aim so holy as that of continuing the species could have been attached to a culpable or ridiculous act? We attribute to the Eternal, by this supposition, a grotesque intention."

I have said enough: this new volume, though it is written in some parts with rare delicacy, though the choice of words is of the rarest, though some of its parts are highly poetical, has left me under an almost painful impression. I regret to find so much weakness in such a solid intellect; there are thoughts which ought never to be spoken; there are secrets which ought never to be told. As "full many a flower is born to blush unseen," full many dreams of imagination ought to vanish in silence and night.

Correspondence.

A MYTH OF THE CONFEDERACY.

To the Editor of The Nation:

Sir: The following sample of what I may venture to call the *ex-post-facto* manufacture of history, considering the respectability of the magazine in which I find it seems to call for an early and complete contradiction.

In the *New England Magazine* for November, 1891, in an article entitled "Why the South was Defeated in the Civil War," by Prof. Albert Bushnell Hart, we find the following:

"A much more amusing case is that of Jones County, Mississippi. The 3,300 people of this county became tired of the burdens of the civil war, and by a convention held in 1862 formally seceded from the State and Confederacy.

"'Whereas, The State of Mississippi, for reasons which appear justifiable, has seen fit to withdraw from the Federal Union; and, whereas, we, the citizens of Jones County, claim the same right, thinking our grievances are sufficient by reason of an unjust law passed by the Confederate States of America, forcing us to go to distant parts,' etc.

"'Therefore, be it resolved, that we sever the union heretofore existing between Jones County and the State of Mississippi, and proclaim our independence of the said State and of the Confederate States of America; and we solemnly call upon Almighty God to witness and bless the act.'

"A resolution offering their alliance to the United States was not adopted. The sovereign nation of Jones County, with its President, Cabinet, Congress, code of laws, and conscription and confiscation acts—nailed to trees, since there was no newspaper in the commonwealth—was able for some time to maintain itself in the midst of the swamps against the troops sent to subdue it. Finally, by the aid of fieldguns, the infant commonwealth was overcome, and the authority of the Confederacy was restored."

As Prof. Hart premised, this was an amusing case of the ultimate application of the logic of secession. But, as I was active in those days, and became an officer of the army which invaded the State of Mississippi, and as I have a good memory of the current news of those times, I began to wonder that I could not remember so remarkable an event. I began to doubt the story. I addressed a note to Prof. Hart asking for the contemporary authority for the story. Not receiving an answer, I wrote to the County Clerk of Jones County and to the Governor of Mississippi. They courteously responded in a few days. E. B. Sharp, Esq., Chancery Clerk, says: "The report . . . is entirely false in every particular." Gov. Stone sent me the following letter, enclosing a second statement from his predecessor, Gov. Lowry:

State of Mississippi,
Executive Department,
Jackson, January 22, 1892.

Dr. Samuel Willard, Chicago:

My Dear Sir: I am in receipt of your letter of the 15th inst. in reference to the remarkable statements in regard to Jones County, in this State, and it affords me pleasure to inform you that the whole story is a fabrication, and there is scarcely any foundation for any part of it. To begin with, Jones County furnished perhaps as many soldiers to the army of the Confederacy as any other county of a like population. A large portion of the population of the county was composed of illiterate persons who had been reared in the interior, far from railroads and other means of transportation, and mainly without schools. Many of them declined to go into the army in the beginning, but so far as any formal withdrawal or resolution to that effect is concerned, no such thing ever occurred in Jones County. There were a good many who deserted from the Confederate army and returned to their homes in Jones County, and they, with others who had refused to go into the service, did join together in little bands to protect themselves against the conscript officers, and resisted the authority of the Confederate Government; but there was no general organization of such character; it was simply small squads of deserters and other persons who determined not to go into the army if they could avoid it. Many of them were arrested and put into the army, and afterwards performed faithful service to their commands.

I enclose herewith a letter from my immediate predecessor, Hon. Robert Lowry, who was Governor of the State for eight years, his term ending two years ago, who was sent to Jones County during the war for the purpose of arresting and returning these deserters to their commands. He informs me that many arrests were made, and many came voluntarily and surrendered to him and returned to the service. There was some little fighting with these bands of deserters, or rather, bushwhacking of his men by the deserters; and some of the deserters were arrested, tried, and executed; but only a few. The whole story is the veriest fabrication, and I presume few persons of intelligence will believe any of it.

Thanking you for an opportunity of correcting this slander upon one of our counties, I have the honor to be, with great respect,

Your obedient servant,
J. M. Stone, Governor of Mississippi.

The enclosure, Gov. Lowry's letter, in part describes the county of Jones as it was before the war, and as it now is, with a railroad and a prosperous trade in cotton, lumber, and turpentine, and in part deals directly with the question in hand. He says:

"The county furnished nearly and probably its entire quota of soldiers, many of whom did splendid service. Quite a number deserted, and only returned when captured by a regular command. No such effort as establishing a separate government was ever attempted. The men who ran away from the army in the field were ignorant persons, and most of them under the leadership of Newton Knight, and their main object was to get back to their homes and to avoid being caught and returned to their respective commands. Knight was an ignorant, uneducated man. The story of withdrawal and establishing a separate government is a pure fabrication—not the shadow of foundation for it."

I think the testimony I have elicited disposes of the fiction completely, and yet I fear it will run a long while on the credit of Prof. Hart of Harvard and the *New England Magazine*.

Yours truly, Samuel Willard.

Chicago, March 7, 1892.

THE ELEVATION OF BLACK AMERICANS.

To the Editor of The Nation:

Sir: Since the refusal of the South to permit of Federal interference either with the education or elective franchise of the negro, his Northern friends have naturally concluded that nothing in the way of legislation could be done to aid him. With the demise of the Blair Bill and Force Bill, there has sprung up a growing conviction that the South must solve its own problem. Discussion of the negro question has ceased for the time being. Northern ignorance and Southern apathy concerning his condition are enlightened and aroused only by occasional outbreaks which excite public attention and sympathy for the moment.

Such an outbreak, which throws light upon the true state of affairs in the South, is the movement of a large number of negroes from the Indian Territory and Arkansas to New York, expecting to colonize in Liberia. This movement appeals directly to the citizens of New York. But it is not so much the fact that we must exercise Southern hospitality towards these transient visitors, nor the outrageous misrepresentations of the American Colonization Society as to existing conditions in Liberia, but rather the ignorance and destitution of the Southern negro, which make such an imposition possible, that claims our attention. A talk with these negroes, or, better still, a trip through the South, including a visit in the slums of the cities or in the cabins on the plantations, will make the point still more clear. The visitor will view things differently from the Southerner, who puts up with the negro as best he can, laughing at his ignorance and cursing his stupidity. The fact that other men's chickens and other men's wives are common property among the negroes seems strange to the visitor, but the Southerner does not notice it until his own possessions are encroached upon.

The South is many millions poorer this year on account of the low price of cotton, and the negro is the last to receive sympathy in his poverty and destitution. The establishment of manufactories in East Tennessee and northern Alabama helps the negro but little, as the labor required is either imported or almost entirely white skilled workmen. Those upon whom the negro is directly dependent are most limited in means, and it now appears that the South is not able to solve its own problem. Nor can the millennium for the negro be brought about by statute. Because the South, with faith in the future proportionate with her success since the war, does not ask for Federal aid, this is no reason why individuals in more prosperous sections should not feel themselves in duty bound to aid his former masters in emancipating the negro from ignorance, abject poverty, and moral degradation. Nor can this emancipation be secured by proclamation. Systems must be devised and institutions established whereby influences and agencies will be set in operation which, *generation after generation*, will raise the standard of his intellectual and moral life and make him an important factor in the great industrial developments now promised in the South.

It is possible that a clear statement of the

urgent need of the negro, and a suggestion as to the practical line along which the remedy lies, may find some one prepared to push along a work that now lags. These are days big with opportunity for opulent philanthropy to immortalize itself. The cause of the college and the church has received substantial aid from generous men of wealth. The fact that this philanthropy has been exercised so frequently and so wisely is one excuse for the present industrial conditions which concentrate the wealth of the nation in the hands of the few. Persecution in Russia presented urgent claims, and philanthropy answered. Now pestilence and famine stretch out parched tongues and wasted fingers for those necessities which a sympathizing world hastens to supply. The crowded tenements of our great cities have received attention, and philanthropy has drawn vice and squalor out into the sunlight. Whatever the motive—be it for sweet charity's sake, to so bequeath an estate as to leave an undying name, or to claim honor as the founder of some institution of learning or the originator of some social system—it is a laudable ambition, and the fact remains that the needs of the hour are being met with cheerfulness and promptness.

For the evils which now beset the African race in the South the surest remedy lies in some agency which shall purify their home life. Remove the negro girl from the one-room cabin where all members of a large family eat and sleep, and surround her for a period of four to six years with the influences and environments of an *industrial* institute and college, with modern methods and equipments, and the corner-stone of African civilization is laid in the *home*. If it were possible to establish these institutions for negro girls generally throughout the South, the next generation would date their emancipation from the initiation of this movement. There are several poorly equipped industrial schools for negroes in the South, where the results for good are small because the students return each day to the degrading influences of their own homes. There is a crying need for boarding-schools for negro girls, where the moral refinements and practical advantages of domestic life can be instilled into them day after day and year after year. In the homes of the whites such women would be treasures as servants; or, as mistresses of their own homes, they would be blessings to the race.

Here is the opportunity for practical philanthropy to make a beginning. R. E. L.

New York, March 5, 1892.

A WORD WITH "G. B."

To the Editor of The Nation:

Sir: I have always read "G. B.'s" letters with interest, and that of last week on "Parties and the Nation" is especially definite and suggestive. I am not sure the results of the change he proposes would equal his expectations; but why not try it in Massachusetts? Why should he not prepare a bill embodying this reform, have it introduced in the Legislature, and try to secure its adoption? It is easy to put any substantial idea into the minds of the people of a State, if it can be clearly expressed, to concentrate their attention upon it and obtain their assent or disapproval. This is the quickest and surest way to find out what the people will approve after adequate examination and discussion. I am inclined to think that "the root of the trouble" is not wholly "in the defective organization of the Government business," but partly in the average character and civilization of the people of our country. This is something deeper than its special manifestations in politics. We need a more direct study and analysis of American civilization than has yet been undertaken. The character of the people expresses itself more and more fully through all our methods of Government business and all our forms of political action. No system or agency can long keep our politics much above or below the level of our national character, and it is at least a question whether any change in methods or machinery would eliminate the essential elements of the stage of civilization which we have reached. J. B. Harrison.

Franklin Falls, N. H., March 16, 1892.

A NEGLECTED LITERATURE.

To the Editor of The Nation:

Sir: In examining the biographical portion of the new 'International Dictionary,' I have been very much surprised at the omission of three of the most important names in recent Danish literature: Drachmann, Schandorph, and Jacobsen. Hundreds of names are given of far less note in European literature. This omission is especially noteworthy in the case of Drachmann, who is, without doubt, Denmark's greatest living man of letters. Is it not true that England and America, in their enthusiasm for the new literatures of the Continent, have strangely neglected Denmark? This little country is just now in a veritable fever of intellectual activity and literary production, or rather over-production. It is not in Norway alone that the impulse given by Björnson and Ibsen to Northern letters, has made itself felt. The three above-mentioned writers, together with Brandes, Rudolf Schmidt, Skram, Schjoerring, and some others, have attained a degree of literary merit that ought to gain for contemporary Danish literature not only the respect, but also the attention, of other nations. I doubt if there can be found, outside of France, a more promising and enjoyable field of investigation for the lover of the new and elegant and realistic in fiction and in verse. This fact has already begun to be recognized in Germany, where numerous translations from the Danish are being issued, and where belletristical journals abound in studies of the new Danish literature. In England and America, however, this literature is practically a *terra incognita*, except to the few who read Dano-Norwegian. So far as my knowledge goes, not a single one of Drachmann's books has been translated into English.

There are several reasons for this neglect. In the first place, these Danish writers are intensely national. Drachmann's 'Derovre Fra Graensen' is one of the most "national" compositions in literature. Another reason is that this new literature has had no advocate with us. Gosse has confined himself to Norway and to the older Danish writers. The same may be said of Boyesen. Anderson is interested rather in the ancient writings of the North, although his 'Literature' has introduced us, at least, to some of the new writers of Denmark. Again, Dano-Norwegian is very little studied here in America, and is supposed to be exceedingly difficult. It is, however, no very great task to acquire a reading knowledge of this language, especially for one who reads German. In any case, I trust that the time is not far distant when some enterprising publisher will make it possible for English readers to enjoy, in good translations, the more important of the literary productions of "Young Denmark." Mitchell Bronk.

Crozer Theological Seminary, Chester, Pa., March 7, 1892.

AN UNKNOWN WRITER.

To the Editor of The Nation:

Sir: Some months since I received two monographs (manuscripts) on or about the same day, one of which was from a friend with whom I am in constant intercourse, who desired me to review it. They were laid aside for lack of time at the moment; but upon being subsequently urged, I very carefully read the longest one, and found it to be one of the ablest treatises upon the tariff question that I have ever read or been called upon to revise. Believing this to be the one that my friend had sent me, I returned it to him, when to my surprise he said that it was not his; that he concurred with me in my judgment of its merits, and that he thought it ought to be published. Now I am very much troubled. The manuscript in question was anonymous. It was not accompanied by any letter or request for examination, and I therefore cannot identify the correspondent from whom it came. I know not what to do with it, as in the time that has elapsed no one has written to me upon the subject. I ask for this notice in the *Nation*, in the hope that the writer will make himself known. The title of the paper is "Protection," and it begins with an introductory paragraph from an article by Cardinal Gibbons, in the *North American Review* for April, 1891. I am, yours respectfully,

David A. Wells.

Norwich, Conn., March 16, 1892.

VOLTAIRE, NOT PHILLIPS.

To the Editor of The Nation:

Sir: "Of course errors about matters of oral tradition are to be dealt with leniently, but they ought to be pointed out before they crystallize into the 'lies agreed upon,' which Mr. Wendell Phillips says constitute what we call history."

Voltaire had written ('Jeannot et Colin'): "Il n'y a certainement d'agréable et d'utile que l'histoire du jour; toutes les histoires anciennes, comme le disait un de nos beaux esprits, ne sont que des fables convenues."

A. I.

New Bedford, Mass., March 18, 1892.

Notes.

Prof. Romanes's book, 'Darwin and after Darwin,' is to be brought out in the United States by the *Open Court* Publishing Company of Chicago. The work will appear in England and this country simultaneously.

Fresh stories of Brer Rabbit and the other brethren are promised, together with some autobiographic matter, in Joel Chandler Harris's new book, 'On the Plantation,' which is at once to be published by the Appletons, with illustrations by E. W. Kemble.

Harper & Bros. announce for immediate publication 'Love-letters of a Worldly Woman,' by Mrs. W. K. Clifford; 'Monsieur Henri, a Foot-note to French History,' by Louise Imogen Guiney; and Mr. Howells's latest novel, 'The Quality of Mercy.'

The expiration of the copyright on 'The

Scarlet Letter' brings with it the announcement of two cheap editions, one by the Waverly Company of New York and the other by Houghton, Mifflin & Co., Boston. From either firm the book may be had in paper at twenty-five cents and in cloth at fifty cents. The last-named publishers will also speedily issue 'The Unseen Friend,' by Lucy Larcom. March 23 was the date of issue of the first number of a new religious quarterly, the *New World*, published by the same house.

Thought News is to be the title of a new monthly, of which the first number is to appear in April, and which is to be published at Ann Arbor, Mich., under the editorial care of Prof. John Dewey.

Macmillan & Co. promise for early April two fully illustrated volumes on the 'Remains of Ancient Rome,' by Prof. J. Henry Middleton. They are also to publish on March 29 Tennyson's new play, "The Foresters," now running at Daly's Theatre in this city. They announce, furthermore, a monthly issue of the more popular novels of Dickens in their "Dollar Series," starting off with 'Pickwick' in March, 'Oliver Twist' in April, etc. Accurate reproduction of the text of the first editions is promised, with all the original illustrations, and an introduction to each volume by the novelist's eldest son.

The Government "Atlas to accompany the Official Records of the Union and Confederate Armies" proceeds with a second and third part which embrace the defences of Washington, of Paducah, Ky.; Northeastern Virginia, from Washington to the Potomac; the battle-fields of Carnifix Ferry, West Va., Pea Ridge, Ark., Shiloh, Tenn., Roanoke Island, N. C., Forts Henry and Donelson; the neighborhood of Corinth, Miss.; the siege of Yorktown, and sundry other maps, surveys, reconnoissances, and sketches.

If one overlooks the faulty style, sometimes resulting in nonsense, of Dr. P. C. Remondino's 'The Mediterranean Shores of America' (Philadelphia: F. A. Davis Co.), he may derive no little instruction from it regarding Southern California as a health resort. The author maintains and illustrates forcibly the thesis that an equable temperature, permitting free ventilation, is the prime anti-phthisical condition, quite irrespective of altitude, humidity, rainfall, etc. He also indicates the great variety of situations and climates in Southern California, suitable not only for different kinds of invalids, but for invalids whose cases appear to be the same, yet who do not thrive equally well on the same spot. The book is freely but somewhat capriciously illustrated with views, and also with maps and sections.

M. Jules Lemaitre has just gathered into a volume a fifth collection of his studies of modern French literature and modern French life, still called 'Les Contemporains' (Paris: Lecène, Oudin & Cie.; New York: F. W. Christern), although the rigidity of the formal portrait-essay is now relaxed and the papers here presented are often fragmentary. There is the same wit, however, the same honesty, the same exceeding cleverness, the same highly interesting exhibition of the mind of a nineteenth-century Parisian, cultivated almost to the point of reaction. Among the literary men considered in this fifth series are M. de Maupassant, M. André Theuriet, M. Édouard Rod, and M. Paul Marguéritte—this last a most promising novelist not yet as well known in America as he ought to be. Outside of literature are brilliant little papers on Boulanger, on the philosophy of dancing, and on exiled emperors. More than half of the book is given up to the delightful "Billets du Matin," contributed to the *Temps* two years ago, and constituting a pleasant variation on the accepted form of the *chronique*. Easy, graceful, learned, charming—these *billets du matin* give an impression of Parisian society quite different from that derived, say, from the *Figaro* or the *Vie Parisienne*.

After an interval of several years, M. Francisque Sarcey has at last followed his 'Souvenirs de Jeunesse' with a volume of 'Souvenirs d'Âge Mûr' (Paris: Ollendorff; New York: F. W. Christern), reprinted from the *Revue Bleue*, where the earlier chapters appeared under the title of "Comment je deviens conférencier." Perhaps this is a better title than that the book actually bears, for the volume is devoted wholly to M. Sarcey's experience as a lecturer in Paris, in the provinces, in Holland and Belgium, in London. Like all his writing, it is delightfully frank, easy, humorous, and engaging. It abounds in anecdotes, many of which tell against the teller. It includes one whole chapter given up to an explanation of the lecturer's art, and setting forth, for the benefit of the novice, the rules which experience has taught M. Sarcey to devise for his own use. It provides material for a very piquant comparison of the old New England lyceum lecturer and the Parisian *conférencier*. Especially interesting is M. Sarcey's account of the methods of other French lecturers, of M. Legouvé, for example. Altogether, his 'Souvenirs d'Âge Mûr' (like his 'Souvenirs de Jeunesse,' for that matter) is as instructive as it is amusing.

'Brighter South Africa' (London: T. Fisher Unwin), by J. Ewing Ritchie, is a pleasantly written description of a short visit to the Cape and Natal. The most interesting chapters are those in which the writer gives the prevalent views of the colonists on such subjects as their relations to Great Britain, the treatment of the natives, and temperance legislation. Some light, also, is thrown upon the religious conditions, and especially upon the peculiar position of the Church of England in Natal. There is an excellent map, in which the places of the various products of the country are distinctly shown. Among these the gold fields are very prominent, but in view of Mr. Bent's statement of the immense tracts both of alluvium and quartz which have been worked by the ancient miners, the question naturally arises whether the gold, in Mashonaland at least, may not have been practically exhausted ages ago.

Dr. Bourinot is a recognized authority in everything pertaining to Canadian institutions. The first edition of his work on 'Parliamentary Procedure' had already so high a reputation as a trustworthy compendium of the law and practice that a new, revised, and enlarged edition (Montreal: Dawson Bros.) must at once take position as a standard book of reference on his subject. His historical chapters on the growth and changes of the government in Canada from the period of the French colony downward will prove instructive for American readers. As a study in comparative parliamentary law the book will be valuable to parliamentarians everywhere. As evidence of Canadian progress in bookmaking, the volume shows that in typography, press-work, paper, and general make-up, our neighbors need not fear comparison with the product of the best presses here or elsewhere.

From John W. Lovell Co. we have received the first three volumes of a complete translation, by Mr. Charles G. Leland, of Heine's poetic and prose works. Hardly a greater service could be done to American literature than to appropriate for it a writer who in breadth of sympathies, keenness of judgment, and irreverence of language seems to be our own, while his German romanticism and waywardness add to this that indescribable personal charm which we miss so sadly in most of our stout modern realists. While it must be said that the only true translator of Heine would be another Heine (which the present translator is not), it is only fair to admit that Mr. Leland has approached his difficult task courageously and with a good deal of spirit. The three volumes which lie before us contain among other essays and sketches the 'Florentine Nights,' the 'Rabbi of Bacharach,' the 'Book le Grand,' the 'Pictures of Travel'; and throughout this variegated and multiform matter there runs, even in the translation, something of the electric current from which flash forth the sparks of the original production. It is a pity that an author of Mr. Leland's power of reproductive imagination should not have had a little more scholarly conscience. For it is only to the lack of the latter that we can ascribe the frequent occurrence of most elementary blunders, some of them grotesque enough to form the *pièce de résistance* of a freshman blue-book. We subjoin, without further comment, a few of them—the gleanings of a hasty reading. "Profaxen und andere Faxen" (Pict. of Trav. i., 59) = professors ordinary and extraordinary. "Verjüngter Maasstab" (ib. ii., 8) = revived proportions. "Reifröcke" (ib. 9) = travelling jackets. "Jene Bretter die eine Festung bedeuten" (ib. 67; an allusion, of course, to the "Bretter die die Welt bedeuten") = planks which lead to a prison. "Die aufgeklärten Bäuche, denen jene Messgewänder viel zu weit" (ib. p. 259) = the enlightened bellies, a world too wide for the chasubles—etc., etc.

The sixth and closing paper of the series on Britannic Confederation in the *Scottish Geographical Magazine* is by Lord Thring, formerly Parliamentary Counsel. It is an interesting statement of the present relations of the Colonies, as distinct from the Dependencies, to the mother country, together with a few suggestions as to the manner in which the bonds can be drawn closer. As the whole trade of the United Kingdom with Canada, Australia, New Zealand, and Cape Colony is less than 12 per cent. of her foreign trade, the writer scouts the idea that it should give up free trade for protection, but holds that they should alter their commercial relations in the direction of free trade. He also advocates, with Sir John Colomb, the formation of an Imperial army and navy, apart from the British army and navy, to which each colony should contribute men and ships, to be used in the colony in case of attack, but not for foreign service except with their own consent. Among minor details are the elevation of the Agent-General to a position akin to that of a minister of a foreign State, freer postage, and the interchange of the civil services. Illustrative of the whole series is an excellent map of the world so colored as to show not only the extent of the empire, but also the countries in which it has a monopoly of the foreign commerce (more than 50 per cent. of the imports and exports combined), British-owned steamship lines, naval and coaling stations, as well as all places in which are British legations, consuls, or vice-consuls.

The double fascicule of the *Bulletino della Società Dantesca Italiana* (September, 1891) contains a report of progress from the committee appointed, at the organization of the socie-

ty in 1889, to prepare a new uniform text of Dante's complete works. Prof. Michele Barbi, to whom the 'Vita Nuova' and the 'Rime' were assigned, is already well along in the preparation of the former, and Profs. Bartoli, D'Ancona, and Del Lungo publish in this number a "canon" of doubtful readings, which will serve as tests for MSS. of the 'Divine Comedy,' with explicit directions for their use. The society has also taken in charge an excellent plan, originating with the late Lord Vernon, of collecting photographs and other adequate reproductions of the various places and objects commemorated in the great poem. The prospectus includes more than two hundred subjects, the materials for illustrating a third of which are already at hand.

Societies founded for the special encouragement of the study of Dante's works and time have not as a rule been long-lived. The most famous has been the *Deutsche Dante Gesellschaft*, whose Year Books contained a large amount of valuable matter. The oldest in existence is that which naturally grew up at Cambridge under the influence of Longfellow, Lowell, and Norton, and was definitely established in 1880, since which date it has annually published reports with accompanying essays or bibliographies. Next (1889) came the Italian Dante Society, whose Bulletin is mentioned above, with its headquarters in Florence and branches in various cities throughout the kingdom. Last is the "American Dante Society"—located in this city, with branches in Brooklyn and Philadelphia—whose Year Book for 1890–1, now before us, shows a membership of considerably over two hundred. It also contains addresses before the Society by Drs. M. R. Vincent, Thomas Davidson, and W. T. Harris. A sum has been set apart from the treasury for the purchase of books for the library of the Society, which, for readiness of access, is to be placed in charge of some public institution.

The mail from Holland brings news of the death of Dr. Frederik Gerrit Slothouwer, a scholar well known to all Americans who have visited Friesland, and especially Leeuwarden, in the interest of research. He wrote the history of the University of Franeker—whose professors and students so actively influenced Dutch opinion favorably to American independence—and other historical works. At the time of his death he was Professor in the Gymnasium and Secretary in several languages for the Friesland Historical and Archæological Society.

We have before spoken of the influence of Toynbee Hall in getting the ratepayers of the Whitechapel district in London to vote for a free public library, and now have to record the gift of £6,454 by Mr. Passmore Edwards, to meet the estimated cost of the library building. Other subscriptions in hand will pay for the site, the fittings, and the books to begin with, so that the whole of the tax levied can be devoted to the working expenses and the development of the library.

—The second volume of the so-called national edition of the works of Galileo Galilei (Florence: Barbèra), published under the auspices of the King of Italy and with the aid of funds voted by the Italian Parliament, is considerably stouter than its predecessor, to which we called attention about a year ago. In this second instalment of the monumental work, the editor, Prof. Favaro, fully sustains the reputation he had acquired for critical discernment, excellent taste, and exact and many-sided scholarship. It contains a number of treatises embodying the results of researches made while Galileo was professor at Padua, between 1592 and 1610, and never before printed. During this period he delivered a course of lectures on military science, and especially on fortification, which attracted unusual attention, and there is a tradition that Gustavus Adolphus as a youth of fourteen came to Padua to profit by this instruction. According to the testimony of Oxenstiern, the Swedish prince showed remarkable knowledge of the science of war before he ascended the throne in the seventeenth year of his age, and the legend may have originated in an attempt to account for this precocity. These lectures, in which Galileo treats the subject as a branch of applied mathematics and anticipated by three-quarters of a century the principle so successfully employed by Vauban in the polygonal construction of bastion fortifications, have been preserved in only a few manuscripts, and are now published with the original geometrical drawings for the first time. The rest of the volume consists of treatises on mechanics, including statics and dynamics, the second part of the essay *De Motu*, and fragments of discourses on astronomy, with the "Dialogue Concerning the New Star" (of 1604), which, although bearing the name of Cecco Di Ronchitti, was essentially the work of Galileo. Exceedingly interesting is Galileo's letter of March 30, 1597, to his old instructor at Pisa, Jacopo Mazzoni da Cesena, who, in a treatise *De Comparatione Aristotelis et Platonis*, had set himself in opposition to the Copernican system, and is very politely, but quite decidedly, refuted by his former pupil. Galileo's invention of the sector in 1597 was contested by a rival astronomer and bitter enemy, Baltasare Capra, who had the effrontery to claim this distinction for himself. Prof. Favaro has published the documents referring to this controversy, including Capra's pamphlet with Galileo's marginal annotations and a separate defence of his rights by the latter, who denounces his adversary as a slanderer and swindler. The practical value of the volume is greatly enhanced by a complete index of proper names.

—The strong feeling excited by the forced retirement of Prince Bismarck has given rise to a voluminous literature of which he is the central figure. Many of these works are polemical and partisan pamphlets of an ephemeral character, while others are the result of thorough research and have a permanent value. Of the latter class the most important is perhaps Horst Kohl's 'Fürst Bismarck, Regesten zu einer wissenschaftlichen Biographie des ersten Deutschen Reichskanzlers' (Leipzig: Renger, 1891; vol. i., pp. xii., 418). The first volume contains a succinct chronological record of all the acts of Bismarck relating to public affairs on nearly every day of the year from 1815 to 1871. The usefulness of such a register of the life of an eminent statesman, as a book of reference and as a storehouse of facts for biographical and historical purposes, is obvious, and will be fully appreciated by all who have had occasion to look up information of this kind. Of special interest to rhetoricians is Hugo Blümmer's 'Der bildliche Ausdruck in den Reden des Fürsten Bismarck' (Leipzig: Hirzel, 1891; pp. vi., 198). The Zurich professor has studied Bismarck's speeches from 1847 to 1889 with sole reference to their rhetorical character, collecting and classifying the most striking imagery, similes, metaphors, historical, literary, and poetical allusions, proverbial phrases, tropes suggested by popular customs or derived from social and domestic life, and other forms of oratorical decoration and illustration. Many, and indeed most, of these figures are, of course, not original with the German Chancellor, but the common property of mankind; characteristic of him is his uniformly happy choice of them. The work is thoroughly well done. Fortunately for Prof. Blümmer's purpose, the speeches of Bismarck have been published in sixteen small octavo volumes, entitled 'Fürst Bismarck als Redner' (Stuttgart). It is a complete collection of his parliamentary speeches since 1847, edited and chronologically arranged according to subjects, with notes and introductions by W. Böhm and A. Dove. Another earlier edition of the same statesman's speeches, designed to give a connected survey of his political career and parliamentary triumphs, is Friedrich Thudichum's 'Bismarcks parlamentarische Kämpfe und Siege' (Stuttgart). It is in two volumes and is intended chiefly to justify the Imperial Chancellor's policy as embodied in the legislative enactments with which his name is identified, and only incidentally to illustrate his characteristics as an orator. It would be strange if the German muse should fail to sing the praises of Bismarck, but ballad-doggerel like Rudolf Genée's 'Bismarckiade fürs deutsche Volk' (Berlin: Hofmann) is anything but a worthy expression of national gratitude and admiration. Less ambitious and really enjoyable is 'Ein Märchen vom Bismarck und der Kaiserkrone' (Frankfort: Rommel), in which an anonymous author has made a successful attempt to narrate for children the achievements of Bismarck in the style of the sagas.

—It is a prevalent opinion that common schools, as we now have them, were an American invention. No legislation, it is asserted, taxing all in order that all may be taught can be traced back further than to the early laws of Massachusetts. Those who deny this assertion are content with showing something of the sort in Scotland and Germany a generation or two before the landing of the Plymouth pilgrims. The truth is, however, that, as much of our social wit is now credited to the ancient Greeks, something of our educational wisdom ought to be. Two centuries ago John Locke, as an able political writer, was invited to draw up a code of fundamental laws for the new colony of Carolina, and in like manner, more than 2,300 years ago, Charondas, a master of a similar type in Magna Græcia, was called to a similar task. This was to frame a series of statutes for the government of a Greek colony founded about 446 B. C., in the foot of Italy. This colony was Thurii, and conspicuous among the enactments of Charondas was the following:

"Charondas made a law unlike those of lawgivers before him, for he enacted that the sons of the citizens should all learn letters [or writing] (*ἅπαντας μανθάνειν γράμματα*), the city making payment to the teachers. He thought that the poor, not able to pay wages themselves, would otherwise fail of the best training. He counted writing the most important study, and with reason. Through writing, most things in life, and those the most useful, are accomplished—as ballots, epistles, laws, covenants. Who can sufficiently praise the learning of letters? Only through them are the dead held in memory by the living, through them those removed in place [as the colonists were planted beyond a sea which seemed to them world-wide] converse with those most distant in space as with by-standers. [See "Winter's Tale," I., 1, 33.] Again, in treaties among nations and kings the certainties of writing furnish the best pledge of persistent adhering to agreements. In fine, writing alone

preserves the most brilliant utterances of wise men and the oracles of gods, nay philosophy and all culture. All these things it alone hands down to all future generations. Wherefore nature should be viewed as the source of life, but the source of living well we should consider the culture derived from writing. Inasmuch, then, as illiterates are deprived of a great good, Charondas came to their help, judging them worthy of public care and outlay. Former legislators had caused the sick to be attended by physicians at the public expense, thinking their bodies worthy of cure. He did more, for he cured souls afflicted with ignorance. The doctors of the body we pray that we may never need, while we would fain abide for ever with those who minister to the mind diseased."

—This extract is from the 'Bibliotheca Historica' of Diodorus Siculus (Book x, § 13), who was flourishing at the birth of Christ and was the most painstaking chronicler of the Augustan age. The legislation is worth notice for more than one reason. It rebukes the self-conceit of those who hold that the education of all at the charge of all is an idea born in our own time or country. It has also been strangely unnoticed by historians who ought to have kept it before the people. Thus, Charondas and his laws are spoken of by both Grote and Curtius, but this law is brought to view by neither of them. It is possible that Grote never heard of it, for he denies Charondas the credit of any legislative originality. Only in Weber ('Weltgeschichte,' vol. ii., p. 215) is this mother and model of a school law for the masses allowed a single line of mention, thus: "Alle Kinder sollen die vom Staat unterhaltenen Lese-schulen besuchen." Short as is this notice, it is not quite correct. The law of Charondas did not provide for the instruction of all children, but only for that of all *sons*. Sons is the word of Diodorus. Female education in common schools, this crowning key-stone in the arch of culture—this new thing under the sun—we may claim as a Yankee notion, pure and simple.

—A "trustworthy history of the city of New York" can be offered to the public without any apology, and it is earnestly to be hoped that such a work is to be found in the 'Memorial History,' edited by James Grant Wilson (New York History Co.), of which the first volume is now at hand. Many and important works have already appeared, purporting to be histories of the city, but they are for the most part merely elaborate and picturesque narratives of imposing events, and none of them seeks seriously to trace the causes or results of the incidents described. What book can claim to be a history in any true sense that devotes as many as fifty pages to the celebration of the opening of the Erie Canal, and not one to the social, economic, and political results of the event; that ignores entirely the changes by which in scarcely a decade the "nativist" constituency of the city was so transformed as to present a majority which was foreign by birth or extraction, and that omits even to record the first great political struggle to which this transformation gave rise; that fails almost entirely to notice the course of political events since 1857—the régime of Fernando Wood, the control of the city government from Albany established by Thurlow Weed through his State Commissions, the supremacy of Tweed and the beginning of the movement towards home rule through his charter, the reëstablishment of Tammany Hall (its organization and by-laws should be published everywhere to show that it is the most undemocratic political organization in the land), and the later struggles for simplicity and unity in the administration and for reform in the machinery of elections? In none of the many "histories" of New York are these matters considered. Two-thirds of every work hitherto published is devoted to the time before 1820, and of this most refers to the colonial period, when the city's population was only 20,000. But the New York of 20,000 inhabitants has little interest and little importance compared with New York the metropolis. The "history of New York" which will be welcome will deal fully, indeed, with the colonial as well as the later periods, but will particularly recognize that modern New York begins its existence about 1850, and that its growth since then deserves the most patient and laborious study and the most exhaustive treatment. In one of the best extant "histories" of the city—a work of 800 pages, recently published, and claiming to be complete to the year 1880—eight pages are deemed sufficient for the social and political development since 1857! It is to be hoped that the 'Memorial History' will fill the gap here indicated. The first volume is a satisfactory review of the seventeenth century, and if the quality of the work is maintained, there seems to be promise of a real history of the later times.

LOUNSBURY'S CHAUCER.—II.

Studies in Chaucer, his Life and Writings. By Thomas R. Lounsbury, Professor of English in the Sheffield Scientific School of Yale University. 3 vols. Harper & Brothers. 1892.

"Chaucer's Relation to the Religion of his Time" is a very brilliant essay. The attempt to make the poet out a Wicliffite is first discussed, and its errors of fact and inference are exposed. Chaucer, Mr. Lounsbury insists, though he satirized the vices of the clergy, was in no sense a controversialist or a religious reformer: "he lived and moved in the dry light of the literary atmosphere, free from the passions that stirred the hearts of his contemporaries and the prejudices that warped their judgments." This is an extreme form of statement, and easily lends itself to misconstruction. Probably Mr. Lounsbury does not mean that Chaucer was not in every way a man of his age. If he had not been that, we should have had to do without the 'Canterbury Tales.' Dry light is *not* the best for some purposes. It is a foible of our self-satisfied time to think and to call such of the great of old as we condescend to admire "moderns"—that is, men intellectually and morally ripe enough for the enlightened present, though condemned by fate to pass their days in a century too young for them. This feeling shows itself, perhaps, in the sentence just quoted. It comes out still more clearly when Mr. Lounsbury passes from considering what Chaucer was not to a consideration of what he was. Chaucer's intellect, he tells us, was by nature sceptical; he was never spiritually minded, and, though he began his career with an honest, if not an enthusiastic, belief in the dogmas of the Church, he had become, long before the end of his life, something very like "a modern agnostic." "The general view of all his productions leaves upon the mind the impression that his personal religious history was marked by the dwindling devoutness of so many lives—the fallings from us, the vanishings, we know not how or when, of beliefs in which we have been bred." Now we are convinced that Chaucer was not a saint or a devotee. We are not concerned to prove him a good Catholic or even a good Christian. But we cannot think that Mr. Lounsbury has made out a case. His conclusion appears to us to rest in large part upon a misinterpretation of the spirit of the passages that he uses as evidence.

That Chaucer speaks of the Deity at times in a way that would nowadays be irreverent—as where he remarks, in exalting the beauty of Dido, that if God Himself wished for a mate, He could find no fairer lady—is a fact of no moment in this discussion. The moral Gower, whose devout orthodoxy may almost be termed notorious, does not hesitate, in emphasizing the impossibility of a niggard's succeeding in love, to assert that "with gift a man may undertake to please the high God." And in his enthusiasm over the reception of Jason in Colchis, he ventures upon a still more daring comparison:

> "Of him made every man a speche,
> Some man said on, some said an other;
> But *though he were goddes brother,*
> *And mighte make fire and thonder,*
> Ther mighte be no more wonder,
> Than was of him in that citee." (Ed. Pauli, ii., 255.)

Again, Mr. Lounsbury affirms that "the critical spirit is applied by Chaucer to the facts of the Bible as coolly as by the most cold-blooded of rationalists or the most scoffing of infidels." The only example cited in support of this rather strong statement is the attack made on Solomon by Proserpine in the 'Merchant's Tale.' The goddess calls Solomon "a lecher and an idolaster." These accusations, Mr. Lounsbury is forced to admit, are Bible truth; but he insists that the charge "would never have been so bluntly stated by a spiritually minded man." Surely at this point a demurrer may be interposed. The charge is not stated by a spiritually minded man; it is stated by a heathen goddess in the heat of an animated discussion with her Tartarean husband. However, it will be as well not to press this demurrer, for, if the context be scanned, Proserpine will be found appealing to her Bible in a fashion that makes this passage particularly unfit for Mr. Lounsbury's purpose. And, after all, was there any obligation on the most spiritually minded of men to treat Solomon's memory tenderly? Has Mr. Lounsbury forgotten that, in spite of Dante's doubts, the author of 'Piers Plowman' felt justified in associating the wisest of kings with the wisest of philosophers, and in proclaiming of Solomon and Aristotle: "al holicherche holdeth hem bothe ydampned"?

The two passages on which Mr. Lounsbury mainly relies, however, are the opening verses of the Prologue to the 'Legend of Good Women' and lines 1951-1958 of the 'Knight's Tale.' Both these passages are torn from the context, and ruthlessly compelled to give evidence without consulting their neighbors and friends. The result is startling. Boccaccio had devoted two or three stanzas to tracing the itinerary of Arcita's soul among the spheres. Chaucer had admired the description and had used it in the 'Troilus.' In the 'Knight's Tale,' therefore, written years afterward, he preferred not to employ the same rather frigid lines a second time. His taste had improved, and he accordingly inserted in the appropriate place a good-natured fling at the essential absurdity of the original—a fling which he enjoyed the more for being as much at himself as at Boccaccio. Out of this Mr. Lounsbury has extracted a confession of unfaith. "Can modern agnosticism," he asks, "point to a denial more emphatic . . . of the belief that there exists for us any assurance of the life that is lived beyond the grave?" The passage from the 'Legend,' which is used by Chaucer merely to introduce what he says of the authority of books, is thus summed up: "Chaucer [here]

indicates clearly his opinion that none have any real acquaintance with the nature of the future life of which they speak so confidently." Let us be preciser and say: "Chaucer indicates clearly his opinion that nobody whom he has ever seen has an *experimental knowledge* of the nature of the future life." An unexceptionable sentiment, for Chaucer's century or for our own! In all this we are not trying to establish Chaucer's belief in heaven and hell or in anything whatever. We are merely protesting against what seem to us inquisitorial methods. A poem is no more likely than a man to give trustworthy evidence under torture.

So eager is Mr. Lounsbury in pressing his point that he is ready to assert that Chaucer sometimes clothed his attacks on the Church in ambiguous language in order to avoid trouble. "It was doubtless essential to his comfort, if not to his safety, that his words could be taken in a double sense." So of the comments on the archdeacon's curse in the general Prologue. This will hardly do. It is humor, not prudence, that led Chaucer to "speak in amphibologies" on such occasions. Once more, Mr. Lounsbury declares that it is indicative of Chaucer's decline in faith in later life that he found "his keenest delight in the exposure of that dry-rot in religion when men no longer practise what they preach," etc. But Chaucer took no keener delight, to all seeming, in portraying the rascally pardoner or the hypocritical friar than in describing the good priest, the pious ploughman, or the unworldly clerk. The argument defeats itself. In the 'Wife's' Prologue Mr. Lounsbury discovers a "revolutionary document." This, with the host's raillery of the monk, is Chaucer's protest, he thinks, against the celibate ideal. "It was a triumph of literary art to put forward heterodox views prominently, and not subject himself to condemnation for their avowal." Here Mr. Lounsbury is unconsciously forsaking his hard-won ground. The purely literary man, resident in the dry light of belles-lettres, the non-controversialist, becomes of a sudden the social reformer—and that on the evidence of the Wife of Bath! The Prologue expresses the sentiments of that "worthy woman"; of so much we may be sure. To assume that it also expresses the sentiments of Chaucer is no more safe than to assume that the poet's marriage "was not a success," as Prof. Hales puts it, because the merchant satirizes wedlock. It is venturesome to select all the "modern" ideas uttered by any of the Canterbury pilgrims and to ascribe them to Chaucer, while we allow all those ideas that we think distinctly mediæval to remain the property of the speakers. Chaucer is a narrative poet, to be sure, as Mr. Lounsbury reminds us, but the conditions of his problem in the construction of the 'Canterbury Tales' demanded that he should be a dramatic artist as well.

The third volume of the 'Studies,' which many readers will find the most attractive of the work, consists of two long papers, "Chaucer in Literary History," and "Chaucer as a Literary Artist." In the first of these Mr. Lounsbury has undertaken a history of the reputation of Chaucer. His task was one of peculiar difficulty. It demanded not only learning and industry in the collection of materials scattered through the prose and verse of almost five hundred years, but nice discrimination in weighing testimony, a just and catholic spirit in estimating obsolete critical standards, and rare powers of selection, combination, and arrangement. The unquestioned supremacy of Chaucer in the fourteenth and fifteenth centuries, the whimsically mistaken reverence paid him by the Puritan reformers of the sixteenth on the strength of a spurious work, his influence on Spenser and the Elizabethans, the decline of his fame and its revival through the vogue of Dryden's "Fables"—these are some of the subjects which Mr. Lounsbury has had to treat. In his account of the Chaucer "translations," from Dryden's to Horne's, he has put a neglected chapter of literary history into what may be deemed final shape. The curiously inconsistent effect of the modernizations in keeping the poet's name up while they prevented everybody from finding out anything about him at first hand, is clearly brought out. In illustrating the misapprehensions of the seventeenth and eighteenth centuries, when Chaucer's language was supposed to be hopelessly archaic, his verse harsh and often unmetrical, and his diction clumsy and obscure, Mr. Lounsbury has been obliged to characterize a series of attempted imitations of Chaucer, and here again he has supplied a considerable lacuna in the annals of letters. In a word, this whole paper is an appreciable contribution to knowledge. The author has so marshalled his facts and has chosen his illustrative quotations with such excellent judgment that the reader is never wearied or confused by their abundance. He has contrived to be methodical without being formal, and solidly instructive without deviating into dulness.

The concluding portion of the essay, however, we have read with many misgivings. It is a plea for modern spelling in our texts of Chaucer and for modern pronunciation in reading them. Special students, says Mr. Lounsbury, can always revert to editions in fourteenth-century orthography, and can indulge their fancy in efforts to reproduce fourteenth-century sounds; but for the general reader, and even for the man of letters, the spelling and the pronunciation of our own day will suffice. Only by this process of modernization can Chaucer become so well and widely known as he should be, and all pedantic predilections should give way to these considerations of utility. Fortunately, Mr. Lounsbury has tried to practise what he preaches, and has modernized the extracts from the poet which he has quoted in the course of his work. We say "fortunately," for, in our opinion, the attempt to read these extracts as thus printed will best counteract the influence which his utterances would otherwise exert. In the first place, the cutting off of final *-e* in rhyme quite misrepresents the melody and movement of Chaucer's verse. Further, since *-e* and *-en* have to be preserved in the interior of the line, the reader will not fail to notice that the resultant forms are often neither of the fourteenth century nor of the present time. Again, many words that look familiar when spelled in modern fashion, lose that air when it is discovered that they cannot be accented in modern fashion without destroying the measure. In a word, that absence of strangeness which it is Mr. Lounsbury's aim to effect, is seen to be attained in no appreciable degree. Modern spelling and modern pronunciation will not make Chaucer's words familiar in look and in sound unless we fall back to the practice of the seventeenth and eighteenth centuries and disregard the metre. But this is not all. The student who tries to read Mr. Lounsbury's modernized quotations will find himself in a curious dilemma. *Anon* and *stone*, *shall* and *all*, *case* and *was*, *shoe* and *in principio* will not rhyme. What is the reader to do? Shall he content himself with imperfect rhymes? He is mangling the verses of the most melodious of poets. Shall he accommodate the pronunciation of *shall* to that of *all*, the pronunciation of *was* to that of *case*? He is abandoning the principle of modernization. With this dilemma the subject may be left. We regret that Mr. Lounsbury has lent the weight of his authority to pervert many who, but for him, might have made a shift to acquire some system of pronunciation which, though perhaps philologically imperfect, would at least reasonably well satisfy the requirements of practice.

The second part of this volume is in a manner complementary to "The Chaucer Legend," for a good portion of it is devoted to exploding critical fatuities. Literary critics have always been exasperatingly irresponsible; and small blame to them, for none of them has ever promulgated an absurdity so monstrous as not to be hailed by his disciples as a proof of "insight." But there are indications to-day that criticism is very specially anxious to emancipate itself from accountability. The old magisterial way of valuing an author according as he did or did not conform to certain arbitrary rules supposed to have been laid down by the ancients for their own guidance, was bad enough; but the new fashion of pretending that you are an initiate in some mysterious thought free-masonry by means of which your author speaks to you directly, heart to heart, in a language which you will do your best to translate to the world, but of whose grammar and vocabulary you can give no account, is downright pernicious, however interesting as a sign of the marked tendency of this age to dabble in occult sciences. Peculiarly irritating is this sort of criticism when it rests on tradition after all—when the critic is detected translating into what he calls human speech, *not* the results of some esoteric communion with the astral spirit of his author, but the results of inherited misapprehension and ignorance.

No great poet has suffered more from the incompetency of his critics than Chaucer, and therefore much that still passes current as opinion about him is pitifully out of the way. Mr. Lounsbury's paper is, then, a welcome contribution to Chaucer literature. The masculine qualities of style and judgment which he has evinced in dealing with other departments of his subject are equally evident here. The belief that Chaucer was an inspired barbarian, who sang, without art, what the gods put into his head, is perhaps not entertained by anybody at the present time in quite so gross a form as that in which it prevailed a hundred and fifty years ago; but various ludicrous notions founded on that belief are still cherished here and there. We may well be grateful, therefore, to Mr. Lounsbury for demonstrating that Chaucer was his own severest critic, and that his constant progress in literary and poetic art was not made unconsciously. In dwelling on this side of Chaucer's nature Mr. Lounsbury has, perhaps, failed to emphasize sufficiently that spontaneity which was an equally striking characteristic of his genius. But this is a slight defect at most. The chapter is very able throughout—clearly and cogently written, and not above giving reasons for the faith that is in it. It is not only a lesson in Chaucer, but a lesson in conscientious and sensible criticism—the admirable ending of an admirable book.

With 1900, the 500th year of Chaucer's posthumous fame will be finished. Many scholars are busy studying the poet, and much has been accomplished; but heretofore the results arrived at have been mainly tentative; and, even when sound conclusions have been reached, they have usually been put forth in forms laying small claim to permanence. Hence the hopeful ex-

pectancy with which we wait for Mr. Skeat's promised edition of the 'Canterbury Tales'; and hence, too, our satisfaction in the thorough, scholarly, and in many respects final 'Studies' of Mr. Lounsbury, which will go far to enable American learning to face the coming anniversary without shame.

LORD ROSEBERY'S PITT.

Pitt. By Lord Rosebery. New York: Macmillan & Co.

THERE is probably still in England, as there was in the days of Horace Walpole, a decorous predilection for royal and noble authors. A more reasonable interest is felt in a life of a statesman written by one who himself aspires to that part. Lord Rosebery has perhaps had the benefit of both these sentiments. His work, however, if not masterly, is thoroughly clever. It shows, as might be expected, parliamentary experience and familiarity with political and diplomatic history. It is lively and sometimes trenchant in style, and nowhere smells of the House of Lords.

Lord Rosebery does not note the European significance of Pitt's figure as one of that group of reformers before the French Revolution upon which history looks back with a wistful eye. Seen from this point of view, Pitt is the companion of Frederick the Great, Joseph II., Catherine of Russia, Leopold of Tuscany, Pombal, Aranda, Tanucci, and Turgot. All these sovereigns and ministers, imbued more or less with the philosophy of the eighteenth century, had in their various ways and different degrees been ushering in a policy of enlightenment, beneficence, and toleration. They had as their fellow-workers philanthropists like Howard and Wilberforce, as well as economists like Adam Smith, whose follower Pitt was proud to be. The immense influence of Voltaire, whether entirely wholesome or not, and the homage paid to him and other leaders of literature by crowned heads, showed that intellect was gaining ascendancy over force. A happy change was coming by a quiet process over the general spirit of government and legislation. War itself seemed to be gradually wearing out, and on the eve of the Revolution Pitt looked forward to a long reign of peace, and to such a reduction of taxation as would have enabled him to abolish customs duties and thereby probably to open an era of free trade to mankind. Why could not destiny continue to hold that course? Was it inevitable that the work of peaceful improvement should be wrecked by a sudden eruption of revolutionary violence in France; that a reign of terror should ensue, staining the course of progress with unutterable crimes; that this should be followed by the military rule of a Corsican marauder of mighty genius trampling the civilization to which he was an alien beneath the feet of his devastating hosts, and bequeathing to the succeeding generations the legacy of a revived militarism, while the Reign of Terror bequeathed its Jacobin madness? Such is the question pensively asked by those who care more for the character than the name of government, and desire reform and improvement, not destruction and convulsion. In the disappointing 'Memoirs' of Talleyrand there is sometimes a memorable word; and there is no word more memorable or more profound than his saying that the main cause of the French Revolution was vanity. No Roman Talleyrand could have said this of Christianity; nor was a movement of which the mainspring was vanity, likely to end in the regeneration of the world.

Heredity may be a principle well established in its application to horses and dogs, but it is still precarious in its application to human genius. Chatham's eldest son was to all outward appearances a mediocrity and a total failure, both in the Senate and in the field, though Lord Rosebery thinks he has discovered in him a talent for counsel. His second son was illustrious in the very opposite way to his father. Chatham was a great war minister, but no financier or general administrator; his son was a first-rate financier and general administrator, but as a war minister a noted failure. Both were eloquent, but the eloquence of the son was as passionless as that of the father was impassioned. To the nation, however, Pitt was the son of Chatham, and its heart yearned towards him when it was wearied by the long reign of aristocratic cabal, selfish jobbery, and ill-starred war.

Pitt was beyond doubt the choice of the nation, which, as soon as an appeal was made to it, ratified, by an overwhelming vote, his accession to its leadership in place of the justly detested coalition. The consciousness that the tide was rising rapidly in his favor, and that he had only to hold on till the Parliament could be dissolved, must have made his struggle against the coalition majority much easier and less miraculous than it seems. But it will not do to accept without comment, as Lord Rosebery does, the transaction through which Pitt was made Prime Minister. The King's conduct was utterly indefensible. He had a right to dismiss the coalition Ministry, call Pitt or any one else he chose to his councils, and appeal to the country for ratification, facing the risk of having to take back his old Ministers at a sacrifice of power and dignity in case of his defeat. But he had no right to conspire against his constitutional advisers, and this was what he did. If the King's intervention to induce the Lords to throw out Fox's India Bill was constitutional, why did not Temple deliver his message openly from his place in the House of Lords? Why did he resort to the circulation of a clandestine card? This seems a conclusive answer to all apologies for the King's act. Temple was an intriguer of the most sinister kind. Pitt cannot escape blame for accepting the Premiership at the hands of perfidy and intrigue, though the blame will be softened by his youth and by the self-restraint, if not self-denial, which he had before displayed. Breaches of constitutional right are most dangerous when masked, as in this case, by personal or extraneous considerations, such as the righteous feeling of the country against the coalition. Nor could Pitt's own position in relation to the King fail to be weakened by the consciousness that he owed his place to royal trickery. "Wrong never comes right," was the favorite saying of Theodore Hook. Wrong did not come right even here, though the King, where he sought a tool, found a master.

Nothing could be happier or brighter than the early days of the young Minister's reign, while he was carrying into effect the lessons of Adam Smith, raising the revenue by a reduction of duties, cleansing the Augean stable of oligarchic abuse, and reforming all parts of the administration. Slight and transient was the shadow cast by his comparative weakness in the management of foreign affairs. During this period he was, as Lord Rosebery says, the man of the people, that is, of the middle and trading class, beyond which political life did not then descend. He was what would now be called a Liberal as opposed to a Radical. A Whig he styled himself to the end of his life. If he let Parliamentary reform gradually drop, he might partly excuse himself by saying that he found practical improvement on the largest scale possible without constitutional change. In this, however, he was probably swayed by his relation to the King.

The French Revolution brought a complete and tragic change. Lord Rosebery is right in saying that Pitt did not wish to interfere. He held out against intervention as long as he could. He was, as Lord Rosebery says, the most strenuous of peace Ministers. After all it was by the French that war was declared, though England perhaps had taken the decisive step in dismissing the French Ambassador on the execution of the King. It was not easy, in truth, even for the least meddlesome of Ministers to keep the peace with the nation which threatened all existing governments with subversion by its propagandism, and claimed, as in the Scheldt case, the liberty of setting aside all treaties and the public law of Europe if they conflicted with principles of natural right, of which it held itself the judge. Fair allowance must also be made for the horror and indignation excited in all breasts which revolutionary fanaticism had not steeled against natural sentiment, by the crimes of the Jacobins, their rabid blasphemies, and the cruel murder of the King and Queen. Fox, also, by his unmeasured language, made it more difficult for Pitt to stand against the tide of anti-Jacobin feeling. How Lord Rosebery can compare Fox to Luther it is difficult to understand. Fox was a great orator as Luther was a great preacher, and the temperaments of both were warm and generous; other likeness we fail to see. The character of Fox was largely formed at the gambling-table and in the drinking-bout. He came out first as a violent Tory. Then he became an equally violent Whig, and by his ostentatious sympathy with the rebellion at the time of the American war helped to drive the Tories to extremes. Next he combined with the Tory North, between whom and himself he had put, as far as the most solemn words could do it, an impassable barrier of honor. His coalition having been overthrown by public indignation, he again became a Whig, and at the crisis of the French Revolution, when he ought to have done his utmost to calm British feeling by moderate language and by disclaiming sympathy with violence or sedition, he did his utmost to inflame it by boundless laudation of the revolutionists and palliation of their crimes. A man might have generous sympathies, a winning character, and great powers in debate without being wise or even very conscientious. Lord Rosebery excuses Fox's opposition to Pitt's beneficent commercial policy on the ground that he knew nothing of political economy. Was not a man bound to know something of political economy when he took it upon him to lead a commercial nation?

Once swept away by the tide, Pitt seems to have shared the panic. His wild language, once more quoted by Lord Rosebery, can scarcely admit any other interpretation. He must be severely blamed for prolonging the war on the ground that in his opinion the French Government was not sufficiently stable and trustworthy to make peace, and for allowing his Foreign Minister, Lord Granville, to intimate that England desired as a condition previous to treating with France the restoration of the Bourbons. Had not the monarchies of France and Spain been content to treat with the regicide usurper Cromwell? It seems not to have dawned upon Pitt's mind that Napoleon had mastered the Revolution, and that

thenceforth, if anything was to be feared, it was not revolutionary propagandism, but military ambition. Nor can we, with Lord Rosebery, justify Pitt in resorting to coercion, even though he had Parliament on his side. The people of England generally were content with their modicum of liberty. The number of those who sympathized with the Revolution, or even agitated for constitutional change, the great alarmist Burke being witness, was contemptibly small. The mob at Birmingham was on the side of the Government. Coercion called into existence that hostility to Government which it was intended to repress. Lord Rosebery says that the State trials "cleared the air." At the time it was alleged that, in spite of the failure to obtain convictions, the trials had done good by revealing the abyss to the country. But courts of justice cannot be properly used for the purpose of clearing the air or revealing the abyss: they can be properly used only for the purpose of justice; and a Government which puts them to any other use commits at once a crime and a blunder. Carlyle calls Pitt "a lean, inflexible man." Lean he was, but it may be doubted whether he was inflexible. His habit of keeping people at a distance was rather a sign that he feared influence. He was greatly swayed by Dundas, a man far inferior to him in everything but the lowest kinds of statecraft, as his otherwise inexplicable change of front in the case of Hastings showed; and we can hardly doubt that he was hurried by the tide of anti-Revolutionary sentiment at court and among the upper classes into excesses of coercion which, left to himself, he would have disapproved. The weakness of his health, aggravated by a bad regimen, of which port wine was the principal article, can hardly have helped to brace his moral sinew or make his political attitude firm.

Lord Rosebery defends Pitt's war administration against Macaulay. Macaulay always overstates his case; but here surely he is not very far wrong. Lord Rosebery sets the success at sea against the failures on land. It would have been difficult to prevent the British navy from showing its qualities; but Pitt did not, like his father, inspire its victories. He cannot be said to have brought forward Nelson. He seems never to have looked into the condition of the seamen, and he left their abominable grievances unredressed till attention was enforced by the mutiny at the Nore. On land he was unlucky, no doubt, in having a Napoleon for his foe; but it was not Napoleon who put the Duke of York at the head of a British army. Pitt had not a spark of magnetism, nor did his eye discern the genius of any Wolfe. His forces were never found on a decisive field. He spent himself, as his biographer admits, in scattered and isolated efforts, costly both in money and life, and in which, before the Peace of Amiens, were sacrificed no less than 1,350 officers and 30,000 men. "But our fleet," says Lord Rosebery, "swept the seas and swept all hostile colonies into our net." Meantime Europe was being swept into the net of France. Against Pitt's war finance, it seems, there is nothing to be said except that the suspension of cash payments, like every resort to a forced paper currency, or tampering with the currency of any kind, was sure to be found ruinously expensive as well as demoralizing in the long run.

In treating of the Union with Ireland, and the Irish question generally, the biographer is evidently embarrassed by his own political position, and we are left in doubt as to his real view of the Union. He does full justice, however, to Pitt's upright intention. He sees that the recall of the Liberal Viceroy, Fitzwilliam, about which so much invective and lamentation have been poured forth, was due to the indiscretion of Fitzwilliam himself, and his departure from instructions which bound him to proceed with the requisite caution in the inauguration of his new system. Pitt no doubt sincerely deplored the necessity. He had always been in favor of toleration and of justice to Ireland. He had given Canada a measure of Catholic emancipation, and he had been prevented from extending to Ireland the full benefit of his commercial policy only by a coalition of Irish jealousy with the greed of English monopolists, and with the virulence of political factions headed, to their discredit, by Fox and Burke. His object in carrying the Union was beyond doubt to put an end to the tyranny of Protestant ascendancy, to the murderous strife of factions in Ireland, and to government by corruption, at the same time consolidating the kingdom and securing it against invasion. Lord Rosebery takes it for granted that the Union was carried by corruption which he calls "horrible and wholesale," but which he somewhat cynically defends as the established system. He seems not to know that it has been proved that the supposed bribes were, in fact, compensations regularly assigned under an act of Parliament to the proprietors of nomination boroughs in Ireland, in accordance with the notions of an age which regarded such boroughs as property, and paid without distinction to those who had voted against the Union as well as to those who had voted for it. Pitt would never have been a party to pecuniary corruption. Peerages no doubt he lavished without stint; of these he was always scornfully prodigal, partly, as Lord Rosebery thinks, because he liked to swamp the old Whig houses. In criticising the means by which the Union was carried, people are apt to forget the tremendous motive afforded to all who cared for their property or their lives by the events of '98. Nor was Pitt guilty of any breach of good faith towards the Roman Catholics. He had given no pledge, but he did his best to carry Catholic emancipation. He was foiled by the treachery of Loughborough and the self-interest, which disguised itself as bigotry, of ecclesiastics playing on the crazy scruples of the King. He then resigned. What more could he have done? To pass the measure over the King's veto was impossible, and it would have been not only foolish but criminal on the part of Pitt to attempt to carry his point by throwing the Government into convulsions at the most dangerous crisis of a great war. His resumption of power without authority to deal with the Catholic question is equally capable of defence. The nation had no other man to lead it, and was it to be conquered by Napoleon rather than that a measure of domestic reform should be postponed? Mr. Lecky is strangely unjust to Pitt on this occasion. Lord Rosebery does him justice. Such charges as that of premeditated treachery to the Roman Catholics, or that of concerting a destruction of documents to conceal criminal practices in carrying the Union, could have been made only by faction in its most malignant frenzy, and Lord Rosebery properly passes them over in silence.

Sparkling sentences not a few might be culled from this book. In defending Pitt's omission to patronize literature, Lord Rosebery says that "more Miltons have remained mute and inglorious under the suffocation of wealth than under the frosts of poverty," and that "the best literature has been produced by duns." This is epigram, not history; but it has in it perhaps as much of historic truth as epigram requires. Pitt's elder brother, the bearer of the family title, was once likely to die. "Lord Chatham's death," remarks Lord Rosebery, "by the grim humor of our Constitution, would have removed Pitt from the Commons to the Peers. . . . It would have been as if the Duke of Wellington, in the middle of the Peninsular war, had been transferred by the operation of constitutional law to the government of Chelsea Hospital." Here Lord Rosebery has in his mind, no doubt, the case of Lord Hartington and, perhaps, his own. That "an ex-Premier in a Cabinet as an ordinary member is a fleeting and dangerous luxury" is an apothegm which at once raises in the mind of the British reader the image of Lord Russell in the Cabinet of Lord Aberdeen. Perhaps the smartest hit is at Addington, who is said to have "carried into politics the indefinable air of a village apothecary inspecting the tongue of the State." Addington, it will be remembered, was the son of a physician, and was himself nicknamed "The Doctor." If he were alive, he would be totally incapable of avenging himself on Lord Rosebery by an epigram; but perhaps he might have said that even extreme cleverness is not always a sure earnest of greatness as a statesman.

BOOKS ON ART.

The Early Renaissance, and Other Essays on Art Subjects. By James M. Hoppin, Professor of the History of Art in Yale University. Boston: Houghton, Mifflin & Co. 1892.

The Human Figure: Its Beauties and Defects. By Ernst Brücke, Emeritus Professor of Physiology in the University of Vienna and formerly Teacher of Anatomy in the Academy of Fine Arts at Berlin. With a Preface by William Anderson, Professor of Anatomy to the Royal Academy of Arts, London, and Lecturer on Anatomy at St. Thomas's Hospital. Authorized translation, revised by the author. With 29 illustrations by Hermann Parr. London: H. Grevel & Co.; New York: B. Westermann & Co. 1891.

Lessons on Decorative Design. By Frank G. Jackson, Second Master, Birmingham Municipal School of Art. Third Thousand. London: Chapman & Hall; New York: Charles Scribner's Sons. 1891.

Nature in Ornament. By Lewis F. Day, author of 'Every-day Art.' With 123 plates and 192 illustrations in the text. London: B. T. Batsford; New York: Charles Scribner's Sons. 1892.

English Pen Artists of To-day: Examples of their Work, with some Criticisms and Appreciations. By Charles G. Harper. Macmillan & Co. 1892.

Les Artistes Célèbres. Antoine Watteau. Par G. Dargenty. 1891. *Abraham Bosse.* Par Antony Valabrègue. 1892. Paris: Librairie de l'Art; New York: Macmillan & Co.

One of Prof. Hoppin's essays is on the subject of "Art in Education," and in it he discusses many questions concerning the teaching of art in connection with university education, such as: "How far shall the study of Art enter into a regular academic course? How can it find a place without displacing more important studies? Should it constitute a purely professional school by itself, rather than an academical course of study?" etc., etc. A much more

important question, which he does not discuss, but which is inevitably suggested by a reading of his book, is: Who shall be the teachers of art? When we find a Professor of the History of Art at Yale College devoting an essay to wire-drawn criticism and extravagant laudation of the antique Niobe group, the "interest" of which he thinks "is more the subject of human thought and sympathy than even" the Parthenon figures; when he calls Murillo "an exemplification of all the richest and best qualities of Spanish painting," and finds that master of namby-pamby "appealing to the deepest heart of true worshippers in all ages and nations"; when he ranks Alma-Tadema, Leighton, and Turner among the Pre-Raphaelites, and Millet among the Impressionists, and calls Bastien Le Page "a disciple of Millet but especially of Cazin," then one longs for the words of one artist who has some real knowledge of his subject. And could the most inarticulate of painters express himself less clearly than Mr. Hoppin does in such a sentence as this?

"The atmosphere of his [Claude's] pictures, their aerial perspectives which carry the eye and mind into the illimitable, the coloring not always serene but sometimes sombre with deeper tints, the tender gradations of light and shade,—of evening and morn and fiery noon,—the breadth of composition, and, above all, the exquisite finish that makes even Turner's pictures that hang defiantly by the side of the Claudes in the National Gallery of London, look a bit imperfect, muddy, and dull-brown,—these cannot lose their charm under the most advanced criticism; but that they are the highest conceptions of Nature in her real beauty, significance, and force, with clouds as they are in the sky floating lightly in space and bearing the thunder in them, of nature varied with dull scenes, with striking contrasts and grim ugliness in which also there is power, Claude gives us little."

This is so wonderful—style, grammar, punctuation, and all—that we have not the heart to cut it short. And yet Prof. Hoppin wishes to teach art in the university on account of its influence in forming a "clear, vigorous, and elegant style of writing."

Prof. Brücke's little treatise is a very German book indeed. It is an attempt, by study, first of the antique and afterwards of nature, to fix a standard of what artists shall be allowed to find beautiful in the human figure. In the latter part of the book some concessions are made to individual taste, but in the first chapter, on the head, the Greek fetish is supreme, and Greek noses and Greek mouths are the only ones allowed as worthy of reproduction in serious art. One of the notable things about the unreasoning worship of the Greeks by so many critics is, that it is always to the second-rate, conventional Greek work that they attach themselves most firmly, and that they seem almost unaware of the existence of the great figures from the Parthenon. In discussing, for instance, the purely conventional representation of the iliac line which obtained in archaic and later Greek sculpture, Prof. Brücke makes no mention of the fact that in one of the most superb of antique figures, the Ilissus, this line is treated in a purely naturalistic manner. When will the art-critics learn that because a statue is antique it is not necessarily good, and that the conventions of second-rate Greek sculptors are no more binding on the modern artist than they were on the really great Greeks? When will they learn that art is not necessarily the more ideal for being less natural, and that the greatest idealists have been the greatest realists too? Also, that there is more than one kind of beauty, and that the artist's business is to reproduce that which seems beautiful to him?

That Mr. Jackson's volume, which was reviewed in these columns upon its first appearance, should have reached its "third thousand" may be an encouraging sign of the amount of interest in decorative design that today exists; but, if there were nothing better than this for that interest to feed on, the outlook would not be altogether agreeable. Fortunately, in Mr. Day's 'Nature in Ornament' (one of a series of "Text-books of Ornamental Design" by the same author) we have something very much better indeed. Mr. Day is a practical designer, the merit of whose work predisposes one to accept his opinions, and his opinions are broad and catholic and clearly stated. The numerous illustrations are well selected and admirably rendered. His book is one to be thankful for.

Mr. Harper's book is a sort of supplement to Mr. Pennell's 'Pen-Drawing.' Mr. Harper conceives that Mr. Pennell has done scant justice to the English pen-draughtsmen, and has therefore devoted an entire volume, got up in the same lavish style, to them alone. We cannot say that he is justified by the result. The men not represented in Mr. Pennell's volume will, with few exceptions, hardly add to the reputation of English pen-drawing, while those represented in both books are quite as well shown in Mr. Pennell's. In at least one case Mr. Harper has reproduced the identical drawing which had already served Mr. Pennell. Mr. Harper's arrangement is careless and his style slovenly, while his rabid dislike of everything American (except American printing, which he admits is better than English) is amusing. So, also, is his contention that the pen-draughtsmen are the only men who can draw, and that the painters can only color. One may heartily admire good pen-drawing without being ready to admit that it is the highest of all graphic arts. Mr. Harper's protests against plagiarism may do good, but they would be more likely to do so if nearly all the sin were not laid upon American shoulders, and if he showed any appreciation of the existence of such straightforward and original draughtsmen as Abbey and Eaton and other Americans.

The two little monographs on Watteau and Abraham Bosse, reproductions from *L'Art*, are in the characteristic careful and appreciative French manner. They are profusely illustrated and accompanied with bibliographies and other aids. Watteau is justly placed among "celebrated artists." It is only comparatively of late that his charming genius has begun to be appreciated, and only within a few years that his "Embarquement pour l'île de Cythère" has been given its rightful place in the Salon Carré of the Louvre. As to Bosse, his interest is mainly that of an illustrator of the costumes and customs of the seventeenth century, but there is a certain grave charm in some of his compositions in spite of their severity and rigidity.

Lectures on the History of Literature. Delivered by Thomas Carlyle, April to July, 1838. Edited, with preface and notes, by Professor J. Reay Greene. New York: Charles Scribners' Sons. 1892.

THIS volume is made from a manuscript copy of the notes of Carlyle's lectures in the spring of 1838, taken down by Mr. Thomas Chisholm Anstey, a barrister-at-law and member of Parliament. They bear in their style abundant evidence of fidelity, and give a useful impression of Carlyle as a popular lecturer. The subject, which is the entire field of literature, is a broad one, and its main topics could only be touched upon. The substance of the volume is of no great consequence, either critically or as an addition to Carlyle's works. The parts of the general subject which specially interested him or had received thorough study from him, have been handled with more completeness and vastly more vigor in his published works, such as 'Heroes and Hero Worship' and the 'Critical Miscellanies.' Whoever wishes to know what he saw in Dante, Luther, or Knox may look in these other volumes with more profit than would be derived from a perusal of this. The omissions, if one looks on this as a history of the world's literature, are many and grave; there is nothing notable in the method; in fact, considered merely by itself, the work is weak. The moralizing which pervades the whole, the counsel to action, the praise of unconsciousness and silence, the gospel of the divine right of great men—all this is familiar matter and does not gain by the dilution it has suffered.

The principal value of the book is biographical in the sense that it affords a bird's-eye view, doubtless tolerably fair and complete, of Carlyle's culture in the strict humane sense—a ground-plan, so to speak, of his knowledge of the world's history and books; and at the same time renders his impressions with regard to the course of civilization. The defects of his mind and the narrowness of its horizons are more felt than the strength and originality of his genius. His overmastering subservience intellectually to German thought and to German literary fashions is made especially conspicuous, and suggests again what has long been a cause of wonder to us, why none of the thousand essayists upon Carlyle has endeavored to make out clearly just how much in his theory of life and character was derived from German sources, and particularly Goethe, and how much what he received was modified by his personality. His genius appears to us to have been not that of the original thinker, but one simply of expression on the literary side and of plodding industry on the scholarly side. He took his main ideas from others and worked them up and gave them individuality by a peculiar faculty he had for originality of presentation; and, further than this, he spent years in furnishing illustrations of these ideas from history and biography. He had, to help him, also a power of imagination rather pictorial than penetrative, with an abnormal and distorting tendency to the grotesque; and this told in his handling of anything he took up. He was never strong as a thinker, but gains his impressiveness from other and, in the main, literary qualities; and when stripped, as he is in this volume, of the advantages of his intense and violent style, and reduced to the plain elements of what he said, he does not strike the reader for substance. He is continually making the object of his admiration, whether an idea or a person, loom larger by surrounding it with a kind of fog; he adopts a superior manner, as if he spoke with an elongated finger pointing at the auditor; and in these pages the mode of the thing is too transparent. On the whole, it does not seem to us the present publication is the work of a friend. Whether as history or as criticism, it would hardly pass muster on its merits, at the present time, even on the platform; and as an addition to the many volumes of a great writer it is absurdly below the level of his performance.

An Introduction to the Theory of Value: on the Lines of Menger, Wieser, and Böhm-

Bawerk. By William Smart, M.A. Macmillan & Co.

THE work of the Austrian economists is of very considerable importance. Following the line marked out by Jevons, they have analyzed with great subtlety the psychological aspects of economic phenomena, and have reached conclusions that are, to say the least, instructive. From a certain point of view their position is inexpugnable. It cannot be denied that the final cause of all industry is the satisfaction of human desire. It seems to follow that any material object will be sought, or prized, or valued, simply as a means to the satisfaction of desire. It follows conversely that if it ceases to satisfy desire, it must cease to be valued, and here comes in the great principle of "final" or "marginal" utility. We distinguish wants according to their urgency; in other words, if we cannot satisfy them all, we satisfy some in preference to others. The material object that satisfied the relinquished desire may be said, therefore, to have had a "marginal" utility, or, in Mr. Smart's language, "the value of a good is measured by the importance of that concrete want which is least urgent among the wants satisfied." The most important corollary from this principle is, that if a given quantity of a thing satisfies all desire for that thing, an additional quantity of the thing can have no value, as it satisfies no desire. The qualification should be added, that some new desire may arise which may be satisfied by the additional product, and therefore give it value. But the truth that is of importance is, that value is not an attribute of things, but an accident, depending upon the nature and extent of the wants of men.

We think it obvious that in venturing into that Serbonian bog of economists, the subject of supply and demand, the study of the psychology of desire may be of much assistance. The greatest minds that have dealt with economics have come to grief in their endeavors to coördinate such elements as a state of consciousness and a material quantity, and it can be only gradually that problems requiring a comprehension of metaphysics will be fully understood, much less solved, by most political economists. Moreover, it has always been held that the science is to a great extent, at least, deduced from some psychological laws, and whatever tends to define more clearly the scope of these laws will be a legitimate contribution to the science. But it is quite possible to take a partial view of the matter, and to exaggerate the importance of psychological distinctions. Something, perhaps, may be learned from the history of the free-will controversy. It was asserted by some determinists that the will was always moved by the strongest motive—an assertion which was after a time seen to reduce to the barren proposition that the will was always moved by the motive that moved it. There is, in our opinion, some ground for maintaining that the proposition that value is measured by the importance of the least urgent want is not much more fruitful. Without a scale of wants arranged according to their importance—a permanent hedonic calculus—we are as far away as ever from measuring values.

Something further may be learned from the history of metaphysical controversy. The term cause is notoriously ambiguous, and though no term is more commonly used, there has never been any general agreement as to its definition. Granting that satisfaction of desire is the final cause of human industry, it is to be remembered that there are other than final causes. According to Mill, the cause of a phenomenon is the antecedent, or the concurrence of antecedents, on which it is invariably and unconditionally consequent. It is obvious that on this theory satisfaction of desire is insufficient as a definition of the cause of value. It is a highly generalized and abstract term, and as a statement of the motive of action it is open to the well-known criticism—"When a horse is hungry, what he desires is not happiness, but hay." We have to reckon with Aristotle's τήν οὐσίαν καὶ τό τι ἦν εἶναι. If it is true that our desire for a thing gives it its value, is it not true that the essential attributes of the thing are the cause of our desiring it?

While there is some exhilaration to be derived from this metaphysical waltzing, it is doubtful if it results in much real progress. Admitting the psychological basis of economics, it is yet for practical purposes better to regard it not as a department of psychology, but as a science concerned with things. Moreover, it is futile to speculate upon the degrees of value assigned each of five sacks of grain by a Robinson Crusoe. We cannot assume that what one man desires will be desired in the same degree by others, nor can we strike an average without committing the fallacy of composition. For scientific purposes we must take things as they are, all the world being a market, and the inhabitants thereof buyers and sellers. As Mill said, it is prices in a wholesale market that we have to confine ourselves to, and this implies that every purchase is made with a view to exchange. If we speak of human desire, it must be human desire in the guise of commodities or services, set off against other commodities or services. In short, we must measure desire for things by measuring the things and not the desire; for we have no available psychological standard. If we are asked, "Can a thing have any value if no one wants it?" we must reply, No; but when we say no one wants it, we mean that no one will give any other thing for it, and if any one will give anything for it, that thing is the measure of its value. With some of Sidgwick's qualifications, Mill's classification of values seems to be still the most serviceable.

Mr. Smart is not at all immoderate in his claims. He admits that in the case of goods reproducible at will the cost of production determines the value. But this, he says, is only a convenient expression of a deeper law. On the old theory the value of a good comes from its past, whereas the causal connection runs the other way, from product to cost. "Value comes, not from the past of goods, but from their future; that is to say, from the side of consumption in satisfying want. Goods stand midway between production and consumption. In the old reading it was the former term that gave value; in the new it is the latter." So far as this refers to quantity of consumption, it emphasizes an important truth. If a man proposes to engage in the manufacture of a particular commodity, he will do well to inform himself not only as to the cost of production, but also as to the quantity consumed, although as a matter of fact most men probably content themselves with ascertaining simply cost and market price. Undoubtedly sagacious men may divine the possibility of new wants and seek to satisfy such variations in existing wants as they foresee. But the great body of industrial achievement has always consisted in diminishing the cost of production, and the practical worth of the science of political economy is closely connected with its recognition of this fact. Nevertheless, we must admit that in numberless ways the study of the desires of mankind is suggestive, and on that account we are grateful to the Austrian economists for their labors. Mr. Smart's little book is welcome because it summarizes a portion of their results in a manner convenient for English readers. He has already translated two of Böhm-Bawerk's works, and he informs us that one of his pupils is now preparing a translation of Wieser's application of the theory of value to distribution. To these works this manual will be for many persons a useful introduction.

On the Dedications of American Churches. Compiled by Two Laymen of the Diocese of Rhode Island. Cambridge: Printed at the Riverside Press. 1891.

THE purpose of this handsome monograph is stated with an approach to completeness in its sub-title: "An Enquiry into the Naming of Churches in the United States, some Account of English Dedications, and Suggestions for future Dedications in the American Church." Its compilers, as they modestly call themselves, express a certain sensitiveness to what they deem the imperfections of their work, and a regret that the conditions under which it has been done have made an adequate treatment of their subject impossible. We do not think that their readers will share these feelings. The authors write for the benefit of their fellow-Churchmen of the Episcopal communion, and a great many of these must have felt the barrenness and monotony of the nomenclature of their churches, and be ready to welcome such information and suggestions as are here offered to them. The poverty of the name-list of Episcopal churches is really astonishing. Here and there American invention—or is it American humor?—breaks out in some such effort of misdirected ingenuity as appears in the name of "The Church of the Heavenly Rest," which is probably the oddest invocation ever devised for a building meant for the use of a portion of the Church Militant. But for the most part the virtuous namers of churches walk a narrow round. In one diocese, for instance, four dedications only are made to serve for eighty-two churches: St. Paul, for sixteen; St. John, seventeen; Trinity, twenty-four; Christ, twenty-five. In another, there are ninety-four churches under four dedications—St. John, twenty-two; Grace, twenty-three; St. Paul, twenty-three; Christ, twenty-six. English, and especially Welsh dedications, have a much wider scope, as may be seen from an analysis of 18,500 of them which our compilers give. The number of different names that appear in this must run well up into the hundreds: the list occupies more than twenty-six pages. Besides its analysis, there is a large finding-table of American dedications, a chapter of good suggestions as to dedications to be made hereafter, and various appendices and notes that convey pleasantly much valuable information not easily to be had elsewhere. Amusement also may be found in some of the quaint and puzzling shapes into which the names of certain of the saints of old time have been transformed. Hippolytus appears as 'Eppalets,' which suggests irresistibly a dedication for a West Point chapel; and Olave becomes 'Tooley,' a sad come-down for the king of whom Adam of St. Victor wrote:

> "Rex Olave, qui regium
> Nomen habes egregium
> Unctionis."

A word may be added as to the rather exceptional typographical beauty of the volume, which recalls, perhaps with some advantages, certain fine liturgiological books published by Pickering forty years ago. We have noted in

it but one slight misprint (which, however, occurs twice)—Adanctus for Adauctus.

The Story of New Mexico. By Horatio O. Ladd. [The Story of the States.] Boston: D. Lothrop Co.

"STORY" is a modest title for a book which, in fact, is the most accurate "history" of that Territory that has ever been published. Mr. Bancroft's more elaborate work has the merit of being infinitely superior to everything that preceded its appearance in the literary field, but Mr. Ladd's book has the advantage of being based upon information of a documentary character more detailed and more special even than that at Mr. Bancroft's command, touching the obscure periods in New Mexico's history that intervened between 1608 and 1680. The author enjoys, furthermore, the advantage of having resided in the country which he describes, of having travelled in it and viewed with intelligent eyes its scenery, its ruins, and its people. Hence the book has a certain merit of subjective actuality, well felt and fairly expounded, in such a plain and unassuming manner as to put the contents within easy reach even of youthful readers. The older periods of New Mexican history are, of course, briefly told, for they could not be treated at length without going into elaborate studies about Spanish law, ecclesiastical law, the relations between Church and State in the American colonies of Spain, and Spanish "Indian policy"—topics far too intricate and too extensive not to injure the popularity of the work. Still, Mr. Ladd has so far grasped the true point of view from which Spanish American history is to be considered as to be very fair and just, and to avoid the reefs upon which the ships of historical novelists have invariably stranded.

As regards the modern history of New Mexico, it is too early yet to write it without running the gauntlet of criticism of eye-witnesses. These eye-witnesses may all be sincere, but they see only one side of the events in which they have participated. Moreover, there is, at the bottom of everything that happens, an occult substratum which remains (and mostly has to remain) hidden for a long time from the public eye or even from the most careful investigator. Contemporaneous history is therefore always a very ungrateful task, but Mr. Ladd could not avoid it, and if, after doing the best he could, his work should incur censure, the fault lies not so much with him as with the task itself. Mr. Ladd has made several geographical mistakes that are inexcusable on the part of one who has so long resided in New Mexico and who has quite extensively travelled through that Territory. Thus, he identifies, and repeatedly too, Taos with Santa Cruz de la Cañada, and Albuquerque with Alameda. Taos lies forty miles north of Santa Cruz, and Albuquerque thirteen miles south of Alameda. Equally unpardonable is the frequent misspelling of Spanish words, so that it seems as if there had been no proof-reading at all, and this imparts to the whole an appearance of carelessness, of slovenliness even, that detracts greatly from the merits of an otherwise very commendable book. The illustrations, too, are not of a very high order, and not as well selected as they might easily have been. In both respects a revised edition is plainly called for.

On the whole, Mr. Ladd's book is a gratifying step in the direction of fairness in history and independent judgment, unaffected by the stereotyped clamor against Spain in the New World.

A Treatise on the Geometry of the Circle, and some Extensions to Conic Sections by the method of Reciprocation. With numerous examples. By William J. McClelland, M.A. Macmillan. 1891.

OF the smaller and outlying branches of mathematics which have received attention of late years, none is more interesting than that of the remarkable lines, points, and circles of a triangle, which really forms the principal subject of this little treatise; and it is a subject in which any person skilled in elementary geometry and trigonometry can take pleasure. Mathematicians will welcome a convenient compendium of the theorems connected with Brocard's, Taylor's, and a dozen other circles, as to which they are now all expected to be *au fait*.

The methods of the book are rather promiscuous, the nomenclature is not always good (as when the well-known theorem of Matthew Stewart is called "Euler's theorem," a designation applied already to half-a-dozen different propositions), the enunciations are sometimes not clear, and the writer throughout has consulted his own comfort rather than the reader's. But, notwithstanding such relatively unimportant faults, the book is acceptable.

Handbooks of Athletic Sports. [Bohn's Library of Sports and Games.] Vols. V. and VI. London: George Bell & Sons. 1891.

THESE volumes deal with track athletics, cycling, skating, and riding, and are quite up to the high standard of vols. i. and ii., already noticed in these columns. It will be a surprise to those who have not followed the history of track athletics to learn how recent is the development of this branch of sport. It was not till 1864 that the first Oxford and Cambridge sports caused a sudden awakening of interest in England, and the response on this side of the Atlantic did not follow till the early seventies. Since that time there has been a more or less steady improvement in all kinds of performances, and hardly a season passes without the breaking of some records; but it is now believed that in running and jumping the limit of human capacity has been very nearly reached. On several occasions sprinters have covered 100 yards in less than ten seconds, while a jumper has cleared 6 feet 4¾ inches in height and some 23 feet in width—figures which would have seemed impossible to a winner at the Isthmian games.

Although a species of velocipede was invented in France as early as 1816, the modern bicycle with cranks may be said to date from 1866, in which year patents were granted both in this country and in England. Every year since has witnessed some improvement in the machines and a consequent increase of speed at all distances, and it seems certain that a man riding a bicycle will soon be able to cover a mile in less time than a trotting horse before a wagon. Besides all that is needful for the male cyclist, this volume contains an interesting chapter on cycling for ladies, which is well worth their consideration. As a means of exercise, cycling is distinctly superior to lawn tennis for the wearers of skirts, and it enables them to cover very considerable distances, and so enjoy new scenery with very slight fatigue.

Equally good is the chapter on ladies' skating, another exercise which they may safely indulge in when opportunity offers, and which, if properly taught, will tend to increase of both vigor and grace. The chapters on figure-skating cover all the well-known varieties, but that on speed-skating should have been brought down at least to the date of Donoghue's victories a year ago, which gave the championship of the world to this country.

Mr. Kerr's advice to those about to ride is quite the reverse of *Punch's* advice to those about to marry, but it is nevertheless sound and useful. He shows an intimate knowledge of all that pertains to horse-flesh, and strongly advocates the modern methods of treating young horses in many ways like young children. Every one who has had to do with horses knows the importance of meeting their obstinacy with firmness and patience, but few come up to the Yorkshire trainer who sat unmoved on an obstinate colt all day, had his meals brought out to him, and finally conquered the animal as he was adjusting his night-cap and otherwise preparing for a night session. A horse that has once been forced to yield in this way will never give any more trouble, whereas severe punishment ruins the horse's temper and generally fails to produce the desired result. Young riders will find Mr. Kerr's treatise full of valuable hints, and the only fault we have to find with it is the multitudinous recommendations of saddles and such things, with names and addresses of makers, which are too suggestive of the "reading notice."

The New York Obelisk. With a preliminary sketch of the history, erection, uses, and signification of obelisks. By Charles E. Moldenke. New York: Randolph. 1891. Pp. viii., 202.

A BOOK on an Egyptological subject printed in this country is not without precedent, but one containing hieroglyphic type set in America is a novelty. We have many monuments, inscriptions, and writings here which had Egypt as the land of their origin, and the greatest of them is the New York obelisk. It is a matter of interest to many to know what this great stone stands for and what it says. The author's intent has been to furnish an answer, and to some degree he has succeeded. He has presented a considerable array of facts, more or less pertinent, and he has given a series of translations of the texts.

But it is impossible to say that his book is satisfactory. The style is occasionally infelicitous or worse; the "preliminary sketch" is not sufficiently elaborated; even the facts which are presented are not fortified by the citation of authorities; there are a few mistakes in the transliterations, and there are some strange contrasts between the interlinear and the freer renderings. In the matter of explanations the author has been a little more successful, though the ordinary reader will be stumbled to find that he makes conflicting statements, and in one case at least explains the same thing in two inconsistent ways.

While full recognition must be given to the fact that the style of the writing found on such objects as obelisks is extremely abbreviated, and that it presents more problems to the student than almost any other, still one who essays to give a true rendering must know that grammatical forms underlay the writing and must now determine the meaning. The renderings here given are approximately correct, but he would be rash indeed who should claim that any text has yet been translated absolutely without error. The specimens which this book affords are of the stereotyped sort with which we have been so long familiar. The author has not advanced beyond what has long been published, and he has not added any new explanations of value. In fact, he seems not to have known that anything has been done to-

wards a more exact determination of grammatical forms or of the structure of sentences.

Upon the whole, the book is behind the times. It might have passed muster ten years ago, but it will not answer now. In general it will give the reader some idea of the subject, but he who should rely upon its every statement, and attempt to draw thence conclusions as to details, will be apt to find them seriously questioned. Numerous minor errors might be pointed out which vitiate its results except in a large and general way. Since that which is wanted is as exact information as the present state of investigation will allow, the author must be adjudged to have failed to satisfy reasonable demands.

BOOKS OF THE WEEK.

Bercy, Paul. Le Français Pratique. W. R. Jenkins. $1.
Bierbower, Austin. The Morals of Christ. 2d ed. Chicago: C. H. Kerr & Co. 50 cents.
Colbert, Prof. E. Humanity in its Origin and Early Growth. Chicago: *Open Court* Pub. Co. $1.50.
Crosby, Edith R. "Blessed are they that Mourn." James Pott & Co. 50 cents.
Dilke, Sir C. W., and Wilkinson, S. Imperial Defence. Macmillan. $1.25.
Evans, E. W. Walter Savage Landor: A Critical Study. Putnams. $1.25.
Goodwin, Prof. W. W., and White, Prof. J. W. The First Four Books of Xenophon's Anabasis. Boston: Ginn & Co. $1.65.
In Tent and Bungalow. Cassell. 50 cents.
Johnson, Samuel. Rasselas, Prince of Abyssinia. [Knickerbocker Nuggets.] Putnams. $1.
Krause, Gustav. The Growth of German Unity. London: David Nutt.
Lawless, Emily. Grania: The Story of an Island. Macmillan. $1.
Lecomte, Maurice. Bouderie. Scenette en un Acte. W. R. Jenkins. 25 cents.
Le Gallienne, Richard. The Book-Bills of Narcissus. Scribners. $2.
Logan, Celia. How to Reduce Your Weight or Increase it. W. A. Kellogg. 50 cents.
Longmans' New School Atlas. Longmans, Green & Co. $1.50.
Longmans' New Atlas. Longmans, Green & Co. $3.
Lorne, The Marquis of. Viscount Palmerston. [The Prime Ministers of Queen Victoria.] Harpers.
Marshall, Frederick. It Happened Yesterday. Appletons.
Matthews, Brander. In the Vestibule Limited. Harpers.
Maurice, Rev. F. D. Sermons Preached in Lincoln's Inn Chapel. Vol. IV. Macmillan. $1.25.
Maxcy, C. L. Shakspere's Hamlet. Boston: Ginn & Co. 50 cents.
McCaskey, J. P. The Franklin Square Song Collection. No. 8. 50 cents.
Meredith, George. Modern Love. Portland, Me.: Thomas B. Mosher.
Miller, Rev. Emory. The Evolution of Love. Chicago: A. C. McClurg & Co. $1.50.
Moore, George. Vain Fortune. Scribners. $1.
Mr. Leslie and Mrs. Lennox. Cassell. 50 cents.
Muirhead, J. H. The Elements of Ethics. [University Extension Manuals.] Scribners. $1.
Muller-Simonis, P. Du Caucase au Golfe Persique, à travers l'Arménie, le Kurdistan et la Mésopotamie. Washington: Université Catholique d'Amérique; New York: Westermann.
Murray, A. S. Handbook of Greek Archæology. London: John Murray; New York: Scribners. $6.
Ohnet, Georges. Le Chant du Cygne. W. R. Jenkins. 25 cents.
Orr, Mrs. Sutherland. A Handbook to the Works of Robert Browning. 6th ed. London: George Bell & Sons; New York: Macmillan. $1.75.
Pelletreau, Charles. Sylvester Romaine. James Pott & Co.
Perrot, Georges, and Chipiez, Charles. History of Art in Phrygia, Lydia, Caria and Lycia. London: Chapman & Hall; New York: A. C. Armstrong & Son.
Perrot, Georges, and Chipiez, Charles. History of Art in Persia. London: Chapman & Hall; New York: A. C. Armstrong & Son.
Pinkerton, T. A. A New Saint's Tragedy. Harpers. 50 cents.
Pollard, A. W. Herrick's Works. 2 vols. London: Lawrence & Bullen; New York: Scribners. $3.50.
Pool, Maria L. Roweny in Boston. Harpers.
Praeger, Ferdinand. Wagner as I Knew Him. Longmans.
Prince, J. T. Methods of Instruction and Organization in the German Schools. Boston: Lee & Shepard. $1.
Protestant Episcopal Layman's Handbook. 2d ed. Baker & Taylor Co. $1.25.
Recollections of a Happy Life: Being the Autobiography of Marianne North. 2 vols. Macmillan. $7.
Remondino, P. C. The Mediterranean Shores of America. Southern California, its Climatology, etc. Philadelphia: F. A. Davis. $1.25.
Richards, George. The Law of Insurance. Banks & Bros. $5.
Roberts, D. L. Browne's Religio Medici, and Other Essays. London: David Stott; New York: Macmillan. 75 cents.
Rogers, Prof. J. E. T. The Industrial and Commercial History of England. Putnams, $3.
Rolfe, W. J. Scott's Lady of the Lake. Boston: Houghton, Mifflin & Co.
Rollins, Alice W. From Palm to Glacier. Putnams. $1.75.
Royce, Prof. J. The Spirit of Modern Philosophy. Boston: Houghton, Mifflin & Co. $2.50.
Ruskin, John. The Crown of Wild Olive. [Brantwood Edition.] Charles E. Merrill & Co. $1.50.
Russell, S. A. Electric Light Cables and the Distribution of Electricity. London: Whittaker & Co.; New York: Macmillan. $2.25.
Saintsbury, G. Selections from Defoe's Minor Novels. London: Percival & Co.
Sargent, Epes. Peculiar; A Hero of the Southern Rebellion. New ed. Boston: Lee & Shepard. 50 cents.
Savage-Armstrong, G. F. One in the Infinite. Longmans, Green & Co. $2.50.
Schelling, Prof. F. E. Ben Jonson's Timber. Boston: Ginn & Co. 90 cents.
Schloss, D. F. Methods of Industrial Remuneration. Putnams. $1.50.
Schwabe, Ludwig. Teufel's History of Roman Literature. Vol. 2. London: George Bell & Sons; New York: Macmillan. $4.
Sellar, Prof. W. Y. The Roman Poets of the Augustan Age. Horace and the Elegiac Poets. Oxford: Clarendon Press; New York: Macmillan. $3.50.
Shepp's Photographs of the World. Frank Hegger.
Shiells, Robert. The Story of the Token. John Ireland. $1.
Shorter, C. K. Lyrics and Sonnets of Wordsworth. London: David Stott; New York: Macmillan. 75 cents.
Simmel, Georg. Einleitung in die Moralwissenschaft: Eine Kritik der ethischen Grundbegriffe. Erster Band. Berlin: Wilhelm Hertz.
Smith, Emily J. Selections from Lucian. Harpers.
Smith, Goldwin. The Moral Crusader, William Lloyd Garrison: A Biographical Essay. Funk & Wagnalls Co. $1.

A SCHOOL-BOOK.

Laboratory Exercises in Elementary Physics.

By CHAS. R. ALLEN, S.B., Instructor in the New Bedford (Mass.) High School. *Pupil's Edition.* x+209 pp. 12mo. Teachers' price, 80 cents; by mail, 89 cents. *Teacher's Edition.* x+277 pp. 12mo. Teachers' price, $1.00; by mail, $1.10. Most of these exercises exact of the pupil measurements of some sort. They are carefully adjusted to the usual text-book study and lecture-table demonstrations. They are planned for young beginners, employ no elaborate and unduly expensive apparatus, require no more than forty-five minutes each in the laboratory, and are so framed that the pupil can prepare himself beforehand to make the most of his time there with the least help from his instructor. The teacher's edition contains much suggestive matter upon the simplification and home construction of apparatus, time-saving devices, etc.

Wanted—Work in Translating from German into English
Or from English into German, by German lady who studied at Oxford (England) and who has lived for over seven years in England and in America as a teacher of languages. Continuous literary or philosophical work preferred. Address "GERMAN TRANSLATOR," care the *Nation*, or care Prof. H. A. Rowland, Johns Hopkins University, Baltimore, Md.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.
Crosby's Vitalized Phosphites.
The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.
The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.
For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y. *F. Crosby Co.*

Exhaustion.
HORSFORD'S
ACID PHOSPHATE.
A wonderful remedy, of the highest value in mental and nervous exhaustion.
Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.
Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."
Descriptive pamphlet free.
Rumford Chemical Works, Providence, R. I.
Beware of Substitutes and Imitations.
CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

The Nation.

NEW YORK, THURSDAY, MARCH 31, 1892.

The Week.

A BLOW so destructive as that which the Bar Association has inflicted on Judge Maynard has never, we believe, overtaken a judicial officer in this country, because no such tribunal has ever sat on judicial delinquency. Conviction on impeachment before the Federal or State Senate would be much less serious morally, although involving the loss of office and salary. A Senate is a political body, composed mainly of men in no way prepared, by training or character, for the exercise of judicial functions, and almost sure to make up their minds, to some extent at least, under the influence of considerations not furnished either by the law or the evidence. But the Committee of the Bar Association which has tried Judge Maynard's case are lawyers of the highest standing at the American bar. They would, if converted into a bench of judges, constitute a tribunal such as has not in many a long day, if ever, been seen in this State or any State in the Union. Moreover, seven out of the nine members belong to Judge Maynard's own political party. Their unanimous condemnation has been almost unanimously endorsed by the Bar Association, in itself a picked body of lawyers. The verdict would be, for a man of any moral sensitiveness, absolutely crushing.

The offence of which the Committee convict him is defined by the Penal Code, as they remorselessly point out, as grand larceny in the second degree. Any man who had the moral or mental constitution which the office of judge, even in its lowest stages, calls for, would, on hearing what the most eminent members of his own profession thought of him and what the whole intelligent community is thinking of him, either resign his place and go into obscurity, or resign it and challenge a trial in a criminal court. We fear Judge Maynard will do neither. He will sit still, render decisions which nobody will respect, draw a salary to which the mass of his fellow-citizens think he is not morally entitled, secure in the approval of Governor Flower, Senator Hill, Judge Earle, and his companions in misfortune, the members of the Canvassing Board. But none the less the air in his court and in all courts of the State has been purified by the Committee's report. It has lashed before it "the lazy elements which were stagnating into pestilence." It has shown that there is still, even when the days seem darkest, a public conscience somewhere which can be counted on to make itself thoroughly heard in times of danger, necessity, and tribulation. The community has been laid under obligations to the Bar Association which will not soon be forgotten, not for finding Judge Maynard guilty, but for taking a great case out of the atmosphere of politics, and deciding it with absolute indifference to political considerations and consequences.

Lord Salisbury's final proposal is that he will renew the *modus vivendi*, with a provision that the arbitrators shall be asked to decide, over and above the questions already submitted to them, whether the United States Government has inflicted "wrongful loss" on British subjects in Bering Sea, and whether the British Government has inflicted wrongful loss on American citizens, and that each side shall pay damages for such wrongful loss as may be charged to it. This seems reasonable enough. But he adds a warning that in the meantime he adheres to his old position that the right of seizure and search of foreign vessels does not exist on the high seas. The Harrisonian doctrine that this power, which we denied to British cruisers in the most celebrated controversy of this century, when exercised on behalf of African slaves, we may ourselves properly exercise for the protection of the Elkinsian seals, does not really call for argument, and does not receive it. What the organs say is, that they are going to exercise it, "by golly," whether it is lawful or not.

Some people are wondering whether there is any such person as the Secretary of State in Washington at the present time. The latest published correspondence between our Government and that of Great Britain on the Bering Sea question does not bear Mr. Blaine's signature. It is signed by Mr. Wharton as Acting Secretary. It is true that Mr. Blaine is ill, but he is not too ill to sign his name or to have it signed by somebody for him. One would suppose that after carrying on so long a correspondence on this subject he would follow it to the end, it being his official duty to do so. It is just possible that he disapproves of Mr. Harrison's Jingo policy and his attempt to force the doctrine of *mare clausum* on Lord Salisbury pending the arbitration, after he (Blaine) had expressly repudiated that doctrine, and that this is the reason why his name is not appended to the latest correspondence. It is not forgotten that Mr. Blaine took a position of dignified conservatism in the Chilian dispute, and that his relations with the President at that time were nearly as "strained" as those between the United States and Chili. It is surprising if true that the Plumed Knight has become a conservative force in the Government, while the Presbyterian elder has become a firebrand. It makes a great difference whether you are a Presidential candidate or not.

The first convention in the West to choose delegates to the Democratic National Convention was held in North Dakota last Thursday, and elected men every one of whom is strongly for Cleveland. A resolution was adopted declaring it "the sense of this Convention that ex-President Grover Cleveland is preëminently the best representative of Democratic principles." In this attitude and action North Dakota sets an example which it is evident will be followed very generally by the older States in that part of the country. Except so far as two or three States may choose delegations committed to at least complimentary votes for "favorite sons," the West promises to stand solid for Cleveland in the National Convention. What is more, its delegates seem likely to go to the Convention this year with a strong purpose to make their influence felt.

The election of Mr. Mills as Senator from Texas is far more than a personal victory for the man. It is the verdict of "the banner Democratic State of the Union" upon the issue between the two factions in the party. It means a deliberate and emphatic declaration by the masses of the party in that great commonwealth, in favor of relegating silver to the background and making the national campaign this year on the tariff issue. No man in the Democratic party has been so conspicuously the representative of one element in the organization as Mr. Mills, and there were in Texas, as everywhere else, men who supposed that he could be beaten because of his pronounced stand. The question was carried to the people, and their answer was so unmistakable that the reactionists were overwhelmed, and all opposition to Mr. Mills finally disappeared. Like the victory for Senator George on the sub-treasury-scheme issue in Mississippi a few months ago, this Texas incident illustrates the wisdom of courage and conviction on the part of a public man.

The Iowa Republicans have finally decided to stand by prohibition, and consequently to keep that question as the leading issue in State affairs. The Senate, through the coöperation of three Republicans with all the Democrats, recently passed a high-license and local-option bill, and there has been a chance that it might go through the House by a similar combination. But when the bill came up Tuesday week, the Republican side was solid against it, and it was indefinitely postponed by a strict party vote. The Republicans in the House were between the devil and the deep sea. On the one hand, notice had been served upon them by Republicans who believe in prohibition that any one who voted against it would commit political suicide. On the other hand, they had been warned

by many prominent Republican politicians and journals that the party would be ruined unless it should unload prohibition. Apparently the Republican Representatives put their own supposed advantage before the interests of the party. It is a notorious fact that many of them consider prohibition a failure, and believe in the wisdom of substituting high license; but they had been threatened with the vengeance of the prohibition Republicans if they should dare to vote according to their convictions, and they recorded themselves against a bill which they really favor. It remains to be seen whether the course such men have adopted may not prove disastrous to themselves as well as to the party. The people ultimately find out how a Representative really stands on a public question, and have a supreme contempt for the man who votes one way when he believes that he ought to vote the other.

Gerrymandering has never suffered a worse blow than was administered by the Supreme Court of Wisconsin last week, when it declared unconstitutional the act passed by the last Democratic Legislature redistricting the State for legislators and Congressmen in the most grossly partisan manner. Having carried Wisconsin with a sweep in the "tidal wave" of 1890, the Democrats set out to fix things so that the Republicans could not recover control of the Legislature, even if they carried the State by a large majority. In order to accomplish this end, they disregarded the fundamental requirement of the Constitution, that Assembly districts shall be bounded by county lines; cut up counties, lumped together parts of counties, made Republican districts large in population and Democratic small, and in general made as unfair an apportionment as ingenuity could devise. The performance was repugnant to the popular sense of decency, and the unanimous decision of the highest judicial tribunal in the State shows that it is as unconstitutional as it is unfair. The fact should not escape notice that the three Democratic members of the Wisconsin Supreme Court united with their two Republican associates in thus annulling the act of a Democratic Legislature and defeating the plans of the Democratic managers.

Rhode Island is not only the one State of the Union which now holds her State election during the first six months of the year, but also one of the fast diminishing list of States which still refuse stupidly to "lump" elections in November. Hence in this Presidential year her State contest, to be decided on the first Wednesday of next month, takes on a certain national character, especially as it involves the reëlection of Senator Aldrich, an active promoter of the Force Bill. The Democratic vote in the State during the last few years has been considerably increased from two causes: first, by an Australian ballot law which has checked the purchase of votes, in which the rich Republicans of the State have been proficient and lavish; and, secondly, the substantial removal of the old property qualification by a constitutional amendment adopted four years ago. In 1889 the Democratic candidate for Governor, in a total vote of 43,114, had the large plurality of 4,419, yet failed of a majority and lost his election in the Legislature, where the Republicans had a majority of ten on joint ballot. In 1890 the Democrats had a plurality of 1,560 in the popular vote, and chose their Governor through the Legislature. But last year, although they had a plurality of 1,254, the majority against them in the Legislature was no less than 51 in a total legislative membership of 109. Even in the Legislature of 1890, though it was Democratic on joint ballot, there was a Republican majority of 10 in the State Senate under the curious Rhode Island system which gives Providence, with a population of 132,146, a State Senator, and a Senator also to Jamestown, with a population of 707.

Legislative Governors, therefore, are the rule in Rhode Island, and "Carry the Legislature" is the cry of the parties, particularly in a year like this, when a Federal Senator is to be chosen. Thus local, State, and national questions come to be queerly intermixed. A Rhode Island voter who wants to elect a Democratic Governor may have to seek that result by supporting a bad candidate for the Legislature; or a voter who opposes the reëlection of Aldrich, but wants a Republican Governor, finds himself in practice between the hammer and anvil whether he votes the Republican or the Democratic legislative ticket. Thus such considerations as personal feud or friendship, or the local standing or lack of it of a candidate for the Legislature, under the "majority system" in Rhode Island, disguise the popular verdict just as they do in Connecticut. This year will be the first "hot" election in Rhode Island held under the new ballot law which was passed in 1889. The outcome will be watched with extreme interest, taking place in a State notoriously corrupt, and where, as in many other commonwealths, the Democrats have a natural majority of the votes, and the Republicans the money and a much stronger party machine. The canvass is already disclosing such Republican tactics as the hiring of all the large halls in Providence for the last two weeks of the campaign, "free railroad trains," and special efforts of a not too ethical nature by the same party to capture the new French-Canadian voters.

Maine continues to illustrate the folly of enacting laws which are not sustained by public sentiment. A year ago Neal Dow succeeded in getting the Legislature to pass a bill which was going to stop liquor-selling "sure," because the liquor-seller would have to go to jail every time he was arrested and convicted. Twelve months have passed, and more liquor is sold than ever. The reason is that the people do not sustain the law. On the one hand, juries will not convict though the evidence of guilt is plain, because they do not think the offence worthy of imprisonment. On the other hand, the judges themselves are so loath to inflict the penalty when conviction is secured that they will not send the criminals to jail, even though it seems questionable whether they legally enjoy any discretion in the matter. The Chief Justice of the Supreme Court presided at the recent term of court held in Bangor, a city where the liquor traffic is conducted openly, and he let off all of the sellers who were convicted, upon payment of fines, not a single jail sentence being imposed. A district lodge of Good Templars has passed resolutions declaring

> "That we view with indignation the action of the Presiding Justice of the Supreme Judicial Court at the February term held in Bangor, as tending to bring into disrepute our prohibitory laws, and defeat the ends of justice, said action being in our minds arbitrary and illegal, and in utter defiance of all law and right, nullifying the law and preventing the punishment of the criminals who have engaged in the liquor traffic in defiance of the expressed will of the people."

The Good Templars further resolved that the action of the Chief Justice was "illegal, unrighteous, and subversive of the rights of the people who desire to see the law rigidly enforced," and declared that "we will earnestly call upon our representatives in the Legislature to inquire into the matter, and take such further action as the facts ascertained demand." As to the legality of the action in question, most people will incline to the view that the opinion of the highest judge in the State is more valuable than that of a Good Templars lodge. The important fact in the matter is, the readiness of the Chief Justice to avoid imposing the severer penalty when he might have done so. In this he only reflects the dominant sentiment of the community, for everybody knows that an overwhelming majority of the people in Bangor do not believe it is the fair thing to send a man to jail for selling a glass of whiskey. So long as this remains the feeling of the community, it will be useless for Good Templars to adopt resolutions, or Legislatures to go through the form of enacting statutes.

The "White Cap" outrages in Indiana still continue. The latest occurred in Crawford County, and was perhaps the most extraordinary on the list. A band of men seized one Mattox on a charge of stealing, and dragged him some distance with a rope around his neck, when they discovered that he was innocent, and released him, after making themselves

known to him and exacting a promise that he would not betray them. Mattox finally concluded that such a promise was not binding, and gave the names of his assailants to the Prosecuting Attorney. The remarkable feature of the case is that among the names are those of two preachers, one County Commissioner, and two other well-known citizens, who are church members. Four of the number have been arrested and held to await the action of the Grand Jury. Although these outrages have been perpetrated in Crawford County for years, the Indianapolis *Journal* says that this is the first earnest movement which has been made to break up the White Caps. In all its aspects this White Cap business is one of the most surprising phenomena ever known in a presumably civilized community, and it is a terrible reproach to the State of Indiana that such outrages have been permitted year after year without any serious effort to stop them.

The "maple-sugar vote" in New England is greatly dissatisfied with the workings of the McKinley Law. That measure removed the duty on imported sugar, but offered the home producer a bounty as compensation. But the new system does not suit the Vermont owners of maple groves at all. They complain that they are being ruined by the pauper maple-sugar of Canada. Congressman Powers drew this alarming picture of the situation in a speech delivered in the House a few days ago:

"The maple-sugar production of Vermont is about 15,000,000 pounds. The production of Canada, just across the line, is 20,000,000. But the possibilities of production in Canada are perfectly astounding; 100,000,000 pounds might be produced there; and since this bounty was given to the maple-sugar producer there have been ten car-loads of maple-sugar imported into this country from Canada where before there was but one. It is imported to the city of Chicago, and there adulterated, and is sold, as I am told, through the West for Vermont maple-sugar."

So desperate is the situation of the Vermonters that Mr. Powers has introduced a bill to restore the old duty and to repeal the bounty. One of his objections to the bounty system is that the red tape necessary in order to get it compels the producer to lose the early market on maple-sugar, and forfeit more than two cents a pound if he undertakes to secure the bounty. Mr. Powers declares that, "if the old tariff upon sugar were restored, so as to keep foreign sugar out and leave the market to our own product, then our maple-sugar producers would be vastly better off than they are now." All of which illustrates again the difficulty of suiting people by any device to put money in their pockets by way of the Federal Treasury.

Again has British justice been taking a turn at literature, though this time its decision is not so bewildering as some others we have been obliged to record. The publishers of the London *Literary World* were sued for £1,000 damages for libel, the said libel asserted to consist in their review of a certain book. This was entitled 'Roughing it after Gold,' and was written by a Capt. Devereux, though published under an assumed name. His grievance was two-fold: first, his book was reviewed under the head of "New Novels," although it purported to be a faithful record of actual experience; and, second, the review stated, in substance, that the author was, on his own showing, a barefaced liar. The doughty Captain thereupon wrote the publishers, revealing the martial authorship of the volume and demanding a retraction. Not satisfied with the partial disclaimer which he received, he brought suit as stated. But on the witness-stand he was obliged to admit on cross-examination that one incident in the book—a description of election methods in Chicago, and of his own experience in running for office in that city—was highly colored, and, in fact, the thing that was not. Thereupon the learned Judge asked the jury if they saw anything in the plaintiff's case, and when those incorruptible freemen answered in the negative, gave judgment for the defendants with costs. This fable teaches that a critic sometimes knows how to classify a book better than its author; and also contains the moral that it is foolish to sue a writer for calling you a liar, only to have it proved in court that the charge was true.

At the time the correspondence in regard to the Spanish treaty was made public, it was seen that a clause in Mr. Blaine's last letter declared that the President would take into consideration the Spanish request for lower duties on Cuban tobacco, and that "this matter will be the subject of a separate note." It was alleged by some that this meant, what it certainly did not expressly say, that the President would send a special message to Congress on the subject. How the Spaniards themselves came to have the idea that such was the meaning of it may be seen from a letter of the Spanish Minister for Foreign Affairs to the Spanish Minister at Washington, made public in the course of the recent debate in the Spanish Senate. The letter was dated April 30, 1891, and gave a recapitulation of the negotiations leading up to the treaty. It then said that Mr. Foster, the special envoy, "promised, in the name of his Government, that the President of the republic would make use of his authority to ask Congress, on its reassembling, to make the reduction in the duties on tobacco which the Spanish Government so much desired." This promise was not kept, and it would seem to be in order for the two gentlemen who were responsible for making it and then breaking it, to explain their conduct.

"Fraternity with Claws" is the suggestive title of an article printed in a late number of *América en Paris*, a Spanish periodical published as the organ in France of Spanish Americans. It reviews the gushing days of the Pan-American Congress, and the stern realities of the McKinley Bill, with its retaliatory clause which followed, runs over the diplomatic relations of our Government with Hayti and Chili, and takes up the recent levying of discriminating duties on the products of Colombia, Venezuela, and Hayti. It says: "No one has a right to complain when he is abused or insulted in any place where he has gone to treat as an equal with one who is stronger than he is, and who has already shown his style of conduct." The writer says that if "any one in Spanish America believed in the sincerity" of the friendly professions of the United States, he never heard of him, and that, if there ever were such a credulous individual, the truth must have dawned upon him at last. In the case of Chili, he says, the "Washington Government imposed its will, and violated in the most shameless and flagrant manner the laws of international intercourse recognized by all civilized nations." After this has come the enforcement of retaliation, although in the case of Colombia, and probably Venezuela, preëxisting treaties were thereby overridden. A person who should act in this way in private affairs, says the article, would be considered as "either a lunatic or a rogue." It closes by saying:

"The great nation of North America has not, and never has had, any real liking for the other countries of the continent. If it wishes to win them over to-day, it is because, burdened by the weight of its protectionist chains, it desires to get them to help carry the load. That is the whole of it. Time will tell if our republics allow themselves to be deceived."

Argentine securities have been picking up in London for the past few weeks on the strength of a reported improvement in Argentine finance and commerce. There appears to have been a rally to some extent, due in part to the apparent settling of the political question, the starting up of new industries, and the expansion of agricultural production. Some important experiments in tobacco-growing point to an increase of resources in that direction, while the discovery of coal-fields, so considerable that the railway companies have declined to renew their contracts with English mine-owners for the supply of their fuel, and the working of some rich salt deposits near the harbor of San Blas, mark other encouraging developments. Still, the gravity of the situation should not be forgotten. Argentina is now paying no interest whatever on her foreign debt, yet even so is running behind. On the basis of the estimates for 1892, a deficit of $1,000,000 is to be looked for; and when we remember that an estimated surplus of $10,000,000 for 1891 turned out to be a shortage of $600,000, this forecast is far from reassuring.

THE END OF FREE COINAGE.

THE country passed a dangerous crisis last Thursday, when the silver-men in the House of Representatives were forced to postpone their attempt to pass a free-coinage bill, after a tie-vote had been taken on the question of tabling it. This vote was more favorable to the friends of sound money than we had anticipated. Most people had expected a majority of about twenty in favor of the Bland Bill, while Mr. Bland himself had been reckoning on forty. The Republicans came up to the fight nobly, and gave all of their votes, except eleven, against the measure. Sixty-six of the 148 votes cast against it were Republican. The eleven who voted in favor of it were either from the silver-producing States or from the far West, except one, Mr. Vincent A. Taylor of Ohio. If this gentleman had voted with his party the bill would have been killed instead of being postponed. By the subsequent decision of Speaker Crisp not to report a closure rule for a vote on the Bland Bill unless a majority of the Democrats in the House should request it in writing, it has practically been killed.

While awarding to the Republicans the credit they well deserve for their action, so nearly unanimous, on this bill, we must extend congratulations to the anti-silver Democrats for the splendid fight they have made. In this struggle the names of Tracey of New York, Williams of Massachusetts, Harter of Ohio, Rayner of Maryland, Brawley of South Carolina, and Cockran of New York will be long remembered. And it serves as a fresh illustration of the recuperative power of the nation that all of these names, except that of Mr. Tracey, are new in this controversy. Not one of them, except Tracey, was in the last Congress, and not one, except Tracey and Cockran, has been in any previous Congress. Among the Southern Democrats was one brave man whose lofty course recalls the example of Mr. Lamar in 1878. Mr. Lamar was then Senator from Mississippi. His Legislature had passed resolutions instructing him to vote for the silver bill of that day. He said he could not conscientiously do so, nor could he conscientiously refrain from voting. He believed that casting his vote against the bill would be signing his own political death warrant, but he nevertheless did cast it as his conscience told him was right. His State not only forgave him, but took him into higher confidence than ever, and promoted him by successive steps to the bench of the Supreme Court of the United States, where he now sits. In like manner Mr. Brawley has come forward, and after delivering one of the most convincing speeches against the Bland Bill, cast his vote against it at every stage. There is something touching in the conclusion of Mr. Brawley's speech. He said:

"If by my voice and vote upon this bill I have failed to satisfy the wishes of any portion of my constituents, and if my course herein puts an end to my public service, as many of my friends warn me that it will, I wish those of my people who have honored me with their confidence to know that my conclusions have been reached after most careful consideration, moved by the most sympathetic regard for their interests and wishes. There has been the strongest and most subtle temptation to earn their approval by hypocritical conformity with what is represented to be their will; but my convictions as to the injurious effect of this bill have been so strong that such mendacious compliances have been impossible to me, and dear as their approval would be to me, I hold my conscience higher than their praise."

There is one man on the other side of the chamber who has won golden opinions from all sorts of people, namely, ex-Speaker Reed. From first to last he has fought the Bland Bill on principle, not on grounds of mere party expediency. He has battled against the measure in order to beat it, not merely to "put the Democrats in a hole." Whatever step was parliamentary and calculated to prevent the bill from becoming a law, he has advocated and urged upon his party associates. In this he has shown the highest party wisdom. The business in hand is too serious for trifling and dodging and "skirmishing for position." Silver has taken another tumble, having fallen to 39 pence per ounce in London, and 85½ cents here. At this rate the bullion value of a silver dollar is only 65¾ cents. To take any step, or cast any vote, which may subject the fortunes of the people, their savings and their wages, to such a fluctuating standard of measurement cannot be good party policy for either Republicans or Democrats.

Looking at the subject in its broader aspects, we think that the country has passed the point of danger, not merely for this Congress but for all Congresses and all time. As there was a culminating point in the greenback craze seventeen years ago, so, we think, has the culminating point in the silver craze been reached and overpassed. Discussion, real discussion, where silver is not a side issue, but the main thing, is fatal to it every time and in every place. Discussion killed the greenback heresy in Ohio in 1875. It killed the silver heresy in the same State last year. It has killed it in the House of Representatives now—a House that was proclaimed to be "two-thirds silver" when it was elected (although elected on another issue) in the autumn of 1890. The American people are not prepared to sanction the principle of paying a hundred cents of debt with 68 cents worth of anything. The more that principle is discussed, the fewer votes will be found for it either in Congress or at the ballot-box.

THE MORAL OF JUDGE MAYNARD'S FALL.

WE do not believe it would be possible to explain how a man of Judge Maynard's position and antecedents came to commit the offence of which the Bar Association has found him guilty, without going back to the extraordinary growth of unscrupulousness in politics which we have been witnessing during the last ten or fifteen years. This unscrupulousness had its origin in a tradition of the war cherished by a great many Republicans, and in some degree excusable, that Democrats were a kind of traitors whom it would be highly unsafe to intrust with the conduct of the Government, and who, in fact, if they got into office, would probably destroy the public credit, and distribute the contents of the Treasury among old slaveholders and ex-rebels. This notion in some degree accounted for the process by which Tilden was defeated in 1876, and it was made to do more and more service as the party grew weaker with the country. It played a large part in the operations against Cleveland in 1884, when it died out.

But it did not die out without calling into existence a new type of Republican politician, of which Messrs. Quay and Reed and Ingalls are good specimens, each in his own field, who hold that anything that will beat the Democrats is lawful, that no man need be ashamed of any perversion or evasion of the law, or disregard of precedent, or abuse of power which helps his party to get what it wants. Ingalls committed the folly of putting the creed of these people into words, in his famous "iridescent dream" speech, and suffered for it; but the others secretly applauded him. They held with him that in politics as in war all was fair that succeeded. Quay carried the election of 1888 on this theory, and Reed ruled the Fifty-first Congress on it. Reed's performances were worse in their influence than Quay's, because Reed is a man of good personal character, as Quay is not, and because they were public, while Quay's were secret, and because they were accompanied by an immense amount of bullying which exasperated the Democrats all over the country to the last degree and made them thirst for vengeance. They were humiliated by their apparent helplessness. Their managers were taunted with inferiority to the Republicans in "smartness," and upon the ease with which they were cozened and put down. There thus grew up in their ranks a longing for tricksters who would match Quay and Reed and Dudley as cheats and bullies, and "get there" somehow.

If we are not greatly mistaken, it is this which explains that most mysterious phenomenon of American politics—the rise of David B. Hill to a commanding position in his party. If it does not account for this rise, certainly nothing else does. Hill, according to our view, came forward to supply a new party want—that is, a leader thoroughly competent to fight the devil with fire, and familiar with all the tricks of the political game as the Republicans were playing it, and as he had long played it himself on the ward and county stage. Ideas, or opinions, or eloquence, or magnetism were not required of him. All he was asked was if he knew how to bribe, to "deal,"

to make false counts, and, in short, by hook or by crook, to make majorities. He showed the wax on his finger-ends, the marks on the cards, the way of getting the aces up his sleeve, and produced a very complete thimble-rigging "layout." He proved so satisfactory to the new school that he received one bit of political preferment after another—

> "And moving up from high to higher,
> Became on Fortune's crowning slope
> The pillar of a party's hope."

It was not wonderful that Judge Maynard's imagination was affected by the apparently brilliant success of this disgraceful career. It surely seemed as if the true road to glory was traced out by Hill's tracks. It appeared after the November election as if the Democrats had been so dazzled by Hill's juggling dexterity that they had thrown overboard in disgust the one candidate produced by them in thirty years whom the country at large recognized as both a statesman and an honest man, and had resolved, in fact, on dismissing all "eminent counsel," and having their work hereafter done by shysters—like the firms in the dry-goods district who now send their lawyer in the cart to seize the goods when they hear of the sudden failure of one of their customers. There was, in truth, for a month after the last election, as we all remember with shame, much chuckling in the Democratic ranks over "Dave" Hill's dexterity. It was not till he began to prepare for his "snap convention," that is, to pick the pockets of his own companions, that disapproval of his ways began to develop itself.

It is not surprising that Judge Maynard and even such men as Mr. John Bogart and Mr. Rice should have been deluded into the notion that cheating was to be no longer damaging to reputation. They, one might say naturally, seized the first chance that offered itself of winning some of Hill's fame. But they came a little too late. The public forbearance was exhausted; the public conscience had waked up to a perception of the frightful consequences to the State and nation of further continuance on the path of competitive knavery and fraud. Judge Maynard's own profession felt the necessity of arresting him and bringing him to justice. There is no calling put in such peril as the lawyer's by the destruction among men of mutual faith and confidence, by successful defiance of the law. The action of the Bar Association has, therefore, come upon the political world like the action of Moses when he found the Israelites had in his absence set up the golden calf. He slew three thousand of them in spite of the excuses of Aaron, who said they insisted on his making "gods for them who should go before them, for as for this Moses, the man that brought them up out of the land of Egypt, they knew not what had become of him." So Aaron manufactured a golden calf for them, and doubtless all the weak heads thought a good-sized golden calf was as a leader worth ten Moseses.

SINKING FUNDS.

THE *Nineteenth Century* for March has an interesting article on the dilemma in which the London Metropolitan Council finds itself. Greater London, as it might be called, is an aggregate of parishes which has had a sort of unification of municipal interests (represented by the Metropolitan Board, now Council) for less than forty years. For general improvements, such as the building of sewers, the Council was authorized to borrow money and to establish sinking funds therefor. These metropolitan stocks, issued at 3½ and 3 per cent. interest, are now above par. The law is explicit that the Council can raise money by taxation only for the exact difference between its income and outgo. In the former it must include all interest on investments, and in the latter a stipulated amount for purchases of stock at or below par for the sinking fund. The Council lent its money to the vestries within the popularly understood, but not the corporate, limits of the city, and since the rate of interest on its loans exceeded the rate on its public debts, it took the difference towards paying the premium on the stock purchased for the sinking funds. This the *Nineteenth Century* says has been declared illegal, so that the whole of the income of the Council, from whatever source derived, must be credited in its accounts before the rate of taxation can be determined.

This leaves the annual appropriation for the sinking funds from taxation without the usual investment, since the public debt is above par and by law no premium can be paid and charged in the tax budget. This Metropolitan stock comes due in 1929 and must be paid from sinking funds. The Council under the present law has two courses open to it. One is to continue lending money to subordinate parishes. The difficulty here is that it will be impossible to collect all this large amount of money from these various debtors, so as to have in hand the cash necessary to pay off the public stocks in that year. The investment is no doubt safe enough, but a municipality does not levy taxes in order to invest the proceeds. The sole aim of the sinking fund is to pay off the public debt at maturity, but not before; and if its sums cannot be used to buy in its own debts at a premium, it is by no means easy to say what should be done with such large amounts of money. Even if uninvested, the taxpayers lose the interest on such part of the public debt as would otherwise be purchased.

Another course before the Council, and one pursued by that body, is to lend the money to itself by using the sinking funds for further improvements instead of creating new debt. But in this case the funds so used are credited to a sort of construction account, and this account by law is liable to the public debtors the same as a sinking fund would be. This practically leaves the difficulty as great as ever, for in 1929 the actual cash must be forthcoming from that account or from the particular sewers, etc., covered by it. This recalls the sinking-fund cases in New York city, in which it was contended that the city sinking funds should be deducted from the city's total debt before the limitation of 10 per cent. on the assessed valuation should be applied.

One of the suggested remedies in the London case is a Parliamentary law allowing the Council to purchase its debt in the open market at a premium. Very likely this would be better for the taxpayers than letting the funds lie idle or investing them in loans which could not be turned into cash at maturity of the municipal debt; yet this premium paid represents just so much loss to the municipality, for the creditor would have to accept par in the end. In spite of all this, the English writer is firm in the belief that all municipal debts should by some means—sinking funds presumably—be paid off in sixty years. Dr. Price advanced his theory of sinking funds a century ago, and though his views were afterwards critically examined and materially modified in public practice, there yet remains a feeling that a sinking fund has a mysterious efficacy for the removal of debt in national, municipal, and corporate affairs. Mr. Henry C. Adams, in his excellent work on 'Public Debts,' has made very clear the fact that governments have but one source of revenue—taxation—and so far as the expedient of laying aside moneys for the extinguishment of a public debt tends to confuse this fact, the practice is misleading. Cossa, in his work on 'Taxation,' says of sinking funds:

> "The complexity of the system, the expenses, the application of the funds for other uses which is inevitable in economic or political crises, and the need of fresh loans have almost always neutralized the advantages that were expected to result from this much-extolled extinction of the public debt."

The question of the wisdom of establishing sinking funds while borrowing fresh money may be illustrated by the practice of the Chicago, Burlington and Quincy Railroad, one of the few railway companies which keep up large sinking funds carefully. In 1890 the direct application from income, together with the interest on the company's own bonds kept alive in those funds, amounted to more than 2 per cent. on the share capital. At the same time the company is issuing other bonds for further extensions and improvements. It would be difficult to show a good economic reason for such a policy. The stockholders certainly lose a possible dividend, while the lien of the bondholders is not made more valuable, because the property is worth more than the mortgage in any case. It should be borne in mind that national and corporation finance rest on different bases. The Federal Government is not "in business" in the sense that a railway is. We may agree that a nation ought to pay off its debt, without thereby committing ourselves to the theory that a corporation ought to do the same. Mr. Adams, in one of his statistical

reports to the Inter-State Commission, speaks of our railway debt as "coming to be a perpetual encumbrance on the industries of the country"; yet his theory just alluded to, that there is no debt payment possible except from revenue, applies also to corporate affairs. Our railways could clear off their bonded debt from earnings only by increasing their tariffs so as to earn annually an extra sinking-fund charge, a course we all know to be impossible. Turning bonds into stocks would not alter their character as capital, but would deprive the shareholders of the advantage of obtaining money at a low rate of interest, thus leaving to themselves any profit remaining.

A municipality, as to its finances, occupies a position midway between the general government and the private corporation. A city raises its revenues from taxation like the nation at large, but also may enter upon a business undertaking like the supplying of water and gas to its citizens, and may properly charge to the citizens benefited a sum sufficient to pay running expenses and to contribute something towards the extinguishment of that particular debt. But on the question of the general debt of the city, that part that approaches nearest to national financiering, it is not so clear that the establishment of a sinking fund adds all that was expected towards the solution of the problem. The constitutional limitation put on borrowing is much more of a safeguard to holders of municipal debt than any sinking fund can be, and with the rapid increase of wealth and population among our American cities it is a question whether under this limitation we need any further taxation for contributions to such funds. So far as London is concerned, to an outsider its difficulties seem largely technical; so that what that aggregation of parishes really needs is not sinking-fund refinements so much as full harmony of interests in what are really, though not yet altogether legally, matters of municipal concern.

THE DECAY OF PROFESSIONAL MANNERISMS.

We do not remember whether Carlyle, in his book on the clothes-philosophy, explained the origin of the old idea that each profession should have its distinctive dress. It may have been due to an unconscious imitation in human society of nature's method of "protective colors" in the animal world; so that a man need be in no more danger of taking a lawyer for a clergyman than a bird is of snapping up a poisonous caterpillar in the thought that it is a nutritious worm. However that may be, there can be no question that the use of a professional garb is rapidly passing away. Its greatest persistence has been in the two most conservative of all the professions—the ministry and the law—but even there it has lost a great deal of ground. In this country, at least, full-bottomed wigs and the dress of the old-style lawyer, such as the late B. H. Brewster used to array himself in to the end of his days, are now a pure anachronism. And as for the ministry, the alarming experience of the Westerner who hunted all day in company with a doctor of divinity without once "suspicionin' thet the chap b'longed to the prayin' gang," is growing more possible every year. We need not stop to point out the same process in other callings. The accentuation of a man's profession by his dress is mostly a thing of the past.

But this outward and visible sign is only a witness to an inward change even more striking. There used to be certain mental presumptions and prejudices connected with the several professions—a sort of lofty assumption of privilege, an air of professional mystery, a kind of waving away of the uninitiated—which were no less a mark and accompaniment of a particular calling than was a peculiar garb, but which, with that, have been very greatly broken down. Thus it used to be very common for a theologian to make some fine-spun distinction, and refuse to accept the inferences which the ordinary reason would draw from it, on the ground that only the "theological mind" was fitted to pass judgment upon it. When Lyman Beecher was introducing his improvements into Calvinism, he put forth the proposition that the Creator did not desire the damnation of the non-elect "in itself considered," but did, "all things considered." He was naturally indignant when some non-theological mind posted placards in Boston representing him, first as an angel of light, labelled "Lyman Beecher, in himself considered," and then as a messenger of darkness, with the inscription below, "Lyman Beecher, all things considered." Those were days in which privilege of clergy could be pleaded with some effect; but few theologians nowadays would claim exemption for their arguments from the ordinary canons of logic.

This city and State have recently seen a curious instance of the survival of a similar idea in the legal profession. A clear statement of fact was before the public, upon the strength of which the press in general and the mass of intelligent men pronounced a judicial officer of the State guilty of a villany, if not a crime. But there were those who came forward to tell ordinary people that they had no right to an opinion on the subject because they had not a "legal mind"; and they thereupon proceeded to becloud the matter with a technical argument in defence, bristling with citations of cases and precedents. Luckily, the committee of the Bar Association, with at least as large a stock of "legal mind" as Judge Maynard's defenders, swept away the obfuscation with which it was sought to enwrap the subject; but the important thing to notice is, that they came back to the same simple statement of actions and their natural interpretation, which had all along been dwelt upon in the press, and which had served to justify the popular verdict of condemnation. The entire incident is a very wholesome rebuke to the unfounded claim that a professional opinion of the morality of an act, or set of acts, is of more value than the judgment of any mind of average intelligence.

This is by no means to deny special aptitudes or attainments, or to impeach the value of expert and specialist work upon which so much of advance in knowledge is founded. There is undoubtedly such a thing as a "legal mind," in the sense of a mind naturally endowed with the power to grasp general principles of law and to deduce their fruitful consequences; and when such native powers are severely trained and fed by the results of prolonged industry, they go to make up a legal specialist of a high order. Such a lawyer's opinion of what the law, in any given case, is, or was intended to be, of the constitutionality of a particular enactment, or the legality of a novelty in legislative or corporate practice, must necessarily be worth more than an ordinary man's. Yet observe that what this amounts to is really only that he is best competent to tell us what the facts actually are; his judgment of the moral bearings of those facts may gain nothing from his exceptional legal attainments.

There is often a surprising failure to notice that a necessary implication of our modern system of specialists is, that a man out of his specialty is no better than any other person. Thus it was hailed as a knock-down blow for the pretensions of modern scientists when a distinguished lawyer declared, some years ago, that he had examined the writings of Darwin and Tyndall and Huxley, and found their conclusions not borne out by their evidence. What he meant was, that their conclusions could not be proved to a jury under the strict rules for the admission of evidence; not seeing how many of the propositions of modern science are built upon inductions of the widest scope, that necessarily include a great deal of moral and cumulative and analogical evidence of a sort which no judge would let go before a jury in a murder trial, but which is absolutely irresistible to the mind not tied down to the technicalities of legal evidence. Yet Tyndall himself did not stick to his last any better than the lawyer, when he essayed to lend his scientific authority to the condemnation of Mr. Gladstone's Irish bills. It is so easy, said the cynical French critic, not to write a five-act play, and it might seem in like manner to be very easy not to think you knew everything because you know some things better than any one else; yet experience shows that it is one of the hardest things in the world for some men.

We might show how the tendency away from professional affectation has had great effects in other callings than the legal and clerical. The novelist or the poet of to-day does not need to assume an air of peculiar wisdom, or maintain an ap-

pearance of great mystery about his art, any more than he needs to wear a dirty collar and long hair. The editor does not need to have it supposed that he is always seated at his desk, in telephone communication with all the world, surrounded by the accumulated learning of the ages, and making "copy" with the inspired air of a man sitting on the Delphic tripod. All around there is a decided gain in simplicity and unaffectedness. The old professional mannerisms linger on the scene only to be laughed at. Men were never so much respected for knowledge gained by tireless and long-continued application, and were never so much ridiculed for owl-like airs of supernatural wisdom, or for pretending that they are exempt from the fallibility and limitations of other mortals.

AN ATTEMPT TO NOBBLE THE NATIONAL GALLERY.

LONDON, March 5, 1892.

THE fame of Mr. Tate, millionaire sugar-refiner and patron of modern British academic art, may not have reached America, but for the last year or longer no name has been more prominent than his in the English art-world. Coming forward as a public benefactor, he has been treated, his friends complain, as a public nuisance. Having made a munificent offer to the Government, first of a collection of pictures valued by himself at I do not know what phenomenal sum, and next of £80,000 to build a gallery worthy of it, he raised, no doubt greatly to his own surprise, such a storm of abuse and opposition that to-day comes the news of the withdrawal of his offer. The story, interesting because it reveals a healthy reaction against the old British sentimentalism in dealing with all art matters, may be briefly told.

Mr. Tate, having accepted the Royal Academy as his standard and possessed himself of a long series of "pictures of the year," felt that it was selfish to reserve these treasures solely for his own delight, and presented them to the National Gallery. Of the generosity of his intention there could be little question; of the benefit of his gift to the nation there was far less certainty. Besides, he hampered it with conditions: the Trustees of the Gallery must take all his canvases or none. Now, too often the "picture of the year" is far from being a picture of all time, and the Trustees, with the good sense that distinguishes the present management of the collection in Trafalgar Square, politely but firmly refused the gift. They already feel the disadvantage of similar presentations and bequests made and accepted in the past. Their refusal, welcomed by the few, was violently criticised by the many at the time, and this criticism to Mr. Tate represented the eagerness of the British public to enjoy his rejected masterpieces. To establish a gallery of British art was the next proposition, and an anonymous benefactor, who in the course of a few days turned out to be Mr. Tate himself, came forward with a promise of £80,000 to build the necessary gallery, where British art could rally round his collection and be freed from the contamination of foreign schools, if the Government would provide a suitable site; and here again—fortunately as it now turns out—Mr. Tate made his conditions: he was to be the judge of the suitability of the site selected. On the other hand, he now agreed that only those of his pictures which were passed by a certain committee—the committee to be formed chiefly from Royal Academicians represented in the collection—need be hung. As has since been said, the jingle of golden guineas dazzled the Government and the public alike. But still there was more than one hitch. The original idea was to gather together in Mr. Tate's gallery not only the pictures given by him, but all the genuine British masterpieces from the National Gallery and the South Kensington Museum, thus despoiling two fine collections. But again the Trustees of the former institution objected, and there was so loud an outcry from influential quarters against such vandalism that this proposition was dropped. Then a new unlooked-for difficulty arose. Mr. Tate and the Government could not come to terms upon the question of site. One place after another was suggested and refused by either the former or the latter. For a vacant lot on the Embankment, which would have answered the city, its owner asked too extravagant a price. The piece of ground at South Kensington which Mr. Tate decided would please him, the Science Department, with some show of righteous anger, declared had been promised to them. And so it went on. Mr. Tate would not build his gallery where he could, he could not build it where he would. With the reopening of Parliament the matter was once more brought before the Government. Last week Mr. Goschen wrote to offer Mr. Tate a plot of land near the South Kensington Museum, for which the nation would have to pay £15,000. To-day is published Mr. Tate's answer, declining not only to build on the piece of land suggested, which seems to him wholly inadequate, but to build at all or to give his pictures to an ungrateful country: he withdraws his offer.

While disapproval of the site finally selected is given by Mr. Tate as the reason for this step, a clause in his letter referring to the "in some respects uncalled-for opposition" aroused by his scheme, supplies the real explanation. The opinion of the younger artists and art-critics, who are fast becoming a power in the land, was strong against his Gallery, and in the end they have carried the day. The war was fierce, for Mr. Tate had his supporters and defenders, but that many of these were found among dealers and time-servers who call themselves critics was scarce an argument in his favor. For a month past the daily and weekly papers have been discussing the matter with great earnestness and vigor, as it was known that upon the new decision of the Government depended the ultimate fate of Mr. Tate's now notorious collection. If his pictures were really great works of art, there would have been no opposition whatever; but they are chiefly the productions of popular painters of the day, whose fame in many cases is already on the decline, and in the course of another generation they would prove as great a burden upon the nation as the pictures of Sheepshanks and many another well-meaning man who has presented or left his private collection to the country. It is safe to say that not more than two would, as works of art, ever find their way into the National Gallery. When the plan of the one and only Gallery of British Art fell through, then it was said, why not let Mr. Tate's collection form the nucleus of a British Luxembourg? At a glance this proposition seemed plausible enough. But has not London already this nucleus in the pictures bought by the Chantrey Bequest Fund and hung at South Kensington—or rather would it not have, if the Fund were managed as it should be? Besides, the wretched daubs and rubbish that fill the German Luxembourgs, started in similar fashion, should serve as an awful warning against making a private collection the foundation for a public gallery; that is, if the public gallery is to be of the least value or service to anybody. Sentimentalists may exclaim at the generosity of the gift; practical men should consider its intrinsic merits and ultimate effects. That enough practical men to make their influence felt in sentimental England have been found is a triumph. An excellent precedent has been established, and far more good has been derived from Mr. Tate's offer of his pictures than if they had become the property of the nation.

CONFESSIONS OF A MYTH-MAKER.

TO THE EDITOR OF THE NATION:

SIR: One of the favorite situations of the modern novelists is the awakening of a once respectable character to its own turpitude; the sudden revealing of an unsuspected moral disintegration, the final result of a long series of bad acts. Tito denies his connection with Baldassarre in the Rucellai Gardens; Bartley Hubbard finds himself disgraced in the Cleveland station; MacPherson discovers that he is known to be the writer of Ossian. I felt myself Tito, Bartley, and still more MacPherson, when I read Mr. Samuel Willard's letter in the *Nation* of March 24, on "A Myth of the Confederacy." Under such painful circumstances of detection, the only solace of the criminal is to plume himself upon the magnitude of his offence. But even that comfort is denied me: I cannot conscientiously feel that I am entitled to such an advertisement as a successful circulator of reports "false in every particular," of "fabrication," and "slander," of "the *ex-post-facto* manufacture of history." However sensible of the compliment which Mr. Willard pays to my imaginative powers, it would be assuming to allow to go uncontradicted the insinuation that I invented the diverting episode of the secession of Jones County, Mississippi.

Nor have I even the lesser distinction, which seems also to be ascribed to me, necessary to repeat a story and then to refuse to give my authority. One must be a very reckless offender who has not the fear of the *Nation* before his eyes. It is quite true that Mr. Willard "addressed a note, . . . asking for the contemporary authority" for my statement, but as the note, the only one I have ever received, reached me *March 21, 1892*, when the printed letter must have been already in type, my speedy and sufficiently explicit reply probably did not reach Mr. Willard in time for him to withdraw his letter. To be sure, his note is dated December 14, 1891, and is post-marked, apparently, "Los Angeles, March 14, 1892"; but I am not quite so devoid of humor as to charge a presumably respectable man with a want of good faith for what any one must suppose is a simple accident; nor shall I write to the Postmaster at Los Angeles for information without giving Mr. Willard an opportunity of private explanation. The only persons, therefore, whose character appears to be seriously involved by Mr. Willard's investigation are the "slandered" people of Jones County and Mr. G. Norton Galloway, historian of the Sixth Army Corps. Mr. Galloway published in the *Magazine of American History* for October, 1886, (vol. xvi., pp. 387-390) an article entitled "A

Confederacy within a Confederacy," from which I drew my statement in the *New England Magazine*. To judge from the picturesqueness, humor, and straightforwardness of the article, Mr. Galloway is abundantly able to defend himself, even against the principalities and powers of Mississippi. His account has the ear-marks of truth; and I am so lost to propriety as to believe it still, and to hope that it "will run a long while."

Recent events suggest a delicacy as to delivering anything in the nature of a "professional warning," having any personal bearing: "Those be such desperate bloody-minded weapons." May I venture, however, to lay down four canons for the guidance of the inexperienced who may venture into the paths of historical criticism?

(1.) Never make a statement which you cannot support by good authority, if challenged; it is right to be cautious, it is also convenient.

(2.) Do not too hastily accept the testimony of two persons who never heard of a thing as conclusive against one who has heard of it.

(3.) If a stern sense of justice moves you to expose a fellow-craftsman who is engaged in "the *ex-post-facto* manufacture of history," be sure that your letters of inquiry are not also "*ex-post-facto*."

(4.) "To Roast a Hare.—*First catch your Hare.*"—Respectfully,

ALBERT BUSHNELL HART.

HARVARD UNIVERSITY, March 25, 1892.

THE GOVERNMENT AND THE PEOPLE.

TO THE EDITOR OF THE NATION:

SIR: No one who, in persistently advocating a cause, has not felt the freezing effect of indifference can appreciate the gratitude I feel o Mr. Harrison for furnishing a point of restance, or it might be better to say a staff to ean upon.

It is nearly a quarter of a century since I began to urge the importance of giving to the Cabinet officers seats in Congress. The same principle next presented itself with startling force in relation to municipal government. But it is only within a few years—in fact, since the appearance of Mr. Bryce's book—that I have seen that the State governments furnish the most important as well as available point of attack. It is perfectly astounding, as one bores into the subject, to see how obvious and how imperative is the necessity for such a change. There is, however, one thing in the State government which makes the work much more difficult. The Federal administration is organized on a sound principle—one man in every place, and that man appointed in a direct line of subordination, from the President down. All that needs to be done, therefore, at the outset is to make a connection between the Executive and the Legislature. In the States, on the other hand, the heads of departments are elected separately from the Governor, and are wholly independent of him. As administration under these circumstances is impossible, the Legislatures have set up a number of anonymous and irresponsible commissions which really govern the State. This dislocated administration has, therefore, to be got into working order before a responsible Cabinet in the Legislature can be thought of, and the former task is, perhaps, the harder of the two. There is another difficulty common to both the Federal and State governments. The objective point is to strengthen the Executive, and thereby obtain greater personal responsibility. Now, there are two things which by its nature a Legislature does not want and is thoroughly hostile to: one, strengthening the Executive; and the other, personal responsibility. It is, therefore, quite useless to try, as Mr. Harrison suggests, to get a bill through the Massachusetts or any other Legislature, or through Congress. The work can be done only in one of two ways: (*a*) by crusaders like William Lloyd Garrison and Wendell Phillips, who shall arouse the people to compel the Legislatures and Congress to do the work; or, (*b*) by some Governor or President who shall appeal directly to the people on behalf of his office.

Mr. Harrison doubts whether much advantage would be gained. "No system or agency can long keep our politics much above or below the level of our national character, and it is at least a question whether any change in methods or machinery would stimulate the essential elements of the stage of civilization which we have reached." I cannot reply to this better than by a quotation from Macaulay relating to the first Parliament of William III. after the Revolution of 1688:

"But the King of England could do nothing without the House of Commons. And the House of Commons, though it had hitherto supported him zealously and liberally, was not a body on which he could rely. It had, indeed, got into a state which perplexed and alarmed all the most sagacious politicians of that age. There was something appalling in the union of such boundless power with such boundless caprice. The fate of the whole civilized world depended upon the votes of the representatives of the English people, and there was no public man who could say with confidence what the representatives might not be induced to vote within twenty-four hours.

"The truth was that the change which the Revolution had made in the situation of the House of Commons had made another change necessary, and that other change had not as yet taken place. There was Parliamentary Government, but there was no Ministry, and without a Ministry the working of a Parliamentary Government such as ours must always be unsteady and unsafe. It is essential to our liberties that the House of Commons should exercise a control over all departments of the administration. And yet it is evident that a crowd of five or six hundred people, even if they were intellectually much above the average of the members of the best Parliament, even if every one of them were a Burleigh or a Sully, would be unfit for executive functions. It has been truly said that every large collection of human beings, however well educated, has a tendency to become a mob; and a country of which the Supreme Executive Council is a mob is surely in a perilous position."

The remedy in this case was found in an Executive Ministry having seats in the Parliament, and there are few things more interesting in political history, and none more instructive, than the development of this Ministry till it has become in this century the instrument of the greatest peaceful reform, in the interest of the whole people, which this world has ever seen. The whole history of France from 1789 to this hour is that of a struggle to work out this problem of establishing an Executive strong enough to govern, but held responsible to the nation. It is to be feared, notwithstanding the twenty years of the Third Republic, that final success has not been attained. We also in this country have got to work out the same problem, or go to pieces.

G. B.

BOSTON, March 25, 1892.

CHAUCER'S AGE.

TO THE EDITOR OF THE NATION:

SIR: In Prof. Lounsbury's excellent monograph on the life of Chaucer ('Studies in Chaucer,' i., 32 *ff.*), certain arguments are advanced against the assumption of 1340 as the birth-year of the poet. On p. 48 the author remarks that the only way to break the force of references made to Chaucer's old age, both his own laments and the allusions of his contemporaries, is to take the ground "that the average duration of human life in the fourteenth century was so much shorter than in the nineteenth that a man would then be termed old at a much earlier period than now." A quotation to this effect is made from Hampole; and an utterance of Innocent III., two hundred years earlier, is shown to hold the same tenor. Such evidence, however, is condemned by Prof. Lounsbury as mere religious rhetoric, and useless to prove the point. In this opinion we all cheerfully concur. But there is other evidence of a much more convincing character. I do not say that this evidence will dispose of our author's assertion that the individual life was no shorter then than now (p. 49); but I feel sure that it will show what fourteenth-century people meant by old age. Jacob Grimm ('Rechtsalterthümer,' 416 *f.*) brings proof, for several Germanic races and for different times, that sixty and often fifty years were regarded as the terminal point of active manhood. From twenty to fifty for men, from fifteen to forty for women, said the West Goths, may be reckoned as active life. Above sixty, ran a German maxim, men were come "beyond their days," or had "arrived at their days." An old German poet, after naming various stages of a life well spent, ends by saying: "How fairly comes one to the fifty years!" Among the Romans, *senectus* began at fifty (see J. Grimm, *über das Alter*, Kl. Schr. i., 190). An old German proverb, quoted in Grimm's essay, says:

"30 Jahr ein Mann,
40 Jahr stille stahn,
50 Jahr geht Alter an."

Such popular wisdom is worth the rhetoric of a thousand sermons; and it shows how easily Chaucer's friends might call him old at fifty, or even a few years earlier. When he calls himself old, we need not take him too seriously: think of Thackeray's "forty year."

It is almost superfluous to add that what I have written applies simply to the use of this particular argument, and not to the conclusions of Prof. Lounsbury in regard to the birth-year of Chaucer.—I am, etc.,

F. B. G.

HAVERFORD COLLEGE, March 25, 1892.

"PSYCHOLOGY IN AMERICA."

TO THE EDITOR OF THE NATION:

SIR: We have lately flattered ourselves on the way in which we teach mathematics in America, and now it seems that we are to do so on the score of our psychology as well. Prof. Cattell, in your issue of March 17, presented things in a very optimistic light, although there are at present not half-a-dozen institutions in the country where courses in scientific psychology are given. The kind of "psychology" generally taught bears as little relation to science as the teachings of the "Metaphysical Medical College" bear to medicine or metaphysics. I have actually found one institution in which the only course in mental science was conducted with Bowne's 'Introduction to Psychological Theory' as a text-book. This little-known work is a tirade against the employment of scientific methods in psychology, and was written during an attack of what G. Stanley Hall calls "hylophobia," or "materialism-madness"; and I am sure that the author never dreamed of its being used as a text-book. The experience of many of us will suggest other places where the in-

struction is no better. Prof. Cattell does not do justice to the supporters of the new psychology, himself included. The difficulty of raising the standard in mathematics is comparatively small. In psychology we have to struggle for the first introduction of scientific methods; what this means when it comes to the question of an appropriation for a laboratory can well be conceived. To be sure, President Hall has founded two laboratories, of which the one at Baltimore no longer exists, and Prof. Cattell is to be credited with a like number. But the success achieved by the pioneers ought not to blind us to the fact that by far the large majority of our so-called universities teach a psychology which would call a blush of shame to the face of old Aristotle, the father of the science, for the degeneration of his offspring in the last two thousand years. To attempt to console ourselves by pointing out the entire lack of psychological facilities in England (except in the Cavendish Physiological Laboratory) is like trying to persuade the New Yorkers of the charms of bossism because the Czar of Russia is worse than Hill.

Respectfully, E. W. Scripture.

WOMEN IN EUROPEAN UNIVERSITIES.

To the Editor of The Nation:

Sir: The "woman question" in Europe is a much more simple thing than in America; the head and front of the offending seems here to be that women desire admission to all the universities. Yet this demand alone is so vital, so pressing, that you should really have a monthly bulletin from all the university centres to note the degrees of progress in opinion and opportunity. The latest event of importance here at the seat of the renowned University of Zürich has been the installation of Dr. Emilie Kempin as privat-docent. This took place to-day at eleven o'clock in the auditorium of the University. Mrs. Kempin is well known in America as a lecturer in the law school of the University of the City of New York. She made her second application for a privat-docentship here last fall and was appointed, though not without opposition from the conservatives. The installation is an affair quite simple enough to suit the undemonstrative Swiss character; it consists of the first public lecture of the privat-docent, to which he (or now she) comes attended by the rector and by members of the special Faculty in which the candidate is to work, as well as also by the gloriously caparisoned verger, and to which the public also are invited. The audience that came to hear Dr. Kempin discourse upon "Modern Trusts" was large, gave close attention, and showed appreciation by hearty applause at the close. I have heard that the students in law were specially pleased, and it is to be hoped that the new privat-docent will have a good number to attend her course in English and American law next semester.

This is the first time that such an honor has been conferred upon a woman in German-speaking countries; and it is especially noteworthy because the University of Zürich is a State institution. But it is the only university where such a thing could be done, because it is the only place where women are officially admitted. Here all doors are officially opened wide to women up to the examination and degrees of doctor of philosophy and doctor of medicine. But where in other universities a woman now and then appears in the lecture-halls, it is always through the personal favor or invitation of individual professors. At Leipzig a larger number of women than elsewhere brave public opinion, and, led by their strong desire to hear the lectures of great specialists, ask for permission to attend. They are never molested in any way, but their position is always an ambiguous one.

In Baden a recent movement towards opening the universities of that Grand Duchy to women has awakened a great deal of interest. An exact statement of facts will perhaps account for some of the misapprehensions that have been caused. The "Frauen Verein Reform" of Weimar, under the leadership of Frau Kettler, sent to the Baden Landtag a petition praying for the opening of the universities of Baden and for the founding of a gymnasium for young women. The petition was referred to a commission, and they reported to the Landtag that they were not in favor of opening the universities or of founding a gymnasium for young women, but that young women might take the *Maturitäts* examination at the gymnasiums for boys now existing. As to the attendance of foreign women upon the university lectures, the Commission said that their visit (*der Besuch*) should be exceptional and liable to recall at the will of individual professors; and that such a visit should be allowed to those women of Baden who should have taken the *Maturitäts* examination.

This report was not exactly recommended by the Landtag, but commended to the consideration of the Government. But the representative of the Government in the debate, while declaring that the Government was favorable to the advance of opportunity for women, and would keep further developments of the woman question in mind, still expressed timidity about taking definite steps until other German States showed a disposition to advance also. The stormy opposition, he said, on the part of university professors (presumably at Heidelberg) to opening the doors to women would lead the Government to consider well and go slowly. I am quoting at present from memory of the report of his speech as given in the Baden papers, but I believe I give the main features correctly. That something has been gained by the debate over the matter is clear, but perhaps not so much as has been reported. The Government is to consider the matter, but what its decision will be is uncertain.

The petition of the "Frauen Verein Reform" emphasized the need on the part of women for scientific training, and because of this, perhaps, has gone out the word that scientific and mathematical courses are open. Recent news from Heidelberg leads me to say that there are no women students there. At Freiburg there have been two or three in the past year, but they were working in laboratories only as "guests." The Faculties of both these universities have to this time refused to consider the application of any woman for official recognition.

There has been this year a movement in Austria looking towards the opening of the university at Vienna to women, and the Emperor of Russia has within a few days given permission for the refounding of the medical school for women in St. Petersburg, which has been closed since 1886.

Martha Foote Crow.

Zurich, March 4, 1892.

THE EDUCATION OF YOUNG MEN.

To the Editor of The Nation:

Sir: The article in your paper of February 25 entitled "An Interesting Question," and also the letter in your issue of March 10 on "The Education of Southern Youth," I read with much interest. Permit me to say a few words on the other side of the question. Is it a fact that the young women of this generation are intellectually superior, that is to say, better educated, than the young men? That, as a whole, they are better read in certain branches of literature cannot be denied; and they certainly profit by joining literary societies, which, as a rule, men do not avail themselves of. But the question is, are they better educated?

What is education? Is it not the acquiring of knowledge, irrespective of how it is acquired? The young woman may learn more from the study of books, but the young man who enters into business, whether in a professional branch or otherwise, is undoubtedly receiving valuable information daily. Business is now reduced to a science, and requires study on the part of the young man who would succeed, and experience is constantly thrusting knowledge upon him. His brain is necessarily kept in a state of activity. Is the knowledge thus obtained of less value to him, either as an exercise for the development of the mind or as information worth retaining, than that acquired by the young woman wholly from books? It is obvious that the dearth of men in literary societies is caused by want of time on their part, while this is not usually the case with women, who frequently have much leisure at their command. The man, after an active day's work in his office, requires rest and recreation. He is naturally not inclined to spend his evening in study, although he often uses it to advantage by reading an instructive book of an entertaining order. On the other hand, an evening of study is recreation for the woman, who has had household duties to attend to during a greater part of the day. The man's work has been of a higher mental order—generally speaking—than that of the woman.

In reference to small towns and sections of the country removed from the large cities, is it not a noticeable fact that a large majority of the best young men leave and seek the business centres, and on this account the young women, who remain at home, are compelled to admit into their social circles and often to accept as husbands men who are inferior to them intellectually? This has been the case in the observations of the writer here and in the East.

Mr. Jas. G. Holmes may account in part for the superiority of the young women over the young men in the South, but in the North we have not had the same cause, nor do I believe a like effect. W. W.

Milwaukee, March 16, 1892.

A PHILOLOGICAL ANALOGY.

To the Editor of The Nation:

Sir: The *t*, that in time became affixed to the ending of the second person in Old English, has been explained as a forgotten remnant of the postpositive pronoun. In the second person the pronoun is particularly apt to stand after the verb (questions and commands), and being weak, amalgamated with it; then one of the two fricatives became stopped (Sievers, §201, 6), and *bindes-thu* became *bindestu*; but when *thu* was used before the verb, the *t* still adhered to the latter, hence *thu bindest*, and so *bindest thu*.

Those who have regarded this reasoning as far-fetched, will find it confirmed by a somewhat similar case in colloquial modern English. The hortatory *let us* becoming contracted to *lets*, the *s* has come to be (of course unconsciously) regarded as a part of the word, and is frequently retained, though *us* or some word of

like function be used after it. Thus, "Lets us go over to Jones's," "Lets you and I stay here, and John go down to the river and get the girls." GEORGE HEMPL.

ANN ARBOR, MICH., March 14, 1892.

NAMES FOR CHURCHES.

TO THE EDITOR OF THE NATION:

SIR: On reading your review of the 'Dedications of American Churches' in the issue of March 24, I am impelled to make mention of one more unique than any your reviewer has adverted to. We have in this diocese a church whose dedication is "The Good Samaritan." Is this not the only recorded instance of the dedication of a Christian church to an admittedly fictitious person?—Yours truly,

OBSERVER.

PHILADELPHIA, March 26, 1892.

Notes.

GINN & Co., Boston, have nearly ready 'A Primer of English Verse,' by Prof. Hiram Corson.

The volume next to appear of 'The Poets and Poetry of the Century' (London: Hutchinson & Co.) will be devoted to the women poets. Dr. Garnett is to write of Emily Brontë and others; Mr. J. A. Noble of George Eliot and Mrs. Browning, etc., etc.

'Examples of Early English Pottery,' by J. Eliot Hodgkin and Edith Hodgkin, is now to be had of Bernard Quaritch, London. The work figures and describes upwards of six hundred pieces of pottery, and is put out in an ordinary edition of 500 copies and a large-paper issue of but 50.

Mr. Rudyard Kipling has collected his fugitive verse of the past few years, which, revised and with the addition of some unpublished pieces, will be printed early in April by Macmillan & Co., under the title 'Barrack Room Ballads.' The same house has now ready 'The Soteriology of the New Testament,' by the Rev. Dr. Du Bose of the University of the South, Sewanee, Tenn.

An historical novel, 'Columbus and Beatriz,' by Constance Goddard Du Bois, is announced by A .C. McClurg & Co., Chicago.

Funk & Wagnalls Co. will publish early in April 'Ethical Teachings in Old English Authors,' by Prof. Hunt of Princeton.

The second volume of Rehatsek's translation of Mirkhond's 'General History' is announced by the Oriental Translation Fund agents as now ready for delivery. It contains the Moslem version of Bible stories between Moses and Jesus, as well as biographies of Alexander the Great and certain Persian philosophers and monarchs. Applications for the volume, which is sold at ten shillings, should be addressed to F. F. Arbuthnot, Royal Asiatic Society, No. 22 Albemarle Street, London, W.

The Appletons have ready their 'History of the Centennial Celebration of the Inauguration of George Washington as the First President of the United States,' edited by Clarence W. Bowen. It is a folio of 650 pages, profusely illustrated, and the edition is limited to 1,000 numbered copies.

Rand, McNally & Co. issue a timely map of the Indian and Oklahoma Territories, on the generous scale of twelve miles to the inch, and folded to pocket size.

The Trow Directory Co. send us their 'Copartnership and Corporation Directory' for 1892 (the fortieth year of issue), which contains a great mass of information of the highest value to legal, banking, and commercial houses. Another volume of great, though local, interest, is the 'New York Charities Directory' for 1892, the fifth volume of the kind published by the Charity Organization Society. It should be in the hands of all those who have to do with the relief of the poor and unfortunate, or the reformation of criminals.

The Putnams have done well to include Mr. Louis R. Ehrich's two papers on 'The Question of Silver' in their "Questions of the Day" series. Mr. Ehrich's thorough information and effective power of homely argument have already become widely known.

Fifteen sermons by Theodore Parker, hitherto unpublished, come to us from Roberts Bros., Boston, entitled 'West Roxbury Sermons.' As might be inferred, they do not bear the polemical stamp of his discourses of the later Twenty-eighth Congregational Society days, being, in fact, almost entirely "practical" sermons; yet they have their interest, both intrinsically and as helping to show how the man came to his power.

A collection of contributions to *Garden and Forest* by Mary C. Robbins, makes a lively and pleasant book, 'The Rescue of an Old Place' (Houghton, Mifflin & Co.). Many an amateur gardener will sympathize with the writer's denunciation of that "shameless weaver," the web-worm, and of the rose-bug, desolator of whole counties that he is; nor will he fail to admire the discipline of those shrubs, here described, which grew so accustomed to being dragged out of their holes and set in a new place that they minded moving-day no more than the most peripatetic New Yorker.

Miss Jane E. Harrison's 'Introductory Studies in Greek Art' (Macmillan) does not call for extended notice. As its name implies, it is a handbook, intended principally for beginners; and as its name does not imply, half of it is taken up with a description of the arts which preceded the Greek, namely, Egyptian, Assyrian, and Phœnician. To the last of these is devoted a chapter of no less than seventy-eight pages, much of which might well have been spared in so small a book, especially as the writer's chief purpose is to develop one thought, which finds its culmination in the sculptures of the Parthenon; and the long digression on the history and characteristics of the Phœnicians makes it difficult for the reader to keep the leading motive in mind. The best chapter by far is that on Egyptian art, which is a clear, simple, straightforward statement, undisturbed by those emotional qualities which frequently mar Miss Harrison's style, and admirably successful in bringing out those points which are of most interest to the student who cares for Egyptian art mainly in its relations to the art of Greece. The second half of the book really amounts to a series of four sermons, taking for their texts, respectively, the Metopes of Selinus, Pheidias, the Hermes of Praxiteles, and the Altar of Pergamon. These deal with the moral or ethical aspect of Greek art; and, excellent as are the precepts they enforce, we cannot help feeling that the preacher is rather inclined to take a lurid view of matters, as, for example, when she says that the Marble Faun, in the Capitol, is "doubly satisfactory to some because he is the euphemistic expression of an evil thing."

The steady increase of interest in the art of bookbinding is shown by the constant publication of volumes in which the art is discussed and in which the best specimens are reproduced. It is to be hoped that a full bibliography of bibliopegy will soon be forthcoming. The latest addition to the list of books on the subject is 'Historic Bindings in the Bodleian Library, Oxford, with reproductions of Twenty-four of the finest Bindings,' by W. Salt Brassington (London: Sampson Low, Marston & Co.). Of course, in any work of this character the text is secondary to the illustrations. Mr. Brassington's remarks are judicious: he is learned on the subject, and he has not the absurdly high opinion of British bookbinding held by some of his fellow-countrymen who write about the art. The illustrations are excellent. They are photogravures, colored by hand, and are quite equal to any to be found even in recent French books about bookbinding. Plate 4, for example, reproduces a Latin Psalter bound in silver gilt, partly covered with translucent enamel in various colors—a most difficult specimen to render adequately, and most satisfactorily accomplished. Equally beautiful as reproductions are plates 22 and 23, one a Book of Common Prayer bound in canvas embroidered with colored silks, and the other a Prayer Book and Bible bound in white satin and also embroidered in colored silks. It is in these embroidered bindings and in bindings enriched with metal work and with ivory carvings, that the Bodleian is richest, rather than in the simpler and, at bottom, finer bindings of leather relying on their tooling for their beauty.

Still another batch of unpublished drawings by Thackeray is to see the light. This one is to appear in the April *Greyfriar*, the paper of Charterhouse School, and will relate, fittingly enough, to the artist's school days, from which most of the collection dates.

Poet-Lore makes a spring-moving from Philadelphia to Boston, in the latter of which cities it is hereafter to be published under the same editorship and with the same aims and scope as before. The removal is mainly due, it is announced, to the interest taken in the magazine by Mr. Dana Estes, and to the inducements which he held out to it to make the change.

The February number of Petermann's *Mitteilungen* contains an account, by Th. Thoroddsen, of the first of two journeys into the interior of Iceland for geological research. It is accompanied by a chart. The editor, Dr. Supan, gives the results of the deep-sea explorations during the years 1888–'90. From the chart on which are drawn the routes of the different vessels, with the soundings in metres, the *Albatross*, U. S. N., seems to have surpassed all others in the extent of its surveys, having gone from Cape Horn to Bering's Straits and taken soundings the whole length of the North American and a considerable part of the South American coast. No greater depths have been found than those previously discovered, namely, 8,515 metres in the North Pacific, and 8,341 metres in the Atlantic just to the north of Porto Rico. A supplemental number contains an orographic description of the Atlas Mountains of Morocco, by Dr. Paul Schnell, mostly compiled from the reports of recent travellers.

The small trades of the Caucasus are the subject of an article by Victor Dingelstedt, in the *Scottish Geographical Magazine* for March. The country has great natural resources, as yet undeveloped, the principal occupations of all the inhabitants, both villagers and townspeople, with the exception of merchants and officials, being to cultivate the soil, breed cattle, and rear horses. They supplement these occupations by a number of petty home industries which are described in detail. The writer's information was obtained from the reports of the various schoolmasters throughout the country to the Superintendent of Public Instruction, published by him last year in Tiflis. All their appliances are very simple, the work be-

ing done in their huts and tents, or in the fields and streets, while the profit is, in nearly every case, ludicrously small. Every Tartar household has a loom on which carpets, saddle-bags, and other woollen goods are woven by the women. After this the most important industry is the rearing of silkworms, which are "known as Jobs' worms, an ancient tradition relating that the worms which attacked the patriarch were transformed into silkworms as a reward for his patience under suffering." "The eggs are hatched by the women in the hollow of their armpits." Recently silk-mills after European models have been introduced, in which "a working-day is from fourteen to sixteen hours," with wages ranging from twelve to eighteen cents a day. Other trades are tanning and fur-dressing, embroidery, pottery, and basket-making, and the manufacture of arms. The last art is declining, "many famous armorers, who knew how to produce a weapon capable of cutting in two an iron bar of 0.3 inches diameter, having carried their secrets with them to the grave." A short account of "The Mapping of the United States" is given by Mr. Henry Gannett, chief topographer of our Geological Survey. From this it appears that "an area of 50,000 to 60,000 square miles is surveyed annually, and the entire area thus far surveyed is about 650,000 square miles, the area of the United States being about 3,600,000 square miles."

An interesting account of a journey in northern Korea by Mr. Charles W. Campbell opens the March Proceedings of the Royal Geographical Society. The principal object of the expedition—to explore the famous White Mountain in Manchuria—was unfortunately not attained on account of the lateness of the season, but a large part of the way to and from this place was through a region never before visited by a European. Much of the scenery was fine, the agricultural villages being picturesque in appearance and situation. The soil, though very fertile and capable of bearing two crops a year, is cultivated in a slovenly way, very unlike that of the more thrifty Japanese and Chinese. Gold is very extensively found, but not as yet in large quantities, "placer" mining being resorted to by the natives only when the ground is too sterile for profitable cultivation. The White Mountain is surrounded by a great forest, the resort of the sable-hunters and the gatherers of the gen-sing. When one of these valuable roots is found, a clearing is made in the forest about it by the finders and it is left to grow, perhaps for a year or two, and the men who found it are perfectly certain that it will not be stolen. The sole authority recognized in the forest region is that of the guilds of the hunters of sable and gen-sing, formed for their mutual protection.

Statistics of present-day publications in the Welsh language are furnished by Mr. Gwynfe Evans in a late number of the *Welsh Review*, which will give most readers a new idea of the persistent vitality of Welsh. He enumerates seventeen weekly papers published in 1887, besides several monthly, bi-monthly, and quarterly magazines, one of which has a circulation of 37,760. There was also a regular output of books, from a pamphlet to the ten-volume 'Gwyddoniadur.' A Welsh-English Dictionary is now in course of publication on such a scale that the first volume of four hundred quarto pages covers but one letter of the alphabet. A leading Welsh firm of publishers estimates the total annual value of publications of all kinds in Welsh at more than £200,000.

Dr. Gill, Astronomer Royal at Cape Town, has urged upon the Admiralty the necessity of establishing a magnetic observatory there, and the Committee of the British Association appointed for the purpose of reporting on the best means of comparing and calculating observations on terrestrial magnetism, strongly favor the recommendation. The importance of systematic record of the magnetic elements in that part of the world, and of thorough study and discussion of the results, is so great that it is to be hoped that the Admiralty may see fit to furnish a suitable equipment and provide for its proper use and maintenance. Researches in cosmical physics and the ends of navigation will alike be fostered by the early execution of this plan. The necessity of delicate apparatus and careful manipulation is such that astronomers are well fitted for this work by their previous training. The most successful magnetic observatories of the world are those which are connected with astronomical observatories. That isolation which is necessary for the best location of an astronomical observatory is no less imperative for the stability of the foundations which carry instruments for work in practical magnetics.

We have received from Tokio, Japan, a copy of a handsome zylographed life-size picture of Commodore Matthew C. Perry. On the broadside of white Japanese paper, five feet by two in size, is also printed an autograph poem written by the famous scholar Sakuma Shozan. This man in 1853, and for two decades previously, was a student of the Dutch language and literature, and by his writings and eloquence did much to change the opinions of his countrymen in favor of western civilization. He was assassinated in Kioto, August 12, 1864, while riding a horse caparisoned with a foreign saddle and bridle, but his principles survived his life. In the imperial proclamation issued on the day the new Constitution was given to the people, February 11, 1889, the name of Sakuma Shozan was covered with honor, because he had, as early as 1841, advocated representative government. The zylographic picture is a good specimen of popular art, and the likeness is photographically accurate and full of expression. At the top are the seals, autograph, and original title of commendation bestowed on Perry, as being "well-disposed to benevolence and friendly to neighbors," written by the late premier, Sanjo Saneyoshi. The prose and thirty-one-syllable stanza may be translated as follows:

"In the Land of the Morning, whither I went, aiming to reach the Eastern capital, many days passed while the ships lay at anchor in a place called the harbor of Yokohama in Musashi. One day, in order to beguile the tedium of the time, we gathered on board ship, and held a feast. After sunset, the moon rose resplendent. In playful mood, I sang this stanza:

On Musashi's bright sea
The rising moon
In California
Makes setting gloom.

Taira Hiraka [literary name, Sakuma Shozan] composed this for pastime, in the place of the American envoy."

The nineteenth National Conference of Charities and Correction is to be held at Denver, June 23-29. The Executive Committee announce a provisional programme, and promise a second announcement early in May, in which will also appear the arrangements made to secure reduced rates of railroad fare and hotel accommodations.

—The growth of Minneapolis is shown in a nut-shell as we compare the census of 1880 with that of 1890. The twenty foremost cities of the country at the former date remained still foremost at the latter, except that Minneapolis had come among them, Providence having fallen out. Minneapolis, standing now No. 18 among our cities, had not only passed by Providence, which had been No. 20, but also outwent Jersey City, whose standing in 1890 was No. 19. At the beginning of the last decade it seemed unlikely that Minneapolis could soon, if indeed ever, rank in the most populous score of our cities. As its number in 1880 was 38, seventeen competitors were ahead of it in the populational race, before it could reach the threshold of the foremost score. In 1880 the inhabitants of Minneapolis were 46,887, while of the seventeen cities with which she was to compete, all but two showed a census of over 50,000, six of over 60,000, and one of over 90,000. All the seventeen have also at the close of the decade shown a fair, and some of them a phenomenal, percentage of increase. Some of them, accordingly, have risen in rank, but most have fallen. Four rose in relative standing, namely, Kansas City from No. 30 to No. 24, Syracuse from No. 32 to No. 31, Columbus from No. 33 to No. 30, and Toledo from No. 35 to No. 33. One only of the seventeen, Rochester, retained the same rank, No. 22, at the end of the decade as at the beginning. Of the twelve competitors which meantime declined, one, namely, Paterson, fell from No. 34 to No. 36. The position of two cities was lower by three each—Indianapolis falling from No. 24 to No. 27, and Fall River from No. 37 to No. 40. Worcester sunk from No. 28 to No. 32, Alleghany from No. 23 to No. 28, and Albany from No. 21 to No. 29. Still greater was the relative decline of the remaining six, Richmond and New Haven each falling off nine numbers, from No. 25 to No. 34, and from No. 26 to No. 35, while Lowell and Cambridge stood No. 37 and No. 41 in 1890, instead of No. 27 and No. 31 in 1880, and the numbers of Troy and Charleston went down respectively from No. 29 to No. 46, and from No. 36 to No. 53. The percentage of increment during the decade at Minneapolis was 251.35; the largest in any of the competing cities was 137.91, at Kansas City. All but four of the eighteen cities distanced by Minneapolis in populational advance are situated on the Atlantic slope.

—Some years ago Prof. Karl Hegel of the University of Erlangen published a work entitled 'Geschichte der Städteverfassung in Italien,' in which he showed, first, the influence exerted by the cities of the Roman provinces, and especially of Italy, in assimilating the hordes of German conquerors and the more numerous conquered population, and, secondly, the changes produced in the organization and evolution of the cities themselves through the introduction of Germanic institutions. The same scholar has recently issued another work, 'Städte und Gilden der Germanischen Völker im Mittelalter' (Leipzig: Duncker & Humblot), which forms a proper sequel to the preceding one, tracing as it does the later development of cities among the Germanic nations, and their corporate and industrial character as affected by the rise and growth of guilds. The Frankish guilds were put under ban by the Church and prohibited by the State as strongholds of paganism. In the capitulary of 779, Charlemagne characterizes the *geldonias* as conspiracies, and in a later edict accuses them of fostering drunkenness. As pagan sacrificial rites were more or less festal and convivial, they readily degenerated, with the decline of the ancient cult, into banquetings and drinking-bouts. The first volume contains a history of guilds in the principal

cities of England, Denmark, Sweden, and Norway; the second volume embraces the towns of northern France, Normandy, Flanders, Brabant, the Netherlands, and northern Germany. In connection with each of these sections the author gives the literature of the subject, and expresses his great indebtedness, so far as England is concerned, to the researches of Mr. Toulmin Smith.

—The celebration of the centenary of Franz Bopp's birth on September 14, 1891, was the occasion of many warm expressions of personal esteem and scholarly appreciations of his labors as a pioneer in the province of comparative philology. Of the latter class of works the most important is Dr. Lefmann's 'Franz Bopp, sein Leben und seine Wissenschaft,' of which the first volume has been published by Reimer in Berlin. A little more than half of it is devoted to the biographical narration; the rest consists of an appendix containing Bopp's correspondence with Karl Joseph Windischmann and other scholars, and his reports sent from time to time to the Bavarian Academy of Sciences, from which he received a yearly stipend of a thousand florins while pursuing his studies in Paris and London from 1812 to 1820. This collection of papers, which have never before been printed, is exceedingly interesting, and alone enables the reader to follow the young Orientalist's career step by step through his severe and often disheartening struggles until the earnest efforts of William and Alexander von Humboldt secured his appointment to a professorship in the University of Berlin in September, 1821. It is curious to note how even the philologists of that day failed to appreciate the importance of Sanskrit. In 1820, fifteen years after Colebrooke's 'Grammar of the Sanskrit Language' and essays 'On the Vedas,' and four years after Bopp's 'Conjugationssystem der Sanskritsprache' had appeared, Silvestre de Sacy wrote to the latter that the relations of this tongue to classical or theological studies were not sufficiently intimate and immediate ever to make it obligatory in the course of instruction, and gave him the following advice: "While continuing to cultivate Sanskrit for your own satisfaction and that of the learned world, you ought absolutely to render your talents more directly useful to the youth of your country by teaching Arabic." In the same year Bopp wished to be made professor of Sanskrit at Würzburg, but the University refused his request on the ground that Sanskrit was a "mere literary luxury." "These erudite professors" are characterized by Bopp in a letter to Schlegel in August, 1820, as men who "wish to teach only what supplies the cupboard with bread; and what they do not know, others should not have an opportunity of learning." Although Bopp spent some time in London, he does not seem to have formed any close friendships or cordial relations wtih Englishmen, whom he deemed extremely conventional and unapproachable. "I have not found a single foreigner," he writes, "who likes it in England."

—A translation of the 'Iliad' of Homer by Mr. John Purves, M.A., late Fellow of Balliol College, Oxford (London: Percival & Co.; New York: Macmillan), is a work of great merit, which makes its appearance under some disadvantages. The translator *feels* his author and is carried on by his inspiration; he makes the reader feel it, too. In this respect the rendering has something of Chapman's quality; its prose has also, more definitely than Leaf and Lang's translation, the quality of sustained and consistent style. It moves more easily than theirs, is more articulate and less verbose. The paragraphs are sustained and vigorous, mounting successfully towards the music and eloquence of the finer passages in the original. In details it would be easy to find fault. One lights occasionally on odd or affected words which do not harmonize with the generally easy and straightforward diction —"pinnated ships," "slaughterous Hector," "mishandlement," "all to-burst," "bronzen spear," "Troyland." "Green fear" is very strange; within a few hundred lines the word δαιμόνιος is successively represented by *madcap*, *headstrong*, and *faint spirit*. In this special instance, the variety of phrase is rather a happy expedient, for the epithet is a chameleon that takes its color from the person addressed and the circumstances; in many other cases, more consistency ought to have been maintained. It is superfluous, however, to criticise in detail a production which was never revised as a whole by the author, although it was the chief literary work of his life. If he had finally reviewed it, some of the oddities we have cited might still have remained, while others would undoubtedly have disappeared. The total effect would have been much the same—a performance which justifies the pains of the editor, Mr. Evelyn Abbott, and which, though in some sense a broken column, deserves to stand beside the finished achievement of such scholars as Leaf and Lang and Butcher. The introduction, by Dr. Abbott, presents a very clear and fair summary of the incidents in the poem which have been cited for and against the unity and continuity of the 'Iliad.' It is interesting to note, apropos of Mr. Palmer's 'Odyssey,' that one of the chief liberties the editor permitted himself was the transforming or rearranging an occasional passage in which Mr. Purves had "declined and fallen" into blank verse.

—Mr. E. B. England's 'Iphigeneia at Aulis' (Macmillan), without claiming original views as to the state of the text and its history, is nevertheless a work of painstaking and independent scholarship, which, in addition to a full body of notes, presents a detailed statement and comparison of the readings of the principal MSS., accompanied by many original suggestions and emendations. It is, on the whole, a valuable contribution towards the elucidation of a play which, notwithstanding all the mutilations and interpolations it has undergone, remains still powerful and impressive, replete with genius and with beauty. It has, besides, the fascination for scholars of offering many insoluble problems and many passages as to which each new editor will have his opinion and his reason. In discussing these subjective questions, Mr. England shows good sense and good taste, and his reason is generally quite as good as another's. His conclusion, in the main, is, "that the play was left by Euripides in too unfinished a state to be put on the stage; that the man or men who prepared it for such representation not only added passages at the end and in the body of the play, but rearranged the prologue; and, lastly, that of small casual interpolations of later date the text of this tragedy contains an exceptionally large share." As to the character of the heroine, Mr. England remarks rather strikingly, that if, as some have believed, the 'Bacchæ' was Euripides's recantation of the heresies of former plays, his picture of *Iphigeneia* is the palinode in which he atones for earlier imputations on the sex.

—The Chairman of the Managing Committee of the American School of Classical Studies at Athens has received from the Director, Dr. Charles Waldstein, under date of Athens, March 6, the following informal report with regard to the important excavations of the School at the Heræum, near Argos:

"At the Heræum we have been successful beyond all hopes. We are clearing the whole site of the second temple, cutting far into the hill below. The whole foundation will be clearly visible now (there having been nothing to see before). We have done enough digging on the surrounding sites to discover the interesting foundations of the first temple (even with the remains of the charred wood of the superstructure, burnt in 429 B. C.), and have found a stoa and other interesting buildings on the lowest terrace. The harvest of ancient pottery of the earliest periods, terracottas, and bronzes, is perhaps the richest yet made in these regions, including Mycenæ, and I do not doubt will have the most important bearings upon the early history of art and ritual—a subject much under discussion at the present moment. We have also discovered many beautiful pieces of the architectural decoration of the second temple, and I trust we shall be able to make a restoration of it. Last, but not least, we have found most interesting pieces of sculpture, among them three well-preserved heads —one of them, I believe, the most perfect specimen of the art of the fifth century B. C. to be found in any extant head. The numerous other marble fragments will become the more valuable the further the excavation goes. I trust that we are just now at a point where further finds may be made. At the end of this or next week, the work at the second temple will come to a point where we can well stop for this year; we shall continue our work next year at the other portions of this excellent site. The Greek authorities, who have visited us while excavating, approve highly of our method of working. We are digging on a large scale, which the liberal contribution of the Archæological Institute of America enables us to do, and the form of excavation has proved advantageous to the scientific aspects of the work. We have employed on most days (fortunately no rain and no holidays) from 150 to 180 workmen, and 20 to 30 carts with horses. Four students have been with me. I shall have a cast of the beautiful head taken at once, and shall send the mould to you, that casts may be made in America and forwarded from there. I have also made arrangements for good photographs, and shall have a set of selected specimens issued in phototype, as a preliminary publication, and shall add a short explanatory text. At Sparta this year I mean only to make excavations on one site in the city which belongs to the Government, and perhaps some trial excavations on the most promising private sites, leaving the chief work for next year."

—The Greek Government has granted to the American School at Athens the permission to carry on excavations in the province of Laconia, and particularly in the vicinity of ancient Sparta and of Amyclæ. The conditions are similar to those made with the German Government for the excavations at Olympia, and with the French Government relative to those at Delphi. The permission is granted for a period of seven years. The School is allowed to take moulds and casts of the antiquities discovered, and to be the first to publish the results of the excavations and of the discoveries thereby made. The Greek Government certainly seems desirous to afford the School as good a recompense as possible for the loss of the opportunity of conducting excavations at Delphi, and the American School is taking an exceedingly honorable part in archæological work in Greece. During the last half-dozen years, the School (as the readers of the *Nation* may remember) has dug at Thoricus, Sicyon, Icaria, Platæa, Eretria, and the Heræum, besides slighter work at two or three less important places—determining the site of an ancient deme, bringing to light much material for the history of the Greek drama and its theatre, finding what may be the grave of the philosopher Aristotle, some fine pieces of ancient sculpture, etc., etc.

CARSON'S SUPREME COURT.—I.

The Supreme Court of the United States: Its History. By Hampton L. Carson of the Philadelphia Bar. And its Centennial Celebration February 4, 1890, prepared under direction of the Judiciary Centennial Committee. Philadelphia: John Y. Huber Co. 1891.

THIS book is a magnificent tribute to a great tribunal. A ponderous, unwieldy volume for working purposes—a folio in form, 12x9 inches on the cover and 3 inches in thickness, containing 761 pages of heavy paper, and 53 cardboard illustrations—it is nevertheless a work which every owner of a good library will recognize as well entitled to shelf-room and exceptionally in keeping with its subject. About 600 pages are the work of Mr. Carson, the remaining 150 containing the account of the centennial anniversary, and the addresses which were then delivered. The two parts are not unfitly joined together in one book, for the work of Mr. Carson comes down to the centennial, and is a combination of judicial history, biography, and album (in its fifty-three portraits of the judges), while the addresses then delivered, especially those of Mr. Butler, Mr. Hitchcock, and Mr. Semmes, are the incisive commentaries of able and accomplished lawyers, and well worthy of preservation in an accessible and lasting form. The two parts thus united give a certain majesty of proportion to the whole, and they have one element in common—panegyric.

Panegyric is not unhealthy reading for the citizens of a republic when it is given to that branch of the Government which depends upon the Executive for its material, and the Legislature for its jurisdiction, and whose office is frequently to repress and never to excite the political or popular movements of the day. The future President of the United States who studies this book while a young man will give the country better judges for having read it; the future judge will deem it all the more incumbent to live up to the ideal standard that has been ascribed to his office; the good citizen will curb his personal opinion, and be more than ever a law-abiding American, bowing to the court of last resort as if infallibility were an attribute of exalted judicial station. As we pass over Mr. Carson's chronological review of the statutes defining jurisdiction, of the personnel of the Court, of its decisions, of the support it needed but did not receive, of the opposition it encountered but overcame, of the low estimate put upon it by its earlier members—Harrison declining his commission in 1789 to accept the Chancellorship of Maryland; Rutledge leaving its bench in 1791 to become Chief Justice of South Carolina; Jay surrendering the all-important office of Chief Justice of the United States because he had been elected Governor of New York—until at last we reach the glowing commemoration of its century, we are more than ever before impressed with the significant fact that the branch of our Government which has neither power nor patronage, which appeals most to the judgment and least to the imagination, and which has been assailed more by the public press than it has been extolled, is the one which has grown most in real strength, in the high opinion of foreign observers, in the hope and reliance of thinking men, and in the esteem and confidence of the great mass of good citizens.

When we observe the reverence which is now rendered to the Court, and listen to the volume of laudation that is poured out on its wisdom past and present, it seems indeed well-nigh incredible that this respect is a growth and not an inheritance. The young lawyer of the present day can hardly believe that when the Supreme Court, during its first decade, rendered judgment against the State of Georgia, the Legislature immediately enacted that if any person should attempt to execute the process of the Court within the State, he should suffer death; or that when the Court, during its second decade, issued a peremptory mandamus to the United States district judge in Pennsylvania commanding him, by proper process, to enforce a judgment of his court, the Governor called out the militia to resist the execution of the writ. But passing these by as occurring in the infancy of the Court (the latter in 1809, within twenty years from its organization), we come, in 1832, to the case of Worcester v. The State of Georgia. The Supreme Court was then approaching the end of its first half century. Marshall had become venerable as well as great, and was within three years of the end of his illustrious service. Yet even then the Governor of Georgia defied the authority of the Court, and the general Government made no attempt to enforce its decree. A more just and righteous decision, moreover, was never made by a court.

Samuel A. Worcester, a citizen of Vermont who had entered the country of the Cherokee nation "in the capacity of a duly authorized missionary of the American Board of Commissioners for Foreign Missions, under the authority of the President of the United States," was "engaged in preaching the Gospel to the Cherokee Indians and in translating the sacred Scriptures into their language, with the permission and approval of the said Cherokee nation." For so doing he was arrested, tried, and convicted under a Georgia statute, and the State court sentenced him to "hard labor in the penitentiary for the term of four years." The decision of the Supreme Court of course was, that "the law of Georgia, which subjected to punishment all white persons residing within the limits of the Cherokee nation, and authorized their arrest within those limits, and their forcible removal therefrom, and their trial in a court of the State, was repugnant to the Constitution, treaties, and laws of the United States, and void." Yet the Governor of Georgia declared that he would hang the missionary before he would give him up, and the missionary accordingly continued for eighteen months at hard labor in the penitentiary after his imprisonment had been declared unconstitutional and void. When we contrast the masterly opinion of the Chief Justice in this case, its temperate statement, its scrupulous fairness, its unerring analysis and unanswerable demonstration, with the savagery that resisted the mandate of the Court, and set itself against Christianity, humanity, and civilization as well, we may well wonder that such incongruous elements could have existed in the same Government at the same time, and congratulate ourselves that the growth of the Supreme Court in popular esteem during these two generations has not been because the tribunal has grown greater, stronger, wiser, or more just or learned, but because the nation has grown in intelligence, humanity, civilization, and all those things that make for righteousness.

The dangers that beset the Supreme Court in the first decade of its second century are of another kind. Panegyric may do something towards giving the nation better courts, and making the people better citizens, but there its services cease. The Supreme Court is no longer subjected to factious opposition, but it is exempt from healthy criticism. At the present time there is a great deal more adulation poured upon it than is good for any tribunal. And much of this adulation comes in a personal form, which is not good for any man, and especially not for those who hold the final balances of human judgment. During the last twenty years the American capital, like the capitals of Europe, has become the resort of wealth and fashion. Its beautiful avenues and matchless pavements, and temperate winter climate, and picturesque environs, are magnets which draw the rich and idle, the pleasure-seeking society of the country, from every quarter of our wide domain. Hitherto in our Anglo-Saxon system, with the judiciary as with the clergy, something different and better has been expected in their lives than in the lives of other public men. There have been roystering judges as there have been roystering bishops; but the good sense and good taste of two nations have never approved of them. If a man will be a judge or a clergyman, we expect not merely that he will keep out of the penitentiary, but that he will keep out of bad influences. When we commit our things temporal or our things spiritual to a man, we instinctively rely upon his living a life not merely moral, but above suspicion, and especially above the suspicion of inferior surroundings. The unhappy Cabinet officer (a brave soldier, in private life an honorable gentleman) who a few years ago was dragged before the country and the Court of Impeachment, owed his fall to the same influences that now surround every member of the Supreme Court. There was also, it will be remembered, another Cabinet officer about the same time, who bought a fashionable landau which appeared on the inventory of the department as his official wagon, but which in fact was his wife's carriage, the wife, too, being a partner of the Washington ring. None of these reproaches have fallen on the Supreme Court, but two of its members—it is not too much to say its most respected members—have died leaving wives and daughters in comparative penury, their private fortunes dissipated and their official salaries spent in keeping up a style of living beyond their means, but supposed to be required by their official station.

By a most unhappy chance the families of our highest court have drifted into the stream of blended political and fashionable life in Washington, and become a part of it. People in political life think they must do, and are permitted to do, both in England and America, many things that would not be tolerated in private life. The Duchess of Devonshire might let a butcher kiss her to secure the re-election of Mr. Fox; our high political officers may open their houses in sham hospitality, and let their wives shake hands with anybody and everybody who chooses to walk into their private residences. This is deemed a political requirement, a thing that must go on while the office is held, but which would be deemed vulgar and ridiculous after the family returns to private life. By some unaccountable confusion of ideas, the families of the Supreme Court have supposed that they are political personages, and have led the same kind of semi-public life, though of all the families in the country they are the ones who ought to maintain a dignified reserve, and be inaccessible to every unknown adventurer who desires to make their acquaintance. How absolutely absurd it would seem in New York or London, every time an eminent lawyer was raised to the bench after living a quiet, sensible, retired life, for the world of fashion to rush to his door and leave cards, and make him and his wife prominent figures in society. Moreover, people at summer re-

sorts or winter resorts are not as careful about the persons they meet as when living in their own homes; and in Washington society there is a large political element which shuns unprofitable inquiries. Shady characters walk on the sunny side of the street. Not many years have passed since the notorious "king of the lobby" caught four or five judges by simply baiting his hook with the late Lord Houghton, and caught Lord Houghton by baiting his other hook with the Honorable the Justices of the Supreme Court. And as we write, the Washington correspondents inform the world that one, if not more of the judges, was a guest at a dinner given by one of the "Big Four" of Tammany to the most unscrupulous and notorious politician of the time, and this immediately after his infamous attempts to use and degrade the judiciary of this State. In Washington society public men seem to hang on their front doors a placard, "All invitations accepted, and no questions asked." This kind of thing is not compatible with either hard work, serene thought, or exalted character, and the sooner public opinion requires that it shall stop, the better it will be for the Court, for the judges, and for their wives and children. The Supreme Court, we believe, is the only court in England or America to which this vulgar publicity has been attached, or which has descended into these exceedingly questionable currents of political and society life.

Chief-Justice Cooley has said, in his 'Constitutional History of the United States,' and Mr. Carson reiterates that opinion, that "the real importance of the Supreme Court was never greater than at first"; and that "the judges who occupied the bench before the time of Marshall are entitled to have it said of them that what they did was of incalculable value to representative institutions." Nevertheless, the more we turn over these pages, the more it becomes apparent that the commoner view—the instinctive verdict of the American mind—is the right one, and that the Supreme Court owes its present strength and greatness to one incomparable cause, which was the presence of Marshall upon its bench. If at the beginning of this century there was one man in the world whose opinion of the Supreme Court as it then stood, both in common estimation and public usefulness, cannot be questioned, that man of course was John Jay. He had been Chief Justice; he had been selected by Washington in conformity with his "best judgment," and by Adams as being in his opinion "the greatest mass of worth" "collected in one individual." His opinion was not given in a moment of irritation, or when it can be supposed to have been tinged by a sense of personal disappointment, for it was written at the time of his receiving the highest compliment that has ever been paid to an American lawyer—that of being a second time nominated and confirmed as Chief Justice of the United States. What was that opinion? "I left the bench," he wrote to the President as he returned the second commission, "perfectly convinced *that under a system so defective it would not obtain the energy, weight, and dignity which were essential to its affording due support to the national Government; nor acquire the public confidence and respect which, as the last resort of the justice of the nation, it should possess.*" In the same month that this letter was written, January, 1801, Marshall was commissioned as Chief Justice. In less than five weeks he administered the oath of office to the new President, the most inveterate enemy of the Supreme Court among our public men, and beheld the beginning of an intense political revolution whose leaders were bent on the destruction of at least a part of the Federal judiciary, and ready to overthrow the Supreme Court itself by an amendment to the Constitution. For thirty-three years, with one brief interval (the Administration of the second Adams), he had opposing him on every national question a combination which would have overcome a dozen ordinary men—the Legislature, the Executive, the appointing power, the local violence of half-rebellious States. The first President of his official life denounced the Supreme Court as "the subtle corps of sappers and miners," "the reprobated system," "the canker" which should be exterminated "before its venom has reached so much of the body politic as to get beyond control"; and, by a legislative artifice, virtually suspended the functions of the Court for fourteen months. Yet here it should be noted, before Jefferson had been two years in office (February, 1803), came the great decision in Marbury v. Madison—the boldest, strongest, highest assertion of the rights of the American citizen that has ever come from that Court, which subjects the acts of ministerial and administrative officers to judicial remedies, and declares that this is "a government of laws and not of men." The second President of Marshall's official life placed on the bench a young man, thirty-two years of age, but of extraordinary ability and learning, for the purpose of contesting the authority of the Chief Justice. But Story yielded to the greater mind beside him, and it must have brought bitterness and confusion to the souls of Jefferson and Madison when, five years later, he delivered the opinion in Martin v. Hunter (1816), upholding the constitutionality of the Judiciary Act, subordinating the State courts to the Federal judiciary on constitutional questions, and overruling the decision of the Virginia Court of Appeals. This opinion of Story Mr. Henry Adams rightly pronounces one of Marshall's "greatest triumphs." The last President of Marshall's time appointed Henry Baldwin of Pennsylvania (1829) to doggedly dissent from substantially every constitutional principle which the Supreme Court had established during the preceding forty years, and rounded out the adverse circumstances which encircled the noble career of the Chief Justice by leaving the mandate of the Court unenforced and contemptuously saying of what was substantially his last constitutional decision, "John Marshall has made his decision; now let him execute it."

It was during this stormy, adverse period of thirty-four years that Chief-Justice Marshall accomplished what had been deemed impossible—the task of imparting to "the defective system" "*the energy, weight, and dignity that were essential to its affording due support to the national Government,*" and of acquiring for it "*the public confidence and respect which, as the last resort of the justice of the nation, it should possess.*" It is true that the virtues, ability, and patriotism of Chief-Justice Jay cannot be over-esteemed, and that when he wrote the letter we have quoted, he had heroically wrecked his health and personal popularity in harassing diplomatic service; but nevertheless Marshall, tried by an adversity such as never vexed a judicial soul, went steadfastly forward, with a calmness, dignity, uprightness, and intellectual majesty that are unapproachable in all the judicial annals of the world.

It is also, we think, incontrovertible that a tone of moderation and sound sense came with Chief-Justice Marshall upon the bench. One secret of the reverence in which he is held is, that the Court for the next quarter of a century made no mistakes and took no backward steps. It was not so prior to 1801. Brief as was the time, and few as were the decisions, the Court made serious mistakes. In its conscientious upholding of the Federal principle, it went too far and decided too much. The ground taken that there was a common-law jurisdiction of the United States in criminal cases had to be abandoned; and certainly a more unfortunate decision than that in Chisholm v. the State of Georgia was never made. Mr. Carson calls it "the first clear trumpet-note which had been sounded by the new nation, in striking contrast with the feeble wail against State power uttered by the Committee of the Continental Congress." Brave enough it undoubtedly was, but disastrous in its consequences. It divided the Supreme Court upon a question of constitutional authority and State sovereignty, at the beginning of its work, when it was vital that it should move with caution and with unanimity. It violated the pledge of the *Federalist* that suits could not be brought against States without their consent; that that objection to the Constitution was without "a color of foundation." It set at naught the assurance of Marshall in the Virginia Convention, when he was struggling to secure the adoption of the Constitution: "It is not rational to suppose that the sovereign power [of a State] shall be dragged before a court." It called out the powerful dissent of Iredell, which furnished a quasi-judicial foundation for the State-right doctrines of the next thirty years. It was not essential to the integrity of the national Government, but aroused and united all the opponents of a Federal power, and awakened distrust where there had been none before. And, finally, it brought down on the Federal principle the reaction of defeat, for the decision was substantially reversed two days after it was announced, by the introduction into Congress of the Eleventh Amendment.

Looking at the opinions of the majority of the Court, now that time has clarified our views of the Constitution, we see that they are able and conscientious and thoroughly moral arguments for a legislative assembly or a constitutional convention, but that they are not judicial. The fallacy which runs through them is, that a grant of jurisdiction to a court creates a liability to process on the part of every one who may be a suitor. "*To controversies to which the United States shall be a party,*" "*To controversies between a State and citizens of another State,*" are constitutional provisions of no distinguishable difference. No one dreamed that the national Government was amenable to the process of a court under the former; yet it was under the latter that the Supreme Court maintained that a State could be sued whether it would or not, and its appearance in court be enforced by process. Sovereign rights were the real objects for which the people of "these colonies" had gone to war; a real sovereignty had been attained by the war; it seemed to them incredible that it could have been surrendered by an ambiguous phrase in an article which related to the judiciary and not to the States. Assuredly, it was an unfortunate decision.

RECENT POETRY.

GOETHE said of English poets that the least of them had yet Shakspere at his back and the ocean at his feet. It is true, however, that it is easy, even for a poet, to ignore what is directly behind him; and easier to emulate the

vague distances of the sea than its measure and its rhythm. Hence the multitude of new volumes of poetry that come from London are as ineffectual, perhaps, as the multitude proceeding from New York; while those that come, in increasing numbers, from our far-off inland cities have almost always some local coloring and hence some value, although this is often to be found in the obscurest corners of the book. Of recent English volumes, the most thoughtful by far is one bearing the somewhat enigmatical title, 'One in the Infinite' (Longmans), the author being George Francis Savage-Armstrong, whose agreeable earlier book, 'A Garland from Greece,' was noticed with cordial enjoyment in these pages some years ago. This present book records the not uncommon theme of a soul first struggling with doubt and depression, but coming by degrees to hope and faith. The theme is old, but the force and freshness of the treatment are new; the doubts are real doubts, the joys are actual triumph, and it is saying little for the book to say that if read and digested faithfully, it is worth several alcoves full of controversial treatises and sermons. Even in the treatment of the ethnic religions, the author has a zest and an originality, as in the following (p. 66):

THE MENDICANT.

1.

Sakya-Muni, Gautama Buddha, what dost thou proffer of hope or of mirth?
"What shall I do to be saved" from the sorrow, passion, and terror, and madness, of earth?
What is thy gospel, O prophet of India? What hast thou left to me, child of the sun?
What is the balm for my pain thou hast promised me? What is the crown when the race hath been run?

2.

"What shall I do to be saved?'—Thou hast answered it. "Labour not ever, but beg for thy bread;
Live as a Mendicant; marry not; mortify flesh; let a life of Nirvana be led.
So shalt thou find in the death of thy passions, growth of thy spirit, composure and rest,
Passing through indolent days of humanity on to intangible joys of the blest."

3.

Sakya-Muni, Gautama Buddha, bending I heed thee, but find in thy law
Something that baffles me, doubtful consistency,—Lo, in the weft of thy wisdom a flaw!—
Look to it, Gautama!—Sakya-Muni, sweet is the bulbul, but hollow her egg.
How shall thy gospel suffice for the Many?—If all men are Beggars, from whom shall men beg?

And here we have him again, at his tenderest phase, not in the final triumph, but when the light is breaking (p. 287):

"THE FATHER."

1.

If it were only a dream,
Were it not good to cherish,
Seeing to lose its beam
Is in despair to perish—
Maker and Father and Friend,
Yearning in pity to guide me,
Leading me on to the end,
Ever in love beside me,
Never in storm or gloom
Deaf to a cry of sorrow,
Kindling beyond the tomb
Light of an endless morrow?

2.

Yea, if 't were only a dream,
Better it were to clasp it,
Brood on it until it seem
Real as the lives that grasp it.
Helpless, feeble and lost,
Groping in Wisdom's traces,
Whirled like a leaf, and tost
Out in the awful spaces—
Oh, how the heart betrayed
Bounds, into life upleaping,
Trusting that He who made
Watch over all is keeping.

Throughout the book there is no cant, nothing merely technical, but a wholesome human flavor, and a religious life beyond all conventionalism.

Next to this we should rank first, among the English books of poetry issued in the last few months, 'A Summer Night, and Other Poems' by Graham R. Tomson (London: Methuen). No one now living in English-speaking countries has the ballad-touch like Mrs. Tomson; and as we have pointed this out in her former books, we may reaffirm it now, and quote in sufficient proof of it the following (p. 33):

THE FARM ON THE LINKS.

Grey o'er the pallid links, haggard and forsaken,
Still the old roof-tree hangs rotting overhead,
Still the black windows stare sullenly to seaward,
Still the blank doorway gapes, open to the dead.

What is it cries with the crying of the curlews?
What comes apace on those fearful, stealthy feet,
Back from the chill sea-deeps, gliding o'er the sand-dunes,
Home to the old home, once again to meet?

What is to say as they gather round the hearth-stone,
Flameless and dull as the feuds and fears of old?
Laughing and fleering still, menacing and mocking,
Sadder than death itself, harsher than the cold.

Woe for the ruined hearth, black with dule and evil,
Woe for the wrong and the hate too deep to die!
Woe for the deeds of the dreary days passed over,
Woe for the grief of the gloomy days gone by!

Where do they come from? furtive and despairing,
Where are they bound for? those that gather there,
Slow, with the sea-wind sobbing through the chambers,
Soft, with the salt mist stealing up the stair?

Names that are nameless now, names of dread and loathing,
Banned and forbidden yet, dark with spot and stain:
Only the old house watches and remembers,
Only the old home welcomes them again.

The new book of skits and fantasies by the late Mr. J. K. Stephen, 'Quo Musa Tendis?' (Macmillan), is generally regarded as a great falling off from his 'Lapsus Calami,' once reviewed in these columns, and certainly has in it nothing so good as his "Rudyards cease from Kipling," which seemed to "fill a long-felt want"; but its author should have endeared himself to Americans by this warm-hearted tribute to the memory of Lowell (p. 65), dated August 13, 1891:

Lowell: the labors of your noble life,
Your state-craft, and your high poetic skill
Were aye a force that made for union, till
The peace now reigning hushed the ancient strife
Between the mighty land that gave you life,
And that whose kinship distance could not kill.
I think your death has drawn us nearer still!
Now with your praise our island home is rife,
While rings your continent with equal praise;
And here, as there, we sadly quote your lays.
And Lowell! I who knew you, also know
Some that you loved in England, who to-day
Not only share your countless readers' woe,
But mourn a dear old friend that's passed away.

Other recent English volumes do not seem remarkable. 'A Dream of Other Days,' by Lieut.-Col. Fife-Cookson (Putnams), is an East Indian tale of some animation, in which the author claims to have contrived a stanza of his own; the 'Poems' of the late William Caldwell Roscoe, edited by his daughter (Macmillan), are chiefly remarkable for two dramas, which have in them a touch of Elizabethan fire and flavor, reminding the reader of Beddoes; and 'A Vision of Life,' by the late William Gifford Palgrave (Macmillan), is a long and often abstruse and Dantesque poem, the fruit of the long studies and varied wanderings of one of the most Ulysses-like of modern Englishmen. Indeed, his last book published during his lifetime bore the name of the much-roaming Greek hero; and his biographer says that he knew Dante almost by heart, had learned many Oriental languages, had lived on every continent, and had gone in and out of several different churches. The vast material of his book requires a good deal of yeast to give it lightness, and this adjunct is not always forthcoming; yet the work is certainly a contribution to the history of the human mind.

Of recent American volumes the wittiest verse is undoubtedly to be found in 'Original Charades,' by Prof. L. B. R. Briggs of Harvard University (Scribners), which is as clever as a London volume of *vers de société*, and much less cloying. But the most valuable and enjoyable is the first complete edition of Maurice Thompson's 'Poems' (Houghton, Mifflin & Co.), which is all the more enjoyable because it comes from that very Crawfordsville, Indiana, which Matthew Arnold immortalized by his mistaken disdain. But it is a part of the very merit of these fresh and vigorous poems that they were born wholly outside that Europe which stretches, Emerson says, to the Alleghanies; and all their literary material, even when the poet longs for England, is American throughout. Even the very flavor of the words must be indigenous, as thus (p. 160):

"If I were a poet, my sweetest song
Should have the bouquet of scuppernong,
With a racy smack in every line
From the savage juice of the muscadine.

"The russet persimmon, the brown papaw,
The red wild plum and the summer haw,
Service-berries and mandrake fruit,
Sassafras bark and ginseng root,
Should make my verse pungent and sweet by turns;
And the odor of grass and the freshness of ferns,
The kernel of nuts and the resins of trees,
The nectar distilled by the wild honey-bees,
Should be thrown in together, to flavor my words
With the zest of the woods and the joy of the birds.

"Who sings by note, from the page of a book,
So sweet a tune as the brawl of a brook?
Shall Homer or shall Anacreon
Suggest as much as the wind or the sun?"

We have here the old favorites of Mr. Thompson's muse, "The Death of the White Heron," and "Between the Poppy and the Rose," and "In Exile"—the last touching vigorously the chord which still vibrates in American hearts, beyond all jealousy or injustice, to the touch of the mother-country. In a still higher spirit he now sings "To an English Sky-lark," "To an English Nightingale," in such strains of transatlantic cousinship as those much-sung birds never heard before; introducing them, with true Western cordiality, to the mocking-bird and the brown-thrush. Mr. Thompson wholly lays aside in his verse that polemic spirit which sometimes intrudes upon his prose: and hence his verse, at least, rarely fails to be fresh and free and agreeable; and nothing can be manlier than his hearty acceptance of the results of the war (p. 194):

"Not so! I am a Southerner:
I love the South; I dared for her
To fight from Lookout to the sea
With her proud banner over me:
But from my lips thanksgiving broke
As God in battle-thunder spoke,
And that Black Idol, breeding drouth
And dearth of human sympathy
Throughout the sweet and sensuous South,
Was, with its chains and human yoke,
Blown hellward from the cannon's mouth,
While Freedom cheered behind the smoke!

In marked contrast with the healthfulness and outdoor vigor of Mr. Thompson's lay is the new volume of posthumous poems of the late Mr. Francis S. Saltus, just now published, 'Flasks and Flagons—Pastels and Profiles—Vistas and Landscapes' (Buffalo: Moulton). The title well indicates the extraordinary exuberance and variety of this poet, who groups his themes for us collectively—so many kings to be celebrated, so many wines, so many nations—and then distributes to each a song or a sonnet. The reader wonders anew over the wealth and profusion of this wasted young life, for the portrait of the author reappears in every volume of the series to assure us, if the verse did not, that wasted it was. In this book there is less that is repulsive and ghastly than in its predecessors; and though it contains a poem on absinthe, there is less evidence in its pages of what the author calls the "glorious Lethe" of that beverage. Mr. Saltus died, it seems, on June 25, 1889, and his friend, Mr. John Ernest McCann, prefaces the volume with a memorial sonnet.

Mr. Edgar Fawcett, whose 'Songs of Doubt and Dream' have just appeared (Funk & Wagnalls), has much of the varied wealth of Mr. Saltus, though the fates have been kinder to him and made him a New York social reformer instead of an estrayed Paris *flaneur*.

He is indeed at his best when he is most a reformer, since then his spirit of defiance is employed for better purposes than where he seems defiant merely for amusement. His poem, "By a Window"—the reveries of a lost girl—has a touch of real nobleness, as well as much of dramatic power; but his purely literary poems are apt just to miss their mark through a flavor of self-consciousness, as in the following (p. 22):

A RETROSPECT.

Wandering where mortals have no power to gauge
The enormity of night that space outrolls,
Floated or paused, in shadowy pilgrimage,
Two disembodied souls.

One towered a shape with dark wild-trailing shroud,
With face by sorrow and anger seamed and drawn;
One loomed a holy glory, as when some cloud
Swims deep in baths of dawn.

World after world they gazed on, till beguiled
They flew toward earth, and hovering where she swept,
One with a saturnine dejection smiled,
And one with slow tears wept.

"On that star," said the spirit of sombre mien,
As Dante I passed through pain's most blinding heats." . . .
"On that star," said the spirit of look serene,
"I suffered, and was Keats!"

The increasing cosmopolitanism of our country yields fruit in several volumes bearing Italian surnames on their title-pages; as for instance, the graceful 'Lyrics' by Cora Fabbri (Harpers), which are full of a just longing for Florence, and are adorned with "stornelli" and "strambotti," but, after all, leave it a little uncertain whether they were written in New York or London. More vigorous, though often cruder, are the 'Poems of Humanity, and Abelard to Heloise' (San Francisco: Griffith), by Lorenzo Sosso, who is elsewhere said to be general-delivery clerk in the San Francisco Post-office. These poems show a good deal of reading and are drawn from varied sources; but although they flow easily, the rhythm often halts, and there is a good deal of monotony in the note drawn.

In taking account, at periodical intervals, of any accumulated shelf of recent American poems, there are certain constantly recurring types, seldom to be missed. There is pretty sure to be the Indian or Aztec epic, the latter being represented on our table by Hanna H. Foster's 'Zululu, the Maid of Anahuac' (Putnams), and the former by a statelier tome, illustrated with a wealth of exceedingly wooden pictures, 'The Feast of the Virgins,' by H. L. Gordon (Chicago: Laird). Then there is the long religious poem, represented this time by 'Methodism: a Retrospect and an Outlook,' by Prof. Charles William Pearson of Northwestern University (Hunt & Eaton), this example being more simple and genuine than the average of its class. Then there is usually a volume of the verse called "passionate," with a somewhat repellent flavor about it, and enhanced by devout poems intermingled, as has been the fashion of erotic literature, since Marguerite of Navarre; this is usually by a woman, and it is conspicuously represented, for the present purpose, by the 'Unrest' of Mme. Higgins-Glenerne (Lida Lewis Watson) (Dillingham), who dedicates her unwholesome mixture in part to her parents and in part, "with palms of peace and the pulse of passion," to her husband. Then there is the highly wrought romance of chivalry, of which the most obvious recent type is 'Yvernelle, a Legend of Feudal France,' by Frank Norris (Philadelphia: Lippincott), a book whose wealth of costly illustrations only makes the verse seem tamer.

There is the philosophic volume, here represented by the 'Dramatic Sketches and Poems' of Louis J. Block (Philadelphia: Lippincott); the Oriental poem, which is to be found richly and agreeably rendered in 'The Perfume Holder,' by Craven Langstroth Betts (Saalfeld & Fitch); the volume of vivacious verse, here jauntily typified by 'A Beauty of Thebes, with Other Verses,' by John Goadby Gregory (Milwaukee: The Author); and the book of pure and elevated sentiment, with only too abundant a facility for metrical expression, as exemplified in 'Sonnets—Songs—Laments,' by Cara E. Whiton-Stone (Boston: Cupples).

Of more real value, perhaps, than any of these are the few volumes—often dingy and ill-printed—in which there lurk, amid inflation or commonplace, a few pages of genuine local coloring, affording us something that is valuable, not so much because it is new as because it is true. What Mr. M. J. Gorton prized in his 'Drama of the Cycle' (Boston: Cupples) was probably the title-poem, but what the reader prizes is "A Ballad of Life on the Up-Grade [of the mine]," or the few Arkansas ballads. Mr. Albert E. S. Smythe sends forth 'Poems, Grave and Gay' (Toronto: Imrie & Graham), of which the best part really consists in the "Peanut Ballads," which are in the Belfast dialect. Mr. Meredith Nicholson, in 'Short Flights' (Indianapolis: Bowen), although he writes well and earnestly of Omar Kháyyàm, yet charms us most when he describes "Fire-Hunting," or tells us how "My Paddle Gleamed"; and Marguerite E. Easter, in 'Clytie, and Other Poems' (Boston: Philpott), most arrests the eye when she tells us that the later species of wild aster are poetically christened "Summer's Farewells" in Virginia (p. 103). Mrs. Piatt, writing from Ireland, still gives us some of the local coloring of her American home in her 'An Irish Wild-Flower, etc.' (Stokes), for she longs among primroses for the peach and apple-blooms by the Ohio (p. 37), and stoutly maintains the superiority of the blue-bird to the sky-lark (p. 15). She also shows her wonted sympathetic power in the title-poem of the book (p. 1):

AN IRISH WILD-FLOWER.

(A Barefoot Child by —— Castle.)

She felt, I think, but as a wild-flower can,
Through her bright fluttering rags, the dark, the cold.
Some farthest star, remembering what man
Forgets, had warmed her little head with gold.

Above her, hollow-eyed, long blind to tears,
Leaf-cloaked, a skeleton of stone arose. . . .
Oh, castle-shadow of a thousand years,
Where you have fallen—is this the thing that grows?

Charles Haddon Spurgeon, Preacher, Author, Philanthropist. With anecdotical reminiscences. By G. Holden Pike. Funk & Wagnalls Co.

From the Usher's Desk to the Tabernacle Pulpit. The Life and Labors of Charles Haddon Spurgeon. By the Rev. Robert Schindler. A. C. Armstrong & Son.

THE two lives of Mr. Spurgeon already out are specimens of that fungoid growth which is generally so luxurious on the new-made graves of famous or notorious persons. If there is any help in these towards making up a judgment on Mr. Spurgeon's life, and the degree to which it lends itself to biographical treatment, it does not appear to any great extent. We shall some time have a much better biography of him than either of these hasty and scrappy compilations, but his life was uneventful, and the strength of it went so largely into his preaching and the organized activities of his church that there was little left to be expressed in other ways. He printed, we are told, 2,200 sermons. No biography can ever report him as they do. They are the man himself.

The best part of Mr. Pike's volume is not his own, but an introduction written by Dr. W. C. Wilkinson; though here also something must be allowed for the warmth of the writer's admiration and the freshness of the common loss. It is certainly very dangerous to say of Spurgeon's preaching: "Nothing less meteoric, nothing more solar, in its quality of radiance, has ever been set by God among the merely human and uninspired lights of the world to shed illumination on any Christian age." The teeth of time are very hard on such contemporary praise. But Spurgeon's diligence or sincerity cannot be overrated; and few, if any, writers of his time have been more widely read. One of his books, one of a multitude, reached a sale of 320,000 copies. Dr. Wilkinson lays much stress upon the quality of Spurgeon's voice, loud enough without apparent effort for the farthest off of the 5,000 in his Tabernacle, and not too loud for those close up to him. In this connection it may be well to note the fact that he despised all emollients for his throat and believed in such astringents as strong vinegar and beef-tea well peppered. Dr. Wilkinson praises his gift of language as unparalleled. He says its simple, easy flow was "so uninterrupted and so easy that it seemed like lubricity itself"—which suggests that he is no more disposed to let the devil have the good words than the good tunes.

Both of these volumes give the same impression of the suddenness and the stability of Mr. Spurgeon's London fame. He was a mere boy when he went to London after three years preaching in a Cambridge suburb, and in a few years he reached the height of his popularity. The gain after that was in the esteem of the better part of the community, in the correction of mythical reports, in the extension of his influence through the printing of his sermons and the elaborate organization of his parochial and propagandist work. To compare him with Beecher is quite unavoidable. His preaching was more picturesque than Beecher's; its picturesqueness was its greatest charm for the multitudes who flocked to hear him and who read his sermons with delight. Spurgeon had also a sustained sobriety and solemnity of speech and manner to which Beecher did not attain. The London preacher was the more possessed by his message. But Beecher's advantage over him was very great as a poet and as a humorist. Here there was no comparison. As for shocking the conventional proprieties of pulpit speech, Beecher probably did this a hundred times where Spurgeon did it once. The two men had a harmless vanity in common and they delighted equally in a strain of personal reminiscence. Spurgeon had great ability as an organizer, where Beecher had none at all.

Mr. Pike's volume makes no mention of Spurgeon's rupture with the Baptist Union, but Mr. Schindler's has a chapter on "The Down-Grade Controversy." It is brief, but it makes plain how complete that rupture was. Spurgeon was a Calvinistic Baptist, and the Baptist Union has decided that the Arminian doctrine has its unqualified sympathy. The same Union represents those general tendencies of "Progressive Orthodoxy" which need not be indicated here. This is a pregnant comment on the effect of Mr. Spurgeon's great and multiform activity. Genial, hearty, shrewd, and eloquent, taking the color of his style from the tinker of Bedford and the Puritan divines, the most heard and read of any preacher of his time, the object of enthusiastic admiration, his London pastorate of thirty-eight years' duration was a losing battle. He

"Strove against the stream, but all in vain."

It swept the English Baptists ever further and further from that Calvinistic course on which he would have had them sail for ever. The force of his genius measures the strength of the stream. But his own resistance to "the new theology" was not so absolute as he believed. The time-spirit did its work on him also. The temperature of his later sermons was much lower than that of the earlier. His tongue lost something of its daring in describing the misfortunes of the damned.

Sir William Johnson and the Six Nations. By William Elliot Griffis. [Makers of America.] Dodd, Mead & Co.

Sir William Johnson's American career extended from 1738 to 1774. During this period, when American settlement encroached upon Western savagery, and when France and England contended for Indian allies in the struggle for the possession of the West, he was the leader along the Mohawk line, preserving harmony between the English and the Indians, and winning victories against the French in the final conflict. Mr. Griffis has presented a clear and interesting view of this stirring period on the frontier, and has given us a sympathetic study of the masterful Irish pioneer. He has also given a very readable account of the Iroquois Indians. The Six Nations, by their location in the region controlling the water systems east of the Mississippi, by their peculiar organization, and by their priority in securing firearms, became the most powerful Indian confederacy on the continent, and contributed to the victory of the English over the French. It is one of the merits of the book that Mr. Griffis has dwelt upon the importance of the Indian influence in this formative period of our history. In some of his generalizations, however, the author is not free from rashness. For example, the assertion that it was the agricultural basis of their civilization which made the Iroquois superior to their neighbors, needs much modification. But a still more incautious declaration of Mr. Griffis's is that "our Government is in a measure copied from that" of the Iroquois. Aside from the absence of evidence that American statesmen in any measure "copied" the confederacy of the Iroquois, the author shows a lack of appreciation of the distinction between *societas* and *civitas* in comparing the two. A favorite contention with Mr. Griffis is that the origins of many of the most important of our political institutions are to be sought in Holland rather than in England. He goes somewhat out of his way to urge this view in the present work; but it is a well-taken point that the composite middle region of the old colonies has not had its proper place in our histories as a factor in producing the present United States.

BOOKS OF THE WEEK.

Adams, Oscar F. The Presumption of Sex, and Other Papers. Boston: Lee & Shepard. $1.
Alexander, W. D. A Brief History of the Hawaiian People. American Book Co.
Bernhart, W. Andersen's Bilderbuch ohne Bilder. Boston: D. C. Heath. 35 cents.
Bowen, H. W. Losing Ground: A Series of Sonnets. Boston: J. G. Cupples. $1.25.
Coleridge, Stephen. The Sanctity of Confession: A Romance. London: Kegan Paul, Trench, Trübner & Co.
Crim, Matt. In Beaver Cove and Elsewhere. Chas. L. Webster & Co.
Denning, David. The Art and Craft of Cabinet-making. London: Whittaker & Co.; New York: Macmillan. $1.50.
Ehrich, Louis R. The Question of Silver. Putnams. 75 cents.

MARCH
EDUCATIONAL REVIEW.

Articles.—Public School Pioneering in New York and Massachusetts, Andrew S. Draper; Can English Literature be Taught? Brander Matthews; Defective Vision in School Children, Samuel D. Risley; The Prussian Elementary Education Bill, Nicholas Murray Butler; The College President, Charles F. Thwing; The Catholic Controversy about Education, Thomas Bouquillon; The Study of Pedagogy at Cornell University, Samuel G. Williams.

Education in Foreign Periodicals.—The Study of Greek in Germany—Syllabus of Mr. Sully's Lectures on the Science of Education.

Reviews—Editorial.

$3 a year. (Monthly except Aug. and Sept.) 35c. a number.

HENRY HOLT & CO., New York

EASTER.

An original Etching by Mrs. Edith Loring Getchell, representing some verses by the Rt. Rev. Phillips Brooks, D.D., and surrounded by a spray of Easter Lilies, and the picturesque entrance to the Study through the Cloister of Trinity Church, Boston. Size, without margin, 4x7½ inches. Signed proofs on Holland paper, $1.50; unsigned proofs, $1.00. Forwarded by mail on receipt of price.

Government Baking Powder Tests.

United States and Canadian Government food investigations show the Royal Baking Powder a cream of tartar powder superior to all others in leavening strength.

Statements by other manufacturers to the contrary have been declared by the official authorities falsifications of the official reports.

Exhaustion.

HORSFORD'S
ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good"

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

"*The weary brain requires some nerve sustaining element as food.*"—Herbert Spencer.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Piamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y. *F. Crosby Co.*

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

HAVE NOW READY:

The History of the Nineteenth ARMY CORPS. By RICHARD B. IRWIN, formerly Lieutenant-Colonel of Volunteers and Assistant Adjutant-General of the Corps and of the Department of the Gulf. Large 8vo, gilt top, with twenty maps and plans, $4.50.

"If hitherto less known and thus less considered than the proud record of those great corps of the Armies of the Potomac, of the Tennessee, and of the Cumberland, on whom in the fortune of war fell the heat and burthen of so many pitched battles, yet the story of the Nineteenth Army Corps is one whose simple facts suffice for all that need be told or claimed of valor, of achievement, of sacrifice, or of patient endurance."—*Extract from Introduction.*

The English Language and Eng- LISH GRAMMAR. An Historical Study of the Sources, Development, and Analogies of the Language, and of the Principles covering its usages. Illustrated by Copious Examples by Writers of all Periods. By SAMUEL RAMSEY. 8vo, $3.00.

In this work the modern doctrine of evolution is applied to language as a whole, to the English language as a particular example. The history of the language is here exhibited so far as is necessary to understand the growth of its lexical elements and the decay of its grammatical forms. The work will be of especial value to teachers and to readers who take an intelligent interest in the most forcible and widespread of human tongues. They will find the phenomena of their daily speech here illustrated by prolific principles, and not by barren mechanical rules.

A History of Greece. By EVELYN ABBOTT, M.A., LL.D., Fellow of Balliol College, Oxford, author of 'Pericles and the Golden Age of Athens.' Part II. From the beginning of the Ionian Revolt to the Thirty Years' Peace, 500–445 B.C. 8vo, $2.25.

The author expects to complete his work in four volumes, but each volume will cover a distinct period of history, and will be complete in itself.

"It is the work of a painstaking scholar and an acute writer, who evidently enriches his page with the fruits of broad and conscientious study. . . . The style of the book is easy for the reader, its arrangement lucid, its references to authorities ample."—*Chicago Standard.*

A fresh impression of Volume I. has also been issued.

Odes and Epodes of Horace TRANSLATED INTO ENGLISH VERSE; INTRODUCTION AND NOTES. By Rev. JOHN B. HAGUE, Ph.D. 4to, $1.75.

The Latin text is given in parallel columns with the English version.

Cranford. By Mrs. GASKELL. (No. XXVII. in the Knickerbocker Nuggets Series.) 32mo, gilt top, $1.

Questions of the Day Series. LXIX.—MONEY, SILVER, AND FINANCE. By J. HOWARD COWPERTHWAIT. $1.25.

"Favorably received by many of the leading journals of the United States."

*** Volume II., No. 1, "Notes on New Books," a quarterly bulletin, sent regularly upon application.

JUST PUBLISHED:

THE ROSE LIBRARY No. 12.

SOME CHILDREN OF ADAM

By R. M. MANLEY. Illustrated with photogravures. 1 vol., 12mo, cloth, $1.00. Paper, 50 cents.

A vigorous American novel, showing careful study and distinct and interesting types of New York society. It will charm the reader by its masterly delineations of character, its telling incidents, its strange coincidences, and its intricate plot, which keeps up the interest to the end.

The Nation.

NEW YORK, THURSDAY, APRIL 7, 1892.

The Week.

THE country has received with supreme satisfaction the news that the Senate has ratified, by unanimous vote, the treaty with Great Britain by which the Bering Sea dispute is referred to arbitration. The arbitrators, in addition to those appointed by the United States and Great Britain (two by each), are to be appointed by France, Italy, and Sweden (one by each). Thus there will be seven in all, and a majority will decide each question, and the decision will be binding on the United States and Great Britain, but not necessarily so on any other country. The main question is the fifth in the list of questions to be passed upon, viz.:

"(5.) Has the United States any right, and, if so, what right, of protection or property in the fur seals frequenting the islands of the United States in Bering Sea when such seals are found outside of the ordinary three-mile limit?"

The other questions to be brought before the Court of Arbitration are mostly, if not wholly, historical or geographical. They may all be decided in our favor without affecting the fifth or main question at all. The terms of the *modus vivendi* pending arbitration have not been fully made public, but they seem to be based upon the idea that damages shall be paid by the losing party. This ought to be satisfactory in principle. There may be some embarrassment in carrying out the details, but there is no longer any danger of "tension" between the two countries. For this we are duly thankful, and we shall not examine too closely the terms of Mr. Wharton's despatch of March 22, which seemed to negative any plan for a *modus vivendi* on the basis of reciprocal payment. The country will now dismiss the subject from its thoughts and cares. Not one person in ten thousand ever really cared whether the seals were taken on the islands or in the open water, or whether they were taken by Americans or by British Columbians.

In the recent silver debate in the House, Mr. Bartine of Nevada contributed a new idea, being a sort of amendment to Gresham's law that where two kinds of money coexist, the poorer always drives out the better one. Referring to a fact which the silverites have at last been compelled to take notice of, namely, that France did *not* have a concurrent circulation of both gold and silver during all the seventy years from 1803 to 1873, Mr. Bartine said:

"Not one single piece of silver coin was ever 'driven' from France. *It was drawn out by commercial currents.*"

If Mr. Gresham were alive, he would probably snap his fingers at the distinction here made between driving and drawing. He would say that the order of its going made no more difference to him than it did to *Lady Macbeth* when she told her guests not to stand upon their order, but go at once. But to one who looks upon silver as an abused female (as no doubt Mr. Bartine does), it makes the greatest difference whether she was gently coaxed out of *la belle France* or driven with a bludgeon. And as we all know that the French are the politest people in the world, we must conclude that when they got rid of their silver, they used no unnecessary violence. Instead of clubbing silver out of their country, as ruder people would have done, they offered an inducement (of say 1½ per cent.) to other nations in order to create a "commercial current" in which silver could sail cheerily all the way to India if she were so inclined.

No other State in the Union illustrates the transitory nature of the free-coinage craze so well as Kansas. Two years ago the Republicans of that commonwealth seemed to have lost their heads on this question. Both of the Republican Senators and five of the seven Republican Representatives voted in Congress for free coinage. The Republican State Convention heartily sustained their position, adopting the following resolution:

"The practical operation of the Silver Act now in force, recently passed by a Republican majority and opposed by a Democratic minority in both houses of Congress, in rapidly increasing the value of silver, is a good step in the right direction, but *we, the Republicans of Kansas, demand free coinage of silver*, a measure strongly opposed and vigorously denounced by the late Democratic Administration, led by ex-President Grover Cleveland."

Less than two years have passed since this resolution was enthusiastically adopted, but a despatch from Topeka says that "at present four-fifths of the Republicans are opposed to free coinage," and the State's delegation to the National Convention will sustain the President who in 1890 was condemned for his opposition to free coinage.

A change of the same sort as has already occurred among the Republicans of what used to be called "the banner Republican State of the Union," is coming over Southern Democrats. The chief strength of the free-coinage movement, in the West and South alike, has been the fact that Kansas, and all that part of the country, was suffering two years ago from "hard times," and that the low price of cotton still prolongs a similar condition of things in the South. The farmers have wanted more money, and the free-coinage advocates assured them that they would get it if Congress would only pass, and the President would sign, a certain bill. As long as the politicians of both parties cultivated this delusion, and nobody seriously disputed the claim, it was natural enough that it should be generally accepted. But discussion makes short work of any delusion. It is only necessary to ask a question or two, and its folly is exposed.

Mr. Lodge's bill providing for a new international monetary conference and for a suspension of silver purchases by the Government meanwhile, betrays the uneasiness felt in the Republican party over the present Silver Law. The Democrats, partly by blundering and partly by set purpose, have got themselves into a position of determined hostility to that measure, which they call the Sherman Silver Law. They opposed it unanimously when it was before Congress. The majority opposed it because it did not go far enough in the direction of silver, the minority because it went too far. But the effect of the vote was to put the party squarely against it, so that the State conventions subsequent to its passage felt bound to pass resolutions against it. Now that the Bland Free-Coinage Bill has been put out of the way and is no longer a terror, the public mind turns to the existing law, and people begin to ask how long this purchase of seven tons of silver bullion per day can continue without bringing us to the silver standard. While the Bland Bill was darkening the horizon, nobody saw the other thing, but now everybody sees it, and the saying of Mr. Lodge's colleague, Congressman Williams, that "the Democrats have done all the threatening and the Republicans all the mischief," is likely to cut some figure in the campaign this year. But Mr. Lodge's bill will not pass. We shall go into the Presidential campaign buying seven tons of silver bullion per day. That will be the silver-producers' share in the protective tariff.

There is a very mistaken notion, in some financial quarters, that the decline in silver bullion prices has been caused by speculative operations in this country. The truth of the matter is that all sensational operations of the kind, during the last two years, have been efforts to advance the price. The "bull movement" in silver in the summer of 1890, for instance, when the price was put up on the New York Stock Exchange to $1.21 per ounce, was as clear a piece of manipulation as the old-time "rigging" of Erie or New York Central stock. The end of the 1890 experiment was disastrous, and all the frequent attempts since that time to excite the public into speculation for a rise have had a similar origin and a similar result. If there has been any market speculation in silver since the collapse last year of the last of these

efforts, it has been done by the London bullion brokers, and been merely a shrewd "working" of the market to take advantage of the constant overproduction; nor have even these operations been of a permanent character. If the English silvermen put the price down, it was only for the purpose of checkmating the American pools and buying at an advantageous price the silver needed for India. Two months ago the agents of our largest smelting works, apparently more far-seeing than their friends in Congress, gave up even the effort to hold back their surplus product, and, throwing it all on the market, started the decline which culminated on Monday week. In other words, the break in silver prices is as true a reflection of trade conditions as the break in the price of iron. In the one case as in the other, overproduction tells the whole story. The silver-producers played for a higher stake, and, in consequence, strained far more recklessly their producing capacity. It is not strange, then, that the reaction in their case should be the more severe.

The London *Economist* of March 26 mentions the shipment of £1,500,000 gold to Austria by the house of Rothschild. The Berlin correspondent of the *Economist* says that the Disconto-Gesellschaft of that city, in conjunction with the Rothschilds of London, has undertaken the Austrian gold loan, about which there has been so much talk lately in connection with the resumption of specie payments, and that fifty or perhaps one hundred million florins will be issued in April or May. The fact that Austria-Hungary is to pass from the silver to the gold standard at no very distant period seems therefore to be settled. Then Russia will be the only silver-standard country in Europe; but as she is still on a paper basis, the question of the standard is of no greater importance than it was with us in 1873. In India the silver crisis is severe. The savings of the natives are mostly in the form of silver coin or silver ornaments—the coin being changed into ornaments, and the ornaments into coin, on the same principle as money is deposited in savings banks and drawn out again in this country. The natives do not perceive the decline in silver until they have to buy something with it, and then it takes the form of a rise in the prices of commodities. The greatest difficulty in India lies in the fact that the land taxes are collectible in silver rupees, and that the rate cannot be raised without danger of producing a revolution. When the British East India Company came into power there as the successor to the native rulers, it found existing a system of land tenure by virtue of which the holder paid a fixed rent to the Prince, and neither he nor his heirs could be disturbed so long as they paid it. This system has run on to the present time. The Indian cultivator could not be made to understand the reasons for raising his rent. Consequently the Government is helpless. Its own expenses rise as the purchasing power of the rupee falls, but it cannot recoup itself by raising the land rent.

The Democrats of Minnesota met at St. Paul Thursday to appoint delegates to the National Convention at Chicago, and instructed them "to vote as a unit for, and to engage every manly endeavor to secure, the nomination of Grover Cleveland as the candidate of the Democratic party for President of the United States." It also passed some resolutions on the silver question which call for attention, since they may point the way to a solution of the silver question in its political, although not in its financial, aspects. The resolutions were these:

"We hold, in accordance with the traditional policy of our party, to the use of both gold and silver, and the sole coinage function of the Government is to examine the relative values of the metals of coinage, as established by the commercial world, and, if there has been a sufficient fluctuation in the value of either to make the existing ratio unequal, then to readjust the ratios, so that the number of grains of either metal in the unit of coinage, the dollar, shall be equivalent in value, and then to permit the free, unrestricted coinage of both metals.

"We join the Democracy of New York in demanding the repeal of the Sherman Silver-Coinage Act. We condemn this act as an attempt to distract the friends of honest bimetallism, and denounce it as calculated to debase our currency, contract the circulating medium, and wreck the confidence and safety of the business world."

No silverite ought to object to the first resolution. Mr. Bland and Senator Stewart and all of their followers contend that free coinage would bring the two metals to a parity and keep them there, so that we should actually have bimetallism, and not merely the single silver standard, with gold demonetized and selling at a premium. The Minnesota Democrats say in substance: "Then you cannot object to making the silver dollar commercially equal to the gold dollar. If, upon the adoption of free coinage, silver should *not* advance to $1.29 per ounce (it is now 86 cents), we merely ask that you shall put enough metal into the dollar to make it worth a dollar. Then we will join you. Then you may have coinage *ad libitum*. This is the real dollar of the fathers."

We say that this may be the political solution of the silver question. It offers a common standing-ground to the factions of the party. The fact that we cannot make a silver dollar that will *continue* to be of the same value as the gold dollar (neither more nor less), is no reason why we should not have it in our platforms. We have been making fools of ourselves on this subject so long that it is only a question of greater or less folly, and we think that the Minnesota resolution is the very least folly that we shall be likely to get in any national platform this year. The chief value and importance of the Minnesota Convention, however, is to be found in the challenge it gives to the snap delegation from New York. The doctrine that no candidate can be nominated without the delegation of his own State—a doctrine that makes any single State more powerful *ad hoc* than all the others taken together—this undemocratic doctrine the men of Minnesota have trodden under their feet as did those of Rhode Island and of North Dakota a few days or weeks earlier. It is certain that the Democrats of Wisconsin, of Michigan, of Nebraska, and of Missouri will set their heels upon it. It is probable that those of Indiana, Illinois, and Iowa will do likewise, and long before that time the snap delegation of New York will be begging for mercy.

The House did a disgraceful thing on Monday in passing, with only forty-two dissenting votes, a bill which proposes to abrogate the existing treaty between China and the United States, and to prohibit absolutely the coming into the United States of Chinamen, as well as those who are now here and may hereafter leave, except those who may come as diplomatic representatives or agents of the Chinese Government. Vigorous speeches against the measure were made by Mr. Hitt, an Illinois Republican, and Mr. Hooker, a Mississippi Democrat. Mr. Hitt said that the bill was a cold-blooded proposition to abrogate a treaty—a thing unparalleled in the diplomatic history of nations—and for perfidy of expression could not be exceeded by language. The most insulting proposition of the bill, Mr. Hitt thought, was the provision which permitted the Chinese to "attend the World's Fair under guard." But such protests were of no avail when it was a question of catering to "the-Chinese-must-go" demand of "the Pacific Coast vote," and the bill was passed by more than four to one. It is believed that the Senate will not consent to so gross a piece of demagogism, but it is a reproach to the national reputation that such a measure should have passed one branch of Congress.

The investigation of the Pension Bureau is piling up evidence that this branch of the Government, disbursing about $130,000,000 a year, is conducted in a scandalously partisan and corrupt manner by Commissioner Raum. The most convincing testimony to this disgraceful state of things is furnished by Mr. Raum himself, in his answers—and his even more significant refusals to answer—to the questions which are put to him. During Thursday's session he admitted that for all practical purposes the Pension Bureau was a political machine run in the interests of the Republican party. Here is an extract from the proceedings:

"Question—If you found that examiners in the field were using their places to aid the Democratic party, what would you do?

"Answer—Call them in. I always give preference in every way possible to Republicans

because this is a Republican Administration. I am in my position because I am a Republican. I never assign men to the field without knowing their politics. I want only Republicans."

Mr. Harrison must now perceive what a sad mistake he made in refusing to remove Raum a year ago. His management of the Pension Bureau is the worst blot upon the record of the Administration. It recalls the Grant days of the Robesons and Belknaps and Babcocks. Worse still for Harrison, he has been repeating that worst of Grant's blunders in refusing to remove a corrupt official "while he is under fire." If Raum had been discharged, as he ought to have been, a year ago, and a good man put in his place, the scandal would have been forgotten before this time. As it is, the whole thing is kept before the public, and Mr. Harrison suffers for it. Apparently he has concluded to shoulder the load through his canvass for reëlection. This shows an extraordinary lack of shrewdness—or can it be true, as Raum himself has hinted, that he has such a "pull" that the President of the United States does not dare to remove him, no matter what is proved against him?

The prompt way in which the French have disposed of the Anarchist dynamiters shows the virtue there is in grasping the nettle firmly. Before the police were fairly roused there was some danger of a panic in Paris, owing to the popular belief that there was a powerful body of fanatical Anarchist conspirators diffused through the city, with whom society could not make terms, and who could not be successfully watched, and from whom an incalculable amount of damage to persons and property might still be expected. As soon as the police went vigorously to work, however, this theory was rapidly exploded. The chief of the Anarchists was found to be an ordinary criminal named Ravachol, who had already committed many murders and robberies, and, instead of being fanatical, was simply ferocious. The other sixty to seventy were apparently as easily frightened as any other malefactors, as easily discovered, arrested, and expelled from the country or held for trial. The *Temps*, which has examined the situation rather minutely, estimates the total number in Paris of avowed and recognizable Anarchists at 200, but these 200 claim to have behind them about 3,000 others in all ranks of society. It is, of course, opposed to Anarchist principles to have an organization of any kind which would control individual action, and they meet in "groups" for discussion, but all explosions are carried out by one person only. They have had several organs, such as *La Révolte*, the *Père Peinard*, *L'Insurgé*, and *Le Conscrit*. At one time the "Groups" had names, such as "the Batignolles Panther," "the Flat Feet," "the Gunshot," and the "Wolf's Cubs" — somewhat like our "Plug Uglies" and "Bloodtubs" of long ago. Their creed is very simple—that property ought to be divided equally; that there ought to be no government, or at all events no government composed of the bourgeois class; and that anybody who objected to this ought to be blown up.

The legal precautions in France against the illicit manufacture of explosives are very minute and stringent, but the facility with which explosives can be compounded or stolen has made these precautions of little value. The manufacture is permitted only to licensed companies, giving heavy bail for obedience to the law, and submitting themselves to incessant official inspection. Any one who wishes to purchase an explosive must give his name, address, and calling; the use he proposes to make of it; the day on which he will use it; the place in which he will keep it, and the route he will follow in transporting it from the factory. But, as the *Temps* points out, what is the use of all this, as far as anarchy is concerned, when every miner or quarryman who uses dynamite, can, by secretly putting aside a cartridge or two now and then, soon accumulate a considerable stock, of which the authorities will know nothing? The true means of safety seem to lie in the close observation of suspicious characters by the police, who, as a general rule, are pretty sure to be aided by the owners of the houses in which they meet. The trouble with explosives is that they may go off in the manufacture, and everybody who lets rooms or buildings, however much he may sympathize with anarchy, feels uneasy if he thinks they are being compounded on his premises. Still, there is no doubt that a new and formidable weapon has been put into the hands of the criminal and the fanatically discontented.

At a meeting of the General Court of the Bank of England on the 17th ult., Mr. Lidderdale, the Governor, presented a statement of the present phase of the Baring liquidation. The whole amount of liabilities assumed was £30,000,000. Of this sum £22,000,000 was in existence at the time of the crisis, October 31, 1890, and £8,000,000 was incurred subsequently. Against this sum there has been received from the assets and dues of the house £23,000,000, leaving £7,000,000 due to the guarantors. The securities held against this liability consist of £5,800,000 Argentines, £2,000,000 Uruguayans, £924,000 South Americans other than those mentioned, and miscellaneous assets amounting to £1,546,000. Respecting the character of these assets Mr. Lidderdale would express no opinion except that, in his judgment, the guarantors would get out without loss. He did not think that the time had yet come for forming a syndicate to relieve the Bank of its responsibility. The debt needed to be reduced a good deal lower before such a step would be practicable. The court then declared a half-yearly dividend of 5 per cent. on its £14,000,000 capital, out of the earnings of the past six months, and carried £25,000 to the "rest" or surplus fund. From this it appears that the business of John Bull has not gone to the dogs yet. The Baring rescue and salvage is probably the greatest feat of its kind ever undertaken and carried through since the world began. The extent of the ruin that would have followed an actual failure and protest of the Barings' paper is almost unimaginable.

The Buenos Ayres *Standard* has been making some valuable exposures of the inflated character of Argentine statistics of foreign commerce. It shows that the official valuations, both of imports and exports, have been greatly exaggerated, the former by about 50 per cent., and the latter by 20. Thus, sugar has been valued for the past three years by the customs authorities at $190 the ton, while its actual price in the Buenos Ayres market has averaged only about $80. Kerosene has been assessed at eighteen times its real commercial value. The same inflation, though in a less degree, has been practised in the case of many other imports, so that the paper cited maintains that the official figures of imports for the past three years ought to read $249,500,000 instead of $373,500,000, as officially declared. In like manner it analyzes the statistics of exports, showing how the Government figures for them are too great by $64,000,000, for the past three years. All this goes to show how the Argentine bubble has been blown up all around, and at the same time furnishes a new warning against putting implicit confidence in official figures relating to commerce.

The present anomalous position of the Brazilian President is seen from a glance at the provisions of the Constitution and the election laws bearing upon his status. The Constitution provides (Article 42) that in case a vacancy occurs in the Presidential office during the first two years of a Presidential term, the Vice-President succeeds only temporarily, and a new election is to be ordered. According to the new election law, promulgated on January 26, this new election is to be ordered within three months from the time the vacancy occurs. It seems clear that President Peixoto is subject to both these provisions of the law, and yet he has shown no disposition whatever to comply with them. Some of his friends maintain that the exceptional circumstances under which the "vacancy" was created—by the navy's deposing Fonseca—make it unnecessary to apply the strict letter of the law. We should think a safer defence for him would be that as Congress when it adjourned voted him "plenary powers," he is thereby authorized to be both law and Constitution unto himself. At any rate, that is what he appears to think.

A CAMPAIGN FOR PRINCIPLE.

A good many political observers in various parts of the country are greatly surprised at the sudden revival of Mr. Cleveland's prospects as a Presidential candidate, and are seeking reasons in explanation of it. We think they will find them in his speech in Rhode Island on Saturday, and especially in such sentences of it as these: "Splendid achievements await those who bravely, honestly, and stubbornly fight in the people's cause"; and "Demonstrate to the people the merits of your cause and trust them." That has been his political creed from the beginning of his public career to the present moment. He acted in accordance with it when, as Governor, he vetoed the five-cent-fare bill, and ran the risk of being denounced as the friend of the railway corporations rather than the friend of the people. He acted in accordance with it when, as President, he vetoed the Dependent Pension Bill, and, above all, when he issued his famous tariff message. He acted in accordance with it again when he wrote his letter against free silver coinage in February of last year.

On all these momentous occasions he put his trust in the people and in their capacity to recognize the justice and honesty of the cause for which he was fighting. In each instance the politicians declared that he had ruined himself politically, but time has shown that he was a shrewder politician than they, for he has to-day a wider and more enduring popularity than any other citizen of his time. His kind of politics is that described by Lowell in his definition of a statesman: "He is not so much interested in the devices by which men *may* be influenced, as about how they *ought* to be influenced; not so much about how men's passions and prejudices may be utilized for a momentary advantage to himself or his party, as about how they may be hindered from doing a permanent harm to the commonwealth. He trains himself to discern evils in their causes that he may forewarn if he cannot prevent, and that he may not be taken unawares by the long bill of damages they are sure to bring in, and always at the least convenient moment."

The great revival of Democratic faith in Mr. Cleveland, which is now sweeping all opposition before it, is due to the fact that he has made it his constant political practice to show his party and his countrymen what they ought to do rather than what they might do. More than any other public man of his time, he has sought to hinder his party from doing a permanent harm to the commonwealth. It is because he has done this that the whole country believes in his honesty and fearlessness—believes he would do right in every emergency, no matter what the personal cost might be.

If any man doubts the value of the service which Mr. Cleveland has done his party by his course, let him read the resolutions which the Democratic Conventions of Rhode Island, Minnesota, and other States are adopting as they are sending their Cleveland delegations to the National Convention. He will find therein the kind of material which begets lasting enthusiasm in a Presidential canvass. They are not empty and meaningless declarations, but pledges to sustain an honest man, and to sustain him in upholding principles which are of vital interest to the prosperity and welfare of the country. There is no dodging or "straddling" necessary, because the whole country knows exactly where the candidate stands now and where he will stand if he is elected. The American people do like an honest man as well now as they ever did, and they do like to be trusted to take the honest, patriotic view of all public questions.

No man ought to realize the truth of all this to-day more forcibly than David B. Hill. He has been trying to succeed in obtaining a Presidential nomination by precisely opposite methods to those pursued by Mr. Cleveland. Surely his "long bill of damages" has been brought in "at the least convenient moment." He sought only to find the "devices by which men may be influenced," and they have all failed him. The grand final result of all his labors is to set him before the country as a politician without principle, the leader of a band of political brigands who have been detected in stealing control of a Legislature, and have been exposed and denounced for that crime by the leading lawyers in their own political party. In fact, Mr. Hill has, by his conduct, succeeded in bringing out to public view a class of voters whose existence was, till within the past few weeks, generally questioned—that is, independent Democrats who hold the honor of their party so high that they do not hesitate to censure and repudiate leaders who commit crimes in its name and for its supposed advantage.

The enthusiasm with which the Democratic masses are flocking to Mr. Cleveland's support is undoubtedly increased by the sense of relief which they all feel at the failure of the Hill conspiracy to prevent his nomination. If Hill had not started his garroting expedition against the party, there would have been no question of Mr. Cleveland's renomination. Hill's failure simply means the collapse of the most formidable effort that can be made to prevent Mr. Cleveland's candidacy, and the reaction which is now so apparent and pervading in all parts of the country is the natural result. The party feels not only that it is going to have the candidate of its choice, but that it is going to save its self-respect and enter a campaign with its head erect and its conscience clear.

LEGISLATOR AND CONSTITUENTS.

The Keokuk *Gate City*, an Iowa Republican newspaper which discusses public questions with independence as well as intelligence, questions the justice of our statement that "the Republicans in Iowa have finally decided to stand by prohibition." It holds that the action of the Legislature was not the act of the Iowa Republicans as a party, but was the vote of so many legislators from so many prohibition districts who had been elected upon the pledge to the voters of their counties that they would stand by the prohibitory law, and who could not have been elected if they had not so promised. It admits that a few of the Republicans who voted against the bill were personally in favor of local option, but it says that they had assured their constituents that, no matter what their personal views were, they would stand by the Prohibitory Law.

The *Gate City* proceeds to discuss the wider question of the relation between legislator and constituents. Among other things it says:

> "Certainly it will not be maintained that candidates for the Legislature should promise their constituents one thing and then go to the Legislature and do the precisely opposite thing. No one should want to make politics and legislation a matter of open falsehood and debauchery like that. But for the position taken by the Republican candidates for the Legislature in the fifty-four districts that elected Republican legislators, the Republicans would not have carried the Legislature. That is a perfectly patent fact to any one here in Iowa, whether he is a Prohibitionist or anti-Prohibitionist. And there was nothing for those legislators so elected to do but to keep their word."

The question here raised is not a new one, but it is always full of interest. It is more than a question of good faith. It involves the whole matter as to the proper relation of the legislator to his constituents, the extent to which he shall turn himself into a mere machine to record their opinions (or their supposed opinions) at some time in the past, the degree to which he shall be conceded the right to exercise his own discretion as to what is the best thing for the community. It is a question which has just been raised in Congress over the Silver Bill, and it is a question which is sure to come up periodically in the future.

It is by no means a one-sided question. It is something more than whether a man ought to keep a pledge. To take an illustration which will make plain the wider issue involved: in 1890 a popular craze in favor of the free coinage of silver swept over the country, afflicting the Republicans hardly less than the Democrats. The Republican State Convention in Indiana, Harrison's own State, adopted on the 10th of September, 1890, a resolution which "cordially commended the action of the Republicans in Congress on the subject of silver coinage," condemned ex-President Cleveland for having "strongly opposed all legislation favorable to silver coinage," denounced the Democrats in the House as foes of silver because "the law recently enacted was passed in spite of persistent Democratic opposition," and commended this law as "*a long yet prudent step towards free coinage.*" The Republicans of Iowa the same year came out in favor of free coinage as the ideal towards which the Government should move as rapidly as possi-

ble. Their platform, adopted on the 25th of June, 1890, contained this plank:

"We are in favor of such an expansion of the currency as will meet the growing demands of the increase in population and trade, and offset the contraction resulting from the continual withdrawal of the national-bank circulation. That to this end we favor such legislation as will utilize as money the entire silver product of our mines, and we favor such laws as will aid in the ultimate unrestricted use of both of the precious metals as money."

It was upon such resolutions that the Republicans of Indiana and Iowa ran their candidates for Congress in 1890, and such of them as were elected may be held to have pledged themselves to carry out these resolutions by their votes. That is to say, according to the *Gate City's* theory, when a bill looking toward free coinage comes before Congress in 1892, Republican representatives from Indiana and Iowa are bound to vote for it, because in 1890 their constituents commended the Silver Bill, then just passed, as "a long step towards free coinage," and instructed them to "favor such laws as will aid in the ultimate unrestricted use of silver as money." According to this theory, all that the Representative in Congress has to do when any question comes up is to try and find out what his constituents thought (or thought they thought) about it two or three years before, and then vote accordingly.

This does not seem to us a rational conception either of "the popular will" or of the Representative's obligations to his constituents. It requires any fleeting craze which gets possession of a convention to be regarded as the deliberate and final verdict of the people—which is a gross injustice to the people. The party managers who constructed the Indiana and Iowa Republican platforms of 1890 thought that the nation was bent upon the ultimate free coinage of silver, and that the popular thing to do would be to fall in with this supposed popular demand. They were badly mistaken. There was far less sentiment in favor of free coinage then than they thought, and there is far less now than there was then. The Republicans of Indiana and Iowa in 1892 are obviously and overwhelmingly against any further step towards free coinage, and the Congressman from either of those States who had voted last week according to the platform of 1890, would have misrepresented his party.

Of course nobody at this distance can judge correctly whether there has been any material change in the attitude of Iowa Republicans towards prohibition since last summer, when the State Convention declared in favor of it, but it certainly looks as though there had been. Many Republican newspapers which formerly supported the policy have come out in favor of dropping it. Three Republican Senators voted for the Local-Option Law when it was before that body, and, as we understand it, they claim that they find their action endorsed by a large proportion of the party in their respective districts. If there were enough Republican Representatives to pass the bill in the House who believed that their constituents now favor it, they ought to have made it a law, according to the narrow theory of simply representing the opinions of their constituents at the time they were called upon to vote.

But the truth is, that no right-minded man will accept the commission of Representative or Senator if he is only to record the popular will. His first duty is to do what he believes to be best for the interests of the State. If a member of the Iowa Legislature thinks in March, 1892, that, in view of the conditions now existing, the passage of a local-option law would promote the cause of good morals, he ought to vote for it. The man who wins the enduring respect of his constituents is the man who votes against their prejudices, or even their convictions, if he thinks he ought so to vote. The greatest name in the history of Iowa is that of James W. Grimes, and the reason is because—at a crisis in the history of the Republic—he, a Republican Senator, had the courage to vote, at the dictate of his conscience, against the impeachment of Andrew Johnson, when 99 out of every 100 Republicans in Iowa demanded that he should vote for it.

MORE LIGHT ON THE BRAZILIAN TREATY.

WHATEVER may be the truth in regard to some of the assertions of the London *Times's* Buenos Ayres correspondent, in his despatch of Thursday last, cabled anew to this country, there can be no doubt that he was strictly correct in saying that, according to the declarations of the Brazilians themselves, the reciprocity treaty with them was "obtained under promises which have not been fulfilled." We have several times produced evidence going to show that this was the fact, but it has met with the usual overpowering rejoinder that no newspaper which did not worship at the shrine of protection could tell the truth, and that any charges made against Mr. Blaine must be inspired by "British gold," and therefore false, no matter how strong the proof might appear to be. It was also said that no responsible person appeared in Brazil to father the charges, and that anonymous and journalistic assertions were beneath notice.

This whole defence has been swept away by a long communication from Ruy Barbosa published in the Rio de Janeiro *Combate* of February 24. He, it will be remembered, was Minister of Finance and virtual Premier in the Cabinet of the Provisional Government, and was the one man in Brazil mainly responsible for the negotiation of the treaty. With him were associated in that matter Senhor Cesario Alvim, Minister of the Interior, and Senhor Wandenkolk, Minister of Marine. They lend their names and authority to the account of the negotiation which Senhor Barbosa makes public, so that the story now stands upon their united testimony and personal responsibility.

The ex-Minister begins by asserting that the Provisional Government advocated the projected treaty with the dominating idea that it would give Brazilian sugar especial advantages in the United States. He quotes a letter addressed to him by the Brazilian Minister in Washington, in which the latter said: "The general exemption of sugar from customs duties will not avail us, as that will be a very slight advantage. What we need is an exclusive favor shown our product." It was this "exclusive favor," says Barbosa, which the Brazilian Government sought to obtain, and which it supposed it did obtain, from the Government of the United States. He proceeds to give various proofs, documentary and otherwise, in support of his position.

His first citation is from an official letter written by the Brazilian Minister at Washington, under date of April 22, 1890, in which that diplomat, Mr. Mendonça, urged his Government to accede to the proposed treaty, and said in so many words that "no similar treaty would be made with Spain." This proviso was constantly in the minds of the Brazilian Cabinet, and it was solely in view of it that they authorized Mr. Mendonça to proceed with the affair. Ample proof of this is furnished by Barbosa in his quotations from another letter of Mendonça's and his telegraphic reply thereto. The letter was dated September 17, 1890, and said: "We ought to lose no time in being the first to take possession of a field in which we shall have a practical monopoly, for as long as the United States do not make similar treaties, as they will not, with Spain and England, no other country can compete with us here." This letter reached Rio de Janeiro on October 20, and Barbosa immediately telegraphed in reply: "You may continue the negotiations according to the terms of your letter, just received." Later on, Mendonça was in Brazil, and in all his conferences with Barbosa, and with the entire Cabinet, he "emphatically declared that the agreement would not depart from that essential condition."

Corroboration of all this is supplied in a letter written to Baron Lucena, the last Premier of Fonseca's Administration, by ex-Minister of the Interior Alvim. He was giving an account of the whole negotiation, and wrote as follows:

"When our representative in the great American Republic, Salvador de Mendonça, came to this capital for the purpose of pressing the negotiations to a close, he gave me, as he gave all my colleagues in the Cabinet, in the conferences which we had, the most perfect assurances that, in the treaty which was to be made, it would be determined by a special clause, or by a promise of the American Government, that no similar agreement should be made with any monarchical Power of Europe. This makes clear the reason for our haste in the matter, as the American Government had previously consented to the agreement, according to the information given us by our diplomatic agent, who assured us that he had been very careful about this particular, and had encountered a most favorable disposition on the part of the

illustrious statesman, Mr. Blaine, who had motives of high policy easy to understand."

Moreover, on December 17, 1890, Minister Mendonça, before leaving Brazil for Washington, wrote to Barbosa that if the Democrats returned to power they would alter the tariff, but would scarcely extend to other countries "the advantages, as concerns sugar, which we alone are to enjoy to the exclusion of European colonies in America." The same gentleman, when again in Brazil in 1891, after the treaty had been ratified, and when there was much public dissatisfaction with it, wrote to Barbosa asking for a conference, and saying: "I believe that in the interview which I request I can prove to you the advantage we have won, and clearly vindicate my position in affirming to you that I had a promise from Mr. Blaine that no treaty should be made with Spain."

All this evidence puts beyond possibility of doubt the fact that Minister Mendonça did assure his Government that the United States would not, in case Brazil accepted the treaty, make a similar agreement with Spain or any European monarchy. "The question comes back, then," says the *Jornal do Commercio* in commenting upon Barbosa's letter, "to whether Mr. Blaine ever did make to Salvador de Mendonça the promises which he so repeatedly and emphatically said were made him. For our part, we are obliged to believe that our Minister told the truth, all the more so in view of the fact that two successive Governments have kept him at Washington." Now, we know this is a painful subject to the *Tribune*, and that it "closed the controversy" some months ago, after it had failed to obtain a denial from either Mr. Blaine or Mr. Mendonça. We also know how difficult is its position in an affair where Mr. Blaine is concerned, and how it has to suppress all news reflecting upon him, as it did the London *Times* despatch referred to above. Neither do we forget the muzzle it wears in virtue of being a member of the Administration—a muzzle which Commissioner Raum unfeelingly exhibited to a scoffing world the other day in Washington. It will remember that it sneered at our former evidence as being "private" and "confidential"; what has it to say about publications made in the journals of Brazil, over the names of ex-Ministers, seriously impugning the good faith and honor of our Government?

WALT WHITMAN.

WALT, or Walter, Whitman was born in West Hills, Long Island, on the 31st of May, 1819, and was educated in the public schools of Brooklyn and New York city. He afterwards learned printing, and worked at that trade in summer, teaching in winter. Later on he acquired a good deal of skill as a carpenter. For brief periods of his career he edited newspapers in New Orleans and on Long Island, and in 1847–48 he made long pedestrian tours through the United States, generally following the courses of the great Western rivers. He also made pedestrian explorations in Canada. His 'Leaves of Grass' was first published in 1855. During the war his brother was wounded on the battlefield, and he hastened to visit him in camp, becoming a volunteer army nurse, in which capacity he served for three years in Washington and in Virginia. His experiences are recorded in 'Drum-Taps' and other poems. Want of rest and nervous strain brought on a severe illness in 1864, from the effects of which he never fully recovered. In 1870 he published his 'Democratic Vistas.' From 1865 to 1874 he held a Government clerkship in Washington. In the latter year he was stricken by paralysis and retired to Camden, where he was gradually recovering when the sudden death of his mother in his presence caused a relapse, and he had remained in a crippled condition ever since, although until lately in generally fair health. His intellectual powers remained unaffected. In his prime Mr. Whitman had a magnificent physique, and to the last his presence was imposing, his white hair giving him a most venerable appearance in his later years. At times he felt the pinch of poverty, but his wants were few and simple, and he had friends who were always ready to contribute to the relief of his necessities. Among his published works may be mentioned 'Leaves of Grass,' 'Passage to India,' 'After All, Not to Create Only,' 'Two Rivulets,' 'Specimen Days and Collect,' 'November Boughs,' and 'Sands at Seventy.'

It has been the curious experience of Walt Whitman to find his inspiration almost wholly in his own country, and his admirers almost wholly in another. The rhythmic apostle of democracy, he has had, in the words of one of his stanch admirers, "absolutely no popular following" at home; and the gradual increase of his circle of special readers, even here, has been largely due to the class he least approves—those who desire to be English even in their fads. The same thing was true, years ago, of "Joaquin" Miller; but while he has gradually faded from view, the robuster personality of Whitman has held its own, aided greatly by his superb physique, by the persistent and somewhat exaggerated panegyrics on his services as an army nurse, and by that rise in pecuniary value which awaits all books classed by the book-venders as "facetiæ" or "curiosa." All this constitutes a combination quite unique. To many the mere fact of foreign admiration is a sufficient proof of the greatness of an American; they have never outgrown that pithy proverb, the result of the ripe experience of a young Philadelphian of twenty-one, that "a foreign country is a kind of contemporaneous posterity." But when we remember that the scene of this particular fame was England, and that it was divided with authors now practically forgotten—with "Artemus Ward" and "Josh Billings" and the author of 'Sam Slick'; when we remember how readily the same recognition is still given in England to any American who misspells or makes fritters of English, or who enters literature, as Lady Morgan's Irish hero entered a drawing-room, by throwing a back somersault in at the door—the judicious American will by no means regard this experience as final. It must be remembered, too, that all the malodorous portions of Whitman's earlier poems were avowedly omitted from the first English edition of his works; he was expurgated and fumigated in a way that might have excited the utmost contempt from M. Guy de Maupassant, or indeed from himself; and so the first presentation of this poet to his English admirers showed him, as it were, clothed and in his right mind. Again, it is to be remembered that much of the vague sentiment of democracy in his works, while wholly picturesque and novel to an Englishman—provided he can tolerate it at all—is to us comparatively trite and almost conventional; it is the rhythmic or semi-rhythmic reproduction of a thousand Fourth of July orations, and as we are less and less inclined to hear this oft-told tale in plain prose, we are least of all tempted to read it in what is not even plain verse. There is, therefore, nothing remarkable in the sort of parallax which exhibits the light of Whitman's fame at so different an angle in his own country and in England.

But while an English fame does not of itself prove an American to be great—else were we all suing for Buffalo Bill's social favor as if we were members of the British aristocracy—it certainly does not prove that he is not great; and it is for us to view Whitman as dispassionately as if he were an author all our own, like Whittier or Parkman, of whom an English visitor will tell you, with labored politeness, that he has a vague impression of having heard of him. The most distinct canonization ever afforded to Whitman on our own shores was when Mr. Stedman placed him among the *Dii majores* of our literature by giving him a separate chapter in his 'Poets of America'; and though it is true that this critic had already cheapened that honor by extending it to Bayard Taylor, yet this was obviously explained in part by personal friendship, and partly by the wish not to give New England too plainly the lion's share of fame. Possibly this last consideration may have had influence in the case of Whitman also; but it is impossible not to see in this chapter a slightly defensive and apologetic tone, such as appears nowhere else in the book. Mr. Stedman's own sense of form is so strong, his instinct of taste so trustworthy, and his love-poetry in particular of so high and refined a quality, that he could not possibly approach Whitman with the sort of predetermined sympathy that we might expect, for instance, from Ella Wheeler Wilcox or Amélie Rives.

There seems to be a provision in nature for a class of poets who appear at long intervals, and who resolutely confine themselves to a few very simple stage properties, and substitute mere cadence for form. There is, or was, an Ossian period, when simple enthusiasts sat up at night and read until they were sleepy about the waving of the long grass on the blasted heath, and the passing of the armed warrior and the white-bosomed maiden. Ossian is not much read now, but Napoleon Bonaparte admired him and Goethe studied him. Neither is Tupper now much cultivated; but men not very old assure us that his long, rambling lines were once copied by the page into extract-books, and that he was welcomed as relieving mankind from the tiresome restraints of verse. It would be a great mistake, doubtless, to class Whitman with Ossian on the one side, or Tupper on the other; but it would be a still greater error to overlook the fact that the mere revolt against the tyranny of form has been made again and again, before him, and that without securing immortal fame to the author of the experiment.

It is no uncommon thing, moreover, for the fiercest innovating poets to revert to the ranks of order before they die—as Wordsworth gradually became conventional and Swinburne decent. Whitman has abstained, through all his later publications, from those proclamations of utter nudity which Emerson called "priapism," in connection with 'Leaves of Grass';

and is far more compressed and less simply enumerative than when he began. True poetry is not merely the putting of thoughts into words, but the putting of the best thoughts into the best words; it gives us, as in painting, the *O* of Giotto; it secures for us what Ruskin calls "the perfection and precision of the instantaneous line." It fires a rifle-bullet instead of a shower of bird-shot; it culls the very best phrase out of language, instead of throwing a dozen epithets to see if one may chance to stick. For example, Emerson centres his "Problem" in "a cowled churchman"; Browning singles out an individual bishop or rabbi, as the case may be; but Whitman enumerates "priests on the earth, oracles, sacrificers, brahmins, sabians, llamas, monks, muftis, exhorters." In "The Song of the Broad-Axe" there are nineteen successive lines beginning with the word "Where"; in "Salut au Monde!" eighteen beginning with "I see." In "I sing the body electric," he specifies in detail "Wrists and wrist-joints, hand, palm, knuckles, thumb, fore-finger, finger-joints, finger-nails," with thirteen more lines of just such minutiæ. In the same poem he explains that he wishes his verses to be regarded as "Man's, woman's, child's, youth's, wife's, husband's, mother's, father's, young man's, young woman's poems." It is like bringing home a sackful of pebbles from the beach and asking you to admire the collected heap as a fine sea view. But it is to be noticed that these follies diminish in his later works: the lines grow shorter; and though he does not acquiesce in rhyme, he occasionally accepts a rhythm so well defined that it may be called conventional, as in the fine verses entitled "Darest thou now, O Soul?" And it is a fact which absolutely overthrows the whole theory of poetic structure or structurelessness implied in Whitman's volumes, that his warmest admirers usually place first among his works the poem on Lincoln's death, "My Captain," which comes so near to recognized poetic methods that it actually falls into rhyme.

Whitman can never be classed, as Spinoza was by Schleiermacher, among "God-intoxicated" men; but he was early intoxicated with two potent draughts—himself and his country:

"One's self I sing, a simple separate person,
Yet utter the word Democratic, the word En Masse."

With these words his collected poems open, and to these he has always been true. They have brought with them a certain access of power, and they have also implied weakness; on the personal side leading to pruriency and on the national side to rant. For some reason or other our sexual nature is so ordained that it is very hard for a person to dwell much upon it, even for noble and generous purposes, without developing a tendency to morbidness; the lives of philanthropists and reformers have sometimes shown this, and when one insists on it for purposes of self-glorification, the danger is greater. Whitman did not escape the danger; it is something that he outgrew it; and it is possible that if let entirely alone, which could hardly be expected, he might have dropped "Children of Adam," and some of the more nauseous passages in other effusions, from his published works. One thing which has always accentuated the seeming grossness of the sensual side of his works has been the entire absence of that personal and ideal side of passion which can alone elevate and dignify it. Probably no poet of equal pretensions was ever so entirely wanting in the sentiment of individual love; not only has he given us no love-poem, in the ordinary use of that term, but it is as difficult to conceive of his writing one as of his chanting a serenade beneath the window of his mistress. His love is the blunt, undisguised attraction of sex to sex, the physical appetite for the requisite quantity of white flesh; and whether this flesh belongs to a goddess or a street-walker, a Queensbury or a handmaid, is to him absolutely unimportant. This not only separates him from the poets of thoroughly ideal emotion, like Poe, but from those, like Rossetti, whose passion, though it may incarnate itself in the body, is inseparable from the very profoundest and most subtle yearnings of the spirit.

In preaching this gospel of unbounded self-indulgence—or, as his admirers would prefer to call it, self-expression—he has constantly made his own personality, and especially his own fine physical manhood, a factor. It is therefore fair to introduce this factor into criticism, in a way that would be wholly unfair if we were dealing with an objective poet like Browning. Thus, in his poem of "Native Moments," Whitman says:

"Native moments—when you come upon me—ah, you are here now.
Give me now libidinous joys only.
Give me the drench of my passions, give me life coarse and rank.
To-day I go to consort with Nature's darlings; to-night, too.
I am for those who believe in loose delights; I share the midnight orgies of young men."

Much more has Whitman written to the same purpose, and with a bad influence—we speak from personal observation—on the lives of many young men; an influence that can scarcely be estimated. This passage is probably not among those extracts from Whitman which are now read for charitable purposes at Congregational rooms or in the parlors of Episcopal churches; but it represents what the poet would once have recognized as the vital principle of his muse. And he constantly represents himself as the living example of what he sings:

"I now, thirty-seven years old, in perfect health, begin,
Hoping not to cease till death."

This is his theory, this his invited test. No matter, for the present, what the moralist would say of the theory; what the physiologist would say of it is, that a man who undertakes to act upon it will end in bankruptcy, will not live out his life; that those who thus claim to be Nature's darlings end as Nature's warnings; that paralysis, insanity, premature old age are the retribution for "the drench of the passions" in youth. Was there ever a sadder personal commentary on all this than when we find this same poet, who at thirty-seven exulted in his manly strength, addressing school-children at fifty-five from the point of view of extreme age ("An Old Man's Thoughts of School"), and having constant appeals made for him, when hardly past the prime of life, as for one broken down by years and infirmities? Compare this premature senility of the poet of "life coarse and rank," with the old age of the chaster poets—with Bryant's eighty-four clean and wholesome years, with Whittier's, almost a life-long invalid, and yet busy and useful when eighty-four years are told. It is the easy device of admirers to attribute this want of physical staying power to Whitman's army services, but the land is full of men who encountered during the civil war, and without boasting, an ordeal of bodily exposures to which those of Whitman were as nothing, in that comparatively sheltered position which he chose for himself, and who are still in health and vigor. We have no wish to dwell on the bodily calamities of any one, but where a man deliberately invites the personal test, and where the application of that test points a moral for coming generations, it would be cowardly to shrink from its recognition.

On purely poetic grounds it must be said of Whitman that he has in a high degree that measure of the ideal faculty which Emerson conceded to Margaret Fuller: he has "lyric glimpses." Rarely constructing anything, he is yet gifted in phrases, in single cadences, in single wayward strains as from an Æolian harp. It constantly happens that the titles or catch-words of his poems are better than the poems themselves; as we sometimes hear it said in praise of a clergyman that he has beautiful texts. "Proud Music of the Storm," "When Lilies Last in Door-yard Bloomed," and others, will readily occur; and if they were sometimes borrowed or duplicated, as "The Sobbing of the Bells" from Poe, it is no matter. Often, on the other hand, they are inflated, as "Chanting the Square Deific," or affected and feeble, as "Eidolons." One of the most curiously un-American traits in a poet professedly so national is his way of interlarding foreign, and especially French, phrases, to a degree that recalls the fashionable novels of the last generation, and gives an incongruous effect comparable only to Theodore Parker's description of an African chief seen by some one at Sierra Leone—"With the exception of a dress-coat, his Majesty was as naked as a pestle." In the opening lines, already quoted from his collected volume (ed. 1881), Whitman defines "the word Democratic, the word En Masse"; and everywhere French phrases present themselves. The vast sublimity of night on the prairies only suggests to him "how plenteous! how spiritual! how *résumé*," whatever that may mean; he talks of "*Mélange* mine own, the seen and the unseen"; writes poems "with reference to *ensemble*"; says "the future of the States I *harbinge* glad and sublime"; and elsewhere, "I blow through my *embouchures* my loudest and gayest for them." He is "the extolled of *amies*," meaning apparently mistresses; and says that neither youth pertains to him "nor *delicatesse*." Phrases like these might be multiplied indefinitely, and when he says, "No dainty *dolce affettuoso* I," he seems vainly to disclaim being exactly what he is. He cannot even introduce himself to the audience without borrowing a foreign word—"I, Walt Whitman, one of the roughs, a kosmos"—and really stands in this respect on a plane no higher than that of those young girls at boarding-school who commit French phrases to memory in order to use them in conversation and give a fancied tone of good society.

But after all, the offence, which is a trivial affectation in a young girl, has a deeper foundation in a man who begins his literary career at thirty-seven. The essential fault of Whitman's poetry was well pointed out by a man of more heroic nature and higher genius, Lanier, who defined him as a dandy. Of all our poets, he is really the least simple, the most meretricious; and this is the reason why the honest consciousness of the classes whom he most celebrates, the drover, the teamster, the soldier, has never been reached by his songs. He talks of labor as one who has never really labored; his 'Drum-Taps' proceed from one who has never personally responded to the tap of the drum. This is his fatal and insurmountable defect; and it is because his own countrymen instinctively recognize this, and foreigners do not, that his following is mainly abroad, not at home. But it is also true that he has, in a fragmentary and disappointing way, some of the high ingredients of a poet's nature: a keen eye, a ready sympathy, a strong touch, a

vivid but not shaping imagination. In his cyclopædia of epithets, in his accumulated directory of details, in his sandy wastes of iteration, there are many scattered particles of gold—never sifted out by him, never abundant enough to pay for the sifting, yet unmistakable gold. He has something of the turgid wealth, the self-conscious and mouthing amplitude of Victor Hugo, and much of his broad, vague, indolent desire for the welfare of the whole human race; but he has none of Hugo's structural power, his dramatic or melodramatic instinct, and his occasionally terse and brilliant condensation. It is not likely that he will ever have that place in the future which is claimed for him by his English admirers or even by the more cautious endorsement of Mr. Stedman; for, setting aside all other grounds of criticism, he has phrase, but not form—and without form there is no immortality.

BARANTE'S MEMOIRS.

PARIS, March 15, 1892.

THE second volume of the 'Souvenirs du Baron de Barante,' which has just appeared, is even more interesting than the first. We left M. de Barante, in 1813, at Nantes, where he had been sent as prefect; in this capacity he had to organize the new levies ordered by the Emperor. A great coalition was formed against France: Prussia had joined Russia, and even Sweden had entered into the league. Barante tells a curious anecdote about Bernadotte. In September, 1813, Talma came to Nantes and gave a few performances. He told M. de Barante that the famous Mademoiselle Georges, who had left France a few years before to go to St. Petersburg, passed through Sweden on her return to France. Bernadotte, knowing that she was on her way to Paris, where she certainly would see Napoleon, gave her a letter for him. Mademoiselle Georges had the letter sewn in her stays, and did not take it out till she was alone with the Emperor. He read it, and, speaking to himself, said: "It is too late." Mademoiselle Georges knew nothing more; but M. de Barante is not wrong in inferring that Bernadotte hesitated much before joining the coalition, and never was a safe ally of the Powers leagued against France.

The levies of Napoleon had already exhausted France; they were made in virtue of *sénatus-consultes*.

"The Senate gave the Emperor, January 10, 1813, 100,000 men from the national guard, 100,000 from the conscripts of 1810, 1811, and 1812, who had not been called to service, and 150,000 of the conscription of 1814; in October, 1813, 280,000 more from the classes of 1812, 1813, and 1814; and a month afterwards, 100,000 from the classes anterior to 1813, back to the year 1803. These pitiless levies, made without any drafting, without any deliberation by the Councils of Revision, the requisitions of horses, for which no credits were open to me, so that I could not pay them—such was now the habitual occupation of my days. There was no longer any law or any rule. Though the administration could act as arbitrarily as it liked, I tried to exercise my powers with equity and mildness."

Mildness, humanity, were the chief qualities of M. de Barante; and they were not purely negative: he did not hesitate sometimes to risk his position or to incur responsibilities in order to do some good. He is sincere when he tells us that nothing in his administration at Nantes gave him so much pleasure as when he succeeded in saving the lives of two conscripts who were on the point of being executed because there had been some brawl between conscripts and gendarmes.

M. de Barante does not give the history of the great events of 1814; he contents himself with telling what came under his personal observation. His judgments on the men of the time are very interesting. Read this, for instance:

"Louis XVIII., as belonging to the House of France, considered himself of a race superior to all the reigning families. He assumed a sort of patronizing and aristocratic superiority towards all the other sovereigns. The Emperor Alexander was for him only a cadet of the House of Holstein. He was cold with the Czar and kept him at a distance. The Emperor wished to marry his sister, the Grand Duchess Anne, to the Duc de Berry; the King feigned not to understand his overtures on the subject. He did not even confer on him the Order of the Holy Spirit, which he had some notion of getting. M. de Talleyrand, either because he wished to play the courtier, or because he already contemplated an alliance of France with England against Russia, was careful not to give other advice. The Emperor Alexander left Paris highly discontented."

M. de Barante judges Talleyrand with much acuteness; he describes well his liberal and constitutional tendencies, his love for the great combinations of politics, as well as his laziness, his hatred of details. Talleyrand had at first wished Louis XVIII. to keep on with the tricolor cockade; he soon saw that he had expected too much from a King who signed his decrees "from the eighteenth year of my reign." Long afterwards, speaking to M. de Barante of the hopes which he had cherished in 1814, and which had been disappointed: "I must repeat," said he, "the word of Madame de Créqui: This is not the son I had in my head."

The Abbé de Montesquieu, one of the framers of the *Charte*, "had no very fixed political principles. . . . His love of liberty did not go beyond the States of Languedoc or the provincial assemblies; the Restoration was for him the *ancien régime* becoming reasonable. More of a *grand seigneur* than a courtier, he had the monarchical superstitions. Nobody would have more frankly told the King what he believed was the truth, having little of that civility of the ante-chamber into which the old nobility had fallen. But, this duty once accomplished, the will of the King became sacred to him."

It is impossible better to describe the state of mind of the best part of the French Legitimists—a state of mind which has always persisted since, notwithstanding many changes and revolutions. "To be in any sort of opposition to the King seemed to him a moral dereliction." Barante was amazed at seeing how the new France, the France of the Revolution and the Empire, was unknown to the *émigrés;* it was to them *terra incognita.* All the *émigrés* were not from foreign parts: there were some who had, so to speak, emigrated to their provinces. The new Chancellor, M. Dambray, "lived for twenty years in Normandy, honored on all sides, respected in his province, charitable, just, affable, yet foreign to all; never going to Paris, without any relation with the new men, not knowing the new laws, not reading a new book, or, it was said, even a newspaper; spending his days with country neighbors, and his evenings in playing piquet with his *curé* and his aunt."

We need not give the portrait of Beugnot; he has described himself better than anybody could do in his invaluable Memoirs (a book, by the by, which has become very rare). Barante speaks of Baron Louis, the first Minister of Finance of the Restoration, with much respect; M. Thiers, who pretended to be a great financier, always said that he had learned everything from Baron Louis. The Duke of Angoulême made a journey to Nantes, and Barante wished that the Prince should not appear to the populace surrounded by the Vendéens alone. His task was not as difficult as he expected:

"Not remembering the *ancien régime*, he little regretted it. This equality in obedience, this suppression of the aristocracy, this regularity of the administration and of the law—all this suited him well enough. A sort of instinct or confused reflection advised him that it was a good foundation for an absolute power. He did not feel the repugnance of the old *émigrés* to the imperial régime. If his impressions could ever have been lively, I would have said that it made his mouth water to hear how, in great and in small things alike, was exercised the authority of the government which had given way to the Restoration. I found in him no gratitude, no affection, no preference for any opinion, for any party, for any class. In his mind, he was under obligations to nobody. The *émigrés* had done nothing for royalty and now embarrassed it; the Vendéens had never succeeded and now wished to be recompensed as if they had."

The picture is not flattering, but bears the impress of truth.

Barante was in his prefecture at Nantes when Napoleon returned from Elba. The Duke of Bourbon came to Angers for the purpose of raising the west of France against the Emperor. M. Louis de la Trémoille came also with an undefined mission. When Napoleon reached Paris, M. d'Autichamp, one of the Vendéen chiefs, merely advised the Duc de Bourbon to leave France. The Prince went only to Beaupréau, in the Bocage; some of his friends still wanted to see if anything could be tried. It was with difficulty that twenty peasants were found to mount guard at his door. Having received a passport, the Duc de Bourbon went away and embarked for England.

Barante sent his resignation to Paris as soon as he heard that the imperial authority was reëstablished in the capital. He left directly for Barante with his wife and children; he regularly received news from his friend the Comte de Montlosier, whose letters are given in this new volume. In May, 1815, he lost his patience and went to Paris; he found the capital without any deep attachment to any cause, feeling that everything was uncertain and provisional. He saw Benjamin Constant almost every day at Madame Récamier's; they had both been intimate with Madame de Staël, and had little to learn about each other. They were both Liberals and partisans of a Constitutional Government.

The correspondence of M. de Barante with his wife and his friends during the eventful year 1815 is in the highest degree interesting. When Louis XVIII. returned to Paris after Waterloo, he made up what was called a Constitutional Cabinet, with Fouché at its head. Barante wrote at the time a memoir "On the Political and Constitutional Institutions of France, such as the King wishes to establish definitely," at the request of M. Pasquier, the new Home Minister, who had chosen him to be Secretary-General of the Interior. The position was an important one, as he had to correspond with all the prefects and to direct their policy.

When the elections took place for the Chambers, Barante was elected in the Loire-Inférieure and in the Puy-de-Dôme. He had been prefect in the first department, and Auvergne was his native province. The Duc de Richelieu formed a Cabinet after the retirement of Talleyrand. Barante renders full justice to his rare qualities, *cum grano salis:* "In short," says he, "he had the aspect of a *grand seigneur*,

and a loyal, reasonable, honest man, which seduced and made you respect him. Yet the limitations of his mind and the inconsistencies of his character were speedily perceived."

Richelieu was very independent in character; he had once a conversation with the Comte d'Artois, and reminded him that when he took power, the Count had given him his word that he would support his Cabinet. Monsieur answered, "But ——" The Duc de Richelieu did not let him finish his phrase; he bowed, retired, shut the door with violence, went to his house, where M. Pasquier was waiting for him, and flung himself into a chair. M. Pasquier asked him what had happened. "Well, I have just seen a —— who does not know what a word of honor means!"

The second volume of these souvenirs ends with 1821; it is to be hoped that we shall soon have another. The work forms a valuable addition to the original documents concerning the period of the Restoration.

Correspondence.

A "MOCK CHARONDAS."

To the Editor of The Nation:

Sir: Probably the reason why the law of Charondas, providing for the instruction of the sons of citizens in letters at the public expense, has been so "strangely unnoticed by historians," is that Bentley proved, in his immortal 'Dissertation on the Epistles of Phalaris' (pp. 358–378), that what Diodorus Siculus (b. xii. §12) tells about Charondas and his laws is entirely untrustworthy. The laws attributed by him to this "mock Charondas," as Bentley styles him, were quite different from those known to Aristotle as his. This educational law, accordingly, stands upon no better footing than the one reported by Diodorus (§17), that whoever proposed any change in legislation must do it with a halter around his neck, until the people should decide by adopting it, or not, whether he was to live or die—or the other one (§13), that whoever, by marrying a second wife, gave a stepmother to his children, should be held in disgrace, as the author of his own misfortunes.

Truly yours, Henry W. Haynes.

Boston, March 25, 1892.

[Our chief aim in the "Note" to which Prof. Haynes takes exception was to "rebuke the self-conceit of those who hold that the education of all at the charge of all is an idea born in our own time or country." The quotation we translated from Diodorus proves that idea to have been at least as old as the Christian era. Thus much is clear, even if Diodorus credited the law to the wrong Charondas—for two legislators bore that name—or if all he says of the law was a figment of his own. But if, as Weber remarks, this law, with others ascribed to Charondas, had been moulded into metre and handed down by tradition long before the era of Diodorus, then the quotation proves our point still better. Bentley would not have denied this.

It seemed "strange" to us that Grote said nothing about the school-law ascribed to Charondas, because he devotes a page to another law of his (iv., p. 418). If he judged the school-law to be erroneously considered the work of Charondas, it was natural to expect he would have said so—and the more as its distinctive idea marks an epoch in popular education. It was worth a word.

In the judgment of George Weber—whose 'Universal History' is one of the latest standard authorities—the education law taxing all for all was really derived by southern Italian and Sicilian cities from some ancient Charondas. Accordingly he gives a list of nine Charondasian enactments, the last of which is that "all children shall attend schools supported by the State." Another of the nine is that about second marriages, which will seem less absurd to Mr. Haynes when he notices the reason for it. He who married a second wife was no longer eligible to office, as it was presumed that he who had introduced discord into his family would treat his country no better. The other law to which Mr. Haynes objects, that "whoever proposed any change in legislation must do it with a halter around his neck, and be strung up at once if his proposal were rejected," is an enactment worthy of all acceptation. It ought to be at once adopted in all our States, and all the people will say, Amen! Laws characterized by what may be called "poetical" justice have been common even in modern times—notably in the German Empire. They were naturally still more common in eras when laws were themselves poems.—Ed. Nation.]

MORE NAMES OF DANISH WRITERS.

To the Editor of The Nation:

Sir: Prof. Bronk's letter on Danish literature, published by you on March 24, is so timely and sympathetic that it seems ungrateful in a lover of northern art to take exception to any part of it. My criticism, however, refers not to any fault of commission, but simply to one of omission. While Prof. Bronk's list of contemporary Danish writers does not pretend to be complete, it should, I think, have included Ernst von der Recke, one of the sweetest and most powerful of modern dramatists; Einar Christiansen, a younger but hardly less talented lyrical poet; Erik Bögh, the genial champion of the old school; Richardt, the uncrowned poet laureate of Denmark; Karl Gjellerup, the first Wagner critic of Scandinavia; Herman Bang, the eccentric but brilliant novelist; and last but not least, Carl Ploug, the sweet-voiced singer of northern lays. Besides these more prominent names, there is a host of clever *raconteurs* and critics, many of whose writings are worthy of being clothed in an English dress.

Prof. Bronk's explanation of our ignorance of Drachmann, on the ground of his extreme nationality, may be well founded as regards that writer's earlier works, but it does not hold good for his latest novel, 'Forskrevet' (Pledged), in my opinion one of the most powerful productions of modern literature. Karl Gjellerup's 'Minna,' too, is as full of interest to a foreigner as to a Dane. The recent enterprise of the Messrs. Appleton in introducing Dutch imaginative literature to English readers ought to prove the feasibility of Prof. Bronk's suggestion of a similar attempt with the writings of Young Denmark.

Yours respectfully,

Daniel Kilham Dodge.

Columbia College, March 27, 1892.

A FOURTH-CLASS APPOINTMENT IN SOUTHERN MARYLAND.

To the Editor of The Nation:

Sir: The incident referred to in this communication was related to me by a gentleman of this city only a short time ago. I told him the matter ought to be made public, and asked him to obtain for me the facts in writing. He did so, and I have in my possession a letter from his friend living in one of our southern counties, who is a Republican. This gentleman does not wish his name published, but is ready, if necessary, to substantiate the facts which I quote from his letter:

"When President Harrison came into office, our Congressman (who was a Republican) had our Post-office removed from ——'s store, the most convenient location in ——ville, and on the railroad, where it was carefully attended to, to a store inconveniently situated, where they were careless in their attention to the mails, and where liquors are sold—not *in the room* where the Post-office is kept, but down stairs. This makes our Post-office frequently unfit for a child or woman to go in to get the mail, because white men and negroes come from down stairs in different states of drunkenness and loaf around the stove in the Post-office. They are often profane and sometimes quarrelsome.

"Having obtained a letter of introduction to Postmaster-General Wanamaker, accompanied by a gentleman from this neighborhood I called on Mr. Wanamaker in Washington. He received us very kindly, and said the Post-office should certainly be removed to some place where liquors were not sold on the premises. He said Mr. Clarkson had the management of the fourth-class postmasters and that he would take us right into Mr. Clarkson's office, introduce us, and request him to attend to it at once. When we got to Mr. Clarkson's office, very unfortunately, he was out at lunch. Mr. Wanamaker said it was impossible to give us any more of his time, but if we would call upon Mr. Clarkson after lunch and explain the thing to him, he had no doubt that he would alter things at once. We called, and, after keeping us waiting several hours, he informed us, in anything but a courteous tone and manner, that it was no use to bring tales against postmasters to him; that if we had any grievance, we must put it down on paper and sign it, then there was something tangible to go upon; but that he did not want to listen to just any tale any one chose to bring. He had no time for that. I offered to write it down if he would supply me with pen and paper, which he did. I gave three distinct reasons for wishing the office moved: (1.) Its distance from the railroad, and its inconvenient location. (2.) That liquors were sold in the same building in which the Post-office was located. (3.) That the office was very carelessly attended to.

"We both signed our names to this paper and handed it to Mr. Clarkson himself. He read it and said, 'Very well, I will send an inspector down in a few weeks, and if he finds things as you say, there shall be a change.'

"In three or four weeks after this interview the inspector came down. He sent for me, and said that as for my first reason, the office was within the number of rods from the railroad allowed by law, and that we must put up with its inconvenient location; that we could not expect to have everything just as we wanted it; then, that for a Post-office in a saloon it was very well arranged, and that liquors were hardly an objection, as they were sold down stairs. I reminded him that that did not prevent people under their influence coming up stairs, and asked him if it was not against the law to have a post-office in a place where liquors were sold. He said, 'Why, certainly it is,' and took from his pocket a copy of that section of the law and read it to me, adding that 'if that were enforced, half the post-offices in the South would have to be closed'; and asked me if I would be willing to do without one at ——ville. I told him no, and that argument had no force here, as we had another

place for it that was satisfactory in every respect. He asked, 'Where?' I said at ——'s store, where it had been so satisfactory hitherto. But he said, 'He is a Democrat.' I said, 'He votes that ticket, but is no politician.' The Inspector replied, '*When it comes to a choice between a Democrat and a saloon, the saloon will get it every time.*' Then in answer to my third reason, he required me to give him the particulars of their carelessness, etc., which I did. He said I had good reasons for complaint on that head; that he would reprimand the Postmaster and threaten him, and he had no doubt that things would improve in that respect [as they have]. Then I said to him, 'I suppose there is no chance of a change of place for our Post-office.' He said he thought not, unless our Congressman, who had it put where it is, would request Mr. Clarkson to make a change, which he was not likely to do. I have heard nothing more since."

Comment upon this scandal is unnecessary. Trusting that you will publish the statement in the cause of civil-service reform, I am

Yours truly, B. P. M.

BALTIMORE, MD., March 23, 1892.

WAGES AND THE TARIFF.

TO THE EDITOR OF THE NATION:

SIR: Enclosed please find clipping from the Meriden *Daily Republican*. I would like to know if the facts stated in regard to Mr. Dolge's factory are true, and if so, if they are not an unanswerable argument for a protective tariff.—Very truly yours,

A TRUTH-SEEKER.

MERIDEN, CONN., March 30, 1892.

[Enclosure.]

Rev. Mr. Griffin has doubtless read the challenge of Congressman McMillin of Tennessee, made in the course of that gentleman's speech in the tariff debate, defying any Northern Republican "to give the name of a single individual in the woollen industry whose wages have increased since the passage of the McKinley Bill." He got an answer. One of the employees of Alfred Dolge promptly wrote that the six or seven hundred hands in Mr. Dolge's factory had their wages increased 12 per cent. and their hours of labor reduced from ten to nine and one-half in January, 1891, "because of the McKinley Bill," as their employer explicitly stated. In January of the present year they had their wages again increased 10 per cent., Mr. Dolge again stating that it was "because of the McKinley Bill." He is not getting one cent more for his goods than he did before the McKinley tariff was enacted, but he is making them in immensely larger quantities and consequently at a more economical rate of production.

[The reasons why we cannot take this statement of facts (supposing them to be correctly reported) as a logical argument in favor of protection are three in number: First, it is not shown that Mr. Dolge's action was a necessary consequence of protection. As the story is here told it was mere benevolence on his part; another man might be equally benevolent under free trade. Second, it is not shown that the Dolge case is the usual experience under the McKinley tariff. If there have been more decreases than increases of wages since the 1st of October, 1890, then the case cited is not representative. We do not attempt to pass upon that question, though Congressman Crosby of Massachusetts was able to cite, in a recent speech in the House, forty-nine cases of reductions of wages occurring last year. We say merely that the case cited falls short of being "an unanswerable argument for a protective tariff." Third, an increase of wages in all the protected factories in the United States due to the tariff would not be such an argument. Senator Sherman once said in a speech opposing an increase of the tariff that the effect of it would be to raise wages in protected employments higher than in unprotected employments, and this he considered to be essentially unjust.—ED. NATION.]

Notes.

DODD, MEAD & Co. announce two new volumes in their "Makers of America" series—a Life of Charles Sumner, by Anna L. Dawes; and a Life of Columbus, by Charles Kendall Adams. They also promise 'The Art of Entertaining,' by Mrs. M. E. W. Sherwood; and 'Prince Serebryani,' an historical novel by Count Alexis Tolstoi, translated by Jeremiah Curtin.

Prof. J. H. Patton's 'Concise History of the American People' is to be brought out in a new revised and enlarged edition, in two volumes, bearing the new title, 'Four Hundred Years of American History.' Fords, Howard & Hulbert are the publishers.

Another Columbian announcement of interest is 'The Story of the Discovery of the New World by Columbus,' by Frederick Saunders of the Astor Library. Thomas Whittaker will publish it.

Damrell & Upham, Boston, bring out 'The Ethics of Music,' lectures before the Philadelphia Musical Academy by Miss Edith V. Eastman.

The Cupples Co. of the same city will speedily publish 'The House of Cromwell, and the Story of Dunkirk: a genealogical history of the descendants of the Protector, with anecdotes and letters,' by James Waylen.

'Materialism and the Modern Physiology of the Nervous System,' by William H. Thomson, and 'The Story of Sicily,' by the late Prof. Freeman, are among the announcements of the Putnams.

The second volume of the 'Memorial History' of the city of New York, edited by James Grant Wilson, is now in the printer's hands, and is expected to appear in May.

Harper & Bros. are soon to publish 'The Kansas Conflict,' by Charles Robinson, formerly Governor of Kansas. They also announce a new edition of Hardy's 'Tess of the D'Urbervilles,' revised and expanded by the author.

Several reprints lie upon our table, among them two editions of 'Rasselas,' one issued by Leach, Shewell & Sanborn, in their "Students' Series of English Classics," edited by Prof. F. N. Scott, and the other by the Putnams as vol. 36 of their tasteful "Knickerbocker Nuggets"; 'Select Essays of Macaulay,' five in number and all literary, edited by Samuel Thurber (Boston: Allyn & Bacon); Milton's "Samson Agonistes," in the Pitt Press Series (Cambridge: University Press; New York: Macmillan), with introduction, notes, glossary, and indexes, by A. Wilson Verity; 'Political Pamphlets,' being the fourth volume in the Pocket Library of English Literature (Macmillan), edited by George Saintsbury and comprising the more famous writings in that sort by Defoe, Swift, Burke, Sydney Smith, Cobbett, and Scott; 'Horae Sabbaticae,' two volumes made up of contributions by Sir James F. Stephen to the *Saturday Review* (Macmillan); and two volumes in the Brantwood edition of Ruskin's works, 'The Eagle's Nest,' and 'The Crown of Wild Olives' (Charles E. Merrill & Co.). We may also dismiss with brief mention here the two most recent volumes issued by A. C. McClurg & Co., Chicago, in their "Masterpieces of Foreign Authors" series—namely, 'The Thoughts of Novalis,' edited and translated by M. J. Hope, and 'The Comedies of Carlo Goldoni,' edited with an introduction by Helen Zimmern.

B. Westermann & Co. send us a copy of the final revision of the German Bible. The "Probe-Bibel" was issued in 1883, with the request that all scholars interested would suggest emendations; the present version is put forth by a committee of the evangelical "Kirchenconferenz," and presumably represents the consensus of German scholarship.

Mr. Frank M. Etting's 'Hall of Independence,' an historical account of the old State House of Pennsylvania, has gone into a second edition, with some additions (Philadelphia: Porter & Coates). A volume in which local interest has not in a similar way become general, is 'Newburgh, her Institutions, Industries, and Leading Citizens' (Newburgh, N. Y.: Ritchie & Hull).

In her 'Love-Letters of a Worldly Woman' (Harpers), Mrs. W. K. Clifford gives us, in the form of correspondence, glimpses of the love-affairs, and the ideas of marriage and life, of three women who sometimes make the reader suspect that they are scarcely human, to say nothing of "worldly." However, a good deal of thought and suggestiveness has got into the book, and many of the experiences it portrays are more typical now than in the days of our grandmothers.

Four parts are promised of D. A. Gregg's 'Architectural Rendering in Pen and Ink' (Boston: Ticknor & Co.); the two now received are confined to the simplest problems and are by no means a complete treatise on pen-drawing, but a series of lessons in the making of architectural pictures, embodying the methods of an accomplished draughtsman and a teacher of experience. The directions are clear and technical, accompanying a set of outlines to be worked up by students according to example and precept. Mr. Gregg naturally insists first and last on the quality and use of the line. There is no exposition of principles or study of mere representation. But then, pen-drawing is the least literal of all graphic representations: all its processes are of suggestion and interpretation, not of imitation. It has, quite apart from its subject and likeness, a beauty or ugliness of its own that will intrude, and the draughtsman has got to master this, or he cannot make a good pen-drawing. His lines are there and insist on recognition; he must learn to use them attractively and economically, and this is what Mr. Gregg undertakes to teach. Thus far he deals only with plain and simply picturesque buildings; we shall be interested to see how he treats the higher and more difficult problems of monumental architecture, if he goes so far.

Perhaps nothing shows more strikingly the difference between the ancient world and the modern than the decay of symbolism. Symbolism is the natural refuge of primitive man in art, as pantheism, its correlative, is in religion; so that we find the earliest art, and through tradition ancient art, everywhere pervaded and in great measure shaped by it. But to the modern mind, absorbed in realism and in science, symbolism is a forgotten and unsympathetic thing; and one of the chief difficulties

that moderns have in comprehending ancient art lies in their want of sympathy and understanding of this phase of it. Mr. W. R. Lethaby, in 'Architecture, Mysticism, and Myth' (London: Percival & Co.), has gathered up some of the most general and widely diffused symbolisms that have found expression in old architecture, particularly those in which are imaged the structure or phenomena of the outer world, illustrating them by abundant quotation from many authorities. In a dozen well-written chapters he discusses the orientation of buildings, the dome of the sky, the gate of the sun, the starring of ceilings, the labyrinth, and like topics, leisurely, and without close analysis or much attempt at generalization. Such embodying of analogies, it must be said, has hardly had in architecture, where construction and use have from the beginning been the determining factors, the control that it has had in the decorative arts; nevertheless the idea of it pleased and more or less influenced the early builders, and is interesting to follow in the history of art. Mr. Lethaby's book contains a variety of curious reading, and if any means were provided for referring back to what is in it without rereading, it would be a storehouse of many interesting ideas.

Mr. W. Ward Fowler's 'Julius Cæsar and the Foundation of the Roman Imperial System' (Putnams) is a volume in the series of "Heroes of the Nations." It is intended for persons unfamiliar with the classics, and is well written, by a man who knows his subject, and may be heartily recommended as a useful guide. It is excellently printed, and its illustrations, except for the ridiculous head and tail-pieces, are drawn from trustworthy sources. But the binding cannot be praised for its beauty.

With the publication of the second volume of Mr. Warr's translation, English readers have complete Schwabe's latest revision of Teuffel's 'History of Roman Literature' (London: George Bell & Sons; New York: Macmillan). The original is too well known to call for extended remark here. It has been well said of the book that it is *annales*, not *historia:* it is invaluable for the facts and is perfectly indispensable to scholars, but one looks into it in vain for any broad, philosophic treatment of either the intellectual or the literary development of Rome. For this, recourse must be had to other works. Mr. Warr has done his work well, and has added many useful English references. The only fault to be found with this volume is that in it, as we remarked of the first, we are too constantly reminded that it is a translation by his over-fidelity to the German original.

The third volume of Sir John Lubbock's "Modern Science Series" is 'The Oak, a Popular Introduction to Forest Botany,' by H. Marshall Ward (Appletons). In this little book is traced the life-history of an oak, beginning with the structure of an acorn, and passing through the structure and physiology of root and stem and leaf and blossom to acorn again. Very minute descriptions are given of the microscopic structure of the wood and bark, and many figures are inserted to illustrate what is said. The few original figures are clear, and easy to understand; but some of those which are borrowed from German publications are indistinct, especially as to the reference-letters along the margin. One chapter treats of the cultivation of the tree and of the diseases and injuries to which it is liable. In the last chapter it is revealed that the oak is, after all, only one of some 300 species of the genus; it is, however, the only British species, and therefore it is here treated as if it stood alone in its arboreal glory. The oaks of North America are many, and furnish various diversities in leaf, wood, bark, fruit, etc.; but all this must be already well understood by any one who has technical learning enough to read this 'Popular Introduction.'

Considering the number of Swiss who write French, the contributions of the Swiss to French literature are surprisingly few. Calvin, Voltaire, Rousseau, Sainte-Beuve, Amiel, and Scherer have all more or less connection with Geneva itself, or with Lausanne. Marc Monnier was a Swiss, and so is M. Cherbuliez. But the showing is not impressive, and any recruit is welcome. Doubly welcome is a recruit so well armed as M. Édouard Rod, and so skilled in the art. M. Rod is a professor at the University of Geneva; he is also a novelist, and he is a critic singularly acute in the discussion of literature from its ethical side, as becomes a fellow-townsman of Calvin and Rousseau. His volume of essays on 'Les Idées Morales du Temps Présent' has reached a third edition; and now he has written the volume on Stendhal for M. Jusserand's always admirable series, "Les Grands Écrivains Français." Although M. Rod does not seem to be aware of the biography of Henri Beyle, published in England twenty years or so ago by Mr. A. A. Paton, he has not neglected the diaries recently issued in Paris, and these have helped him in the portraying of a character sufficiently remarkable to be worthy of study and analysis. Stendhal, unsuccessful in his own generation, comforted himself by the assurance that he would be popular in 1880, and, oddly enough, it was about 1880 that the 'Chartreuse de Parme' and 'Le Rouge et le Noir' had their vogue, now already somewhat abated. M. Rod's book is a little cold-blooded, perhaps, but eminently careful, critical, sane.

The nine-sheet contoured map of the United States, prepared by the Geological Survey last summer, is now followed by a similar map on a single sheet and smaller scale. Like its predecessor, it is extremely convenient in looking up the approximate altitude of any part of the country, and will doubtless be made good use of by geographical publishers. An edition without lettering, to serve as a base map in various geological studies, presents an instructive picture of our country. Mr. Henry Gannett, geographer to the Survey, under whose direction these maps have been prepared, has just issued a second edition of his 'Dictionary of Altitudes' (Bulletin 76), in which the heights of all determined towns and mountains in the United States are given in alphabetical order —a very serviceable compilation. The topographical sheets of the different parts of the country, made in Mr. Gannett's division of the Geological Survey, are unfortunately not issued as yet for public distribution, but are prepared only to serve as base for geological coloring later on. A large number of these sheets have now been lithographed in excellent form, and embody a fund of geographical information nowhere else to be found.

The generous proportions and range of the first number of the *New World* (Boston: Houghton, Mifflin & Co.) give promise of a distinct addition to theological literature of the quarterly genus, and demonstrate, as do the statistics of publishers, that the theological stage of human culture has taken much more time to pass away than Comte gave it.

The Senate of the University of St. Andrews has decided to admit women to the departments of theology, art, and sciences. The fact that this, the most venerable institution of learning in Scotland, opens its doors to women almost at the same time with Yale's decision that hereafter all postgraduate courses in her academic department shall be open to them, illustrates the international quality of advance movements. So also does the selection by the Royal University of Ireland of two women as cadet members of its faculty. Miss Mary Story, M.A., the new assistant examiner in French at the Royal University, entered it in 1882, carried off "honors" at successive examinations, until in 1889, at the University's M.A. examination, she scored first place—first-class honors in modern literature, and the £500 scholarship, the highest award in the gift of the University. This year her brilliant talents have received a by no means tardy recognition at the hands of her Alma Mater, through her appointment to a post not before held by a woman. Miss Margaret Kerr Johnston, M.A., the new assistant examiner in physics, with a scarcely less brilliant record, matriculated at the Royal University in 1884, and graduated as M.A. in 1888. Since then her post-graduate work at the College of Science, Dublin, has been of so high a grade as to secure from her former teachers the unusual recognition of an invitation to take a place in their ranks.

Our notice last week of G. Holden Pike's Life of Spurgeon was incorrect in saying that it contained no mention of the "Down-Grade Controversy." Spurgeon is quoted characteristically with reference to that matter on pages 338–9.

—The most notable article in the April *Atlantic*, on "Federal Taxation of Lotteries," by Judge Cooley, has already been noticed in these columns. Another interesting political subject is taken up by the writer of the unsigned short political papers, which have deservedly attracted wide attention. He writes a few pages in this number on our method of electing Congressmen, and advocates a simple modification of the reform proposed by Thomas Hare, by means of which representation must always be in proportion to the votes cast. The scheme has for its end what is commonly known as minority representation, and the argument is derived mainly from an analysis of the working of the present system, showing that each party suffers in turn from what the writer styles "the legal disfranchisement" of their voters. Thus in 1888 in thirteen States the Democrats polled 41 per cent. of the votes, but secured only 13 8-10 per cent. of the Representatives; they got 13 Congressmen when they were entitled to 41. In 1890 in thirteen States the Republicans polled 41 per cent. of the votes and got 10 per cent. of the Representatives; they got 12 Congressmen when they were entitled to 48. In 1888 the Democrats of seven States polled 38 5-10 per cent. of the vote and got no Congressmen, though they were entitled to 10. On such facts as these the writer affirms that our present system results not in representation, but in gross misrepresentation. The system he proposes avoids some of the difficulties of that advanced by Hare, and certainly presents the measure in a simplified form. A third interesting article urges the study of literature upon the ministry with a frankness and emphasis proportioned to what the author thinks the necessity of the case; and it must be said that he presents both the case and the remedy in a very lively way. "Some Notes on French Impressionism," by Cecilia Waern, describes the aim and work of a portion of modern French art in a sympathetic and illuminating

way. Of the remaining articles the characterization of Admiral Farragut deserves special mention.

—The *Century* contains a variety of articles of very even interest. The leading paper, upon "Our Common Roads," which is elaborately illustrated, is of most practical value; but those upon "The Mother and Birth-Place of Washington," "The Total Solar Eclipses of 1889," "Fishing for Pearls in Australia," and "The Ocean Postal Service," are all papers of real value. Artists and students of the fine arts will find in Mr. Edward Robinson's discussion, "Did the Greeks Paint their Sculptures?" an extended examination of this question, and can hardly resist the conclusions advanced on the affirmative side. It must remain doubtful how far this use of color was a tradition and should be regarded as an adverse but socially necessary condition under which the Greek love of pure form was obliged to find expression. The friends whom Wolcott Balestier has made by his writings will find an appreciative memorial sketch of him by Edmund Gosse, which will quicken regret for the early death of this talented American.

—*Harper's* makes a contribution to Shelley literature by the hand of Signor Biagi, who has searched the State archives of Lucca and Florence for the official documents relating to the burning of Shelley's body at Viareggio, and has succeeded in identifying the spot on which the cremation took place by the testimony of eight witnesses of the scene who still survive. The text of the paper is largely made up of the well-known passages from the recollections of Mary Shelley and of Trelawny, nor do the new documents add much, except in the way of minute detail, to what we already possess; but the identification of the locality is important for the sake of the memorial to be erected at Viareggio on the poet's centenary. It is interesting to learn that the burning of the body gave rise to an oath among the fishermen: "May I be burnt like the *Ingresi* [*sic*] at Du' Fossi!" One of the witnesses also said that it was believed "that when the ashes were taken to England, the dead came to life again." In the remainder of the number the most entertaining paper is Mr. Eugene Lawrence's account of the alleged connection of Columbus with the pirates who preyed on the Venetian commerce, and of the mediæval traits of his personality in general. Mr. Julian Ralph contributes two papers, one on Lake Superior, the other on municipal administration in the West. The English public schools give occasion for an educational article. In the "Study" Mr. Warner begins his new duties with an appreciation and literary notice of Lounsbury's 'Chaucer.'

—*Scribner's* begins the long-promised series of special papers on the condition of the poor in the great cities of the world. The first article, which is well illustrated, is concerned with the "Social Awakening in London," and reviews in succession the various movements in which philanthropy takes form there. The work of the churches is touched upon, and the extent to which intelligence has leavened the methods of the new missionaries is strikingly shown by the single detail that one of the high ritualistic churches in a criminal part of London supports a boys' club in which prize sparring contests are the main feature. After the parish churches come the Salvation Army, the Holiday funds, the Food and Shelter depots, the University Settlements—which are the most picturesque element in the moral movement—the Polytechnics, of which we have before had a detailed account, the People's Palace, the artist propaganda through the Kyrle Club and Miss Octavia Hill, the more revolutionary preaching of the artistic and literary "proletariat," as it is called, and finally a new and sympathetic view of the great strike at the docks and the personal force of the leader of the strikers, John Burns. Here are a multitude of influences, not associated, but playing in favor of similar ends, and the further organization and outcome of it all will be watched with great interest. The stimulating and educating effect of these efforts in England must also be widely felt among ourselves and in other branches of the race. The only other specially noteworthy article is Senator Ross's vigorous account of the scene when he cast his vote, the deciding vote, in the case of the impeachment of Johnson.

—*Nature* of February 25 contains the translation of an article by M. Poincaré, formerly of Nancy, one of the most eminent of French mathematicians, in which the ground is taken that the axioms of geometry are only conventions, or definitions in disguise. But we are bound to say that the essay in question is very far from reaching the usual level of that accomplished mathematician, and betrays marks of having been written from a study of the subject not altogether ripe. If we may venture to say so, we do not think he is quite master of his Riemann in this particular direction. Every competent student has seen that if the terms of geometry, such as straight line, equal length, etc., are defined in a purely abstract manner, so as not to be essentially connected with any particular concrete experiences, then any propositions compounded of such terms can have no reference to experience. But Riemann supposes that these terms are defined by the motion of a body experientially determined to be rigid. This being done, propositions about such terms are statements of fact, and there is no room for conventions about them. There are many slips in Poincaré's paper which illustrate his hasty study of the subject. Thus, he states that in the elliptic geometry "there are exceptional cases where an infinite number of straight lines can be drawn between" two points. This is an error, for it would follow that any two straight lines lying in one plane intersect in two points, contrary to the definition of a straight line. In fact, those two points must be regarded as coinciding. In the ordinary Euclidian geometry, if we have an infinitely thin and infinitely extended sheet of paper, and if a straight line be drawn on that paper and extended without limit even at infinity, when it comes round into itself it will appear on the other side of the paper (as perspective will show). Now there is just as much ground for saying that that line must pass through infinity twice in order to return into itself, as there is for M. Poincaré's statement about elliptic space, for elliptic and parabolic space differ solely in their metric, and not in their intersectional properties. There are several other similar indications that Poincaré's views are not well digested. Thus, he says that if we had discovered that the parallaxes of a star could be negative, or else that they had an inferior positive limit, "we could either renounce Euclidian geometry, or modify the laws of optics, and admit that light is not propagated strictly in straight lines. It is useless to add that every one would regard the latter solution as preferable." But he does not observe that it would in that case not only be necessary to suppose that light was not propagated in straight lines, but also that the curvature of its path differed in different parts of space; and it can hardly be said that this supposition that different parts of space had different mechanical properties would be by "every one" regarded as preferable to supposing that space has everywhere the same properties—the supposition upon which the non-Euclidian geometry is founded.

CARSON'S SUPREME COURT—II.

The Supreme Court of the United States: Its History. By Hampton L. Carson of the Philadelphia Bar. And its Centennial Celebration February 4, 1890, prepared under direction of the Judiciary Centennial Committee. Philadelphia: John Y. Huber Co. 1891.

THE greatest and best services which the Supreme Court has rendered to the United States were rendered amidst the disturbing influences of political associations. There are decisions on Constitutional questions which depend on the previous political training of the judges and are known before they are pronounced. If they do nothing more nor less than record the political impressions of the men who make them, they are political and not judicial. Our State judiciaries have recorded many such. That the early judges of Washington and Adams would construe the Constitution according to Federal principles was inevitable; but there are two periods in the life of the Supreme Court when its decisions rose above the political training of the judges, and their results are inestimable.

At the time of the adoption of the Constitution there were two parties in the then "confederacy"—a party which was in favor of nationality through a federated, central, general Government, and a party which was opposed to it. Washington, who was then in that period of his life which may well be defined as our "First in War," saw with wonderful clearness and sagacity the realities which have not become visible to all Americans until our own day—the dissoluble nature of merely confederated States, and the absolute necessity of a national power based on a perpetual union. When he became President of the Convention, he entered upon his second period of "First in Peace." With him went by voluntary action all of the States of the Confederacy and a majority of the people. The establishment of a national Government was of necessity a surrender, more or less, of State authority.

When this governmental departure had been taken deliberately, voluntarily, and with the express consent of every State that chose to enter the new nationality, it was right and proper that the new national system should be organized and defined by those who had established it, and not by those who were still opposed to it. In other words, it was right that the Supreme Court should be composed of Federalists—that is to say, of men who believed in the new nationality, and not of men who thought it their mission to undo or belittle what had been done. Nevertheless, though composed of Federalists, it was the duty of the Court to be scrupulously judicial.

The three men who saw most clearly in the future the significant import of the judicial power were Washington, Jefferson, and Marshall. The first divined with profound wisdom at the very outset that in this the framers of the Constitution had "builded better

than they knew," and that the Federal judiciary was the rock upon which a national Government must sooner or later rest. The second saw, but not so soon, that the Supreme Court, as organized by Washington, was a tremendous latent force, guarding the principle of nationality, which could become active and hurl back Presidents and Congresses whenever they approached the ark too closely. The third carried the work of Washington to a glorious completion, apprehending aright the greatness of his opportunity and the immense importance of his task; harassed, though scarcely baffled, in the later years of his life; rising always above the excitement or disappointment of the hour, and calmly establishing great principles which would be as enduring as the Constitution itself. It was during this period of interpretation that the judges of the Supreme Court for the most part rose above their own political training, and gave the country Constitutional decisions which were preëminently judicial.

The third period of Constitutional interpretation began with the departure of the great Chief Justice, or, rather, with the decision in the Mayor of New York vs. Miln (1837), when Marshall and Story were reversed by Taney and Barbour. It ended with the explosion in the Dred Scott case. From first to last the judicial weakness of the Court is demonstrated by its endless divisions. In every case where questions affecting our composite government were involved, the Court was divided in its conclusion, and, what is more significant, the majority were divided in the reasons on which their conclusion rested. The decision in the Passenger Cases (1849) is a lamentable, if not shameful, exhibition of judicial discord, which might well have set the world to asking whether the powers and functions of government can be subjects of judicial determination, and whether the Supreme Court really knew more about the Constitution than any other intelligent debating society. Mr. Carson, with all his reverence for the Court, sadly writes: "Such was the diversity and conflict of views, even among the judges concurring in the prevailing opinion, that the reporter frankly declares that 'there was no opinion of the Court as a court.'" Yet all of this turmoil was raised by the single, simple question whether a law of New York imposing a tax upon vessels for the passengers which they brought in was Constitutional. This lack of guiding and controlling principles must be ascribed to the fact that the greater part of the judges at last perceived that the Constitutional canons of construction, established by the Court prior to 1835, were vitally essential to the preservation of national authority, but nevertheless awkwardly endeavored to reconcile these new perceptions with their early political training upon State rights and strict construction; that they were weakly struggling to reconcile the irreconcilable, or to ride two horses in opposite directions at the same time. It also seems plain that the minority—the senior judges, Story and Wayne—in their sensitiveness at the overruling of the old principles, went too far in their attempted application of them; further than they would have gone if the strong and steady hand had been at the helm which previously had kept the vessel on her true course.

But let us look at the decision which closed the period, and which is unhappily characteristic of its Constitutional interpretations. It is now thirty-five years since (March 6, 1857) Chief-Justice Taney, "in a voice scarcely audible," as was said by the newspaper reporters at the time, read the opinion of the Supreme Court in the case of Dred Scott. Since then a combination of changes—social, political, Constitutional—has come to the American people, greater, probably, than ever befell another nation in a century. During the long interval we have learned to look calmly upon the passionate excitements of the former time; to look at them philosophically from our opponents' points of view. Approaching the decision now in this spirit, and hoping to find some justification that has heretofore been unperceived, we are constrained to say that it was a decision which ought never to have been made; a decision whose errors, when tried by judicial tests, appear to be without palliation. The decision in Chisholm v. Georgia was unfortunate, in the Passenger Cases lamentable, in Dred Scott reprehensible. We bear in mind the excellent personal character of every judge, the learning, ability, and general integrity of the men, the dignity of the Court; and yet we think that the decision is one which should never be forgiven. The reason for this severe conclusion is plain. If the novel and undefined, and consequently unknown, power of setting bounds to the legislative and executive acts of a nation is to be confided to a judicial tribunal, it is a vital condition to the exercise of that power that the tribunal be held to judicial action and upon strictly judicial principles.

In the midst of an intensely exciting political struggle, in which the ablest Americans of the day were exerting their utmost energies in research and argument, and in which the crucial question was whether the nation should thereafter allow the extension of slavery into territory then free by the admission of slave States, the Supreme Court deliberately went out of its way, after having once decided the suit before the Court in conference upon non-political grounds, and after having agreed upon an opinion which would have judicially disposed of the case, to pronounce a decision upon a point not necessarily or properly before the Court, which would render to the political party of the majority of the judges the greatest assistance that it was possible for a court to give; and the judges who united in the judgment based their momentous conclusion upon reasons or excuses so varied that they might be pronounced disgraceful for any court in any case. Mr. Lincoln well said, in his calm, logical way, in the Cooper Institute address:

"Waiving the lawyer's distinction between dictum and decision, the Court have decided the question for you in a sort of way. The Court have substantially said it is your Constitutional right to take slaves into the Federal territories, and to hold them there as property. When I say that the decision was made in a sort of way, I mean it was made in a divided court, by a bare majority of the judges, and they not agreeing with one another in the reasons for making it; that it is so made that its avowed supporters disagree with one another about its meaning, and that it was mainly based upon a mistaken statement of fact—the statement in the opinion that 'the right of property in a slave is distinctly and expressly affirmed in the Constitution.' An inspection of the Constitution will show that the right of property in a slave is not '*distinctly* and *expressly* affirmed' in it. Bear in mind, the Judges do not pledge their judicial opinion that such right is *impliedly* affirmed in the Constitution; but they pledge their veracity that it is *distinctly* and *expressly* affirmed there—'distinctly,' that is, not mingled with anything else; 'expressly,' that is, in words meaning just that without the aid of any inference, and susceptible of no other meaning." (The italics are Mr. Lincoln's.)

In a word, the majority of the Supreme Court set themselves up as five judicial statesmen whose discordant fiat should so completely fetter a great nation that, if the Legislatures of all the States and the Congress of the General Government should unanimously unite in voting to exclude slavery from the national territory, their statutes would be nugatory and void. The five judges substantially said: "The States cannot legislate for the Territories; and the General Government cannot legislate against slavery. We declare the people of the United States to be without power in this matter. Slavery is an institution above the control of Federal law, and, until the Territories becomes States, is free to go where it pleases." And this monstrous assumption of authority was confessedly to extinguish the political agitation of the time.

The best, and clearest, and most incisive analysis ever made of the Dred Scott decision was by John A. Andrew while a member of the Massachusetts Legislature. Mr. Carson has stated the case fairly; his explanatory comments show much painstaking investigation; he quotes the adverse comments of such Democrats as the late Clarkson N. Potter, and he censures the decision himself in a temperate way; but it would have been better for the book, if not for the decision, had he taken Gov. Andrew's analysis, or at least set it forth as a footnote.

The fourth period of Constitutional construction is the second one which revives the confidence of thinking men in the possibility of a judicial tribunal sitting as a supreme arbiter of national questions and determining them judicially. Until the Dred Scott decision there had been but one act of Congress declared unconstitutional. Since that time Federal legislation has received many and severe blows. But the remarkable and cheering facts are (1) that these blows came from a court composed almost entirely of judges who owed their appointments to the party which made the enactments that the Court condemned; and (2) that many of the decisions were rendered, against the embittered public sentiment of the hour, in favor of an unfortunate and conquered people. Some of these decisions conflict with the intuitions of common sense; some push a principle to an absurd extreme; some betray the irritation of conflicting opinions within the tribunal; yet, nevertheless, they will stand as noble efforts of an independent tribunal to maintain the local authority of State Governments and to uphold the weak against the strong.

In dealing with this period, Mr. Carson's hand grows weary—perhaps because of the number of the cases, perhaps because it was weighted with the discouraging sense of his readers' knowing too much of the subject. His comments are generally case by case, and rarely bring into view the relations of things as in the previous periods of Constitutional interpretation. The decisions in regard to pardon and amnesty form a novel and interesting chapter in our Constitutional history. In at least one instance a statute was held to be unconstitutional because it denied to a pardon produced in a civil suit the full effect which it was the prerogative of the President to impart to it; and in many instances an effect was ascribed to pardons or amnesty proclamations which entirely negatived the intent of statutes. The Court adopted the fiction of early English cases, upholding the prerogative of the Crown, that an unconditional pardon closes the eyes of the judges to the offence as completely as if it had never been committed; and applied the doctrine on the civil side of litigation so that in closing its eyes to the crime the Court could

not behold the fact. This swept away in an instant the distinctions which Congress had carefully and properly made between those who had, and those who had not, given aid to the rebellion; and it awarded to the enemies of the Government the benefits which Congress had carefully reserved to its adherents. Mr. Carson does not bring this out; and, while mentioning most of the cases, he omits, both from his text and table of cases, the short but notable decision in Armstrong's Foundry, where a pardon granted after judgment was brought into court and used to reverse the case.

In the novel application of other principles to the affairs of the civil war, the Supreme Court also seems to have lost its head; and notably in the non-intercourse cases, where refinements resulted in irreparable injustice to Northern creditors, and opinions sound much more like mediæval law than like common sense of this century. The artificial reasoning was carried to an absurd length, and ended in the wild conclusions that a Confederate officer marching with the Confederate army in Confederate territory, whose legal domicile happened to be in New Orleans, was (constructively) an enemy of the Confederate citizens around him; while a Union soldier shooting rebels, whose domicile happened to be within the Confederate lines, was (constructively) their friend (Desmare v. The United States, 93 U. S. Rep. 605; United States v. Quigley, 103 id. 595). With regard to pardon and amnesty we may also note a case where the fiction of a court not seeing an offence led to the logical result that if the plaintiff had been guilty of treason he could recover against the Government itself, but if he had violated no law, he could not receive the assistance of the Court (Carlisle v. The United States, 16 Wallace R. 147).

It is not the purpose of Mr. Carson's work to criticise the Supreme Court, to magnify its errors or bring into view its shortcomings; yet there are some things which he might well have made the subject of respectful remonstrance. Of these we note the pernicious practice of affirmance by a divided court. Two cases precisely alike go up at slightly different times. The judgment in the first is affirmed by the equal division of the eight judges who happen to be on the bench; the *plaintiff* wins, and the defendant loses, and is without remedy. The second is decided by a full bench and is reversed; the *defendant* wins, and the result is the exact opposite of the previous judgment. Such decisions by the court of last resort bring reproach upon the law, and make the administration of justice a lottery.

In reviewing the century of decisions it also becomes plain that not the least act of Marshall's wisdom was his bringing the Court into a dignified state of silence and reticence, and making it speak, not by one organ, but with one voice. The discordant dissensions of the judges since Taney went upon the bench are evidences of inherent weakness, and are not suggestive of high intellectual reasoning, nor of dispassionate, unbiassed judgment. The multiplicity of ambitious opinions goes far to account for the arrears of the docket. It is plain that the best energies of the men have been expended, not in doing the work of the Court, but in proving that everybody else was wrong. A small, mild-mannered judicial mob, hurling conflicting opinions at each other, destroys a belief in the reality of the law, and makes the unprofessional world doubt whether the judges know more of the law than they do themselves.

A disregard of the principle of *stare decisis* is undoubtedly the greatest evil of the American bench. It is the offspring of egotism and dogmatism; the result of putting loosely trained lawyers upon the bench, having little reverence and much arrogance, and the mischievous vanity of thinking that they know more than all the men who have gone before them. When the law has been declared by the court of last resort, it is the law, and is as obligatory upon judges as upon Presidents. It then passes out of the domain of judicature and can be altered only by the law-making power. A legislative alteration causes no wrong, for all men know it; but a judicial alteration is an *ex post facto* law. The Supreme Court has not been above this; and it would be an interesting question in speculative philosophy whether the sorrows and sufferings and losses of the civil war are not directly attributable to it. Certain it is that if Marshall and his first associates could have lived a generation longer, the idea of secession and rebellion would have seemed as impossible to the public of 1861 as it seems to us in 1892. The principles laid down by the Supreme Court in the first third of the century necessitated a national Government and indissoluble Union; rebellion against the principle of *stare decisis* opened the gate to the throng of troubles which we trust have for ever passed away. There can be no graver offence in one who administers the law, short of actual criminality, than the conduct of Mr. Justice Baldwin, as detailed by himself and quoted by Mr. Carson (p. 280). But the Supreme Court has given one admirable example of what judges should do in the interesting and remarkable case of La Peyre (17 Wallace, 191), which, we regret to add, Mr. Carson seems to have overlooked.

A single question, absolutely new, was involved—whether a proclamation of the President took effect at the time of its date or of its publication. The Court, being divided and in doubt, did precisely what a court should do in such a case, ordered a reargument. Finally, four of the judges agreed in the opinion of Mr. Justice Swayne, that the proclamation took effect from its date, and four in the opinion of Mr. Justice Hunt, that it took effect from its publication. The ninth member of the Court agreed only in the conclusion of Mr. Justice Swayne. Here, then, was a tribunal as evenly divided as it was possible for a court of nine members to be; yet, having done all that was possible to attain unanimity, and having reached a decision, the Court refused in subsequent cases to reconsider the question, and unanimously enforced the law as it had been declared.

The chief defect in Mr. Carson's work is a lack of precision which the general reader may not observe, but which is annoying to the historical or professional student. The death of Chief-Justice Marshall was one of the great events in the history of the Court. We turn where the index directs us, to find that at the time of his death "three cases of unusual importance and interest were pending." We turn back and find nothing more than that "in the following summer Chief-Justice Marshall died." We search for the year that preceded this "summer," and the first which is named specifically is 1831. We wish to know when Rutledge resigned his commission as Associate Judge, and why; and all that we can find is (p. 161): "In the meantime John Rutledge had resigned," and again (p. 183): "Rutledge had resigned after a few months of service on the circuit." Georgia and Pennsylvania both forcibly resisted the mandate of the Supreme Court. We look in the index, and find "Georgia, Defiance of, to decisions of the Supreme Court"; but under "Pennsylvania" the only entry is, "controversy between, and Connecticut." The index, moreover, does not embrace the commentaries of the very able lawyers whose addresses are no unimportant part of the book.

Mr. Carson's work is not a philosophical treatise on the Supreme Court, and it is well that it is not, for the philosophical writer is a man of theories, and arrays his facts to sustain them. This book is more properly a narrative in which the facts are stated clearly and with admirable fairness, the author being manifestly happy in bringing into view the strongest and best reasoning of either side. Mr. Carson, indeed, has written with entire frankness and without apology or excuse, from a Federalist point of view; and in this he has done well. The State-rights doctrine is now a thing of the past, a speculative idea, as completely behind us as the Articles of Confederation. No one accustomed to tracing causes and effects can look over the historic field and fail to see that the Government of Jefferson was a government of conflicting sovereignties, with the immediate effect that every citizen was called upon to serve two masters, to hold to the one and despise the other, and with the inevitable result that, sooner or later, the conflicting interests of a vast territory would rend the Government in twain. And he cannot fail to see that the Constitution of Marshall is the only bond which the human understanding has yet devised sufficiently strong to withstand the strain; sufficiently flexible to commit local affairs to local administration; fully adapted to the widely extended sovereignty of a free people, and able to develop and maintain the closer union of our modern civilization.

Two Happy Years in Ceylon. By C. F. Gordon-Cumming. Illustrated by the Author. 2 vols. 8vo. Charles Scribner's Sons. 1892.

THIS title-page will remind most people of the Gordon-Cumming who was so prominent in the baccarat scandal of the Prince of Wales, and the more as it hides the author's sex. The truth is that the letters C. F. are the initials of Constance Frederica, and the authoress is an aunt of the noble and notorious gambler. Lady Cumming's book has 880 pages, and so would have made the ancient cynic cry out, "A great book a great bore!" India hangs down into the equatorial ocean, as it were a stalactite from the roof of a cave, while Ceylon is a fragment dropping off of it. Were the rest of Victoria's Oriental empire treated on a scale commensurate with Lady Cumming's Ceylon, the volumes would run up far into the second hundred, and it would be doubly true that "the world could not contain the books that would be written."

When we examine the grand book on Ceylon, we cease to wonder at its bulk. Its framework is the details of journeys by steamers, boats of all sizes, carriages, bullock-carts, etc., to all parts of the island except the extreme north. The date of these tours, hidden all through the first volume, we at last discover to have been 1872 and 1873. But the fates and fortunes of the places visited during these "two happy years" are described through the two decades which have since elapsed. These descriptions are supplemented by a score and more of intermingled monographs. Some of these are on the fauna and flora. Others are on races and religions; on economic possibilities of many plants, animals, and industries; the rise and fall of coffee and many other cultures; the vicissitudes of cocoanut-raising; salt-making in lagoons, and gem-

hunting in mines. As the author was not a huntress, she gives a zest to her narrative by twenty pages from the diary of her brother, who had been a Nimrod among the island tigers "about the time of her introduction to 'Robinson Crusoe.'" When the lady's pilgrimage brought her to a tank, she launched out in an account of that sort of reservoir in all ages and down to the restorations of most recent years. She met a botanist, and seems to have stolen his herbal. A herpetologist allowed her to copy from him something concerning seventy-nine snakes and all the other island reptiles. She was a guest of the Chief of Police, who "talked shop" to her till she had filled thirty pages with a sketch of his department (ii., 242–272). The last eighty-six pages contain historical and statistical notices of Christian missions, and in almost every preceding chapter we find pages regarding the colonies, wars, and administrations of Portuguese, Dutch, and English. In addition to this, well-nigh every subject is shown as related by way of resemblance or contrast to something of the sort in all the continents. More than thirty foot-notes refer to others of the lady's books of travel.

The contents, then, of Lady Cumming's volumes forbid us to marvel at their magnitude. Their multifariousness, however, forces us to say that her production is worthy of a more pretentious title. Such a name as "The Ceylonese Encyclopædia (or Pancyclopædia)" would befit it well. Nobody can read a chapter without feeling that he has been learning something he is glad to know, and which he would despair of finding in any other book. A good index also facilitates turning again to every notable passage as to which a reader may wish to refresh his memory.

Lady Cumming is preëminently an artist in water-colors. Her rule was never to let a day pass without a sketch. Her journal shows how religiously she adhered to this rule in spite of obstacles which none but an enthusiast could surmount. Three score of her Ceylonese paintings selected from several hundreds were exhibited at the South Kensington Museum, and not a few of them engraved in these volumes are well described in her letter-press. The minute peculiarities of the island life in costume, monuments, house-building and furnishing, festivals, pilgrimages, have never been caught by a more inevitable eye or set forth in more apt words. Nothing could be more charming than to hear Lady Cumming expatiating—no matter in what long-drawn gossip—upon her sketches, say of Adam's Peak, or of her double canoe, or Anuradhapura.

The story of her pilgrimage to Adam's Peak and climb to its topmost pinnacle—7,352 feet—fills thirty-five pages, and shows how zealously and adroitly she pursued knowledge under difficulties. Adam's foot-print, which Hindus, Moslems, and Christians all reverence, is on the top of the topmost rock and jealously guarded all day. Having seen many copies of this famous relic, she was determined to ascertain its exact length. Stealing out of her camp after dark, she found the sacred summit deserted by the guards, and hastened to stretch herself in the hollow of the holy print. Its length was four and one half inches more than that of her whole body, and therefore she says "exactly six feet." We thus learn the stature of Lady Cumming to be considerably taller than that of the Medicean Venus. Her age she does not tell us, but it will gratify some readers to know that it is now fifty-five years.

After all, the saying of Hesiod proves true, that "half is more than the whole," and that "he is a fool who does not know it." Much of the two volumes strikes the reader as padding—new patches on an old garment. In speaking of a mountain retreat, where she sketched, Lady Cumming "uses vain repetitions as the heathen do." Within twenty-two lines she specifies the names of thirty-five flowers which perfumed it. A score, or at least a dozen, of these flowers form a series again and again in other descriptions, till, even if a reader does not skip them, they make no impression on him. How would it fare with Abraham in Holy Writ if his name were always weighted with all the generations from Adam, Seth, Enos? Had *Dogberry* known what was meant by *tedious*, he could not have found it in his heart to bestow all his tediousness as a boon. Never was Voltaire more inspired than when he said, "The secret of being dull is to say everything."

Dates in the 'Two Happy Years' are too often lacking or incorrect. One of the first given is May 20, 1890. On that day, it is said, "two Japanese men-of-war came into Colombo conveying the survivors of a wrecked Turkish ship, the *Ertugroul*, back to their own country." But that ship was not wrecked till the 16th of September following. Again: "The Portuguese arrived in Ceylon in the middle of the *fifteenth* century." Their coming was not till the second decade in the sixteenth. The area of Ceylon is said to be 25,000 square miles, and to be "as large as Ireland"—which has 32,535 square miles. The contradiction as to the variations in the length of days is equally remarkable. Regarding "toddy" it is said "to have been doubtless so named by some early Scotch planter in remembrance of the whiskey toddy of the North." But Sir T. Herbert found the word toddy well known in the East in 1665, before any Scotchman had ever landed in Ceylon. The word cactuses sometimes occurs, but the form cactii, which is neither Latin nor English, is more frequent. On the other hand, Lady Cumming's classification of the banyan seems more correct than that of Dr. Murray in the elaborate 'New Dictionary,' which calls it, *Ficus religiosa*, or *Indica*. She calls it *Indica* alone, and says that the Bo-tree is the *religiosa*. So says also Dr. Murray under the word Bo-tree, being divided against himself.

On the whole, the Gordon-Cumming tomes, in spite of their bulk, will long be a standard work on Ceylon. Her testimony that inundation follows conflagration (ii., 308) is one specimen of hundreds of impartial observations incidentally put on record, but effective for instruction to readers the world over. Did space allow, we would dilate on others, as sects divided by covering one shoulder or both with a mantle; lower castes forbidden to carry umbrellas; meritorious water-jars for wayfarers; and the British Government so fearful of intolerance as actually to bolster up heathenism. But these points, and many more, to be appreciated must be read as portrayed with feminine grace and masculine vigor by the wide-wandering authoress.

Tales and Legends of National Origin or Widely Current in England from Early Times. With Critical Introductions by W. Carew Hazlitt. London: Swan Sonnenschein & Co.; New York: Macmillan. 1892. 8vo, pp. xv., 486.

Out of the storehouse of a veteran book-maker Mr. Hazlitt has made a volume which is interesting and which might easily have been made valuable. The nature of the work is sufficiently indicated by the title, and the contents are arranged in the four classes of supernatural legends, feudal and forest legends, romantic legends, and descriptive and humorous legends. The sources from which the material is taken are definitely noted in scarcely a single instance, so that the work possesses no bibliographical value whatever. As a matter of fact, the author has drawn largely from his own 'Remains of the Early Popular Poetry of England,' 'Old English Jest-Books,' Mr. Thoms's 'Early English Prose Romances,' and Percy's 'Reliques.' A considerable number of legends have been reduced to prose from metrical versions. This may perhaps be permissible in a work intended for the general reader in case the originals are difficult of comprehension; but not seldom in the present work a slight modernization of the original would have been far preferable to Mr. Hazlitt's prose, and would have possessed some literary value. One needs only to compare Mr. Hazlitt's "The Child of Bristol" (p. 6) with the slightly modernized version of the original, privately printed in 1886 by Prof. F. J. Child, to see how easily the beautiful old ballad can be made intelligible and attractive.

Each legend is prefaced by a brief introduction, in which the author's incompetence to handle such topics is revealed in every line. It is melancholy to find that all the work done in the field of folk-lore within the past twenty-five years seems to be unknown to Mr. Hazlitt. His remarks on the "Roman or Italian origin" of the myth of Virgil show how far he is behind the recent investigations in this field: Mr. Tunison's 'Master Virgil' would have saved him this fundamental error. An amusing example of the author's ignorance of comparative storiology is shown in what he says about "The Smith and his Dame." This story belongs to the extensive class of legends relating to the mythical journeys of our Lord and his apostles, found in every land, of which a number are given in Crane's 'Italian Popular Tales' (p. 187). The story is briefly that of an overproud blacksmith whose bedridden mother Christ brings back to youth by laying her on the forge and hammering her out. The ambitious smith endeavors to perform a similar feat on his own wife, with lamentable results. Here is what Mr. Hazlitt finds to say on the subject, without a single reference to any other version of the legend: "This is one of those strange inventions which belong to the period of transition from Eastern fable and mediæval demonology to a revival of the miraculous intervention of Christ in response to prayer. Of course, one can only look on such a narrative as a piece of whimsicality, since the central incident at once removes it out of the category of prodigies accomplished by leechdom or legerdemain. To the Elizabethan reader, for whom the little tale was written, the particulars may have presented nothing beyond a humorous exercise of fancy. The serious side was not considered." It will probably do no good to protest against the slipshod work done by Mr. Hazlitt in this and other books of his; but the "general reader" may perhaps be awakened to a sense of the rights which even he possesses, and be led to insist upon them with both editor and publisher.

Life in Ancient Egypt and Assyria. From the French of G. Maspéro. New York: Appletons. 1892. 12mo, pp. xv., 376.

The topics here presented are neither new nor hackneyed, in spite of the fact that we have a number of volumes dealing with them. The

three large volumes of Wilkinson in their own way cover nearly all the ground of the present work and more besides. The popular though scholarly work of Prof. Erman of Berlin, while entirely complete in itself, was intended in considerable degree to supplement the older volumes of Wilkinson. Unfortunately it is accessible only in German. Other minor books of similar character might be mentioned in the same connection. But a distinction must be made between the works of Wilkinson and those of Erman and Maspéro. The main value of the former's lies in its illustrations and in the information derived from Greek writers. Originally it contained very little material based upon or derived from Egyptian sources and inscriptions, other than the pictures as such. The works of the others contain fewer illustrations, but present information of a more authentic character, since to their authors the inscriptions are an open book. In other words, they have built upon the statements of the monuments while ignoring more or less the reports of the Greek writers. Hence it is evident that works of both classes are necessary to a complete understanding, since they are mutually complementary.

The volume before us is popular in its aim and its style is correspondingly animated and vivid. Of the eminent qualifications of the author in point of knowledge so far as Egypt is concerned, it is needless to speak; and it will surprise no one that a Frenchman should have a large degree of tact and skill in presenting such a subject. The narrative will be found not only readable, but calculated to impart an extraordinary amount of minute information in brief compass. Hence when the volume is said to be popular, it is not intended that it is superficial. It is well illustrated in the best sense, since to a considerable degree the text is an exposition of what the contemporaneous monuments here depicted both say and portray. The periods chosen for treatment are those of Rameses II., supposed to have been that of the "Oppression" of the children of Israel in Egypt, and that of Assurbanipal, who carried Manasseh in chains to Babylon—the fourteenth and the seventh centuries B. C. respectively. It is to be hoped that the publishers will supply the grievous lack of an adequate index, when another edition is called for.

The Evolution of Life; or, Causes of Change in Animal Forms: A Study in Biology. By Hubbard Winslow Mitchell, M.D. G. P. Putnam's Sons. 1891. 8vo, pp. xvi, 460, illustrated.

Dr. Mitchell's book is an addition to popular literature on evolution. It is a story of the earth and its life from its gaseous to its present condition, with a "terrestrial and cosmogenic prognosis." On a superficial inspection its elegant appearance and numerous illustrations give rise to expectations that are disappointed by a closer examination. Things that can only be conjectures asserted as facts, reckless assumptions, and evidences of carelessness prevent the anticipated enjoyment. Many of the drawings are old acquaintances, from unacknowledged sources. Figure 72, here upside down, is No. 792 B. of Dana's 'Manual of Geology' (1864); figure 34 is composed of Dana's figures 708 to 713; and figure 33, called a "Saurian skeleton found in the coal measures of Ohio," contains Dana's 549 and 604, the former being the tracks of *Sauropus primœvus* from the subcarboniferous at Pottsville, Pa., and the latter the skeleton of *Raniceps Lyellii* from the carboniferous at Linton, O., both of them batrachian remains. Figure 81 represents a mylodon, but has all of its claws of about the same size; figure 84 is an armadillo with all of its feet off the ground, trotting on the tips of its claws; and figure 42 is a jurassic ammonite floating above the water like a cork. Figure 35 is named "Selachian (shark) of the Devonian Age — *Spinax Blainvillii.*" The author says of it:

"In the species of Devonian fish known as *Spinax Blainvillii* the dorsal vertebrae are very numerous, and the body is long and slender. There is a small pectoral fin which is almost wholly tegumentary, while the true ventral fins are much larger, and have traces of cartilaginous rays. As this animal raised its head above the water in the shallow bays and inlets where it lived, the pectoral fin through disuse would become slowly atrophied and in time disappear. The ventral fins would develop into paddles in the manner already described, and the long anterior portion of the body, through successive generations of development and the survival of the fittest, ultimately become the enlongated neck of the plesiosaurus. This view seems at once both scientific and logical, and answers all the requirements."

The figure represents a nondescript with three gill-openings, an anal fin, no dorsal spines, no lower lobe to the tail, and ventrals larger than the pectorals. But *Spinax Blainvillii* is a recent shark, now living in the Mediterranean, not known as a fossil, and has five gill-openings, a strong spine in front of each dorsal, a lower lobe on the caudal, no anal fin, and pectorals larger than the ventrals. Further than this, scientists believe that the fore limbs of the quadruped correspond to the pectoral fins of some fish-like ancestor, and that the hind limbs were derived from the ventrals. Spinax is not addicted to raising its head out of the water.

Lingula appears to do duty as a protozoan; Notosaurus, crocodilus, and alligator are badly mixed, and *Alligator mississippiensis* is said to occur in great numbers on the Amazon. On page 8 Arcturus is nearing us about five miles per second; on page 447, it is approaching our sun four miles per second. Page 9 informs us that "the essential qualities of space are *cold* and *darkness*. If it were light and warm, the phenomena we now observe in the universe would not only at once cease to exist, but would never have occurred." From page 36 we learn that the Silurian Sea was placid and undisturbed, unruffled by winds or currents, and "no surging tides existed, no surf beat upon the shore." Since the earth began to rotate upon its axis and felt the attraction of sun and moon, it is not possible that it has been without tides. With tides, and the electrical disturbances and torrential rains mentioned by the author, it is difficult to believe in the absence of currents either in or above the water.

To the question of man's origin, it is stated: "The answer is simple. There was but one animal from which he could have descended—that was the great man-like ape, the gorilla, of equatorial Africa." "According to this view, which seems to me to admit of no doubt whatever, the extensive and agreeable region of tropical Africa lying north of the equator was the only place where *man first appeared upon the earth.*" "It is not probable that man will undergo any anatomical changes of form in the future. He has undoubtedly reached the highest point possible in his *structural* development." "But that any new or different animal form will ever appear is so improbable that we are safe in pronouncing it impossible." "We can safely assert, however, that the processes of evolution have ceased, and that no new animal form will ever appear upon the earth." "The time is not far distant when no animal will be found outside a menagerie who cannot be utilized either by the yoke or the spit. Every one beside must give way ultimately to the civilizing influences man is slowly but surely extending over every province of the earth." We question the statement that scientists generally admit that man could only have descended from the gorilla; what is admitted is that the two had a common ancestor. In the interest of popular science it is to be regretted that a book so well calculated to win popular fancy was not more carefully compiled.

BOOKS OF THE WEEK.

Aldrich, Wilbur. Farming Corporations. W. Aldrich & Co. $1.
Arnold, Sir Edwin. The Light of Asia. Rand, McNally & Co. 50 cents.
Baedeker's Upper Egypt. Leipzig: Karl Baedeker; New York; Scribners. $3.
Baldwin, Prof. James. Everybody's Writing-Desk Book. Harpers.
Bernhard, Marie. The Household Idol. Worthington Co.
Boldrewood, Rolf. Nevermore. Macmillan. $1.
Bottone, S. R. A Guide to Electric Lighting; for the Use of Householders and Amateurs. Macmillan. 75 cents.
Brooks, Shirley. Mrs. Lygon. St. Paul: Price-McGill Co. 50 cents.
Cheney, J. V. The Golden Guess: Essays on Poetry and the Poets. Boston: Lee & Shepard. $1.50.
Cheney, S. P. Wood Notes Wild: Notations of Bird Music. Boston: Lee & Shepard. $2.
Clarke, Kit. The Practical Angler. American News Co.
Clifford, Mrs. W. K. Love-Letters of a Worldly Woman. Harpers.
Cook, Theodore A. Old Touraine: The Life and History of the Famous Châteaux of France. 2 vols. Scribners. $5.
Daudet, A. Rose et Ninette. Paris: E. Flammarion; New York: Westermann. $1.
Davidson, Rev. A. B. Ezekiel. [Cambridge Bible.] Cambridge: University Press; New York: Macmillan.
Davies, Charles. New Elementary Algebra. American Book Co. 90 cents.
Earle, Prof. J. The Deeds of Beowulf. Oxford: Clarendon Press; New York: Macmillan.
Engels, Frederick. The Condition of the Working Classes in England in 1844. London: Sonnenschein; New York: Scribners. $1.25.
Englemann, R., and Anderson, W. C. F. Pictorial Atlas to Homer's Iliad and Odyssey. Westermann & Co.
Etting, F. M. Independence Hall. 2d ed. Philadelphia: Porter & Coates.
Fane, Violet. Memoirs of Marguerite de Valois, Queen of Navarre. London: John C. Nimmo; New York: Scribners. $5.
Fiske, John. The Discovery of America. 2 vols. Boston: Houghton, Mifflin & Co. $4.
Flammarion, Camille. Lumen: Experiences in the Infinite. Cassell. 50 cents.
Furness, H. H. The Variorum Shakspere. Vol. IX. The Tempest. Philadelphia: J. B. Lippincott Co. $4.
Garland, Hamlin. A Member of the Third House. Chicago: F. J. Schulte & Co.
Goodfellow, John. The Dietetic Value of Bread. Macmillan. $1.50.
Guiney, Louise Imogen. Monsieur Henri: A Footnote to French History. Harpers.
Guyot, Yves. Principles of Social Economy. London: Sonnenschein; New York: Scribners. $1.25.
Hepworth, George. The Life Beyond. Randolph. $1.
Hilliard, H. W. Politics and Pen Pictures at Home and Abroad. Putnams. $3.
Holbrook, M. L. The Hygienic Treatment of Consumption. M. L. Holbrook & Co. $2.
Hope, M. J. The Thoughts of Novalis. Chicago: A. C. McClurg & Co. 75 cents.
Howard, Blanche W., and Sharp, William. A Fellowe and his Wife. Boston: Houghton, Mifflin & Co. $1.25.
Howells, W. D. The Quality of Mercy. Harpers. $1.50.
Hughes, Rev. N. C. Genesis and Geology. 2d ed. James Pott & Co.
Inglis, Lady. The Siege of Lucknow. London: Osgood, McIlvaine & Co.; New York: Scribners. $4.
Jefferies, Richard. Red Deer. 2d ed. Longmans, Green & Co. $1.25.
Johnson, Virginia W. The Treasure Tower. Rand, McNally & Co. 25 cents.
Keene, H. G. Mádhava Ráo Sindia. [Rulers of India.] Oxford: Clarendon Press; New York: Macmillan. 60 cents.
Kelly, Mrs. M. A. B. A Volume of Poems. Boston: J. G. Cupples.
Lanman, Prof. C. R. Harvard Oriental Series. Vol. I. The Jataka-Mala. Boston: Ginn & Co.
Larcom, Lucy. The Unseen Friend. Boston: Houghton, Mifflin & Co. $1.

Lee, Sidney. Dictionary of National Biography. Vol. XXX. Johnes—Kenneth. Macmillan. $3.75.
Levett, R., and Davison, C. The Elements of Plane Trigonometry. Macmillan. $1.60.
Leffingwell, Albert. Illegitimacy, and the Influence of Seasons upon Conduct. London: Sonnenschein; New York: Scribners. $1.
Libbey, Laura J. Florabel's Lover; or, Rival Belles. Robert Bonner's Sons. $1.

Exhaustion.

HORSFORD'S
ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y.

F. Crosby Co.

The story of a singularly pure and unselfish life.

A Protestant Poor Friar:
A LIFE-STORY OF
TRAVERS MADGE.

By BROOKE HERFORD. First American Edition. Cloth, 16mo, 50 cents. Copies sent by mail on receipt of price.
Just published by
DAMRELL & UPHAM, Boston.

Our New Books.

A Memoir of Honore de Balzac

Compiled and written by KATHARINE PRESCOTT WORMELEY. With Portrait by Eugene Giraud. 12mo. Half Russia, uniform with the Novels. Price, $1.50.

The object is to present Balzac to American readers; a presentation of the man, and not of his work.

West Roxbury Sermons.

1837–1848.

By THEODORE PARKER. Printed from unpublished manuscripts. With Introduction and Biographical Sketch. 16mo. Cloth. Price, $1.00.

Earlier sermons, preached at the famous West Roxbury Church and never before printed.

Poems by the Way.

Written by WILLIAM MORRIS. 12mo, Cloth, gilt top. Price, $1.25.

LATER POEMS.

Last Days of Marie Antoinette

By LORD RONALD GOWER. With Portrait and Facsimile Letter. New edition. 12mo. Bi-color. Price, $1.50.

The Story of the Glittering Plain.

Which has also been called the Land of Living Men or the Acre of the Undying.

Written by WILLIAM MORRIS. A new and cheaper edition, reset in modern type. 12mo. Cloth, gilt top. Price, $1.50.

Pastels of Men.

First and Second Series.

By PAUL BOURGET. Translated by Miss Wormeley. 2 vols. 16mo. Cloth. Price, $1.00 each.

Wells of English.

By ISAAC BASSETT CHOATE. 16mo. Cloth, gilt top. Price, $1.50.

A review of the work of the minor writers of England of the 16th and 17th centuries.

A Last Harvest.

Lyrics and Sonnets. From the Book of Love. By PHILIP BOURKE MARSTON. Edited, with biographical sketch, by Louise Chandler Moulton. 12mo. Cloth, gilt top. Price, $1.50.

The Tragic Comedians:

A study in a well-known story. By GEORGE MEREDITH. With an introductory note on Ferdinand Lassalle by Clement Shorter. 16mo. Cloth. Popular edition. Price, $1.50. 12mo. Cloth, uncut. Uniform with the English edition. Price, $2.00.

The author tells his story with unusual straightforwardness and directness.

WILL PUBLISH IN MAY

A New Work by Francis Parkman:

A Half-Century of Conflict

By FRANCIS PARKMAN. Completing his Historical Series, "France and England in North America," and filling the gap between "Frontenac and New France" and "Montcalm and Wolfe." In two volumes, 8vo, cloth, $5.00.

Mr. Parkman's Other Works.

CONSPIRACY OF PONTIAC. 2 vols., 8vo, $5.00.

THE OREGON TRAIL. 1 vol., 8vo, $2.50.

"*France and England in North America,*" *viz.:*

PIONEERS OF FRANCE IN THE NEW WORLD. 8vo, $2.50.

THE JESUITS IN NORTH AMERICA. 8vo, $2.50

LA SALLE AND THE DISCOVERY OF THE GREAT WEST. 8vo, $2.50.

THE OLD REGIME IN CANADA UNDER LOUIS XIV. 8vo, $2.50.

COUNT FRONTENAC AND NEW FRANCE UNDER LOUIS XIV. 8vo, $2.50.

MONTCALM AND WOLFE. 2 vols., 8vo, $5.00.

LEVER'S ARTHUR O'LEARY.

Arthur O'Leary. His Wanderings AND PONDERINGS IN MANY LANDS. By CHARLES LEVER. With 10 etchings by George Cruikshank. Crown 8vo, cloth, gilt top, $2.50.

Previously issued uniform with the above:

Charles O'Malley, the Irish Dragoon. 2 vols., crown 8vo, $5.00.

The Confessions of Harry Lorrequer. 2 vols., crown 8vo, $5.00. Each work contains numerous etchings, etc., by "Phiz."

ESSAYS AND CRITICISMS.

By ST. GEORGE MIVART. 2 vols., 8vo, cloth, $8.00.

OTHER NEW BOOKS.

The Deluge. An Historical Romance of Poland, Sweden, and Russia. A sequel to "With Fire and Sword." By HENRYK SIENKIEWICZ. Translated by Jeremiah Curtin. 2 vols., crown 8vo, cloth, $3.00.

With Fire and Sword. An Historical Romance of Poland and Russia. By HENRYK SIENKIEWICZ. Translated by Jeremiah Curtin. 1 vol., crown 8vo, cloth, $2.00.

A Woman of Shawmut. A story of old Colonial times. By EDMUND J. CARPENTER. Illustrated by F. T. Merrill. 16mo, cloth, gilt top, $1.25.

Carine, a Story of Sweden. By LOUIS ENAULT. With numerous illustrations by Louis K. Harlow. 16mo, cloth, gilt top, $1.25.

The Blind Musician. By VLADIMIR KOROLENKO. With illustrations by E. H. Garrett. 16mo, cloth, gilt top, $1.25.

Tales of Three Centuries. By MICHAEL ZAGOSKIN. Translated from the Russian by Jeremiah Curtin. 12mo, cloth, $1.00

Familiar Quotations. A collection of Passages, Phrases, and Proverbs traced to their sources in Ancient and Modern Literature. By JOHN BARTLETT. Ninth edition. Crown 8vo, cloth, gilt top, $3.00.

LITTLE, BROWN & CO.,

254 Washington Street, Boston.

Charles Scribner's Sons

NEW PUBLICATIONS.

Travels Amongst the Great Andes of the Equator.

By EDWARD WHYMPER.

With Maps and 140 Original Illustrations, drawn by various artists, and engraved by the author. 8vo, $6.00.

"A memorable addition to the literature of travel. Much of what Stanley has done for an unknown region of the earth's lower surface, Mr. Whymper has done for remote and comparatively unknown regions of the earth's most interesting and lofty altitudes. Such a record of enterprise and daring stamps Mr. Whymper once more as an intrepid explorer of the first rank."—*N. Y. Times.*

A New Book by Mr. Stevenson.

Across the Plains.

With Other Essays and Memories. By ROBERT LOUIS STEVENSON. 12mo, $1.25.

Especial interest attaches to this volume by reason of the autobiographic character of several of the essays, while the others, "Fontainebleau," "The Lantern Bearers," "The Old Pacific Capital," "Dreams," "Beggars," etc., will rank with the author's finest work in this field of literature.

Essays on German Literature.

By Prof. H. H. BOYESEN. 12mo, $1.50.

The spirit and animating forces of German literature are admirably set forth in this book, the personal and anecdotal element bringing the leading figures well into the foreground. The different phases of the genius of Goethe and of Schiller, the evolutions of the German novel, and the influence of the Romantic School, are the principal themes.

The Duchess of Angoulême

And the Two Restorations. From the French of Imbert de Saint-Amand. Famous Women of the French Court. 12mo, with portrait, $1.25.

The daughter of Louis XVI. and of Marie Antoinette is the heroine of this volume, her early years having been pictured in "The Youth of the Duchess of Angoulême," recently issued. It treats entertainingly of the life and of the great personages of Louis XVIII.'s Court, and gives a vivid picture from the royalist point of view of the dramatic episode of the return of Napoleon and the hundred days.

Recently Published.

The Youth of the Duchess of Angoulême.

With Portrait. 12mo, $1.25.

"Agreeable additions to a charming series."—*Philadelphia Times.*

Potiphar's Wife,

The Nation.

NEW YORK, THURSDAY, APRIL 14, 1892.

The Week.

THE new silver debate opened by Senator Morgan of Alabama was started ostensibly to "tear off the mask" from certain Senators who are seeking a Presidential nomination while concealing their views on this important question. It called up Senator Sherman, who gave us one of his characteristic speeches, made up of sense and nonsense in about equal parts, but so commingled that the former should be made effective in legislation and the latter useful on the stump. Nobody understands this art so well as Mr. Sherman. He defended the act of 1890, which discontinued the coinage of silver dollars and substituted in their place Treasury notes based on silver bullion, saying that this was more economical and safer than the plan of coining silver. The Government saved a cent and a half on every dollar by *not* coining. It also kept the metal in the form of heavy ingots which could not be stolen. Moreover, the Treasury-note plan enabled the Government to mix up its obligations in a kind of soup where all the ingredients were inseparable, so that all might, with better face, be kept at par with gold. Mr. Sherman added that "every one of those Treasury notes was based upon enough of silver to be equal to a dollar in gold at the time of the purchase of the silver; and, taking the average for a period of years, there was a dollar's worth of silver in the Treasury for every silver certificate issued." This is a truism that is without the smallest significance unless the Treasury has the power to dispose of the silver in case of need. There is no such power. The Secretary can only look at his stock from time to time. Even if he had the legal power to sell it, he could not do so without greatly depressing the price. If he should offer the whole of it at fifty cents an ounce, he could not find purchasers for it. Therefore the fact that there is a dollar's worth of silver "behind" every silver certificate and Treasury note is of no more consequence than the fact that there is a brick wall "behind" the silver.

Senator Stewart has made an explanation of the singular fact that he has twenty-five mortgages recorded in his favor in a single county in California, the principal and interest of which are payable specifically in *gold coin*. He said that he had never seen one of these mortgages; that they were all given for land sold through his agents, who had simply followed the customary form of mortgage used on the Pacific Coast. Senator Hale said with much solemnity that he hoped Mr. Stewart would never do it again, and the latter replied with equal gravity that he would not. He added that he considered the Gold Contract Law of California a bad thing in itself and a serious drawback to the prosperity of the State. Fortunately there is a way in which Mr. Stewart, and all other "slopers" who are of like mind with himself, can avoid this evil and at the same time contribute to the prosperity of the slope, viz., they can change all their bills receivable, including those secured by mortgage, so as to make them payable in "lawful money." It is not likely that any debtor would object. They can also start a movement to repeal this odious Gold Contract Law. We are surprised, indeed, that Mr. Stewart, entertaining the views he does, has not put himself at the head of such a movement long ago. If it is really an injury to California, he ought to lose no time in pointing out to his fellow-citizens the mistake they are making every day of their lives. No doubt they would be highly diverted if not convinced.

The task of defending the honor and good name of the United States against one of the rudest assaults ever directed against them, was performed by Mr. Hitt of Illinois and by Mr. Hooker of Mississippi in a satisfactory manner on Monday week, when the Chinese Exclusion Bill was brought to a vote in the House. This measure received the affirmative votes of 179 members, against only 43 in the negative, and yet it was a deliberate sacrifice of self-respect and plighted faith at the behest of low demagogism; and in this disgraceful exhibition there was very little to choose between parties. If such a measure should really become the law of the land, we should inscribe ourselves in the catalogue of nations as being inferior to China in some of the most important qualities that go to make up the rating of civilized peoples. Leaving humanity out of the reckoning altogether, the mere breach of faith in this case is positively shocking. It makes one wonder whether the teachings of Christ have produced any enduring effect whatever upon the hearts and consciences of men.

Ex-Senator Blair of New Hampshire had an intense desire to learn why he was *persona non grata* at the Court of Pekin, when he was appointed Minister to China and was not received by that country. That desire was gratified in due time. The reason why Mr. Blair was not acceptable was that he had, in a Senate debate, indulged in comments on the Chinese people that had made an unfavorable impression in the Flowery Kingdom. The Chinese Minister of Foreign Affairs accordingly requested that Mr. Blair be not sent to that country, assigning the foregoing reason. Mr. Wharton, our Assistant Secretary of State, acknowledged that each country must decide for itself the question of acceptableness of a person designated as Minister by any other country, and that it is not obliged to give any reasons. But if it did give reasons, then he was disposed to contend that the reasons must be logical—that is, satisfactory to the country sending him—a position obviously untenable since it would lead to endless dispute and eventual rupture. Mr. Wharton was prepared to show that when Mr. Blair compared Chinese immigration to the spread of yellow fever, he was merely using the latter term as a forcible illustration and figure of speech, and did not intend to say that the landing of a Chinaman was the same thing as the landing of a yellow-fever patient. There is some ground for thinking that this was the truth, and that Blair meant no more than this, that if we have a moral right to exclude yellow fever, we have a moral right to exclude anything that we consider hurtful, including Chinese immigration. Mr. Blair now wants to have the whole affair investigated by the Senate, not with a view to getting him into the good graces of the Court of Pekin, but for purposes of general vindication. We think that the Senate may find better use for its time.

Word has evidently been passed around among Mr. W. E. Curtis's friends in the various chambers of commerce that this would be a good time to pass resolutions extolling him in the rôle of the Bureau of American Republics, and calling upon Congress to give him the appropriation for which he longs. The Boston Chamber of Commerce did the graceful thing by him on April 6, and the Chamber of this city was equally courteous and equally perfunctory the next day. Other cities will no doubt speedily produce the same stereotyped tribute to the "great and increasing importance of the Bureau as an agent in promoting commercial relations between this country and the South American nations." Now the first thing to be said about such resolutions is what the Marquis of Halifax said about the addresses of English Dissenters to James II. on the occasion of that monarch's declarations of indulgence: "These bespoken thanks are but little less improper than were love-letters solicited by the lady to whom they are to be directed." In the second place, there is no evidence that the Bureau has promoted commercial relations to any appreciable extent. It has published various handbooks, which we have given suitable praise, but at a cost ten or twelve times as great as the work could have been done for privately. What it has chiefly promoted has been the vanity and officiousness of its "Director," who carefully draws his salary and leaves all the work

to be done by his subordinates. Moreover, the Bureau meets with so little appreciation in South America that only one or two of the countries there have paid, or will pay, their quota to sustain it. The position of the House Committee in charge of the matter seems perfectly just—namely, that if the other nations do not care enough for the Bureau to help pay its cost, it may as well be dropped altogether. Anyhow, the personality of its "Director" is a standing affront to Spanish Americans, and he ought to be dropped, whether the Bureau is or not.

We feel it our duty to remind the *Tribune* that its continued silence on the Brazilian treaty is imperilling its hard-earned reputation as the greatest "reciprocity" organ. Its editorial articles on that subject have been far more numerous and dithyrambic than those of any of its contemporaries, and they are naturally perplexed when the acknowledged master of the topic has not a word to say upon some of its most important developments. Evidence has been published showing that Brazil was deceived into agreeing to the treaty. A most interesting letter from Minister Mendonça was printed in the *Evening Post* of April 5, showing how, in fact, an "understanding" and "arrangements" and "assurances" did exist between him and Mr. Blaine to the effect that had been stated. Will not the *Tribune* tell us what it thinks of that? Does it agree with Mr. Mendonça that Mr. Blaine's plans were all dashed by the McKinley Bill? And does it think that Mr. Mendonça himself is quite ingenuous in his reference to "any promise whose fulfilment was possible"? He now says that the "expressions attributed to me referred to conditions" anterior to the passage of the McKinley Bill, and that the treaty which was "virtually concluded on November 3, 1890," was signed with no reference to the former promise to exclude Spain. Yet on December 17, 1890, he declared in writing to Ruy Barbosa that "as to the advantages concerning sugar, we are now alone to enjoy them, to the exclusion of European colonies in America." There is a great deal of mystery in all this which we all look to the *Tribune* to clear up, and we beg it to bring its editorial mind to bear upon the subject. We take pains to say editorial mind, for we hope that the matter will not be left, as before, to the nondescript frothings of its Washington correspondent.

The result of the Rhode Island election last week can surprise no one who has watched the course of the canvass. The State has always gone Republican in the gubernatorial election of a Presidential year since the Republican party was formed, and although the widening of the electorate since 1888 has improved the chances of the Democrats, the odds would have been in favor of the Republicans if the opposition had been at their best. But they were not. The Independent newspaper of the State, the Providence *Journal*, threw its influence in favor of the Republicans, largely on the ground that the Democratic nominees were far inferior to the Republican, but also partly on the ground that the Democratic position on national issues is as yet too uncertain to warrant endorsement of the party. Finally, Rhode Island has long been the most corrupt State in the Union, in the matter of elections, and, despite the safeguards of a secret-ballot law, it will always be possible for the party which has the most money at command to make it tell in its favor. Everybody knows that this party in Rhode Island is always the Republican—and this year more than ever, as the election involved the fate of Senator Aldrich, who has a tremendous "pull" on the manufacturers by reason of his prominence in tariff legislation. If the voters in Rhode Island who do not "belong" to either party had been unitedly and enthusiastically in favor of the Democrats, the election would have gone the other way. A good many of them have been so much disgusted by Democratic blundering at Washington—the "turning down" of Mills, the temporary triumph of a Tammany-Hill-Bourbon "combine," the fooling with the silver issue—that they found it easy to vote the Republican local ticket. It seems clear that there were enough Republican votes cast by such men to have turned the scales if the Democrats could have got them. There is a large class of such voters in Connecticut, New York, and every other close State.

The municipal elections in the West last week indicated a very gratifying growth in the tendency towards independent voting. Republican cities have chosen mayors who are Democrats in national politics, on the ground that they would make better municipal officials, and vice-versa. The rebuke to incompetent and corrupt administration of local affairs was particularly sharp in the State of Michigan; a number of cities which are usually good for Democratic majorities electing Republican or Independent mayors this year, because the voters were disgusted with the sort of Democratic rule they had been given. It has thus been shown very clearly that party lines are steadily breaking down in regard to local elections, and that the party label counts for less and less every year. It has also been demonstrated that the decent people can always get good government when they have interest enough in the matter to work for it. If they will not take the trouble to vote, however, they will not get it. In Milwaukee, for example, there are about 55,000 voters, but not 40,000 of them went to the polls at the recent election. Of course all those who had a personal interest in bad government turned out to endorse a Mayor who had forfeited his claim to a reëlection, while many thousands who did not honestly think him entitled to another term neglected their duty. The result was that he was reëlected, and nobody who refused to take the trouble to vote against him has any right to complain.

The Maynard investigation at Albany was brought to an eminently fitting close last week by a refusal of the majority to allow the minority to summon any witnesses or to have any voice in the preparation of the report. The majority were unwilling to let the minority know even the probable date of their report. We doubt if they themselves look forward to the date with much pleasure. They have been devoting their spare time entirely to an anxious search for a method by which they could "let go" of the inquiry without subjecting themselves to fresh ridicule and humiliation. They had summoned new witnesses, but were afraid to examine them after their arrival, lest, like all previous witnesses, they should make the case against Judge Maynard appear worse than ever. From the beginning to the end of the inquiry, not one word was educed which can be used in a report "vindicating" the Judge. The net result has been to stamp his offence more clearly upon the minds of the people, and neither a majority nor a minority report is going to make any difference as to the opinion which the whole State has formed upon his conduct and that of his ally and instigator, Senator Hill.

Iowa is the first State to adopt a ballot-reform law this year, making the thirty-fourth in the list. Her law is to go into effect on November 1, and will thus be used in the Presidential election. It is similar in its provisions to the laws of Ohio, Indiana, Illinois, and three other States, the names of all candidates being arranged in separate columns, each party having a column to itself with the party name and an emblem at the top. The voter can mark the name of each candidate of his choice, or vote the straight party ticket by placing a single mark opposite the emblem. This is the form of ballot which certain Tammany leaders, including Croker, professed to be in favor of in this State at the opening of the present session of the Legislature, but they were unable to abandon the "paster" when the time for action came. The consequence will be that we shall have to conduct our Presidential election with the cumbersome and defective machinery which Gov. Hill's persistent opposition to genuine ballot reform forced upon the State.

The reported purchase by the Sugar Refineries Company of the Spreckels plant in Philadelphia, at a large advance on its cost, brings up the question whether such finan-

ciering can pay in the long run. The combination of sugar-refiners has changed its form from a Trust to that of a corporation organized under the law of New Jersey. Change of organization has not brought with it a change of heart. We do not yet know what economic and political results may flow from these large aggregations of capital. We can, however, assume that such combinations on a large scale are not different in intent, whether they remain Trusts or incorporate themselves in New Jersey or West Virginia. It is undoubtedly true that many incorporators have gone into New Jersey for the honest purpose of escaping the unnecessarily severe corporation law of other States, but this applies more particularly to manufacturing or trading firms with a comparatively small capitalization. The cases of the lead, sugar, and cotton-oil companies are different; the latter involve combination among a number of distinct and hitherto separate corporations in different States. The fact that the Standard Oil Trust is to be dissolved has been much commented upon. The Trust certificates are to be surrendered, and in lieu of them stock in the smaller and legally incorporated companies is to be turned over to the old holders. So long as the holders of the new shares are few in number, they can unite in harmonizing the different interests as before; but experience has taught us that time tells strongly against such harmony. There must be a combination of control if agreement is to continue. It is very probable, therefore, that in good time we shall hear of the incorporation in some liberal State of a general company which shall have power to hold the stock of other and smaller companies, and to which the shares of the various minor properties of the Standard Oil Trust can be transferred. The majesty of the law will thus have been vindicated *pro forma*, but the economic problem will remain as before.

From the financial point of view, it is plain that these great Trust corporations contain an element of weakness. The Distillery corporation, in order to control the output, bought up outside distilleries until it produced more than 90 per cent. of the spirits sold. To make a profit on the large capitalization necessary to purchase the opposing plants at twice or thrice their value, the company advanced the price of its product. That advance at once brought new competitors into the field who had to be bought off as before. This is the dilemma in which every huge attempt at monopoly has so far found itself. The sufferers have been in general the investing public, even more than the consuming public. So far as our experience has gone, it does not yet appear that we need any more stringent legislation, Federal or State, to protect the general public against the extortions of monopolies in the usual lines of trade, except in cases where the tariff gives the consumer bound into the hands of his enemy, by limiting the competition upon which he could otherwise rely. As we have said, the case of the foolish investor is worse than that of the consumer; but about the former, when once warned, the public need not concern themselves.

The way in which the attempt to raise the necessary money for the Grant monument fund has lagged in this city is fast becoming a national discredit. The subscription has been going on for years in the richest city of the richest country in the world, in order to mark in a very simple way, all things considered, the last resting-place of a man who was believed in his lifetime to have saved the nation which Washington founded. Things have come to such a pass that after seven years of collection there is much reason to fear that the $350,000 which is needed to complete the required amount will not be forthcoming when the corner-stone of the monument is laid on the 27th instant, and the Mayor has actually felt it desirable to issue a proclamation calling on the citizens to avert, if possible, what would be an undoubted calamity. A final effort is to be made during the remaining three weeks, by special solicitation among the different trades and professions, through committees appointed for the purpose. The amount, when divided among the various bodies on whom it is proposed to call in this way, beginning with the lawyers, would be for each about $16,000, which looks a little ridiculous. We trust, therefore, we shall be spared the humiliation of seeing the corner-stone laid without money in hand to finish the monument as designed. "A great people," as Napoleon said, when there was some demur over the salary of one of the marshals, "does not haggle over its glory," and it may be said with equal truth that a great people ought not to commemorate its heroes "on tick."

The anxiety of the unemployed workmen in London to hear a sermon from the Dean of St. Paul's is not so great a tribute to the power of the pulpit as might at first sight be supposed. This is clear from their indignation when, after flocking to the cathedral in crowds, they were compelled to listen to a sermon which contained "no reference whatever to workingmen." It was not a sermon as such that they wanted to hear, but a loose harangue on the "cause of labor," interspersed with words of warning to the rich and appeals to the State to "do something" for the unemployed. No other result could well be expected from the attitude of Cardinal Manning and the Bishop of London at the time of the dockers' strike. They went far to give laboring men, especially striking or unemployed workingmen, the idea that the pulpit of London was ready to rival Trafalgar Square as a place for pitching into employers and crying up the wrongs of laborers. No wonder that they now go to church, not for the purpose of receiving the incitements and consolations of religion, but to obtain a religious sanction for their demands. The man whom they ought to invite to preach to them is Mr. Charles Booth, who could demonstrate to them mathematically that Mansion House funds and other expedients for the temporary relief of the unemployed only swell their numbers and deepen their misery.

The discussion in the House of Commons on the escape of William Henry Hurlbert from the English police on a charge of perjury leaves the blame nominally on poor Mr. Stephenson, the Solicitor to the Treasury, who had charge of the prosecution, and has in his report told a piteous tale of the way in which somebody "leaked" when he got the warrant out for Hurlbert's apprehension. The Radicals are apparently, and with just reason, very angry about it, for we presume there are very few people in England who believe that Hurlbert could have escaped if there had been any serious desire on the part of the Crown officials to catch him. The spectacle of his prosecution on such a charge would have been too painful and scandalous for the Unionists. The "Irish Patriotic League" hired him to write a book on Ireland in the character of a thoughtful and pious American, in which he gave the Irish "fits," and which sold largely and was a first-rate campaign document for the Unionists. Moreover, he was to several highly placed Unionists, Mr. Chamberlain in particular, a sort of mentor on American questions, far exceeding Squire Smalley as an authority—the Squire not having much head for politics. Hurlbert told him how our Government was one of divided powers, each independent in its own sphere; how the American newspapers were all edited and written by wicked Irish Fenians; how Congress framed legislation in order to catch the Irish vote; how fond, moreover, "the best Americans" were of shooting Irish rioters, and how fond the Irish were of killing negroes, and how much more numerous evictions of tenants were in New York city than in Ireland, and other little items which the Birmingham orator used like grape and canister on the Gladstonian foe. Besides this, Hurlbert was a welcome guest at scores of "great houses." To have such a man brought to the bar for perjury by a "strange woman" was something the Unionist cause could not stand. It had to be avoided just as much as the production of the Duke of Cambridge in a police court, on the charge preferred by a reporter. The framework of society and the integrity of the Empire are, after all, more important things than the conviction of any perjurer whatsoever. So it *was* avoided. Hurlbert got notice, and he fled, and he has found a place that is safe under the treaties, and he now snaps his fingers at Gladys and the Gladstonians.

THE REAL "THEORISTS" IN POLITICS.

No taunt has been oftener thrown at those who have endeavored to elevate the tone and methods of party government than the one which charges them with being a set of unpractical dreamers, whose eyes are fixed upon unattainable visions, and who are utterly unable to accomplish anything definite and practical. Over against them have been set the hard-headed and keen-sighted "practical politicians," the men who have acquired their political wisdom in the hard school of experience—in running caucuses and fixing conventions, in "getting the delegates" and the nominations, in making "deals" and "trades," in "knifing" and running ahead of the ticket. No cobwebs of fanciful political reform ever attach themselves to such men, who move straight on to the attainment of their purposes. It is all very well to tickle the ears of people with the fine-sounding phrases of the political theorists and reformers, but when you want to get anything done, any actual piece of legislation written in the statute-books, you must leave the visionaries and deal with the practical politicians.

This is an ancient and venerable view of politics, which has been proved false so many times that one can but wonder at its persistence. There is no man so utterly at a loss in all questions of high legislative importance, no man who finds the study of details and the processes of persuasion so distasteful, as the man who has spent his days in political intrigue, where tricks and appeals to the basest motives have been his stock in trade. The very men who have made the most colossal failures as legislators have been the men who have worked their way up to positions of responsibility by means of the low arts of the practical politician. Look at the Senatorial careers of Conkling and Mahone and Quay, and, observing their utter barrenness in all legislation not of the most pronounced partisan character, contrast their records with those of their contemporaries and party associates who have really put through the important legislation of the Senate. It will be easily seen how the men who are the great generals and masters in politics, in the low sense of that word, are all at fault when it comes to the actual business of making laws for the good of the whole people.

Burke set forth this truth in language which is well worth recalling at the present moment:

> "In truth, the tribe of vulgar politicians are the lowest of our species. There is no trade so vile and mechanical as government in their hands. . . . They are out of themselves in any course of conduct recommended only by conscience and glory. A large, liberal, and prospective view of the interests of States passes with them for romance; and the principles that recommend it, for the wanderings of a disordered imagination. The calculators compute them out of their senses. The jesters and buffoons shame them out of everything grand and elevated. Littleness in object and in means to them appears soundness and sobriety. They think there is nothing worth pursuit but that which they can handle; which they can measure with a two-foot rule; which they can tell upon ten fingers."

No better illustration of these words was ever furnished than that now to be seen in the condition of public business in this State. The Legislature is filled with the most "practical" men ever brought together at Albany. On the side of the majority, at least, there is not a man, we suppose, who would not consider himself insulted if he were called a "theorist." Such a mass of brute common sense, without the faintest admixture of rose-colored views, was probably never before applied to the work of legislation. And it has had the advantage of the presence and guidance of the greatest practical politician of the age. He is ineffably weary of his duties in the United States Senate, where such stupid and profitless subjects as the currency, the tariff, the foreign policy of the Administration are under discussion, and leaves his seat there to go to Albany in order to show his party and the world what real political management is.

The result is, a tangle and dead-lock and outbreak of dissensions in his own party such as have rarely, if ever, been equalled. He has had notice publicly served upon him by members of his own party that he has committed a fearful blunder—which is, of course, worse than a crime in a politician—in going to Albany at all, and has been threatened with the tying up of all his measures unless he would take himself off. And he has actually been forced to retreat before the storm which has broken out in his very face. It must be remembered, too, that this collapse has occurred in the very matters where the practical politician has always claimed pre-eminence. The bills that have rent the party into factions are "political" bills. They make no pretence of being for the good of the whole people: they are partisan measures, meant to secure party advantages and pay party debts; yet even on these the plain, every-day men, who know nothing about iridescent dreams, but who assert their ability to get everything in sight for themselves and their party, have gone hopelessly to wreck.

The truth is, these men who use the word "theorist" as their choicest term of contempt, are themselves the real political theorists. Their idea that an organization can take the place of a policy is nothing but a theory, and a most unfounded one. Their belief that the people will not know the difference between a man who has thrust himself forward as a product of the machine, and a man who has gained prominence by force of ability and character, is one of the most ludicrous and baseless fancies that ever entered the mind of man. It is such stuff as dreams are made of. Senator Hill will not have lived in vain, because he will leave it writ large in the memories of Americans that the legitimate ending of a career of unscrupulous adroitness and shifty political scheming is the bitter realization of his own impotence, of the angry distrust and ill-will even of his own party, and of the thorough-going contempt of the people at large.

CRIMINAL LIBEL.

THE Penal Code of this State, while defining criminal libel as a misdemeanor, punishable, like other misdemeanors, by fine and imprisonment, makes this important qualification (section 244):

> "The publication is justified when the matter charged as libellous is true, and was published with good motives and for justifiable ends. The publication is excused when it is honestly made, in the belief of its truth, and upon reasonable grounds for this belief, and consists of fair comments upon the conduct of a person in respect of public affairs."

Now, if we are not greatly mistaken, numerous as misdemeanors are, libel is the only one which is ever legally justifiable, or indeed legally excusable. There may, in other cases, be many matters alleged as furnishing moral excuse in mitigation of punishment, but libel is the only misdemeanor which the law declares beforehand may, under certain conditions, be not only excusable, but praiseworthy. Therefore, no libel is, as a matter of course, a punishable offence. It may prove, on the contrary, when looked into, a great public service. Probably as gross a libel as was ever printed, so far as form went, was the article headed "Two Thieves," with which the New York *Times*, twenty-two years ago, began its attack on the Tweed Ring. But it proved to be one of the greatest services ever rendered by a journal to the community in which it was published. If this distinction did not exist, if every charge or accusatory comment on the action or fitness of a public official were necessarily, because likely to damage him in popular estimation, a criminal offence, not only the freedom but the usefulness of the public press in our day would be at an end. No trustworthy person would follow a calling surrounded with such risks, as no trustworthy person does in despotic countries.

Moreover, the editor of every well-established daily newspaper has already, through the mere fact of being the editor, given tremendous bail for his appearance to answer any charge against him arising out of his manner of doing his editorial work. To run away would be to sacrifice everything he cares about in the world. To add on to this security the thousand-dollar bond of another person is for the most part a ridiculous proceeding.

If all this be true, the present legal mode of bringing editors into court to answer charges of criminal libel is not only oppressive, but absurd. It is precisely the same as that followed in the case of thieves, or burglars, or confidence men, although there can be no such thing as justifiable theft, or burglary, or cheating, since there is no possible way in which a thief by thieving, or a burglar by "burgling," can render the community a service. It is true that in other civilized countries, whatever the law may be, the practice is adapted to the facts of the situation. An editor charged with libel in England or France receives a note from the magistrate or from the prosecuting officer, requesting him to appear at a certain hour on a certain day. At the

worst, this notice is given in the form of a summons. But in these countries great care is taken, in the filling of places on the police bench, especially in the great cities, to see that the magistrates are men of high character, learned in the law, and responsible in feeling as in fact to the more intelligent, respectable, and educated portion of the community, because they belong to it. The use of the process of their courts for purposes of insult, or vexation, or annoyance would drive such men in disgrace from their seats.

In this city we have laid aside all these precautions. We have commented so often in these columns on the manner in which Tammany fills the police justiceships, that we need not, for the purposes of our present argument, go over the ground again. We do not say there are no men among the police justices who are fit for their places. This would be unjust. But we do say that there are enough bad ones to make it perfectly easy for any rascal in good Tammany standing to borrow and use, with their connivance, the process of arrest for the purposes of vexing and oppressing personal or political enemies. This has been done, since Tammany came into power, four times, on pretexts some of them of the utmost frivolity, and without the least expectation of carrying the prosecution any further than the arrest, which is made as annoying as possible, and is made, therefore, to serve as punishment before trial at the hands of a party in the cause.

It may be said that four times are not many, but they are enough to serve as a warning, to inspire timidity among editors, and impose silence on such of them as do not care to pass three or four hours in a police court among criminals and semi-criminals, and, besides the trouble of procuring bail, to incur the expense of employing counsel and preparing a grave answer to a ragamuffin before the Grand Jury. The remedy is very simple. Arrests for libel on the police justices' warrants should be abolished, and the complainant be compelled to go in the first instance, as he has to do now in the second instance, before the Grand Jury and state his case. The Grand Jury would then pass, as they do now, on its reasonableness, and decide, as they do now, whether it had enough merit to warrant its being tried, and grant a war rant or summons, or refuse it, accordingly. Nobody's interest would suffer by this change. Both parties would escape the empty formality of the preliminary arraignment in the police court; the complainant would lose no right which he now possesses, and the defendant would be protected against needless insult and annoyance before it was known whether he was really a malicious slanderer or a public benefactor.

GENUINE FRIENDS OF LABOR.

Mr. J. Pierpont Morgan's gift of a half-million dollars for the endowment of Col. Auchmuty's New York Trade Schools is as noble and beneficent a use of wealth as could well be conceived. It must have carried to the heart of Col. Auchmuty, who has devoted ten years of earnest labor to the building up of these schools, unspeakable joy and thankfulness. As he said in his speech announcing the gift at the exercises of the graduating class on Thursday evening, it has been his fortune to have his work appreciated in a way that seldom falls to the lot of any man. He has now perfect assurance, not only that the work of his schools can be extended and enlarged during his lifetime, but that it will be continued after his connection with them shall have ended. Mr. Morgan's gift has converted a successful experiment of great value into a permanent institution of enduring and continually broadening usefulness to the whole country.

True beneficence has been defined as "that which helps a man to do the work which he is most fitted for, not that which keeps and encourages him in idleness," and this is precisely the object of Col. Auchmuty's schools. His idea is to supply to young men desiring to learn useful trades the means of doing so at a small price and in a thorough manner. In his teaching, the manual and scientific branches of a trade are so combined that the pupil acquires not merely skill, but a knowledge of the principles which underlie his work, and is thus started in the direction of constant growth and development. This is the kind of instruction which breeds master mechanics and inventors. It gives a man a sense of pride in his trade by making him a master of its technique and its principles, and sends him into the world as a living example of the dignity of honest labor. Practical instruction in various trades, such as plumbing, plastering, stone-cutting, painting, brick-laying, carpentering, and tailoring, is given by master mechanics and other competent teachers, and the instruction is accompanied when necessary by the study of technical books and trade papers. The end sought is "to enable young men to learn the science and practice of certain trades thoroughly, expeditiously, and economically, leaving speed of execution to be acquired at real work after leaving the school."

From the outset of his work, Col. Auchmuty has met with the opposition and ill-will of the trade-unions, many of whose members regard his schools as a menace to their welfare. In fact, the establishment of such schools in this and other States has been made necessary by the rules adopted by many organized trades forbidding the employment of more than a very small number of apprentices. In some trades a master mechanic is forbidden to employ more than four apprentices, in others more than two, for a term of four years. Under these rules a master mechanic can graduate only one journeyman a year, or one in two years. The effect of this practice has been to keep the American supply of journeyman mechanics down to only about a fourth of the demand. It is estimated from the figures of the census that out of $23,000,000 paid annually to mechanics in the building trades of New York city, less than $6,000,000 goes to those born here. The number of new journeymen trained by the trades themselves is not adequate to fill the vacancies, much less to supply the constantly increasing demand for larger forces. Many foreign mechanics are induced to come here, some to make this country their home, and others to work here during a busy period and then return to Europe with their savings.

The trade-unions are not to be blamed too sweepingly for this condition of affairs. In the large cities the employment of apprentices is not considered practicable by even the opponents of trade-unionism. The work has to be done so rapidly in many trades that there is no time to devote to the instruction of beginners. This is true, for example, of the type-setting business. All the recruits for the city printing-offices come from the country. Non-union offices in this city, which have no trade reasons for declining to take apprentices, take only a few of them because there is no time for teaching them. This is the case with many other trades. In fact, if it were not for the country supply of fresh journeymen, the American-born contingent of skilled labor would be much smaller than it is. Then, too, there is a feeling in all the trades that the day of apprenticeships has gone by; that there is something like slavery in the binding of a boy to a master for a long term of years, and that the boy, like the man, ought to be permitted to choose his employer and place of work.

All this goes to show the great need of manual schools like those which Col. Auchmuty has founded. Without them, there would soon come a day, if it be not already arrived, when an American boy who desired to learn a trade would be utterly unable to find instruction. We should then as a nation be in the curious position of drawing upon foreign countries for all our skilled labor, as we are now drawing for a great part of it. The folly of a course like this is too obvious to require discussion. We should be denying to a large portion of the youth of the country all opportunities for learning useful trades, and thus fitting themselves for industrious and reputable lives. This is practically what we should be doing in all our large cities now were it not for the trade schools, and yet it is in the cities that the need of useful trades for the rising generation is most felt, both as regards their own future welfare and the moral and political health of the community.

The statistics of Colonel Auchmuty's school show how great its need is, and with what appreciation it is regarded by the persons whom it seeks to benefit. During its first season there were 30 pupils, during the second 98, the third 207, and so on by steady increase till, during the one

just closed, which was the tenth, there were 589. There are somewhat similar schools in a number of other States, and in all parts of the country there is a steadily growing interest in their work and a constantly increasing sense of its value to the whole country. Surely the rich men who, like Mr. Morgan, contribute their wealth to an educational mission of this character, deserve the highest praise from all Americans who love their country and are concerned for its future development and progress.

MR. WHISTLER'S TRIUMPH.

LONDON, March 23, 1892.

IT is reversing the usual order of things when the French, for a fad, affect indifference to technique in art, and the English show signs of beginning to appreciate its value. But just as in Paris the *fin de siècle* Rosicrucians and Idealists, under Sar Peladon and Octave Uzanne, are extolling idea and pretending to despise form in a work of art, in London, etchings by Mr. Whistler and Mr. Haden, from the late Hutchinson and Drake collections, have brought enormous prices when productions of popular Academicians have been resold for a song instead of the original thousands; while at the present moment all the world is rushing to see the exhibition of Mr. Whistler's paintings. It is true that the presence of New York art dealers at Sotheby's and Christie's had much to do with sending up the prices of rare states and prints; that the purchase by the French Government of the portrait of Mr. Whistler's mother has suddenly revealed to Englishmen that he might after all be a painter as well as an eccentric creature who indulges in amusing law-suits, and whose pencil is a clever weapon in newspaper duels. But no matter whence came the inspiration, the fact remains that just now artistic interest centres in the Bond Street Goupil Gallery rather than at Durand-Ruel's.

To those who look only for eccentricity from Mr. Whistler the show must be a disappointment. There are none of the yellow canopies and yellow walls, none of the fluttering butterflies and original schemes of decoration which his name suggests. The pictures, many in old and tarnished frames, hang on Messrs. Boussod & Valadon's red walls as at other times do those of the ordinary exhibitor, and the visitor looks at them from the upholstered sofa of commonplace commerce. The one old Whistler touch is in the catalogue, in which he has collected, as of yore, choice criticisms by men of note who ridiculed him once but to turn the laugh now against themselves. The device lacks novelty, but just after his triumph in France it is natural, and appropriate too, that he should have his jest again at the expense of the blundering English critics who mistook the master for a mountebank. Ruskin's teachings are already obsolete, save in the provinces; Whistler's power has grown with the years.

But to those who delight in the artistic qualities of his work, in its beauty of color and form, its truth to the most subtle effects of nature, its perfect impressionism in the best sense of the word, the exhibition is almost inexhaustible in its interest. It is probably the most representative he has ever given. The forty-four canvases include all his most famous pictures save a few—the portrait of his mother and the "White Girl," now in New York, being the most notable among the missing—and also fine examples of his every period and manner: his earlier studies of detail, his Nocturnes and Symphonies, his wonderful portraits—of Miss Rose Corder, Miss Alexander, Carlyle, Lady Archibald Campbell—paintings so well known that it is useless now to do more than mention them. And really to me the importance of this new exhibition is less in any special contributions to it than in the estimate which, as a whole, it gives of Mr. Whistler's true rank as an artist and of his influence over the younger generation of painters. There is nothing more striking about the collection than what seems, as one first goes through the gallery, its intensely modern character. With the Champ de Mars in one's mind, with the latest efforts of the New English Art Club fresh in one's memory, even not forgetting Monet's forty impressions of a haystack, Mr. Whistler's work might be thought the very latest outcome of the most modern movement in art. The fact is, that Mr. Whistler was a quarter of a century or more in advance of his contemporaries: 1855 is the date on one canvas, the greater number belong to the sixties. He was an Impressionist almost before the name impressionism in art had been heard. The world wondered when Monet a year ago showed those forty haystacks under forty atmospheric conditions, is wondering now at his almost as many treatments of a poplar tree to be seen at Durand-Ruel's. But what are most of Mr. Whistler's Nocturnes but impressions of the river as he watched it from his Chelsea window, looking over to the plumbago works and the church spire and up to old Battersea Bridge?

No wonder that not so many years ago every one, with Ruskin, could find in his genius merely the insolence of a coxcomb flinging his paintpot in the public's face. He had not then had time to educate his critics. Indeed, his wide, far-reaching influence over modern painting is only beginning to be felt, and probably it has never been so emphasized as it is now by the collection at Goupil's. I have heard it argued that it was because he was so determined to force the public to see just those qualities which he considers most essential in art, that in his Nocturnes he has so often sacrificed all others to them. It seems unlikely to me that Mr. Whistler ever had the public—Carlyle's majority—sufficiently at heart to consider them at all. But had he been charitably inclined, and, for the benefit of the ignorant, willing to illustrate that now famous explanation of his in court that a Nocturne of his represented, not merely a morning's work, but the knowledge of a lifetime, he could not have done better than to exhibit, as he is doing now, those of his earlier canvases which are strongest in color and most filled with detail. At these no one can look and continue to believe that it was to conceal his weakness of drawing and indifference to color that he recorded in paint his impressions of twilight and night when form is vague and indistinct and color subdued. Pictures like the "Little White Girl," with the exquisitely worked out geraniums against the muslin gown; the "Gold Screen," with the girl in sumptuous Japanese robes, Japanese fans at her feet; "The Lange Leizen—of the Six Marks," an arrangement of beautiful rich Japanese drapery and china; "The Music-Room," with the old-fashioned furniture and dress and the elaborate design on the window curtains reflected in the mirror; "The Balcony"—pictures like these are distinguished by a masterly rendering of detail which few of the old Dutchmen could rival, much less surpass, a beauty of color which the Venetians might have envied. And it is because he can, when he chooses, paint like this, that Mr. Whistler is qualified to create his Nocturnes, his Symphonies, his Arrangements—because he can, if he wants, paint the sea as brilliantly blue as the sky above, breaking in white foam on solidly handled rocks, as in the "Blue Wave, Biarritz," which Mr. Henry Moore might have taken as his standard, that he knows how to suggest the pale neutral grays and greens at the end of a dull day, just as the "Oyster Smacks" are pushing out from shore. It was the apparent simplicity of his methods, the supposed ease with which the work was done, that so disturbed and puzzled the critics—the fear that he was making a jest of them that led them to lose their tempers and seek to overwhelm him with the storm of their abuse through which he has steered his course so gayly. But the last twenty or thirty years have proved that what seemed child's play to the uninitiated was the most difficult problem to the student, a problem to be solved only by genius. And perhaps the most curious as well as interesting fact in connection with the Goupil Gallery exhibitions is the way papers and critics whose sayings are quoted in the catalogue have, with a few exceptions, veered around and consented to recognize something besides the jester in Mr. Whistler. For his next catalogue he will not have so many choice quotations.

But if his show reminds one of the influence he has had on the present generation, it also reveals the influences which have been most active in his own development. He himself has written his confession of faith in Velasquez and the Japanese masters. But even if he had not, his portraits, especially that of Miss Alexander, that fine harmony in gray and green, would be sufficient proof of the debt he owes to the one; while his careful study of the art of Japan is marked, not so much in his renderings of purely Japanese subjects, the "Gold Screen" and the "Lange Leizen," for example, as in the Chelsea Nocturnes and Symphonies, where a spray of leaves distinctly Japanese in character rises in the foreground, or figures as Japanese in treatment stand and walk on the banks of the Thames. Again, there is something of the feeling, something of the color scheme of Terburg, who might have been a student of Whistler's, in a portrait like the Carlyle. But, accepting all that the masters with whom he was most in sympathy could give, he added far more of his own. For the truly original man is he who knows how to make his own use of great work that has been already produced, not to imitate it, but to create a new masterpiece out of the old material. Is this not exactly what the Rossettis and Swinburnes of our time have done in poetry—what the greatest men have done throughout the ages?

It should not be forgotten in America that Mr. Whistler is an American of Americans; it may therefore be appropriately asked, What has America done for him? It has treated him with—if possible—even more ignorance and coldness than England; this, of course, coming from the desire of the Anglomaniac to out-English the English. It is true that the "White Girl" is, or was, in the Metropolitan Museum; it is also true that the portrait of his mother went travelling around America, only to be bought in the end for the gallery which has the best chance of assuring immortality to the artists represented within its walls. There is in Boston, I believe, at the present moment a

public building in process of decoration by Americans. Has Mr. Whistler, the greatest decorator America has ever produced, been asked to give distinction and importance to what otherwise may be only a striking failure? If he has not — and I am almost sure this is the case—it is at least not too late for Americans at once to endeavor to obtain from him one, if no more, of the few examples of his work still in his possession, which, however, before long may be distributed among galleries everywhere except in his native land. N. N.

ST. JOSEPH'S DAY IN NAPLES.

NAPLES, March 19, 1892.

"WAS there ever such a joyous, happy-go-lucky, noisy, reckless, feckless people as the Neapolitans?" said a grave Piedmontese to me just now, as, despairing of writing a letter in his own room facing the street, he sought refuge in mine, which overlooks the demolition and reconstruction carried on on parallel lines between Via Medina and O'Porto. "Here are you bemoaning and bewailing the misery of Naples, taking your friends willy-nilly into the *fondaci*, the slums, the blind alleys, and the cellars, while I can show you thousands of the very poorest, an hour hence, at their dinner of maccaroni and *zeppole*, with a carafe of wine on every table, so that by night-time we shall have no end of wounded and beaten, and to-morrow 'inquiries' at the hospitals for which no one will be the wiser." "And do you really grudge the poor, nay the poorest, of one sole quarter of Naples a jollification—one dinner washed down with wine that ought to cost them a farthing a litre, pure, light, bright *asprino*, which never turned the weakest head, or ruby-like Posilipo, which cheers but does not inebriate, and which the *dazio consumo* brings up to half a lire without its genuineness being guaranteed? And pray in how many houses of the aristocracy and the far richer burgher will more food be consumed and more wine and liqueurs be drunk than ought to enter into one human body, and which would, converted into money, keep a family of these poor slummers for a month? You may have my room, but not my company." And this last reassuring taunt so enchanting the grumbler that he made no further complaints, I left him in possession and set out to see the Saint in all his glory.

A dear saint's day it is to the generation now dying out, for Mazzini's name was Joseph, and so was Garibaldi's—San Giuseppes both. But, be the truth told, this is "a generation that knew not either of *our* Josephs," and though last Sunday, on the twentieth anniversary of Mazzini's death, the hall of Tarsia was crowded to listen to Prof. Bovio's commemoration of the "Apostle of Italian Unity," his own students and the *élite* of the working classes formed his audience; the plebs shone by their absence. But Mazzini has never been popular in Naples; on the contrary, Garibaldi was *the* saint, *the* hero, *the* idol of Naples thirty years ago. The classes and the masses were at his feet. But now you seek in vain for the images and portraits of Garibaldi above the maccaroni-venders, or the fish-friers, or the famous *zeppole* confectioners. No! the real genuine St. Joseph is reënthroned, and, with the baby Jesus in his arms, reigns supreme in his old quarter, which extends from the Quartiere S. Ferdinando to the Tribunale.

"Signora, signora," said my charming *camariere*, "you can't think of going out into that mob [she also is a Piedmontese]—you, who are still *influenzata!*" But go I did, and have spent just five hours fêting St. Jospeh. First, there were endless Josephs and Josephines of our acquaintance to whom it was proper to send bouquets. One of these, an old friend and guide to the slums, agreed to take us through "the fair" if we would go first to see the old men and women fed by the Little Sisters of the Poor at the hospital on the Corso Vittorio Emanuele. There was nothing for it but to yield, and in about half an hour the *carrozzella* halted before a magnificent edifice where the splendid carriages of the Neapolitan aristocracy stood empty in considerable numbers. Entering, we were greeted by a number of ladies, especially young girls, and begged by the Little Sisters to enter all the rooms and see for ourselves. On the ground floor in the large refectory there were smoking bowls of maccaroni, red with tomato sauce and yellow with cheese, and about 200 nice, clean old men seated with bottles of wine, fruit, and cheese beside their plates. His Eminence Cardinal Sanfelice, is "influenzaed," as is about every third person in Naples, so he had delegated the chaplain of the royal palace to officiate. After blessing the guests and sprinkling holy water over the maccaroni (a very few drops, I am glad to say), he ladled it out himself, and very pretty girls with blue scarfs, from a school near by, took round a plate to each; then followed a plate of fried fish and fried potatoes, a fried egg (to-day is Saturday, so maigre must be observed, though it *is* San Giuseppe), and finally piles of *zeppole*, really an exquisite light toss-up, with cream or jam in the middle, custard puddings, and fruit. "You must come and see the old women," said one of the Little Sisters, and we went up the clean slate stairs to a similar refectory, where all the old women were assembled waiting impatiently for the archpriest to come and "bless them also." We went into the dormitories, marvels of cleanliness, with good iron bedsteads, mattresses, and patchwork quilts; then into the infirmary, where, strange to say, nobody was ill save one old bedridden creature whose table was spread in grand style. On ordinary occasions all "want to be ill," because the food for the sick is more dainty; but to-day the *menu* of the common table had cured them all. From the upper windows the view of Naples, of the sea, Capri, Vesuvius, Castellamare, was simply enchanting. Clearly these old folks, whose life has been of the hardest in their youth and middle age, are having a good time of it now, and won't be in a hurry to go to paradise.

Returning to the refectory, the priest had come up, and the old women were lapping up their maccaroni, many of them finding it difficult to use their forks, and, when no one was looking, using the first three forefingers with lightning speed. Several were so decrepit that they had to be fed by the Sisters. I wanted to know all about the foundation and the budget, but this was not a day for investigations. "Come and see us at any time between ten and four, and we can tell you all." What we know is, that this institution is one of the many established everywhere by these "Little French Sisters," who collect money, food, clothing, furniture, rags, coffee grounds, broken meat from the hotels and wealthy houses; fruit, vegetables, fish, cooked meat, tripe from the poor venders in the poorest quarters, and so carry on their almshouse. Of ices left in the glasses they make a delicious syrup for the sick. It is perfectly wonderful to note the cleanliness, the order, the general air of comfort, that cannot be improvised for a festival.

Quite delighted with the visit, I told my friend that if the archpriest would give us a plate of maccaroni, I could stay all day, but not a minute longer with the inviting *odor* only in my breakfastless vitals. So, in another *carrozzella*, down we dropped to see the poor families at their dinners on the pavements in the streets. We also breakfasted religiously on maccaroni and *zeppole*, then wound our way through the fair of San Giuseppe, of which our hotel is the centre. Truly the noise is deafening—the shouts of the venders of a hundred wares, of the traditional Neapolitan toy, costing two farthings (merely a tin flag which whirls round a tin handle, crying *crik, crik, crik*), whistles, trumpets, all the main stock of every fair contributing to the universal rowdedow. Then, of course, Punchinello is everywhere, on horseback and on foot, jumping through rings, clapping his tin circles, performing in the toy theatres, and delighting all children, aristos or plebs. And all mammas, rich or poor, bring their bairns, especially if they are Giuseppes or Giuseppinas, and all buy toys—the dolls' houses and doll belongings, wonderful to behold; lovely beds and bedding, dolls' kitchens and private drawing-rooms, dolls' wardrobes and dinner services, dolls' cradles, perfect imitations of the real Neapolitan cradle, all artistic, light, and cheap—all save the dolls themselves, which are hideous to view. The gift of a real English doll to an Italian child forms the ne-plus-ultra of generosity even to well-to-do-children. But to-day all the girls got such dolls as there were, and never rested till all the appurtenances of doll life had been added. The prices are not excessive, as I proved by investing half a dollar in twenty-five different presents; then, laden with the spoil, reached my own room in safety, to find five invitations from different friends to "fare il San Giuseppe," to fête the brother, or husband, or lover; but on the whole I think I shall not venture out again in the crowd, so dense that you can walk on their heads.

San Giuseppe has made clear to me certain things which were dark mysteries till now. Visiting the other day some of the new houses wrested at last by the Royal Commissary, and now by the new municipal government, from the Society who contracted for the sanification of Naples, and who have built splendid houses for the rich and middle classes, but none for the evicted slummers, we were astonished to see the numbers already ousted from the poorest *fondaci*, cellars and dog kennels, fairly installed in their new abodes, blessed with Serino water turned on in each room, a sink apiece, and plenty of air and light. For none of these blessings were they at all thankful, and I am sorry to say that they had managed in less than two months to reduce the new abodes to a state of dirt and mess which gave them a strong family likeness to the old tenements demolished. "Well, what have you to grumble at now?" I asked of a woman whom I recognized. "Everything, signora. The porter won't let the children play on the stairs, we can't go down to the court-yard to wash, there is no balcony, and what's the use of all those charcoal stoves for us who have nothing to cook?" "Come here, come here," said a decent-looking woman, "and see how we are ruined." We went to the ground floor, and found a workshop in two very decent rooms, for which only six lire a month was paid. The husband was pleading, gesticulating, with the porter, who, shrugging his shoulders and turning up the palms of his hands, was clearly pantomiming, "Non possumus." He begged us to interfere. "See here! all these horses

and helmets," and there were scores of both. "These are paper-mashed in a mould [papier maché of the coarsest imaginable quality]. They must be dry before they can be painted to look like wood. And here, with no sun, dry they won't, and if they are not consigned for the 18th, they will be left on our hands." Our promises to see if his apartment could not be exchanged for one on the roof, brought no consolation. It was no use unless the horses could be consigned on the 18th! Of course, the great run upon them is on Saint Joseph's day.

When I say that the municipality has succeeded in wresting some half-a-dozen tenements from the Society for housing the evicted, I do not mean that anything has been done expressly for the poor. But as they could not well be all left out in the streets, the houses designed for a better class of workmen have been assigned to some of them at five lire a room per month for the next three years. These houses are not at all adapted to this class of slummers, and their ironical allusions to the "three and more charcoal stoves, with nothing to cook over them," are justifiable. No matter; here will soon be 4,000 of the poorest decently housed, and if they have to walk a long distance to their work, or rather to the seashore where they hope to find a hand-to-mouth job, that is no such great hardship. The shops are beginning to follow their customers, and a hard life have the porters to keep the venders *in* those shops and *off* the pavement. One of their great trials is that they have been taken away from their good old parish priest and don't know where to go. There are as yet no infant schools or even communal schools in the new quarter, and until the citizens set to and do something on their own account, it is useless to bemcan that the French sisters of charity have all the hospitals, places of education, and almshouses in their hands.

Not all, by the way. Yesterday we accompanied some American ladies to the flourishing Froebelian Institute founded by Mme. Schwabe some five and twenty years ago. The building, given or lent, almost tumbled about their ears, and here also the proverb, "All evil harms not," proves true. The boarding-school had to be given up, and, instead, a popular kindergarten and elementary school substituted. The few habitable rooms up stairs are reserved for the normal school for women licensed to teach in the elementary schools, who here learn the kindergarten-school system thoroughly. The present directress is a German, the director an Italian. They work well together, and have in the infant schools 420 waifs and strays from the slums, who are taught cleanliness and order, have soup at midday, and are generally dressed and booted by the parents of the well-to-do children who frequent the same school, eating the same soup and paying seven lire a month. The same system is maintained in the elementary classes. Who can is made to pay for who can't. The mistresses and professors for the high and kindergarten schools number forty-five, the whole "family" over a thousand; yet Miss Baermann and Signor Quarati manage to pay all and have no debts, with something over eleven thousand dollars a year. This includes the salaries, the soup, the gratis pinafores and washing of the same, the lighting and fire for cooking. The boarding-schools could not maintain more than a tenth of the number. These children, left in their homes at night and on Sundays, are a reforming influence there. The mothers are proud of them; they keep neat and do not pawn the dresses given, they wash the children and clean their heads. Great excitement prevailed during our visit, for the name of the beloved director is Joseph, and he was to be got rid of early, on some pretext or other, because the children and the teachers were going to deck his room and prepare garlands and flowers for St. Joseph's namesake. All the little St. Josephs also were to have toys. It was delightful to see what love and kindness prevails. So struck was the American lady by the intelligence, brightness, and cleanliness of the children that she could hardly believe that they were waifs and strays from the slums, but one ten-minutes' dive down from the back of our hotel, though we did not visit by any means the worst parts of Naples, convinced her of the necessity and the use of these institutions for children and parents both.

20th.—As it was too late to post last night, I am happy to add this morning that the early newspapers give no additional items of fights or other disorders as the result of feasting San Giuseppe. J. W. M.

Correspondence.

PSYCHICAL SCIENCE AT THE WORLD'S FAIR IN 1893.

To the Editor of The Nation:

Sir: The Committee on a Psychical Science Congress to be held in connection with the World's Columbian Exposition of 1893 in Chicago, have issued their preliminary announcement, for the special purpose, they say, of soliciting the suggestions and obtaining the coöperation of all persons who are interested in psychical research throughout the world, in order that the Congress may find a truly international representation. They propose to bring psychical research fully and fairly before the bar of public opinion, to rid it of what may be found wrong, bad, or unsound, and to invest it, if possible, with the dignity of a true science. One means to this end is assured at the outset by the effective measures taken to exclude cranks and other objectionable persons. It is probable that many or most of the leading psychical researchers of all countries will be represented. The phenomena of psychical science are to be treated both historically and analytically, by means of addresses from the highest authorities in their several departments, and also by means of actual experiments conducted before audiences. Among the subjects which the Committee specify are: The general history of psychical phenomena, the evolution of human testimony concerning them, the results of original individual research, and the origin and growth of psychical societies—which latter are already comparatively numerous. Various classes of psychical phenomena are grouped under several heads, and include those of telepathy or thought-transfer; of mesmerism or hypnotism; of hallucinations; of premonitions; of apparitions of the living and the dead; of clairvoyance, clairaudience, psychometry, the mediumistic trance, etc.—of the whole range of these psycho-physical manifestations upon which modern spiritualism is based. Finally, the correlation of all these groups of phenomena with one another, the bearing of psychical science upon the physical sciences, and the answer the former may be found to give to questions concerning human personality and immortality, will be discussed at this Congress.

The Executive Committee is composed mainly of residents of Chicago, who can conveniently attend the meetings which will be held from now until the opening of the Congress in May, 1893. The chairman of the Committee is Col. John C. Bundy, editor of the *Religio-Philosophical Journal*, which has long been fully committed to the scientific method in dealing with the facts and theories of spiritualism, and in denouncing and punishing every kind of fraud or folly to be found under cover of that name. Others are Lyman J. Gage, President of the First National Bank of Chicago; Ernest E. Crepin, H. W. Thomas, D.D., A. Reeves Jackson, M.D., J. H. McVicker, D. Harry Hammer, and D. H. Lambeson. It may be added that the World's Congress Auxiliary has been organized with the approval and support of the Exposition authorities, to have general charge of the series of Congresses of which the Psychical Science Congress is one; and that the directory of the Exposition will provide ample audience rooms. Though the announcement has been out less than a month, the Committee are already in very extensive correspondence, and the responses thus far received are almost unanimous in encouragement and support of the project.—Very truly yours,

Elliott Coues, Vice-Chairman.

Chicago, April 5, 1892.

PHILOSOPHY IN AMERICAN COLLEGES.

To the Editor of The Nation:

Sir: The complaint of Prof. Scripture, in your issue of March 31, concerning the backwardness of American colleges and universities in respect to psychology might be extended so as to include all the philosophical sciences. The other day I asked a recent graduate of a Western college what text-book in ethics he had studied. He replied that he couldn't remember the author's name, but he knew the work was old, for, on account of the expiration of the copyright, he had been able to buy his copy very cheaply!

But merely cursing our shortcomings will not help us to reform. We should rather seek the causes of what we deplore, and also consider their relation to the existing forces of progress. The chief cause, apart from the poverty of American colleges, is their original design, which, hardened into unquestioned tradition, has become a fetter upon development. In the first place, most of them were intended for training and instruction, not investigation, and as a consequence their equipment and habits are ill adapted to the demands of the present. Secondly, the predominant interest in their establishment and maintenance has been religious, and because philosophy is more intimately connected with religious beliefs than any other college study, it more than any other has been made ancillary to practical ends. The recitation in "mental philosophy" was formerly supposed to have its primary value in moulding the character of students. The natural result was the stamping as orthodox of certain philosophical dogmas, oftenest those of Sir W. Hamilton and his followers, which were found adapted to this practical end. It followed that the work of the teacher consisted neither in investigating nor in stimulating investigation, but in securing firm assent to what was supposed to be the foundation of a good life. Add to this the traditional notion that the chair of "mental and moral philosophy" is a natural appendage of the office of president, and that the chief qualifications for this office have been clerical ordination and financial and executive ability, and

we have the most complete conditions imaginable for perpetuating the dreary fudge that has been handed down under the name of philosophy. The present tendency to select laymen as college presidents, and the creditable activity of a few departments of philosophy in leading institutions, are hopeful signs, but the notion lingers even yet that the qualifications needful for teaching philosophy are not parallel with those for teaching other branches. Surprise is still expressed when young men receive appointments to this department, as though in philosophy gray hairs or corpulence, rather than specialized knowledge, were the needful qualifications.

The path of progress leads through the emancipation of intellect from these artificial limitations. This does not imply that no connection is to be recognized between philosophy and practical ethics, nor that anything and everything may properly be taught. Just as none of our universities would employ as professor of political science any one known to be radically opposed to the political institutions of the United States, so denominational universities may consistently discriminate between men when they select a professor of philosophy—one may choose the sort of trees one will plant in one's garden; but we ought to insist that whatever calls itself a tree should have life and growth, and not be what one sometimes sees in the courts of German houses, a mere wall painted to represent a grove and yielding only imaginary coolness and shade. No interest of religion is subserved by cherishing the illusion either that a theologian is *eo facto* a philosopher, or that the simulation of thought can ever be as good as thought itself.

Among the forces of progress the new psychology occupies a prominent place. But its advocates may do well to note the conditions under which it is likely to be of greatest service. Prof. Scripture, in the before-mentioned communication, speaks of a certain work as "a tirade against the employment of scientific methods in psychology," and also as having been written during an attack of "materialism-madness." It is scarcely credible that the writer meant what these two statements seem to imply, namely, that, in order to be scientific, psychology must be materialistic. As a believer in the new methods in psychology, I am sorry to see one of their advocates even appear to confuse them with any metaphysical hypothesis, especially the one most likely to hinder their introduction into American colleges and universities. In order to prevent the possible notion that physiological psychology is a disguised materialism, it might be well to emphasize the fact that none of the three world-renowned American specialists in this branch, President Hall and Profs. James and Ladd, is a materialist. This should not, of course, be proposed as an argument for anything, but a mere statement of the fact might disarm the prejudice sure to arise if friends of the new psychology should in its name arrogantly denounce anti-materialistic treatises.

Furthermore, there is need of a frank admission of what Profs. James and Bowne hold in common, that neither physiological nor metaphysical psychology renders the other superfluous. The relation between the two is essentially the same as that between any other natural science and metaphysics. The trouble with psychology, as it is most often taught, is not that it is metaphysical, but that it is neither respectable metaphysics nor decent science.

Finally, the value of a fruitful subject-matter should not be clouded by a fight over names. But this is precisely what happens whenever physiological or cerebral psychology claims a monopoly of the terms *psychology* and (as applied to this realm) *science*. Eliminate the dispute about names, for instance, and what would be left of the contention between Profs. Ladd and James? Above all, conceit, and an overbearing attitude towards those who cultivate equally real fields, are not likely to conduce to progress. True science is modest, even in her triumphs.—Respectfully,

GEORGE A. COE.

NORTHWESTERN UNIVERSITY, April 4, 1892.

THE TEACHING OF ENGLISH LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: In a recent article on the teaching of literature, in the April number of the *Educational Review*, Mr. Brander Matthews writes as follows:

"As yet no American college—so far as I know, at least— has frankly divided this professorship [of English literature and language] and established two chairs, one of English language, and the other of English literature. Perhaps Columbia College has shown the fullest understanding of the exigencies of the situation, and she has not only a professor of the English language and literature, but also a professor of rhetoric, a professor of Literature, and an instructor in Anglo-Saxon."

The saving clause, "so far as I know," might at first thought be regarded as sufficient to shield the writer from the charge of having accidentally overlooked some of the smaller American colleges. But in reality this saving clause is intended to imply that Mr. Brander Matthews has taken some pains to examine the teaching of English in the larger institutions at least, and that he has not discovered any college taking the high stand of our metropolitan cousin. For the benefit, however, of those who may still think that Mr. Matthews, in his sweep from Cape Cod to New Jersey, has taken in the whole country, I should like to call your attention to a few facts.

The Johns Hopkins University has for years separated the teaching of literature and language, and the separation is distinctly recognized in the titles of the two chairs. The University of Michigan, the largest university on this continent, has also gone beyond Columbia in a complete separation of English literature from philology on the one hand and from rhetoric on the other, the three classes of work being in the hands of a full professor, two assistant professors, and a corps of instructors. For two years, also, Cornell University has had both a full professor of English literature, and another full professor with assistants in charge of rhetoric and English philology, showing in this case also a complete separation of the literary from the language study. This last example has been followed more recently by the Leland Stanford Junior University, in the appointment of Dr. Ewald Flügel, announced in the same number of the *Review*.

But it is not strange, perhaps, that the article in question should be somewhat behind the times, since at the very beginning, in reviewing the recent book of Mr. J. Churton Collins, Mr. Brander Matthews expresses "surprise" at the state of English teaching in England. And yet any one acquainted with the literature of the subject knows that the controversy has been going on in England for more than five years, and that one of the articles republished in the book of Mr. Collins appeared in the *Quarterly Review* for January, 1887.

Notwithstanding these criticisms, any article which helps to place the teaching of English in a proper light before the public will be of service, and there can be no question that the article in the *Educational Review* is one of these. OLIVER FARRAR EMERSON.

ITHACA, N. Y.

EDITH WALFORD AND HER WORKS.

TO THE EDITOR OF THE NATION:

SIR: I have only to-day had my attention called to the *Nation* of February 25, containing Mr. Kirk's letter and your rejoinder. I did not see the previous *Nation* containing the criticism referred to.

I am the E. (Edith) Walford who made the translation of the 'Story of the Chevalier Bayard,' from the French of M. de Berville. The book was the first of the "Bayard Series," edited for Sampson Low, Son & Marston (as the firm then was) by the late Hain Friswell. It was quite by an oversight that E. Walford instead of Edith Walford appears upon the title-page. I remember Mr. Edward Walford calling upon me at Mr. Friswell's house in Great Russell Street, and suggesting that in future it would be more convenient to have my full name attached to my work, as he was receiving so many congratulations that were intended for me.

I also compiled the 'Table-Talk and Opinions of Napoleon Buonaparte,' going conscientiously through every book on the subject in the Library of the British Museum. My name, I see, does not appear at all on the title-page—if for any editorial or publisher's reason, I did not hear of it. But in the 'Words of Wellington,' the next volume of the Bayard Series which I compiled, my name is on the title-page ("Compiled by Edith Walford"), and in the editor's preface it is referred to as follows: "Very little need be said of this companion to the 'Table-Talk of Napoleon.' The same compiler has carried out the suggestion of the editor," etc.

I am quite conscious of being a very obscure author, but I am sure you will not consider me unduly egotistical in wishing to lay claim to my own performances.

I am, dear sir, Yours faithfully,

EDITH WALFORD BLUMER.

SIERRA MADRE, LOS ANGELES CO., CAL., April 2, 1892.

NON SEQUITUR.

TO THE EDITOR OF THE NATION:

SIR: The *Evening Post* of March 30 has an unsigned letter from Boston, relating to the report of a Joint Special Committee of the Legislature upon the State commissions. It contains a conclusion against which I desire to protest:

"It is to be noticed, as the first essential feature of the report, that the system of government by commissions has the unanimous approval of the Committee. This is all-important—in the first place, because it will settle for this generation, doubtless, all of the criticism of the existence of commissions as desirable features of our State Government, and again because it will now turn attention to the improvement of the system rather than its abolition, and it will be likely to lead other States to do what is being done here with such success in Massachusetts."

One assertion being, perhaps, as good as another, I say that, so far from this, it is only drawing into more definite shape that conflict between the Executive and the Legislature which is bound to come, and waits only for an executive head who has the courage to appeal directly to the people on behalf of his office

against the usurpations and abuse of power by the Legislature.

Gov. Russell has in two annual messages to the Legislature protested against the government of the State by commissions, and hinted pretty strongly at the propriety of abolishing them and intrusting their work to the Executive as the proper agent. He has also, on two or three occasions, got into conflict with different commissions, and been prevented from changing the members by an exertion of purely party strength on the part of the Council. Yet in the order of the Legislature appointing this Committee, and printed in the report, no allusion whatever is made to the Governor or his opinions, while in the body of the report itself the Governor is as completely ignored as if he did not exist. The Committee would probably say that the Governor should appear and present his views; but that Gov. Russell very properly refused to do. It is beneath the dignity of the chief magistrate to appear as a suppliant before a hostile committee of a hostile body which is itself only a branch of the government of which he is another branch. So that it comes to this, that seven men, representing less than a thirty-fifth part of the State, can of their own motion, and on a wholly one-sided statement of the case, suppress, at least for the present, all discussion of a subject declared by the head of the Executive to be of the highest importance, and while that head has no opportunity of being heard —at all events, so long as adherence to routine forbids him to appeal directly to the people.

An analysis of the report would furnish, if space allowed, a most fruitful subject. But it may be said in general that it breathes in every line the corporate spirit of the Legislature; its jealousy of the Executive, and desire to fetter him in every possible way; its equal jealousy of personal prominence of any kind—all the members wanting to be captains and none privates; and its indifference to the character both of administration and legislation as compared with the indulgence of this ruling passion.

It seems strange that some Governor does not see the splendid reputation that awaits the man who can induce the people to join with him in raising his office to its proper authority, and so bringing some order out of the present chaos. The fact is that as, by the Darwinian theory, organs which are unused for generations lose their vigor and proper form, so the breed of Governors has become divided between those who are content to accept positions of honest insignificance, and those who are eager to use that insignificance, from its very absence of personal responsibility, as a cloak for the darkest and most extensive corruption and intrigue. G. B.

Boston, April 9, 1892.

A MYSTERY OF THE BALLOT.

To the Editor of The Nation:

Sir: In looking over the pages of the *Historical Magazine*, I noticed an article copied from the Boston *Advertiser* for some date about A. D. 1860, calling attention to a matter which has often puzzled those who have counted ballots. It is this: when several persons ballot honestly to choose several persons on one ballot, how is it that more than the necessary number receive a majority of ballots? For example: if five men each vote for three candidates, requiring thus three votes to elect, why is it that more than three of them get three votes? In dealing with larger figures, the number of successful candidates may be so many as to almost double the list. I have known some such instances, and have often heard the statement that the result was impossible and showed evident fraud. After studying the example given in the article quoted, I believe that I discern the principle, a very simple one, but I have never happened to see it stated. I will therefore do so, believing that many persons share my ignorance and will be glad to see an explanation.

The rule seems to be this: multiply the number of officers to be chosen by the number of votes, and divide the result by the number required for an election; the quotient will be the number of persons who can be elected, and the remainder will represent unnecessary or cumulative votes, which may be discarded.

Thus, if five voters each vote for three candidates, a total of fifteen votes is cast; which, divided by three, the number necessary for a choice, gives five candidates receiving a majority vote.

Example:

A votes for candidates	1,	2,	3.			
B " " "	1,	2,	3.			
C " " "	1,			4,	5.	
D " " "		2,		4,	5.	
E " " "			3,	4,	5.	

The individual ballot might be varied considerably, always resulting, however, in a majority vote for five candidates. In fact, as the majority is always a little more than one-half the number of voters, the quotient in the rule must always be at least one less than double the number of candidates; but the greater the number of voters and candidates, the less the discrepancy will be. In fact, the true answer to the problem seems to be this: the number of candidates receiving a majority may always amount to twice the number voted for on one ballot, *less one* invariably, and also less a few more, according to the results of the rule. But I think it will surprise most persons to find that if 100 persons ballot for 30 candidates, 58 could receive a majority vote, or 51 votes apiece; though a little explanation makes it self-evident.

It seems that the Legislature of Massachusetts had made provision for this point. In the Revised Statutes of 1836, chapter 4, section 13, it was provided that

"if, at any election, a greater number of candidates than the number to be elected shall severally receive a majority of the whole number of ballots, a number equal to the number to be elected, of such as have the greatest excess over such majority, shall be deemed and declared to be elected; but if the whole number to be elected cannot thus be completed, by reason of any two or more of such candidates having received an equal number of ballots, the candidates having such equal number shall be deemed not to be elected."

This was during the period when an absolute majority was necessary to a choice; but in 1855 the plurality law was established by Amendment No. 14. The statute was then altered (see Gen. Stat., chap. 7, §14, and Pub. Stat. chap. 7, §25), providing that in all elections of civil officers by the people, "the person or persons having the highest number of votes shall be deemed and declared elected, but no persons receiving the same number of votes shall be deemed to be elected, if thereby a greater number would be elected than required by law."

This, of course, did away with the old trouble of having too many candidates receive a majority vote, as that feature was not essential. It is confined, however, to popular elections, and the case still arises in representative bodies, city councils, societies, and others where the majority rule remains.

I trust, therefore, this little explanation will not be deemed superfluous.

W. H. Whitmore.

Boston, March 17, 1892.

Notes.

Roberts Bros. have in preparation a wholly new edition of Jane Austen's novels, limited to 1,000 copies in eleven 16mo volumes, and to 250 copies in octavo size. Each volume will have a frontispiece design by E. Garrett, and the type will be clear.

A History of the United States for the special use of schools, from the pen of Mr. John Fiske, is to be published by Houghton, Mifflin & Co.

A social study of American society, by Hamilton Aïdé, has been given the title of 'A Voyage of Discovery,' and will soon be brought out by the Harpers.

Macmillan & Co. promise a new edition of Mr. William Winter's 'Shakspere's England,' and of Edgerton Castle's 'Schools and Masters of Fence.' The latter work, hitherto an expensive quarto, is to be accommodated to the Bohn Library.

Cassell announces 'In a Steamer Chair, and other Shipboard Stories,' by Luke Sharp (Robert Barr).

Charles L. Webster & Co. will soon have ready a collection of the poems of William Sharp, entitled 'Flower o' the Vine: Romantic Ballads, and Sospiri di Roma.'

Dr. William Lyon Phelps of Harvard University has nearly completed a book on 'The Beginnings of the English Romantic Movement.' It is a study of the germs of Romanticism in England from 1725 to 1765. The book will probably be published in the fall.

Mrs. Elizabeth E. Evans has made an exhaustive study of the Kaspar Hauser literature, new and old, and her just finished narrative is on the eve of publication.

We learn from a late *Academy* that T. Fisher Unwin will shortly publish a book of reminiscences by George Jacob Holyoake, 'Sixty Years of an Agitator's Life'; that an Australasian Dictionary of Biography, by Philip Mennell, will be published by Hutchinson & Co.; and that Netherton & Worth have issued Vol. I., A to H, of a Modern English Biography, by Frederic Boase, that will contain concise memoirs of nearly 8,000 public characters who have died since 1850.

Little was known until very recently of the private library of the Borghese family at Rome. It is therefore a surprise to scholars both in and out of Italy to learn—since the culmination of the financial difficulties which have overtaken the princely house—that the Borghese palace contained not only the noted picture-gallery, but an immense book-collection, much larger and, in some respects, of even greater interest than the well-known libraries of the Barberini, Chigi, and other old Roman families. The collection is a miscellaneous one, but some specialties—among them music—are very fully represented. Of course, as might naturally be expected, the library abounds in incunabula, other book rarities, and rich bindings. We understand that a limited number of catalogues of the collection will be placed as soon as possible in the hands of a New York firm of booksellers.

In the Cantonal Library of Aarau, Switzerland, the librarian has just discovered a copy of the first edition of Hans Holbein's 'Bilder des Todes,' published at Lyons in 1538, and

containing forty-one woodcuts. Bound up in the same volume are also forty-six woodcuts by the same artist, illustrative of the Old Testament.

A complete *catalogue raisonné* of Parisian journals and periodicals, with date of establishment, name of publisher, price, etc., has been issued by Albert Schultz (Paris, 1892). It is the first full list of such works, analytically and systematically arranged, that has ever been printed. We may add that, during the year 1891, there were started in Paris 821 newspapers and reviews, of which, however, the greater part died of inanition before the end of the year.

'Friedrich der Grosse in seinen Aussprüchen über Religion, Erziehung und Schule,' by E. Schroeder (Berlin: Rentzel, 1892), is a timely publication that might be profitably perused by William II. Frederick the Great did not tell his subjects that if they disliked his politics, they could shake off the dust of their fatherland from their feet, but believed that "a ruler should so govern that people would want to come into the country instead of getting out of it." It was this policy that made Prussia a land of refuge for French Huguenots and Salzburg Protestants, and, by adding to her population a host of earnest, frugal, and skilful mechanics and thrifty husbandmen, contributed largely to her industrial wealth and prosperity and her political greatness. It has been the pursuit of this policy, in short, that rendered it possible for the dynasty of Hohenzollern to become the imperial house of Germany. The extracts in this anthology are taken from original editions and chronologically arranged.

Soule's useful and standard 'Dictionary of English Synonyms and Synonymous or Parallel Expressions' comes to us in a new edition revised and enlarged by Dr. George H. Howison of the University of California (Philadelphia: Lippincott). This work has been before the public for fully twenty years, and enjoys a deserved reputation for both fulness of matter and ease of reference. The revision has been mainly confined to discriminating further between the various senses of leading words, and to increasing the number of parallel expressions, enlarging the bulk by about one-third. The Dictionary easily stands at the head of books of its class.

The continued popularity of the poet Calverley is attested by the issue of third editions of his 'Literary Remains,' with a memoir by Sir Walter J. Sendall, and of his translation of Theocritus (London: Geo. Bell & Sons; New York: Macmillan). The latter of these is certainly the most interesting of the versions of the Idylls, owing partly to the various metres and partly to the quality of the English into which they are rendered. The difficulties that beset translation could hardly be more strikingly illustrated than by comparison of this volume with Andrew Lang's richer and more picturesque version; the original style has suffered a change in both, and which of the two English forms has most verisimilitude is a matter on which scholars and poets might easily disagree, according as the Elizabethan affectation or the late Georgian manner appeals most to their taste. Calverley's own standards may be found in his two or three essays on the subject of translation, which are as admirable as any, to be found in his 'Remains'; but of them, and of the verses included in that collection, and in particular the renderings of Latin hymns, there is no occasion to speak. We cannot refrain, however, from once more giving a word of praise to this delightful memoir of his life, and from expressing admiration for the fine fibre and quality of the man.

Two new volumes have been added to the collection of Peacock's novels (London: J. M. Dent & Co.; New York: Macmillan), edited by Dr. Garnett, of the previous issues of which we have made mention. 'Maid Marian' is most interesting because of its literary coincidence with 'Ivanhoe,' of which it was independent, but with which, nevertheless, it has points of contact, of which the most is made in Peacock's favor by the editor. 'The Misfortunes of Elphin' also goes back into the past of English fable for its subject, and fortunately its field has been less traversed in literature, so that it has a unique quality and an originality that verges on being factitious. In both these volumes the peculiarities of Peacock's genius find admirable play, and they help greatly in giving it variety of expression.

'War Papers and Personal Reminiscences, 1861-65,' read before the Missouri Commandery of the Loyal Legion, and published by the Commandery, is a substantial accession to the list of kindred publications. The present volume contains twenty-four papers, of which three are eulogies and one or two of the longer ones are historical criticisms. The rest belong to the class of personal reminiscences which give chief value to the publications of military societies. They, of course, vary greatly in value and interest, some being of a very high order, while others are of trifling importance. The proof-reading seems to have been very imperfectly done, and some of the papers show the need of editorial revision. As a whole, the volume will be a useful addition to the historical material of the civil war, but might easily have been made more so. Its binding is uniform with those of the Ohio and New York volumes already published.

'The Realm of Nature: An Outline of Physiography,' by H. R. Mill of Edinburgh, is published in this country by the Scribners as one of their University Extension Manuals. It is an excellent book—clear, comprehensive, and remarkably accurate considering its scope. The standard errors that one has come to expect in one text-book after another are successfully avoided, and this indicates high and scholarly attainments on the part of the author, and a broad acquaintance with modern sources of scientific statements. The book gives an account of matter and energy, of the earth as a planet and its relations to the sun; of its atmosphere, oceans, and lands; of the geological record, of the continents, and of life. There is an appendix on the derivation of scientific terms, and an index. The charts are neatly prepared, and exhibit a large variety of facts of distribution. Among the novelties is a chart of equidistant coastal lines, illustrating the accessibility of Europe from the sea, while central Asia is so remote. Although the knowledge gained by a university extension course in using such a book as this is necessarily fragmentary, and unlike that resulting from the more thorough courses given at universities on the various subjects here included, still one who reaches a good understanding of the book may regard himself as having made a real advance in his education towards an appreciation of nature. At the close of the preface, it is stated that Prof. Shaler of Harvard has "supplied occasional illustrations from the point of view of the American physiographer"; but the publishers seem to have set narrow limits to these additions. The book is essentially British, the rest of the world being treated only in a general way. The enthusiastic teacher of country classes in Wisconsin, for example, where university extension is well fathered, can hardly expect his scholars to enjoy the presence of special temperature and rainfall charts of the British Isles in the absence of similar special charts for our own country. The plan and general execution of the book is so good, and even in its present form its value is so great, that we hope the publishers will soon be able to bring out a truly Americanized edition.

The subdivision of what older scholars used to learn as British America into various provinces and territories under the expanded general name of Canada, makes a general account of that vast country welcome. A 'Geography of the Dominion of Canada and Newfoundland' (Oxford: Clarendon Press; New York: Macmillan) has been prepared by the Rev. W. P. Greswell, under the auspices of the Royal Colonial Institute, and gives a compact account of our neighbor on the north. The maps are clear and sufficient for a small book; the chapters are succinctly written, dwelling briefly on the most characteristic features of the region. The total population is placed above 5,000,000, broadly distributed, unlike that of Australia, where concentration in cities is excessive. The weaker side of the work comes from its author not having personal acquaintance with his subject, and from his unscientific training that allows the acceptance of questionable statements, such as those from Maury about ocean currents (p. 82); but the book is a useful addition to our libraries.

'The Story of the Hills,' by the Rev. H. N. Hutchinson (Macmillan), is of about the same quality as its predecessor by the same author, the 'Autobiography of the Earth,' of which we could give no very favorable judgment some months ago. The newer book tells briefly of the uses of mountains, of sunshine and storm, and of plants and animals in the mountains. How mountains were made is discussed in chapters on the accumulation of their materials, on their subsequent deformation, and on their denudation. There are several good reproductions from photographs, some of which are by Donkin. The book will interest and inform its readers, and yet, in looking it over, we have a sense of the recent acquisition of his knowledge by the author. Of course, all books must have errors, but it is rather late now to find the Foehn wind ascribed to a source in the Sahara; and it is a regret to see yet again a repetition of the mistaken belief that all the Pennsylvanian mountains are synclines, and that in time the Jura Mountains *must* come to the same inversion between topography and structure.

The second part of Ratzel's 'Anthropographie' (Stuttgart: Engelhorn) follows nine years after the first. It is a volume of nearly 800 pages of serious, suggestive reading, which will stand well by the thoughtful teacher who wishes to comment on his texts either in history or geography. The essays on thinly populated districts, on the dwindling of low peoples, on the location of cities and towns, and on geographical names, are particularly interesting. The various chapters are closed by notes and references, giving numerous indications for the specialist for further study.

The report of the United States National Museum for 1889 is a bulky volume of more than 900 pages. Besides the special reports of Prof. Goode and his assistant curators, it contains a number of articles of more general interest—among others, the Professor's essay on the museums of the future; William J. Thomson's 111 pages, 48 plates, and 18 figures on

Easter Island, its inhabitants and peculiar history; Prof. O. T. Mason's account of aboriginal methods of dressing skins, 36 pages and 32 plates; and an interesting presentation of the evolution of the American rail and track, 51 pages and 137 illustrations. In this last no attention is given the wrought-iron chair that was such an important item in Western railroad construction about 1855, yet an exhibit is not complete without it. The chair to which we refer was made of a flat piece of iron, say eight inches square and half an inch in thickness, with a hole punched for a spike near each corner at each side of the end of each of the rails forming the joint, and with two or three inches of the middle of the outer side and of the inner turned up and back against the sides of the two rails so as to grasp their bases. This chair rested on joint ties, usually "taken out of wind" by the adzemen; it was displaced by cast-iron chairs and fish-plates and bolts at a later date.

Two more sheets have appeared of Vogel's large-scale map of the German Empire (Gotha: Perthes; New York: B. Westermann & Co.): one to which Emden on the Frisian coast gives its name, and one Frankfort on the Main, though the latter sheet embraces Gotha, Erfurt, and Coburg on the extreme east. The execution is beautiful.

Mr. Gardner M. Jones of the Salem (Mass.) Public Library has made and printed a "Rough Subject Index" to the Proceedings, Bulletin, and Historical Collections of the Essex Institute of that city (six, twenty-two, and twenty-seven volumes respectively). Completeness has not been aimed at, but the more important articles have been selected. The service was worth performing, and Mr. Jones is entitled to the thanks of historical students.

The *Critic*, reviewing Maitland's 'American Slang Dictionary,' says: "Under D should be inserted the popular colloquialism *dog gone* (*dog go on it?*)." The popular colloquialism is *dog gone it*, and we have always supposed that it was (like *darn it* and *dern it* for *damn it*) a mild form of swearing, being a euphemistic corruption of *God damn it*, made by transposing the initials *g* and *d* and twisting the sound a little —a phrase intended to suggest the more robust oath without being obnoxious to serious reproof.

On Feb. 22 Prof. Percy Gardner read before the Hellenic Society a paper on "The Chariot Group of the Mausoleum," contending with Stark and Wolters that the two figures of Mausolus and Artemisia should not be connected with the chariot at all. These two statues were of a workmanship manifestly superior to that exhibited in the chariot and horses. These last being by Pythis, the two figures must be attributed to one of the other artists, Scopas, Bryaxis, Timotheus, and Leochares, known to have worked upon the sculptures of the monument. Given the well-established proportion between the heights of men and horses upon all Greek monuments, a comparison of the stature of the figures with that of the horses made it impossible to suppose that they belonged to the "Chariot Group." The chariot stood empty on the summit of the monument, while the figures of Mausolus and Artemisia were placed somewhere inside the building, as befitted their superior style of sculpture. Dr. A. S. Murray and Mr. Arthur Smith of the British Museum defended the theory that the two figures belonged to the chariot, and Dr. Murray explained that, although the contemplated regrouping of the Mausoleum figures would suggest the grouping of them with the chariot, nothing would be so placed as to force this arrangement upon the eye.

Prof. Calvin Thomas writes to us from Ann Arbor:

"A paragraph in your critique of Walt Whitman begins: 'Whitman can never be classed, as Spinoza was by Schleiermacher, among "God-intoxicated men."' Is this only an inadvertence, or has your critic authority for ascribing to Schleiermacher a phrase that is commonly credited to Friedrich von Hardenberg (Novalis)? In the Tieck-Schlegel edition of Novalis's Works, volume ii., page 261, is to be found, among a mass of 'fragments,' the sentence, 'Spinoza ist ein Gott - trunkener Mensch.'"

—The very least of amateur astronomers need never to despair because of the lack of costly apparatus, in the face of events like two that have recently taken place. It is now commonly known that the *stella nova* in Auriga which has been absorbing the attention of many observatories for the past seven or eight weeks, was first seen by a Scottish amateur, who modestly notified the Astronomer Royal for Scotland by an anonymous post-card. He turns out to have been Thomas D. Anderson, Esq., of Edinburgh, who is now encouraged to make a further communication regarding his early observations of the star, telling how his doubts as to the character of the strange body were gradually removed. To this he adds: "You might also allow me to state that my case is one that can afford encouragement to even the humblest of amateurs. My knowledge of the technicalities of astronomy is, unfortunately, of the meagrest description; and all the means at my disposal on the morning of the 31st of January, when I made sure that a strange body was present in the sky, were Klein's 'Star Atlas' and a small pocket telescope which magnifies ten times." The very great service to science arising from simple but faithful observation of this type is rarely more conspicuously shown. Without it, months would doubtless have elapsed before the star would have been discovered in the necessarily slow, but certain, process of comparison of the photographs of the sky taken at frequent intervals at Harvard College Observatory. By that time this star would most likely have become too faint for satisfactory research upon its peculiar physical constitution. As it is, the beautiful photographs of its spectrum which have now been obtained at Harvard and elsewhere reveal a multitude of bright lines, which indicate a very complex constitution, quite unlike that of the ordinary variable star. Notwithstanding the fact that all the lines in the spectrum of the *nova* are broad, there is no falling off in intensity at the edges, as in the case of the hydrogen lines in such a star as Sirius. It is early yet to announce any definitive result from the examination of the spectra, but the suggestion seems likely that there may have been a celestial collision, perhaps of two large bodies, but perhaps only of two meteor-swarms. The latter, if it be finally proved, will afford a much-needed confirmation of the meteoritic hypothesis — a confirmation which Mr. Lockyer is by no means slow to predict. The unique service rendered by the Harvard chart-plates is worthy of note: this series began as long ago as November 3, 1885, and it was but a short task to examine the entire collection covering the constellation of Auriga. This proved at once, and beyond a doubt, that the new star was invisible up to December 1, 1891, that it was quite bright on the 10th, increased in brilliancy for the next ten days, and subsequently slowly faded away for a month or more, until the date of discovery by Mr. Anderson, when it had already become a star of inconspicuous magnitude.

—A second event is the issue from the press (Longmans) within the last few days of Dr. Otto Boeddicker's superb 'Atlas of the Milky Way,' made at Lord Rosse's famous observatory at Birr Castle, Ireland, during the past five years, and wholly without telescopic aid. Stump and lead pencil and a keen eye have been the chief instruments in producing this really splendid pictorial representation of the Galaxy. It gives the aspect of these star-strewn regions of the northern sky as they appear to the naked eye (a little better than the normal) on the best and clearest of moonless nights. No pains have been spared to insure the highest accuracy without optical assistance; still, Dr. Boeddicker desires his work to be regarded as a first approximation only, and as merely the first step necessary towards a knowledge of the structure of the sidereal universe. His specific point is this: the admirable photographs that have recently been taken of parts of the Milky Way in no sense supersede careful hand-drawing of what is seen by the naked eye. Obviously the photograph gives a section of the Galaxy lying much beyond what we see without optical means, since it resolves into stars what to the naked eye appears as unresolved nebulosity. Thus the hope seems to be justified that by superimposing the drawing on the photograph some knowledge may be obtained of the structure of the Galaxy in the line of sight. To this end, Dr. Boeddicker has already in hand the systematic photography of the Milky Way at Parsonstown—a work whose conclusion can be reached only at the termination of a period of some years. It will be a misfortune if the same observer is unable to continue this research on a like system through the constellations of the southern hemisphere.

—A contribution to vol. xi. of the *Taalstudie* bears emphatic witness to the interest which is now taken, beyond the limits of English-speaking peoples, in what is destined, beyond question, to become the leading speech of the earth. We refer to an article by Mr. C. Stoffel of Nijmegen, occupying no fewer than thirty-eight ample pages, entitled, "Annotated Specimens of 'Arry-ese': a Study in Vulgar English." This essay, it should be remembered, in view of later kindred elucidations, is dated 1889. Mr. *Punch's* 'Arry is, of course, the eponymus of the uncouth dialect with which it is concerned. The enthusiastic expositor of this jargon, who writes our language almost faultlessly, has, certainly, handled his subject much as if he were a born Englishman. That, being a foreigner, he should, here and there, be open to correction, was, however, perhaps inevitable. If we do not mistake him, he is unaware that *along of*, 'owing to,' *flam*, *flush*, 'abounding,' *hum*, 'humbug,' *optics*, 'eyes,' *tip-top*, *topping*, and *top-sawyer* have long been established, and that some of them are even now reputable. Of good age, too, are expressions like *fit to drop*, as could be evidenced out of De Foe; and, further, since they are employed, though only in a light style, by such authors as Bentham, Thackeray, Cardinal Newman, Mr. T. Hughes, and Sir George W. Dasent, they have not, in recent times, wholly lost caste. In the same category as this *fit* is *lingo*, wrongly explained as meaning, with "the lower orders," 'slang.' All other "orders" use it, except in grave discourse, but usually in a contemptuous sense, for 'language' and 'diction.' Far from modern, likewise, is *to go to pot*. Dr. Bentley,

for instance, wrote, referring to the Letters of Phalaris, "For, if the Agrigentines had met with them, they had certainly *gone to pot*," which Mr. Stoffel's fellow-countryman, the learned Van Lennep, amusingly misrendered, "Si enim eas invenissent Agrigentini, sine dubio *tergendis natibus inserviissent.*"

—Nor can we at all agree with the essayist in considering the colloquialism *'em*, 'them,' or *just about*, 'pretty nearly,' *left out in the cold*, *on the boil*, *on the mend*, *on the watch*, *prig* (sb.), *rollicking*, *sneak* (sb.), and *stiffish* as the exclusive property of plebeians. And why should he object to *shunt* in its figurative acceptation? We find, in the *Saturday Review*, as far back as 1858, in vol. v., p. 261, "Practically, General Peel is not *shunted*, but shelved." Exception is also to be taken to the judgment that "a *trifle* tedious" is "decidedly slangy"; it being not a whit more so than "a *little* tedious." Such a mistake as that of defining *gills* by "cheeks" is very pardonable. And so is the characterization of the epithet in 'Arry's *blarmed noosance:* "a mysterious term, reminding us of the equally mysterious 'gormed,' affected by Mr. Peggotty." With respect to certain local and low-class words and pronunciations which, like other writers abroad, he styles "Yankeeisms," Mr. Stoffel is occasionally at sea, as could be shown, if we had space for the showing. Moreover, it is still to be discovered, as by him, by linguistic speculators generally, in England and elsewhere, that we have come to possess distinct dialects, to some extent, and that, in scientific philology, *Yankeeism* and *Americanism* are, respectively, species and genus. In closing these strictures on the hazardous undertaking which we have cursorily criticised, it must be acknowledged that, in spite of them, it has, on the whole, been accomplished with very considerable success.

—The brain, the temperament, the will which made the great commander who suppressed the rebellion, are shown as never before in G. Kruell's latest masterpiece of wood-engraving, his portrait of Grant. It is really the President, in civilian dress, but as yet not overcome by the wiles of flatterers and intriguers, and so still essentially the soldier, simple of mind and invincible of purpose—the man at the height of his physical and mental powers. As a delineation of character, this likeness is as wonderful as its predecessors of the same class, the Lincoln and the Webster; and technically it ranks with either if we were not disposed to say of Mr. Kruell's work that his latest performance is his best. Here, as before, the artistic excellence overshadows the mechanical, and the result is portraiture in the grand manner, akin more to the brush than to the graver. The color scheme is very rich, and the background admirably devised. The handling of textures —flesh, hair, linen, and broadcloth—is perfection. But always one comes back to the "moral" of this face, conveyed in the firm-set mouth and inflexible nose, and eyes which did not flinch before the slaughter of the Wilderness. The correlation of these features has been thoroughly felt and most forcibly expressed. Mr. Kruell's brilliant success in this instance, as in that of his Lincoln and Darwin, has been reached by previous study and engraving of his subject from the same original, a much-prized photograph owned by Mr. Nast, and from other portraits from life. It must profoundly discourage any other artist in black and white ambitious to produce the final portrait of Grant. No connoisseur of wood-engraving can afford to overlook this example of the art in its highest advancement. With the public, it will make its way at sight. Mr. Kruell's address is East Orange, New Jersey; and the print may also be had of F. Keppel, 20 E. 16th St., N. Y.

—At a meeting of the Oxford Ancient History Society on Feb. 29, Mr. Haverfield, best known perhaps among scholars for his work upon Roman inscriptions in the Latin Corpus, gave some account of the work recently done upon the north wall of Chester. There was no doubt that its lower portion was of Roman construction. It had been built, perhaps, as late as the reign of Septimius Severus, with stones mainly taken from a burial-ground; hence the number of inscribed and, in some cases, sculptured tombstones which Mr. Haverfield's investigations have recently obtained. The task imposed upon the excavators was the laborious and costly one of discovering which stones were inscribed, and of substituting in the restored structure of the wall new stones of equal size. This has now been completely done, and the inscriptions obtained are mainly of interest as bearing upon the organization of the legionary forces kept by the Romans in Britain. One legion hitherto supposed to have been stationed at Carlisle is now shown to have occupied Chester. The style of the sculptures showed no traces of a local school of art like that found in similar cases in other parts of the Empire, notably on the Rhine. Mr. Haverfield exhibited a curious but rude representation of the death of Actæon, and a remarkably perfect recumbent figure from the tomb of a grand lady of the Roman colony at Chester. This very admirable piece of sculpture is the best thing of the kind which has been unearthed in England. The chairman, Prof. Pelham, remarked of a third piece of sculpture given among Mr. Haverfield's slides, that all such representations of a horseman running down a diminutive barbarian had been clearly traced back to their Greek original at Pergamum. He also spoke of the English study of Roman remains in Great Britain, saying that it was now to be hoped that something would be done by Oxford men to put these studies more nearly upon the high level attained by the French investigations of the Roman occupation of Gaul. He also referred to the efforts now being made in Germany to gain a systematic and complete knowledge of the great Roman wall. Similar investigations are now in progress on the line of the northern wall in Britain under the auspices of Mr. Nelson and the Glasgow Society of Antiquaries.

GOODYEAR'S GRAMMAR OF THE LOTUS.

The Grammar of the Lotus. A New History of Classic Ornament as a Development of Sun-worship, with Observations on the "Bronze Culture" of Prehistoric Europe, as derived from Egypt, based on the study of patterns. By William H. Goodyear. London: Sampson Low; New York: Dodd, Mead & Co.

THE credit of Egypt in the history of art has been singularly unstable. A generation ago she was held to be the fountain of all the arts; then came a time when her influence began to be denied at all points, and even the inspiration of the Greek Doric was refused her; and now, especially since the recent successes of the Egyptian Exploration Fund, her credit is up again. Mr. Goodyear's study of the lotus was first stimulated by the pottery found at Naukratis, and his identifications of the Egyptian lotus with the forms of Greek Ionic architecture, and of other decorative forms, Greek and Assyrian, were first published in the *American Journal of Archæology* and the *American Architect*, some five years ago. His present book, the outcome of later investigations, covers a much wider field, and, identifying the lotus as the chief emblem of Sun-worship, traces it through the early art of all the nations of the globe as the ruling artistic motive and dominating symbol.

"The lotus," Mr. Goodyear says, "was a fetish of immemorial antiquity, and has been worshipped in many countries, reaching from Japan to the Straits of Gibraltar." With abundant illustration from the monuments and texts, and from the works of other authors, he verifies its significance as the emblem of the sun, its more generally recognized symbolism of the generative force of nature, and its association with the solar disc, the sun gods, Ra, Horus, Osiris, and the rest, as with the animals that represent the attributes of the sun—the lion, bull, ram, hawk—and the sphinx, the gryphon, or other monsters. He follows it through the Phœnicians, Hittites, Chaldeans, and Assyrians to the Hindu, through Baal, Astarte, Mithra to Vishnu and Siva, and to the Greek Apollo and Aphrodite. Further, he maintains that the lotus and papyrus, which, as has hitherto been thought, divide between them the decorative design of Egypt, are one and the same; and not only this, but he really finds no other original motive, of plant or even geometric form, in all the field of ancient symbolic or decorative art of Egypt or any other country. So that the so-called papyrus, the palmette, anthemion, rosette, scroll, spiral, volute, guilloche, meander, fret, rope-pattern, swastica, chevron, zigzag, the ivy-leaf, trefoil, bud, cone, apple-seed, the Assyrian sacred tree, and the Buddhist trisula, even the water-leaf and egg-and-dart moulding, as well as the Ionic and Corinthian capitals, are each descended in direct line from the sacred lotus, and have no other ancestry; each is a symbol of sun-worship and of the generative force. Many of these identifications have been suggested by other authorities, and some have been accepted generally; but no one before Mr. Goodyear has ventured so wide a generalization; no one has thought of making the lotus the basis of all decorative forms. This bold thesis is maintained with great acuteness and range of evidence, and with an opulence of citation from other authorities, and especially from examples of the early art of all countries, that surprises the reader and at times almost takes his breath away.

It is impossible to do justice to Mr. Goodyear's argument by an abstract, because of its many ramifications and the great number of conclusions involved in it. It is a close application of the comparative method, deducing its points one by one by setting the details of ornament side by side according to similarity. So, for instance, the recurved petals of the lotus are shown to produce the Ionic flower, as Mr. Goodyear calls it, of the Egyptians, Phœnicians, and Assyrians; the flower begets the volute, the volute the scroll, the scroll the concentric rings. The addition of tangents to the rings produces the curvilinear meander, the meander the fret, the fret the swastica; and the argument is persuasive at every point. It is easy, however, in following out a series of deductions like this to forget the logic of probabilities —that the conclusion is weakened at each remove. It is not a chain which is as strong everywhere as its weakest link. The uncertainty is cumulative. We do not mean that

Mr. Goodyear's argument is flimsy—on the contrary, the reasoning is close and acute; the uncertainty is in the process, in which the final inference needs to be checked by other argument. The argument of the book is all in one direct line; but there are other considerations that are not to be overlooked. Among them are the extreme probability that different countries were working out apart their own habits of ornamentation, and the fact that there is a considerable number of forms so obvious and inevitable that it would be a wonder if they were not nearly universal. In point of fact, as we all know, certain ones are practically universal, and are reinvented every time an untaught person tries to invent ornament; others, such as the fret, meander, and rosette, we may fairly say, are found wherever a people have by practice developed a system of ornament. Most of these simple elements are found in the ornament of every savage tribe that has attained a little skill. In the ornament of Uxmal the lotus, volute, rosette, guilloche, fret, are as abundant as at Thebes or Amravati, and mingled with them a curious eye may detect not only the zig-zag and lozenge, but the English dog-tooth, the Pisan chequered square, and occasional letters from the English and Gothic alphabets.

This is an old argument, but is not weakened by repetition. Mr. Goodyear meets it squarely by assuming that Aztec, Peruvian, Zuni, Kabyle, and Pacific ornament are as much an Egyptian derivative as Assyrian or Phœnician, and are proof of prehistoric intercourse between these remote peoples and the shores of the Mediterranean. This contention is not new, but Mr. Goodyear is bold enough to maintain that the burden of proof is on the other side, and to say that it appears necessary for those who assert the independent origin of these details to prove that the Phœnicians, the peddlers of Egyptian civilization, were not in ancient America. The burden of proof seems to us to be on Mr. Goodyear's side, but we may stop to say that the presumption against the carrying on of a transatlantic commerce sufficient to communicate a civilization by ancient ships, without compasses and presumably dependent upon oars, outweighs, we think, any argument founded on the coincidences of forms so susceptible of independent invention as the details of common ornament. Some of the coincidences are certainly surprising, but life and history and invention and art are full of surprising coincidences. The argument proves too much. It amounts to the assertion that the art and the religion of all the world, and therefore almost necessarily the civilization, were the gift of a single people, transmitted in turn to every other, to the absolute denial of any other initiative or independent development. The only parallel to it, perhaps, is the conception of the literal descent of the whole human family from Adam and Eve.

The same singleness of argument is pushed too far, it seems to us, in tracing all ornament to the lotus. It implies that the Egyptian, having once accepted that plant as the symbol of his deity and luminary, and used it for ornament, never admitted any other, never associated with it a single line of his own fancy or from any of the myriad natural or geometric forms that were for ever under his eyes, but in the slow course of centuries developed all his great store of decorative forms little by little out of this single flower; that this resolute abstention was persisted in through thousands of years, not only by the Egyptians, but by Assyrians, Phœnicians, Babylonians, Cypriotes, Greeks, and all the nations through whom the inheritance of Egyptian art is here tracked. All we know of the processes of artistic evolution makes this incredible. It would need the strongest evidence; and the evidence here collected does not seem sufficient. This is not the way art is developed, so far as we can see. It is not evolution, but the rigorous carrying out of a preconceived scheme, a thing which probably never happened in the growth of art, surely not in early art. So sure is Mr. Goodyear of his argument that he disposes of an Alexandrian text which calls the sceptre of the goddesses a papyrus, by supposing that the Egyptians themselves had mistaken their amulet form for a papyrus, though he proves it to be a lotus by fig. 21. We can forgive the Egyptians, who probably did not have fig. 21 to set them right. The Egyptians were, or became, a very conservative people, very observant of the conventions of their art and the religious tradition that maintained it. But they were also a very artistic people, with a decorative instinct which in its kind has not been surpassed. There was a time when their artistic conventions were forming, and then there must have been a wide play for this decorative instinct. We see in their ornament, for instance, a variety of campaniform flowers, of very distinct types, carefully discriminated. They had undoubtedly a great variety of such flowers before their eyes in nature—were, indeed, celebrated in antiquity for their culture and importation of flowers; and while they apparently gave the lotus preëminence, it is easier to believe that they took their decorative material where they found it than that they laboriously travestied their sacred symbol into such various and uncharacteristic forms as are ascribed to it. The ingenious juxtapositions here shown certainly bring out in series close resemblances which might be transitions, but so would any systematic grouping of natural flowers. The fact that in Egypt the North and South were hieroglyphically indicated by two plants that are commonly taken for lotus and papyrus, Mr. Goodyear brushes aside with little ceremony. In truth the smallness and summary rendering of the hieroglyphs makes identification uncertain, yet if any two plants are carefully discriminated in the representation, they can hardly both be lotuses. So in the case of the palmette and anthemion, whose derivation from half the rosette is not convincing to us; so with the rosette itself, which is here derived solely from the rather uninspiring ovary of the lotus, though there are many varieties of it in Egyptian art and innumerable prototypes in nature. He rightly calls attention to its prevalence in Egypt, and he objects to considering it a distinctly Assyrian motive; but the distinction remains that in Egyptian decoration, which is unrivalled except by that of the red Greek vases for density and the close adaptation of each form to its neighbors, the rosette is always subordinate, perhaps too much so for a lotus, and generally imbedded in a repeated ornament, while in Assyrian it is apt to stand apart and to be principal.

Of the many valuable things in Mr. Goodyear's book, none is more interesting than his identification of what he calls the Ionic form of the lotus, and its development into the Ionic capital. Other investigators (Ceccaldi, Dieulafoy) had hinted at isolated aspects of it; but he only has covered the whole range of the question, and followed its transformations through Egyptian, Phœnician, Assyrian, and Greek art. The derivation must, we think, be accepted and the Ionic form as well as the Doric be referred to an Egyptian ancestry, though both are cast out from their birthplace. It would not be strange if the third classic order, the Corinthian, were ultimately traced, as some authorities have suggested, to the same country. Of the two forms of the lotus-volute which stand on equal footing in Egypt, the upright, derived directly from the flower, is the form which prevails in Phœnician art, but was neglected by the Greeks, while the horizontal, where the two volutes are united in a flat cushion, was the favorite of the Assyrians, and was developed into the regular Ionic capital. This choice of the Greeks, if it was a choice, seems to sustain, as does the apparent importation of the Ionic order from the Greek colonies in Asia Minor, the accepted theory that the capital was derived, if only secondarily, from the Assyrians, and not directly or through the Phœnicians from Egypt. The links are wanting that should connect the erect lotus volute with the Corinthian capital, though a sanguine person might point on the one hand to certain Assyrian bas-reliefs, and on the other to some Phœnician steles, one especially in the Museum at New York, which suggest not only the calyx at the base of the volutes, but the caulicoli above. It is difficult to believe that the Greek designers, with their keen decorative sense, would not have perceived, if the choice had been before them, that superior decorative fitness of the upright volute which is abundantly demonstrated by its after history. We doubt, by the way, whether the interesting Ionic capital which was found at Mount Chigri by Mr. Clarke in 1882, and has been called proto-Ionic, is to be regarded as a direct link in the development. It has the upright volutes divided by a palmette, and the abacus is missing; its form and its imperfect adaptation to the shaft suggest that it belonged rather to a detached votive column than to an order, and the fineness of the execution makes one suspicious of a very early date.

The theory that the lotus was a sun-symbol, and that it carried its symbolism into the art of many countries, is well sustained in the argument of the book, though it may well be that its procreative significance counted for most among people so given to phallic worship as the Phœnicians and the Hindus. Mr. Goodyear reverses the accepted course of Egyptian influence, and urges that it reached Assyria through Phœnicia rather than Phœnicia through Assyria. There is a good deal of force in his reasoning, yet there was another possible channel of communication in Chaldea, perhaps a more direct one. The recent finding of Babylonian tablets in Egypt, many of which, in the British Museum, are still undeciphered or unpublished, may have some light for this question.

But archæology is still in its childhood; its theories may be reversed many times before they settle into fixity. The 'Grammar of the Lotus' is a notable contribution to its literature, written with a tenacious grasp of its subject, with keenness of observation and clearness of statement. The success of the publishers is not in proportion to their effort, which exemplifies to our mind the worst fashions of modern bookmaking. The book is meant to be handsome; but it is clumsy and pretentious, heavy in the hand, awkward to read, and hard to consult. Most of its illustrations would be quite as clear and more agreeable at half the scale. The text contains matter for an octavo which the scholar would gladly welcome to a place on his shelves for which its bulk unfits it; but it is printed with the ostentation of a trade catalogue, with which its scholarship and the simple directness of its style are singularly out of keeping.

AN ENGLISHWOMAN IN PERSIA.

Journeys in Persia and Kurdistan. By Mrs. Bishop (Isabella L. Bird). G. P. Putnam's Sons. 2 vols. 8vo.

In these volumes, Mrs. Bishop, better known to the readers of her other popular books of travel as Miss Bird, has given an interesting account of her journeys through some of the unfrequented parts of Persia. The first eight of the "diary letters," of which the book is made up, describe the seven weeks of caravan travel from Bagdad, through Kirmanshah and Kum, to Teheran. Starting in the depths of an unusually severe winter, this journey of over 500 miles, through a mountainous country, was beset by hardships which would go far to content the "untravelled many," to whom the book is dedicated, with their own firesides. With the mercury often below zero, scarcity of fuel and incompetent service aggravated the suffering due to the wretched caravansaries on the route, and to the tedious progress of the laden mules through the snow.

After a few weeks of rest and sight-seeing at Teheran, Mrs. Bishop went south again to Isfahan, and from there started on her journey among the Bakhtiari nomads of Luristan. The Ilyats, or nomadic tribes, are an interesting class of the people of Persia, of whom they form more than a tenth part. They are scattered over the whole country in small tribes, and their wandering flocks and herds and their shaggy black tents make a striking contrast to the gardens and villages of the stationary population. In the north they are quiet and attract little attention, although the present dynasty of Persia sprang from the Khajar nomads of the Elburtz mountains, and, in consequence, founded its capital, Teheran, far from the old caravan lines, but near its own strongholds. In southwestern Persia, however, the Bakhtiari and Feili Lurs, of the mountains of Luristan, have been a constant menace to the country, and are now held in only partial control by the Government, through hostages kept at Teheran, and by the characteristic policy of fomenting quarrels among their different chiefs. The Feili Lurs form one of the obstacles to the development of the new trade route from the Persian Gulf to Teheran. This road, starting from the head of navigation on the Karun River, passes through their country, and will need to be strongly guarded to be safe from their depredations.

Little was known about either tribe, as few travellers have ever been among them, and it shows great courage on Mrs. Bishop's part to have undertaken this part of her journey, and great tact and persistence to have accomplished it safely. She had obtained at Teheran letters from the Amin-es-Sultan, or Prime Minister, to the Ilkhani, the head chief of the Bakhtiari Lurs, and to their other Khans, commanding them to supply escorts and to provide for her safety She had, as the leader of her party, a man, presumably a European, although he appears in the narrative only as the "Agha" or "Sahib," who possessed great presence of mind and ability. Yet she regarded rightly, as her main reliance, her medical knowledge and the ample supply of medicine which she carried. Whenever her tent was pitched, a crowd gathered clamoring for "feringee" medicine, and she spent much of her time in treating the sick and in giving away remedies.

Her reputation as an English "Hakim" preceded her, and had a marked effect in allaying suspicion and smoothing over difficulties. Nevertheless, she had many serious adventures. She was robbed of her money at one of the first villages she stopped at; but, although the thief escaped, the village was compelled by the Ilkhani to make good the loss. Her camp was attacked several times at night, and her party was fired upon in the daytime. Parties of wandering horsemen came up and discussed openly with her escorts their intention of stripping the entire caravan, and were with difficulty dissuaded from attempting it. Her small belongings were constantly pilfered, even by the chiefs who pretended to protect her. Mrs. Bishop intended to go back to Isfahan after a short trip, but her return was cut off by an outbreak of fighting, and she found it safer to push on through the unexplored western portion of the Bakhtiari country. She followed up the upper courses of the Karun River, and located its true source, and discovered an unnamed lake. After three months of travel and camp life, she arrived safely at Burugird.

Her account gives a clear idea of the unrestrained life of a turbulent people. They are divided into many small tribes, ruled by petty khans, over whom the Ilkhani has slight control, outside of his immediate neighborhood. The khans are usually engaged in interminable vendetta warfare with each other, and care for little else. The migrations of the tribes consist of semi-annual journeys between their summer camps, in the high mountain valleys, and the mud villages lower down, where they pass the winter. Each family and tribe has certain inherited rights of pasturage, over which there is constant quarrelling. They are a pastoral people in the main, although of late years they have irrigated and cultivated some of their mountain valleys. Though Mohammedans, most of their women go unveiled, and, except in the harems of the principal khans, are little secluded. Mrs. Bishop found the women grossly ignorant, and her ceremonious visits to the harems very tedious. The women complained of the monotony of their lives and begged for love philters. The men were finely formed, active and brave, though cruel. They were faithful to their immediate chiefs, and had, unlike most Persians, some respect for their word once given. Many of them possessed great intelligence, although mixed with the crafty cunning and childish ignorance of savages. They professed to Mrs. Bishop great friendship for the English, and hopes for a British occupation of southern Persia, which would enforce order and relieve them from the misgovernment of the Shah.

After leaving the Bakhtiari country, Mrs. Bishop travelled through some of the most populous and fertile parts of Persia, to Hamadan, and thence to Urumia. She was especially interested in the American and English missionaries, whose efforts are spent mainly on the subject Christian races, as they are not allowed to work openly among the Moslems. Judging from her own experience among the Bakhtiaris, and from the success of those medical missionaries who have been sent out, she advocates strongly the further use of this means of gaining influence among the Persians.

In all parts of Persia Mrs. Bishop found, as do most travellers, among Persians of all classes who talked freely with her, the settled conviction that, at the crisis which will come at the Shah's death, northern Persia will fall into the hands of Russia, and southern Persia probably to England. This prospect is looked forward to with Oriental resignation, due partly, no doubt, to the feeling that any change from the rapacity of the tax farmers and the universal corruption of judges and all other officials would be for the better. Were there any hope for a reform of administration, there might be hope for a more vigorous patriotism and a brighter future. The Shah is intelligent and, Mrs. Bishop thinks, earnestly desirous for the welfare of his country, while the peasantry she found, in the main, industrious, honest, and frugal, not abjectly poor, considering their simple habits of life, and capable of great improvement under more favorable conditions. But between the Shah and his people is a mass of infamous corruption, unchecked by any public opinion. The best-meant plans of the Shah are rendered abortive by the crowd of venal courtiers and officials that surround him, as well as by the intrigues of Russian agents, who are anxious to let things drift from bad to worse, and by the fanatical hostility of the Mollahs, or priests, to any project in which they detect a European tendency. This last influence was shown, within a few months, by the riotous opposition to the tobacco *régie*, and was so powerful that the Shah was obliged to cancel the concession he had granted.

The latter part of the second volume describes Mrs. Bishop's journey from Urumia through the mountains of Kurdistan to Trebizond. She visits the Nestorian Patriarch, Mar Shimum, at Kochanes, and describes the present humble conditions of the Nestorian, or Syrian, branch of the Christian Church, once so widespread and powerful. Her sympathies were deeply moved by the suffering of the Nestorian and Armenian Christians from the depredations of the savage Kurds, who constantly marauded the Christian villages without restraint from the Turkish authorities. We know, from outside sources, that Mrs. Bishop exerted her influence strongly at Constantinople to persuade the Turkish Government to hold the Kurds under control, and even refrained from mentioning the theft of her own valuable journals and diaries lest she should diminish the force of her unselfish appeal.

Mrs. Bishop's book does not pretend to discuss deeply social problems and conditions, although her notes on Persian questions and character show keen observation, as well as a familiarity with the opinions held by old English residents in that country. She has more to tell of the villages on her route, the people she met, the scenes along the road, the daily happenings of her caravan, and the incidents of her camps; in short, of all the minor details which go far to give a vivid picture of the country, its people, and their life.

Historical Essays. By Edward A. Freeman, M.A., Hon. D.C.L., and LL.D., Regius Professor of Modern History in the University of Oxford. Fourth Series. Macmillan & Co.

This volume is made up of twenty-two essays on various subjects, archæological, topographical, historical, and political. The most important papers are those on Carthage, Aix, Orange Autun, and the Lords of Ardres. The most remarkable is that on "Points in the History of Portugal and Brazil," full of proofs of accurate learning, though published, the author tells us, with only a few verbal changes, as it was written at Bordighera, where he had no opportunity of reference to any books whatever. The most characteristic, perhaps, is that on the Channel Tunnel, against the construction of which Prof. Freeman is inclined to protest, not on engineering or military grounds, but because it would impair the insularity which is the determining

factor and the salient feature of English history.

The volume had scarcely come into our hands when the news arrived of its author's death. He died, it seems, of smallpox. But he had for some time been an invalid and had found a Southern climate necessary in winter. The fruits of his valetudinarian sojourn in Sicily were two bulky volumes comprising the early part of a Sicilian history on the largest scale, prodigious in the minuteness of their erudition, and giving proof of an amount of labor in the way of exploration and research which would have been trying to most men in their highest health. His powers of work were indeed immense, and corresponded to the robustness of his typically Anglo-Saxon frame. We may use the phrase "Anglo-Saxon" since he is no longer here to rebuke us. The long list of his works and the range of their subjects attest his sleepless industry. Of the period of history following that treated by Gibbon and comprising the early Middle Ages he is, certainly among English writers, the king. His thoughts were turned and his life was dedicated to his special work by his Oxford training, received at the time when Newman was in the ascendant and neo-Catholicism was the creed of intellectual youth. He was the leading spirit in the Oxford Architectural Society formed for the revival of mediæval art. It is not likely that he retained later in life the beliefs or the religious aspirations of his Oxford days, but he retained his love as well as his knowledge of church architecture, his special interest in the period to which it belonged, and a feeling, to say the least, of coldness towards the Reformation, of which there are traces in one of the papers of this volume. The iconoclasm of the Reformation could not fail to be hateful to him. His knowledge of church architecture was of great service to him in treating the history of a period so largely chronicled in stone. His affection for the Middle Ages was carried to a great height when he could set a literary value on mediæval chronicles, insist that they should be read in the original, and even insinuate for them a claim to a place beside the classics. He was also a great master of Hellenic and Roman history and of the general history of political institutions; Federal government being in this department his favorite theme.

His weakness as an historian lies in his too exclusive attention to the political side of national life, and his comparative disregard of its spiritual, intellectual, social, and economical elements. He shows little feeling for any but the political life even of Athens, and little taste for literature, poetry, or any art except the church architecture of the Middle Ages. That he rather eschewed the philosophy of history, and abstained from putting forth any general theory of human progress, confining himself to facts, with their ascertained relations and sequences, was a fault on the right side, if not a merit, in an age of generalization. His learning was immense, and embraced all printed matter bearing on his period; manuscripts he did not explore. His memory was very strong, and his accuracy was almost unfailing. As a critic, he was apt to be merciless to inaccuracy, forgetting that weakness of the physical memory, such as betrays a writer into little slips, is compatible with real mastery of a subject. The inaccuracy of Mr. Froude, however, on whom he was thought to be most severe, is not only extraordinary but sinister. Prof. Freeman's historical sympathies were strongly marked, but they never caused him to swerve from truth, and they rarely caused him to swerve from justice. He is just to William while his heart is evidently with Harold. His passionate love of his subject, by leading him to revel to excess in its details, impaired the flow of his narrative and laid him open to the charge of pedantry. His pedantry, however, was that of enthusiasm, not of display. His style, though clear, vigorous, and masculine, is too diffuse, and the voluminousness of his writings will interfere with their currency, if not with their fame.

The historian took not only an active but a vehement interest in the politics of his own day, especially in the cause of struggling nationalities, and above all in that of the Christian nationalities which were striving to escape from the domination of the Turk, against whom the shafts of his learned hatred ceaselessly flew. On these subjects he not only wrote, but spoke, with a force and effect which would have surprised those who had heard him only as a lecturer. He, however, carried the historian and archæologist into the political field, and, could he have had his way, Europe would have been almost rearranged territorially upon the plan of the Middle Ages. He even repined at the union of Sicily with Italy, because Sicily had ethnological peculiarities and an interesting history of her own.

As a visitor to this country, Prof. Freeman fell into the error, not uncommon among English visitors, of presuming a little too much on our love of republican simplicity. There was always, however, in his address and attire something of the Englishman anterior to the Conquest. But he was a man of sterling worth, who loved justice, hated iniquity, and strove to perform all his duties in life—those which belonged to the landowner as well as those which belonged to the professor. He did an immense stroke of work, first-rate of its kind, ran a noble course, and rests in honor.

The Real Japan. By Henry Norman. Charles Scribner's Sons.

Mr. Henry Norman, a clever English journalist, has essayed to give us a work whose quality is midway between the German thoroughness of Rein and the superficial and often frivolous narratives of passing travellers. Taking a house in Japan, and spending some months in the capital, he set himself resolutely to study especially the Japan of the era of "Enlightened Peace," which began with the *coup d'état* in Kioto in 1868. No other writer, he thinks, has given an account of the political, economic, educational, and social conditions of this era. Indeed, so rapid are the vital political processes now proceeding, that it is impossible to take more than a snap-shot photograph of present conditions. One may indeed catch a view of the emerging image from the mask, but to describe it as finished life would be a mistake. The author clearly understands and modestly states his limitations, and then sets himself manfully to the task. Honesty of purpose and the utmost possible accuracy of statement are his only claims. In his volume, which is made up of his selected and recast letters to English journals, he discusses what will interest serious students of Japan, while yet picturing the charms which so fascinate tourists. The illustrations have been chosen with care, and most of them, especially the faces of the women, have been successfully reproduced. It is really refreshing to note the disappearance of the African cast of features so prominent in the venerable woodcuts of popular works on Japan, and to see the true Japanese expression and lineaments accurately represented.

After the inevitable chapter on household accommodations and the environment of the domicile, the author naturally introduces us to Japanese journalism. The total circulation of the 550 newspapers and periodicals amounts in one year to 95,932,270 copies. In Tokio alone are 17 political dailies, circulating monthly 3,906,000, and 116 periodicals circulating monthly in all 495,000 copies. Very appropriately we have two pages, with portrait, devoted to Capt. F. Brinkley, R.A., the accomplished editor of the leading journal in Japan, if not in the Far East. The *Japan Mail* is the product chiefly of his brains and energy, and its influence on native and foreign opinion, as well as its filling and fertilizing power upon the makers of books on Japan, can hardly be overestimated. Like Mr. Norman's other descriptive chapters, that on the vernacular press is well salted with criticism.

In describing and analyzing Japanese justice and education, Mr. Norman proves conclusively, whether he knows it or not, that both those systems are more direct outgrowths of old Japan than foreign and borrowed or ready-made manufactures. In matters of police and law, he is surprised at the espionage yet practised, and at the patriarchal methods still in vogue; yet these are nothing more than what have been customary for a millennium or two. The application of American cataloguing to the books and photographs composing the rogues' gallery and library of biography in Tokio of 150,000 criminals, amused him. The wonderful capacity of the average Japanese to do fine art work is utilized in the prison system, and a large proportion of the cheap "art-products" of our shops are the work of native "artists" involuntarily deprived of their liberty. In giving us the real "Japan as a Military Power," he shows how deep-seated and deadly is the vice of militarism in that country, and why education is crippled and poverty is so general. With 50,000 young men under arms, mighty forts building, and great arsenals lavishly equipped, there is not much hope of Japan's national wealth increasing rapidly, or her innate barbarism being quickly reformed. This disease of militarism is not merely a matter of finance, and waste of resources, with all its attendant evil influences; it is also made the pretext of despotism, and proves that thus far Japan's parliamentary or representative system is but a caricature of the English or American pattern. The expenses of the army and navy, all of them, are put by the Government into the "fixed expenditures," which the Diet is powerless to change. Hence it is true that the people of Japan do not yet control their country. The military influence is still the true power.

It is more agreeable to turn to the chapters on arts and crafts, and here we have much fresh and luminous information pleasantly communicated. Amid much that is degrading, Mr. Norman finds genuine art-products, and shows that, even under such altered environment, the inborn spirit and potency of the natives are creating true works of beauty instinct with power to charm. Even while he praises, however, he looks with Ruskin's eye upon the Japanese landscape, which for ages has touched the imagination, ruined by the swift advance of modern industries that destroy and desolate. He turns with delight to tell us all about the Japanese women, and even to suggest how their dress may be reformed. His analysis of female costume is quite detailed. Fortunately, but few native women have adopted

the complex and unbecoming paraphernalia of western women. Even in Tokio, the most "civilized" city, not more than one in five hundred of the men wears foreign clothes, and "you perhaps see two or three Japanese ladies in a foreign dress in a week." After appropriately sandwiching two chapters on fun and an outing, Mr. Norman describes a genuine growth of real Japan. He devotes twenty-two pages to the institution of licensed prostitution —"the most remarkable attempt ever made to solve the great problem of human society." In his treatment of this subject and his references to other writers, the author reveals what is his chief limitation and great defect, viz., lack of full and accurate knowledge of the history and life of Japan before A. D. 1868. Some of his slips are amusing, as in his statement that "the New Year's Day call" was "imitated from the Americans," though the custom in Japan existed before America was discovered. It is more likely that the Dutch imitated the custom from Japan and thence introduced it to Manhattan Island, it being exotic in America beyond the area of New Netherland. Many other things which Mr. Norman thinks modern and borrowed in Japan, because resembling what is in vogue in Europe, are indigenous and ancient. In "Japan for the Japanese," the author ably discusses the complicated problem of treaty revision—a subject which dragged along for twenty years and has already wrecked three cabinets.

Mechanically, the book, with its heavy clay-loaded paper, poor ink, and cheap binding, is not attractive, but, taken alogether, the contents are of sterling interest. Certainly the Japanese should be grateful to such an intelligent and judicial critic, who is equally removed, in the attitude of his mind, from indiscriminate laudation, of which we have too much, and from the harsh censure of the soured and disappointed.

One thing seems certain from this fresh survey of the subject, and is made evident even through the author's very limitations. It is that the opening of Japan to modern civilization was even more the result of the working of forces from within than impact from without: leaven more than gunpowder wrought the result. The original movement began before Commodore Perry was even born. It originated with students and thinking men. It was a movement towards a goal long since passed, but the momentum of which is not yet spent. It is also certain from the facts of history that of all peoples who supplied the elements of expansion and transmutation, not to say the principles of rebirth, the Dutch were the leaders. When dispassionate history is set in luminous phrase, and the voices of religious hate as well as the din of jealous rivals in trade are stilled, it will be found that the little company of merchants from the Netherlands on the isle of Déshima wrought, even more than Perry's Paixhans, or Lord Elgin's diplomacy, the renascence of the real Japan.

Charles Devens's Orations and Addresses. Edited by Arthur Lithgow Devens. With a Memoir by John Codman Ropes. Boston: Little, Brown & Co.

It is high testimony to the standard of merit prevailing in a community that the subject of this memorial was hardly what would be called a distinguished man. He was a patriot of the purest feeling, a gallant soldier, a courteous gentleman, an honorable judge, a brilliant orator—withal, it seems, a man lovable and well-beloved. Yet he would have disclaimed for himself any exceptional virtue. In his orations he loved to dwell upon the high and solemn sense of duty which led the private soldiers of the Union cause to devote to it their lives; and, as he said, the qualities of courage, fidelity, and patriotism ennoble him who exhibits them, no matter what his rank or station. And no one would have recognized with more generous pride that, in the State of which he was an honored citizen, civic virtue has been as common as military, and that those who have been ennobled by it are not to be numbered. Where magistrates as a rule are upright, an honorable judge attracts no attention, and in a community whose chief city long since counted her hundred orators, only eloquence of the highest order can bring fame.

Yet we think that they who have prepared this volume have done well. There is a tendency in the human mind to dwell upon what is exceptional and to exaggerate distinctions, and it is occasionally wholesome to bring it down to a consideration of ordinary virtue and commonplace greatness. The career of Gen. Devens, as briefly sketched by Mr. Ropes, seems to us well adapted to serve as a type of that of the conscientious servant of the public. "Few men have ever lived who were better fitted to discharge the ordinary tasks which belong to public office, whether civil or military, than was Charles Devens. He brought to their accomplishment, in the first place, an honest, courageous, and unreserved purpose to do his duty, and, in the second place, sound judgment, great tact, and good administrative ability." The importance of such characters as this to the daily life of the world cannot be overestimated, and their commemoration is a useful service.

Mr. Ropes speaks highly of Gen. Devens's success as an orator. He was a handsome man, of imposing figure and fine voice, but he owed his power less to these gifts than to his deep and evidently sincere feeling. The written record of course preserves none of these accessories, and yet there are passages in the orations upon subjects connected with the civil war that impress the reader as truly eloquent. Mr. Ropes might well have made a broader claim than that some of these addresses deserve a permanent place in the historical literature of Massachusetts. Some sentences are of a Websterian dignity, as the following from the address at the dedication of the soldiers' monument at Worcester:

"The duties which the citizens of every free government owe to it are of necessity of a higher and more solemn character than the obligations which are due from the subjects of any other State. It is emphatically their own, made by their own will, to be sustained, if sustained at all, by their own power. When menaced by disorder from within or foes from without, it is for themselves to defend it. This duty cannot be avoided or transferred; they who would be free, and they who would preserve their freedom, alike 'themselves must strike the blow.'"

Nor will men at any time read some parts of the oration on Gen. Meade without feeling the blood stir in their veins. We quote a few sentences from the account of the repulse of Pickett's charge:

"The hour for the Army of the Potomac has come. Up now, men of New England, and show yourselves in the field the same stout defenders of the Constitution and the Union that your statesmen have ever done in the forum! Up, men of the Middle States, upon whose soil this unholy attempt to strike at the keystone of the arch is made! Up, men of the West, whose fortunes have so long been cast with this Eastern army, that you may bear back beyond the mountains the tidings of the great victory won to-day on the Atlantic slope! Up, true men of the South, few though you are in numbers, who fight in our ranks to-day!"

There are passages, too, of genuine pathos in these orations, passages so unmistakably the utterance of deep feeling that they must always remain impressive. The account of the battle of Bunker Hill in the oration at the centennial anniversary is an excellent piece of description, perhaps as good as any account we have of that momentous action. Certainly the spirit that carried our country through its two great wars was well understood by Gen. Devens, and his words will explain to posterity the sacredness of the feeling with which their fathers took up the sword. Gen. Devens was the last man in the world to indulge in military bluster, but his appeal to his troops after the disaster at Ball's Bluff shows that he was of the class of soldiers which is most terrible in war. It seems not unfitting to apply to him the lines with which he ended his eulogy of Meade:

"Mild in manner, fair in favor,
Kind in temper, fierce in fight;
Warrior nobler, gentler, braver,
Never will behold the light."

Legendary Fictions of the Irish Celts. Collected and narrated by Patrick Kennedy. Macmillan. 1891. 8vo, pp. xvi., 312.

We have had occasion from time to time to call attention to the increased interest in Celtic folk-tales as shown by the recent collections of Lady Wilde, Dr. Hyde, and our own countryman, Mr. Curtin. It is to be hoped that these works, interesting and valuable as they are, will not throw into the shade the labors of one of their predecessors, Mr. Patrick Kennedy, who has been justly termed the Irish Grimm. Mr. Kennedy was born in 1801 and died in 1873, at Dublin, where for many years he had been a bookseller, noted for the integrity of his character and his interest in Irish archæology. In 1862 he published in the *Dublin University Magazine* an instalment of his folk-lore collections under the title "Leinster Folk Lore," reprinted later with additions as 'Legendary Fictions of the Irish Celts.' This delightful work was followed in 1870 and 1871 by 'Fireside Stories of Ireland' and 'The Bardic Stories of Ireland'—all three so popular that they soon became out of print. It was thus a happy thought of the Macmillans to issue in an attractive form Mr. Kennedy's first work, and it is to be hoped that they may soon bring out a new edition of the two other works just mentioned.

In most of the modern scientific collections of folk-tales, the stories are taken down literally from the lips of the people. Imbriani had his Florentine tales ('La Novellaja Fiorentina,' Leghorn, 1877) stenographed. These popular versions are often mere skeletons of stories, whose only interest is a scientific one. Sometimes a collector like the Grimms appears, and then how different the result! Besides this, in some countries popular tales of a certain kind are confined to the nursery, or to the class representing the intellectual development of the nursery; in others these tales are combined with local elements, and we have such semi-popular tales as still delight the readers of Lever and Lover. Kennedy struck the happy medium, and presented his stories with accuracy and yet made them full of life and local color. The very first story in Kennedy's book, "Jack and his Comrades," illustrates what we have just said. This is the Grimm story of "The Bremen Town-Musicians," and is a wide-

ly diffused tale. In most of the versions animals alone are the actors, but in Kennedy's, Jack, the only son of a widow, lends human interest to the story, and the tale becomes a little masterpiece of comic narration. Besides "household stories," Kennedy's book contains fairy legends, ghost stories, witchcraft, Ossianic and other early legends, and legends of the Celtic saints. For popular reading it could not be improved, while it will always retain its interest and worth for students.

BOOKS OF THE WEEK.

Beardsley, Rev. E. E. Addresses and Discourses, Historical and Religious. Cambridge: Riverside Press.
Boyesen, Prof. H. H. Essays on German Literature. Scribners. $1.50.
Collingwood, H. W. The Business Hen: Breeding and Feeding Poultry for Profit. New York: Rural Publishing Co. 75 cents.
Crawford, F. Marion. The Three Fates. Macmillan. $1.
Eastman, Edith V. The Ethics of Music. Boston: Damrell & Upham. 75 cents.
Everybody's Pocket Cyclopædia. Harpers.
Farrer, J. A. Books Condemned to be Burnt. London: Elliot Stock; New York: A. C. Armstrong & Son. $1.25.
Hague, J. B. The Odes and Epodes of Horace. Putnams. $1.75.

Allen's (C. R.) Laboratory Exercises in Elementary Physics. Teachers' Edition. 277 pp. 12mo. Teachers' price, $1.00; by mail, $1.10.

Most of these exercises exact of the pupil measurements of some sort. They are planned for young beginners, employ no elaborate and unduly expensive apparatus, require no more than forty-five minutes each in the laboratory, and are so framed that the pupil can prepare himself beforehand to make the most of his time there with the least help from his instructor.

Bright's (J. W.) Anglo-Saxon Reader. 394 pp. 12mo. Teachers' price, $1.75; by mail, $1.86.

Accurate texts for reading, provided with notes, a chapter on meter, and a glossary of uncommon helpfulness.

Hall (E. H.) & Bergen's (J. Y., Jr.) Physics. 388 pp. 12mo. Teachers' price, $1.25; by mail, $1.37.

A complete elementary text-book, based upon and reproducing the experiments required for admission to Harvard College, together with introductory and connecting experiments, numerous problems, the whole supplemented by the necessary theoretical accompaniment.

James's (Wm.) Psychology--Briefer Course. (American Science Series.) 478 pp. 12mo. Teachers' price, $1.60; by mail, $1.74.

This work is an abridgment and rewriting (two-fifths of the volume is either new or rewritten) by Prof. James of his 'Principles of Psychology,' and has been prepared as more directly available for the class-room than the larger book.

Whitney's (W. D.) Introductory French Reader. 256 pp. 16mo. Teachers' price, 70 cents; by mail, 76 cents.

Easy, varied, and interesting selections of some length from authors of repute. They are intended to connect the earliest point in grammatical study where consecutive reading can be advantageously begun with that where a complete story or play can be managed with sufficient ease to maintain interest.

MODERN PHILOSOPHERS.

The purpose of this series is to present the substance of the representative systems of Modern Philosophy in selections, translated when necessary, from the original works. Each volume is prefaced by a short biographical sketch of the author and a statement of his historical position. The body of the work is a brief exposition of his system in his own words, and is followed by a bibliography. Notes also accompany the selections. The series is published under the editorial supervision of E. Hershey Sneath, Ph.D., of Yale University. Those already issued are:

The Philosophy of Kant. As contained in extracts from his own writings. Selected and translated by JOHN WATSON, LL.D., Professor of Moral Philosophy in the University of Queen's College, Kingston, Canada, author of "Kant and His English Critics." x+356 pp. 12mo. Teachers' price, $1.75; by mail, $1.87.

The Philosophy of Locke. In extracts from the Essay Concerning Human Understanding. Arranged with Introductory Notes and Biographical Sketch by JOHN E. RUSSELL, A.M., Professor of Philosophy in Williams College. 160 pp. 12mo. Teachers' price, $1.00; by mail, $1.10.

The Philosophy of Reid. As contained in the "Inquiry into the Human Mind on the Principles of Common-Sense." With introduction and Selected Notes by E. HERSHEY SNEATH, Ph.D., Instructor in Philosophy in Yale University. viii.+367 pp. 12mo. Teachers' price, $1.50; by mail, $1.62.

The Philosophy of Spinoza. As contained in the first, second, and fifth parts of the "Ethics," and in extracts from the third and fourth. Translated from the Latin and edited with notes, by GEORGE STUART FULLERTON, Professor of Philosophy in the University of Pennsylvania. vi.+204 pp. 12mo. Teachers' price, $1.20; by mail, $1.30.

The Philosophy of Descartes. In Extracts from his Writings. Selected and Translated by H. A. P. TORREY, Professor in the University of Vermont. xii+345 pp. 12mo. Teachers' price, $1.50; by mail, $1.62. (*Ready April 25.*)

HENRY HOLT & CO., Publishers, New York.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y.

F. Crosby Co.

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good"

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

JUST OUT. A PRIMER OF MATERIA MEDICA.

411 pages. Cloth, $2.50; half morocco, $3.50. Postage, 15 cents.

This book is by Dr. T. F. ALLEN, Dean of the New York Homœopathic Medical College. It is the most compact and valuable work on Homœopathic Materia Medica ever published. Of equal value to physician or layman.

Published by BOERICKE & TAFEL,
1011 Arch St., Philadelphia, Pa.

The Nation.

NEW YORK, THURSDAY, APRIL 21, 1892.

The Week.

THE trouble with Italy arising out of the New Orleans massacre has been creditably and satisfactorily settled by the payment of an indemnity by us of $25,000 for the benefit of the victims, which the Italian Government accepts and undertakes to distribute. The deep regret of the American Government for what happened had already been expressed. But we trust some step will now be taken by the Administration to deliver the Government from the humiliation of inability to control the judicial proceedings to which the affair has given rise. Mr. Blaine had a good technical defence, through the treaty with Italy, against the attempt to fasten on the Federal Government the legal responsibility for the attack on the Italians in New Orleans. By the treaty Italy agreed to be content with such protection for the persons and property of Italians sojourning in this country as native Americans enjoy, namely, the protection of the State laws. But when the State of Louisiana refused to give this protection, and the effort to punish the lynchers ended in a total failure of justice, the Government at Washington certainly cut rather a sorry figure before the civilized world. It was morally responsible for the tragedy, but legally powerless to punish it. The situation made every intelligent American very much ashamed. The remedy seems simple enough—the passage of an act of Congress giving the United States courts jurisdiction of offences committed against foreigners, if they like to seek redress in these courts. The Supreme Court, in the case of Baldwin vs. Franks, has intimated that Congress has the power to make section 5519 of the Revised Statutes cover aliens resident in or sojourning in this country. This section makes penal the conspiracy of two or more persons "to deprive, either directly or indirectly, any person or class of persons of the equal protection of the laws, and of equal protection under the laws." This might not serve the purpose exactly of enabling United States authorities to protect foreigners, but the power to pass this act implies the power to pass another of the same sort.

It is announced that our Government is on the point of signing a copyright treaty with Spain, which probably means that the same advantages are to be extended to Spain by Presidential proclamation as have already been accorded to England, France, Belgium, and Switzerland; that is to say, Spanish authors can secure copyright in this country on condition of simultaneous publication, and provided their books are printed here from type set by American labor. This last proviso is one that has greatly impaired the benefits of our new Copyright Law to English writers, and made them almost nugatory to Frenchmen. At any rate, Zola, who is about the only French author of note to have made a trial of the new law thus far, states that he has copyrighted one book in America, but never will another, as the process proves to be so troublesome and costly. If he discovers the case to be such, it is certain that no Spanish writer will find the privilege of any substantial value. The simultaneous-printing clause has raised the interesting question whether a story first published serially in an English magazine can secure copyright in the United States. The practice of one publisher would appear to indicate that he thought not. Though the authorized publisher for J. M. Barrie in this country, he did not dare to wait till that writer's 'Little Minister,' published in England in *Good Words*, reached its end, but brought out an edition with the concluding instalment missing. Having thus forestalled any possible piratical rival, he afterwards printed the story complete. We also see it stated that some American authors suffer from the new law, inasmuch as they are no longer able to get copyright both in England and their own land on a single set of plates, made perhaps in England at rates cheaper than our own. Of course, the friends of copyright had to take what they could get when the bill passed, and be thankful that it was as well with them as it was; but in their future efforts to perfect the measure they surely will endeavor to have the simultaneous-printing and American-composition clauses stricken out.

The recent announcement of Mr. Wanamaker that he will retire from public life at the end of President Harrison's term and return to the management of his private business, confirms the report that the President is more or less weary of him. Taken by and large, Wanamaker has been the heaviest of the many burdens that the Harrison Administration has placed upon the country. He was taken from his bargain-counter and the Bethany Sunday-school by President Harrison, and was thus enabled to add politics to his professional mixture of piety and business. He not only entered the Cabinet as the most religious Republican business man in the world, as Col. Shepard is the most religious Republican editor in the world, but he entered it as the first man who was known to have bought his portfolio for cash. There was an incongruity about these two qualifications for the place which has not been dispelled by his conduct in office. He has been a failure as Postmaster-General, although he has made some improvements in the postal service of the country; he has demoralized it with "politics" of the most worldly sort, and, while persistently talking piety, has so ignored and violated the civil-service regulations that a steadily increasing crop of scandal has been accumulating in his wake, till he is now at the point of an open rupture with the Civil-Service Commission.

It is likely to be a long time before another President repeats the Wanamaker experiment. No successor to Harrison will think it worth while to seek to increase his popularity by putting a professionally religious man into high office, for Wanamaker and Harrison together have dispelled for ever the idea which many people had, that such men would make better public officials than men either not professionally religious or not religious at all. In doing this, Wanamaker and Harrison have brought discredit upon religion, but they have done the country a service by making it difficult if not impossible for demagogues and humbugs of all kinds to get into office by loud professions of piety. Wanamaker was the first of his kind in national politics, and he is likely to be the last. His decline dates from the revelation of his connection with the Keystone Bank rascals, for it seems to be one of the peculiarities of President Harrison that he has no further use for a faithful friend who allows himself to be caught and exposed. He dropped Dudley after the "blocks of five" charge had been proved against him, and dropped Quay after his performances with the State funds of Pennsylvania had been so completely exposed that the whole country pronounced him guilty. Now he is preparing to drop Wanamaker.

The action of the Nebraska Democratic State Convention on Thursday shows how rapid is the collapse of the free-silver movement. There is no part of the country where this movement seemed stronger two years ago than in Kansas and Nebraska. Republicans and Democrats alike appeared to be carried away by the craze. The Kansas Republicans, in their State Convention of 1890, adopted a resolution declaring that "we demand free coinage of silver, a measure strongly opposed and vigorously denounced by the late Democratic Administration, led by ex-President Grover Cleveland." The same year the Democrats of Nebraska adopted a platform condemning the Republicans for their unfriendliness to silver, and saying that "We declare ourselves in favor of the free coinage of silver." The free-coinage men went to Thursday's Convention expecting to repeat the declaration of 1890, but only one member of the whole Committee on Resolutions favored such a deliverance. The champion of sil-

ver, Congressman Bryan, then decided to carry the fight into the Convention itself, supposing that he would find an overwhelming majority of the delegates on his side; but although he is an exceedingly forcible speaker, and made the best possible case for his side, he was beaten by 247 to 229.

The Florida Republicans held a State Convention last week, elected Harrison delegates to the National Convention, and adopted a platform in which they complain that they are cheated in elections so badly that it is of no use to vote. The concluding resolution is as follows:

"That we consider it utterly useless for us to put tickets in the field for any office—State, Congressional, or national—and we hereby decline to do so until our rights are protected and our political liberty secured to us by the enactment of an effective national election law."

If no Republican ticket is nominated in Florida until a Force Bill has been adopted, it will be a long time before there is a Republican ticket in the field. Probably it will be the best thing for the State not to have a Republican ticket. The Democrats are bound to split as soon as there is no opposition to them, and, when that happens, both factions will insist upon fair play at the polls. The only cure for such troubles is to be found at home; they can never be removed by sending troops from Washington.

The *Congressional Record* for the first session of the Fifty-first Congress consisted of eleven large volumes of nearly one thousand pages each, besides an index volume, itself the largest of the series. As the session was of eleven months' duration, this was equivalent to about one thousand pages per month. But the present Congress bids fair to beat that average, not in the way of actually spoken words, but under the customary "leave to print," which has now become a gross and even shameful abuse. During the past week several members on the Democratic side have attempted to secure a reprint of Henry George's book, 'Protection or Free Trade,' as a part of the national records by introducing successive chapters into their own speeches. In some cases there was no speech at all made by the member who thus loaded the *Record*, but only a few words, saying, "These are my sentiments," followed by several pages of Mr. George's book. Of course, this hint was not lost on the other side of the House. Accordingly, we find in the *Record* of Saturday a similar effort on the part of Mr. Milliken of Maine, who says, "These are my sentiments"—writing eight lines for that purpose—and then puts in fifteen pages of a campaign document on the protectionist side that has been in circulation for some time, the author's name not being announced. Next in order comes Jerry Simpson of Kansas, with six pages of Henry George. Mr. Simpson is more economical of his own speech than Mr. Milliken was, for he uses only six lines to Milliken's eight. Then comes Mr. Dolliver of Iowa with five pages of the writings of R. G. Horr, introduced by nine lines of his own composition. This number of the *Congressional Record* contains fifty-two pages of matter, including two pages of petitions presented and referred. Twenty-five pages are occupied with the sayings of George, Horr, and the unknown author of the Republican campaign document. This exhibit would ordinarily imply barrenness of ideas and poverty of intellect among the Congressmen who make such use of the *Record*, but this would not be the true explanation of the matter. They want to circulate certain documents at the public expense. This would be very smart, although dishonest, if the practice could be restricted to one side; but when both parties resort to it, it becomes a burden to both.

Not long ago a circular was issued by the publisher of the *Tribune*, in which he solemnly and unselfishly appealed to all good Republicans to subscribe for his paper, on the ground that it was about to "educate" the people of this country on the tariff question. The educational campaign was going on at high pressure in Sunday's issue, and something was provided to suit every taste. To show the catholic impartiality with which the editing is done, we put side by side extracts from its London correspondence (first page) and its editorial utterances (sixth page):

FIRST PAGE.

America and the McKinley tariff have heretofore been held responsible for a good part of the diminution in the volume of English trade, but it now appears that the effect of this particular cause has been overestimated. . . . They [the Democratic and Mugwump allies in America of the British manufacturer] like to attribute to the McKinley tariff all or nearly all the ills that flesh is heir to. But since it benefits us and hardly hurts their British allies, they may, perhaps, be induced to attack their own country on some other ground.

SIXTH PAGE.

The trade returns in England prove that the McKinley Tariff Act has damaged the export trade of that country. Experts differ in determining the percentage of loss; but they unite in admitting that the effects of American legislation have been very serious. As the McKinley Act has materially benefited the United States, it would be natural to expect a compensating loss somewhere on the other side; and England is as well prepared to bear the loss as any other European country. The authors of the act were not legislating for England, but for the United States, and they deliberately brought about a transfer of industry from one side of the ocean to the other.

We must add a third even more authoritative extract, to be found in a recent speech of the editor himself. Said Mr. Reid:

"In any case, we shall have plenty of trade with her, and I hope a growing trade. There is every reason for it. Each country produces at the best what the other wants. France must buy our raw materials and certain of our manufactures. We must buy the finest and most artistic things in the world, whatever they cost, and it is France that makes them. Who supposes that you could stop American women from buying French gowns, fine silks, ribbons, and *articles de Paris;* or American men from buying French pictures and bronzes and tapestries, Bordeaux and champagnes, even if a dozen McKinleys stood in the way? We'll grumble about the price, of course—why shouldn't we?—but we'll buy all the same."

Thus we get the three opinions—that the McKinley Bill has not checked foreign exports to this country; that it has; that it has not and will not, but will only raise prices in this country. It is certain that no other than "the greatest American newspaper" would give its readers such an embarrassment of riches in a single number.

The majority report of the Joint Committee of the Legislature in the Maynard case has been made, but as every one knew what it was to be, it is not necessary to analyze it, particularly as it is not likely to exert the smallest influence on public opinion. The report will, however, have considerable value for Judge Maynard himself, as he will be able to send it down to his posterity as the genuine official judgment of the constituted authorities on his conduct, and as a sufficient answer to the Committee of the Bar Association when all knowledge of the standing and acquirements of his whitewashers shall have perished from the earth. But it will do the Judge no good during his mortal career, owing to the notoriety of his case and the extraordinary severity of the blow dealt to his reputation by the Bar Association. By the bye, why does he not have the whole Committee arrested for "criminal libel"? He would have no difficulty in getting warrants for every man of them. Their report was not privileged, and is as full of libellous matter as an egg is of meat.

The Speedway Law has been repealed and the Central Park has thus been delivered, we trust for all time, from one of the most devastating raids upon its beauty and usefulness ever devised. The Tammany leaders are rejoicing greatly over the repeal, and one of them, Mr. Gilroy, is reported as having said, "This means 20,000 votes for Tammany Hall this fall." What Mr. Gilroy meant was, that if the repeal bill had failed of passage, Tammany would have lost that number of votes. His statement is, therefore, a confession that fear of losing votes is the all-powerful motive for good government in Tammany. Rather than face a possible loss of 20,000 votes, the Tammany bosses compel the Legislature to repeal a law which, under orders from the same bosses, the same Legislature passed only a few weeks earlier. The speedway project was a Tammany invention; and Tammany influence would have carried it into execution but for the fear of the loss of votes. In other words, Tammany did not abandon its raid because convinced of its outrageous character, but because it was frightened by

public opinion into a temporary act of contrition and decent behavior.

The eulogy on Croker which ex-Secretary Whitney left behind in the *World* on Thursday before sailing for Europe, as a man who has "worked his way up by force of character and good sense," and "as perfectly honest," and "as hard a worker as there is in the country," entirely misconstrues the objections felt to Croker in this community. Croker may be "honest," in the sense of not committing either grand or petty larceny, and may be a "hard worker," but how do these things qualify him to be ruler of a great city, to sit in private and distribute its offices without the slightest regard to the fitness of the appointees, to sell judicial nominations and pocket the money without accounting, so far as the public knows, to anybody; to decide, without appeal, and often by telegraph, what bills shall pass the State Legislature and what shall not, being all the while a very ignorant and illiterate man, who has never given the smallest outward sign of concern for the public interest? What was he working at when he was working so hard? Is it not astonishing that any American, with a spark of national pride or a spark of care for the good old cause of free government, should not be shocked at seeing the chief city of the Union ruled by such a man almost as absolutely as Tiberius ruled Rome, and with even more contempt for constitutional forms (for Tiberius took great pains to hide his legislative power behind the authority of the Senate)—and all this so early in the national annals? We say with deliberation that history may be searched in vain for a situation so full of humiliation as that in which New York sits to-day, under the domination of three or four ignorant men of foreign birth. We do not blame Croker in the least for getting what he has got—he must have some imperial stuff in him to get it; but what shall we say to the descendants of the Pilgrims, and the Signers, and the Knickerbockers, who are happy and content under his sway, and plaster him with adulation?

When the New York Presbytery voted last fall to dismiss the case against Prof. Briggs, it was clear that such a decision meant only the wish of the majority to hush up the question irrespective of its real merits, and it was equally clear to any dispassionate observer of the situation in the denomination at large that the case could not find a final settlement in that way. The victory of the anti-Briggs party in the Presbytery in the election of delegates to the General Assembly on Monday week, and the agitation of the same old issue reported from various Presbyteries of the country, notably at Cincinnati and at Cleveland, show how impossible it is to cover up such a fire when it has once broken out. The present outlook is for some action at the General Assembly, a month from now, which will put an unmistakable ban upon the accused professor and the seminary that retains him in its corps of instructors. Saying nothing of the weight of argument on the two sides of the controversy, it is perfectly evident that the conservatives have the heaviest battalions, and mean to use them relentlessly. They include almost all the noted politicians of the Church, who have the unfaltering faith of the Cardinal in the "odd man" as the organ of the will of Providence, and who have been busily at work all the winter in seeing to it that there shall be no doubt on which side that man shall turn up. The turn-about in the Presbytery of this city is no doubt due in great part to the maintenance by Prof. Briggs of his positive and aggressive position. If he had gone about on tip-toe, with a padlock on his mouth, the compromisers and hushers-up would have stood by him; but he is not that kind of a man, and the issue he has created is now more unavoidably upon the Presbyterian Church than ever before.

We have not yet seen any authentic account of the proceedings of the Central American Diet which met in San Salvador on February 15, but it is safe to say that the results of its deliberations will not promise so fair as did those of the meeting of three years ago. At that time a full-fledged plan for confederation was agreed upon, needing only the approval of the Congresses of the separate countries to be carried into effect. The outlook for peace and union was very rosy for a time, but the next year came the Pan-American Congress and gave the Spanish Americans such an over-dose of fraternity that a reaction set in as soon as the delegates got home, and they have been flying at each other's throats since in a way quite unexampled in all their history. The Central American republics in particular fell foul of one another with the proverbial fury of a family quarrel, and the project of federation seemed for ever abandoned. However, it was to be discussed again in this year's Diet, together with a proposal, in the meantime, to formulate a general criminal and commercial code, to remove various restrictions on trade, and to make the laws governing citizenship and extradition uniform in the five countries. Certainly, all industrial and progressive interests call for the abolition of the existing territorial divisions, with their perpetually antagonistic and clashing governments; but the curse of popular ignorance and of military rule thinly disguised under republican forms will probably continue to retard the advance of Central America for a long while.

The revelations about the condition of that portion of the British Army which remains at home after the regiments have been drained of their best men for foreign service, are one more indictment, and a very serious one, of the system of voluntary enlistment in our day. The accounts given by officials of the poor quality of the home garrisons simply mean that in order to fill the ranks large numbers of weedy men have been enlisted. To the question, Why have weedy men to be enlisted? the answer is, that the pay is too small in the present condition of the labor market, and the soldier's trade is too much discredited by the memories of what it used to be in the early part of the century. Wellington's army was literally composed of the dregs of the population, and was kept in order by a savage discipline in which ferocious flogging played a large part. This degraded the army horribly in the popular eye, and made the friends of a young man who enlisted give up him as a social pariah. The life of the soldier in the barracks, too, was wretched, and fully expressed the view taken of his deserts by his superiors. Since then his condition has been greatly improved. He is well lodged, and though scantily, yet is on the whole well fed. Very elaborate care is taken of his health, and he is supplied with books and periodicals and schools, which, for a man desirous of self-improvement, would make a term of enlistment a by no means undesirable mode of beginning life, if it were not for the traditions which surround the calling. "A common soldier" still occupies the very lowest place in English life. The uniform which glorifies the officer degrades the private, no matter how many victories he wins in all quarters of the globe. This tradition is not likely to be broken up until conscription sweeps all classes into the ranks.

The exceedingly bitter feeling excited among the lower classes of Berlin by the Emperor's Brandenburg speech found characteristic expression in the cry of the mob during the recent riots: "Wir bleiben hier; der Lump kann gehen" (We mean to stay; the Ragamuffin may go). Only a series of utterances that seemed to be wilful and systematic outrages of public sentiment could have provoked such insulting shouts under the palace windows of the Prussian capital. The educated classes have declined the proffered expatriation in dignified language in the press, and the comic papers have had their fling at the new "L'État, c'est moi." Americans who wonder at the Emperor's folly, however, should bethink themselves of recent events at home in the same spirit. Speaker Reed's treatment of the minority was an almost explicit denial of their right to any standing at all in the House or in the government of the country, and fell little short of Cromwell's expulsion of the Rump Parliament. And, in the campaign of 1888, who can recall without shame the impudent appropriation of the national flag as an exclusive symbol by the protectionist party, and the relegation of its opponents to the British flag, thus proclaiming a moral disfranchisement, denaturalization, and deportation of one-half the citizens of the United States!

SCOPE OF THE MAY CONVENTION MOVEMENT.

It must be apparent to all close observers that the protesting Democratic State Convention which is to be held in this State next month is to be something more than an anti-Hill gathering. The experienced Democratic managers who are organizing the Convention are not working for temporary results alone. They are not seeking merely the selection, by a genuinely representative party Convention, of a delegation to Chicago which will fitly represent the party, but are seeking to set the party itself in such a light before the people of the State that a self-respecting citizen may not be ashamed to say that he belongs to it. So long as the party consents to be dominated by the Hill Machine, self-respecting citizens will hesitate to ally themselves with it or to vote for its candidates. This was shown to everybody's satisfaction in the town elections. The odium of Hillism drove over to the Republican side thousands of voters who had in the November election voted the Democratic ticket, and kept thousands of other Democratic voters away from the polls.

Sagacious Democratic leaders have been quick to catch the alarm from this situation. They had been uneasy for a long time under the Hill domination, and it was only a question of time when they would revolt from it. The calling of the snap Convention gave them their opportunity, but it was merely the culminating act in a long series of abuses by the party machine which he had built up. Accordingly, in organizing a protest within the party against that Convention, the leaders of the revolt determined to make their work thorough and reorganize the party itself. That is what the May Convention is destined to do. The delegates to that Convention will be elected on what will undoubtedly be the fairest enrolment of voters ever made by a great party in this State, and as fair as was ever made in any State. It will therefore be a representative body in the fullest sense of the term, and will command recognition as the organized will of the Democratic voters of New York State.

That this will be the character of the May Convention is evident from the statements which have been made in reference to the work of enrolment in various counties of the State. In Erie County, out of a total of 29,000 Democratic voters, about 20,000 have been enrolled in protest against the methods which culminated in the snap Convention. In Madison County, over 2,000 have been enrolled in a total of 3,500, and the same proportion holds in nearly all the other counties of the State. When it is borne in mind that every voter who signs his name to the list is liable to the charge of bolting, the significance of these figures becomes apparent, for Democrats are proverbially loath to take any step which looks like a violation of party fealty.

The real explanation of this revolt, which is not so much a revolt as it is the uprising of the masses of the party against a clique of unworthy leaders, is to be found in the steadily increasing uneasiness which the decent men in the party have felt during the seven years of Hill's control. They saw, when the snap Convention was called and held, that they had tolerated this control too long, that they ought to have disputed it years ago, and that the only way open to them now for the salvation of their party in the State lay in giving the party an opportunity to take its organization into its own hands. They had been restless for a long time under the practice which prevailed among Republicans everywhere of holding up the Democratic party of the State of New York as a "horrible example" to the rest of the country; and when the snap Convention put Hill before the country as the choice of his party in the State, there was only one way in which the Republican charge could be met. That was to repudiate Hill and destroy his Machine. The May Convention movement has been forced to make this its objective point from the outset, and it is now certain of accomplishing it.

The Democratic party of the rest of the country ought to be deeply interested in the success of this movement, and ought to do all in its power to see that its work not only is completely successful, but is sanctioned by the National Convention. Nothing has done the Democratic cause in the nation at large greater harm than the bad character of the controlling influences of the Democratic party in this the foremost State in the Union. That the party in this State should have as its leading representative a man like David B. Hill, with an apparently all-powerful organization of semi-criminals and liquor-dealers behind him, and that the whole party should accept him as its representative, were facts which were worth thousands of votes to the Republican candidates.

The May Convention will remove this stigma, and will do the Democratic party in the nation a service of incalculable value, second—if second—only to the Bar Association's unpartisan verdict in the Maynard case. That verdict was regarded by Hill as a deadly assault upon himself, and he was right in so considering it. Maynard's offence was an outgrowth of Hill's system, and the Bar Association's verdict was the first gun of the Democratic revolution against that system. It was one of the most powerful moral tonics ever administered to the debilitated system of a great political party. No parallel to it can be found in the history of either of the great parties in this country. The good effect of it upon the New York Democracy will be heightened and strengthened when the May Convention shall have met and done its work, but the cure will not be completed unless that work is recognized and confirmed by the National Convention.

THE PROPER WORK OF THE CITY CLUB.

No more encouraging gathering has been held in this city for many a day than that which assembled last week to usher into formal existence the new City Club. In numbers it exceeded both the expectations of the promoters of the movement and the capacity of the hall, and in character it was representative of all that is worthy and of good repute in the community. That such a body of men should come together at a time when there is no particular provocation for protest against municipal maladministration, simply because they had been asked to form a permanent organization in the interest of good city government, is a most encouraging sign. It shows that there is such a thing as civic pride in this community, and that the number of people who are ashamed of the existing condition of affairs is much greater than has been suspected.

It is a great pity that Mr. Carter's and Mr. Hewitt's speeches were not fully reported, for they were both full of doctrine, of reproof and of instruction regarding the condition of city politics. Mr. Carter's was especially interesting as in a certain sense tracing out the programme of the Club's work. On this programme so traced we have no criticism to offer except on one point, but this is an important one. We are unable to quote his exact words, but we are sure we preserve the sense when we say that he urged on the Club to avoid "personalities" or attacks on individuals, and confine themselves in their agitation to trying to show up the iniquity of "the system." The fault of "the system" is, in his view, that it compels candidates to take office under a great burden of pledges, and it is as the result of the efforts of the candidates to redeem these pledges that we get bad government; so that if we break up the system of giving these pledges, we shall reform the municipal administration.

Now, we make bold to say that if the City Club fails in the vigorous and constant use of personalities, it will fail altogether to do the work it has set before itself. Personalities have got a bad name because they are too frequently used in lieu of argument concerning matters of opinion. But the fight against Tammany Hall, wherein, as Mr. Hewitt well pointed out, the work of reform in this city must mainly consist, does not arise out of differences of opinion among honest men. This city is badly governed owing to the bad conduct of certain men, and owing to nothing else under heaven. The "system," in so far as they have one, differs in no respect from the distribution of parts which conspirators have always to make when they undertake to rob a bank. Some watch on the sidewalk, some inside the door, one holds the lantern, another plies the cold chisel, and another puts the dynamite in

the hole. All concerted action among criminals, as among honest men, needs a system, but no denunciation of the system will ever do anything to bring the criminals to justice.

If the Club go about among the workingmen of this city, refraining from hard words about the Tammany leaders and expending all their invective simply on the Tammany Society as an objectionable organization, they will accomplish nothing; the plain voters will soon tire of their preaching. The plan of taking pledges in order to secure election has nothing objectionable in it *per se*. Such pledges are exacted in all parliamentary countries from candidates for all sorts of offices. The reformers demand them just as much as the Tammany men. They reflect no discredit either on those who exact them or those who give them. The City Club will have to extort them vigorously from candidates for municipal offices, as well as from candidates for the Legislature, if it means to make an impression. Each pledge must be judged on its own merits, and by its nature we must judge the man who makes it. There was, for instance, no harm in Mayor Grant's pledging himself before election to appoint certain men to office. What concerns the public, and what will concern the City Club, is what kind of men he did appoint in execution of these pledges. This shows us at once the use, the necessity, for personality. No system, no plan of action, comes down out of the sky. Men make systems to suit their needs. If they make them for bad ends, they are bad men. If Grant uses his appointing power to put grossly unfit men on the police bench, for instance, what do we care whether it is done under pledge or out of his own head? What would be the use in asking him? In either case it shows his own unfitness for the Mayoralty, and it thus would become the business of the Club to denounce him, not as A or C or X, or as a "System," but as Hugh J. Grant, guilty of gross offences against the public weal. It was not a system which robbed the city in 1870. It was certain individuals named William M. Tweed, Richard B. Connolly, and others, and the work of reform consisted in catching, trying, and punishing them, and using them by name to enlighten the public judgment and sharpen the public conscience.

We constantly forget that the work of municipal government consists almost wholly in administration, and the higher duty of administration consists almost wholly in the exercise of the appointing power. Nearly the whole of the Mayor's task, and by far the most important part of it, consists in the filling of offices. If the offices of this city were to-day filled by competent men of good character, and had been so for the last twenty years, wherein would the badness of the city government consist? What need would there be for the City Club? Does not this badness now consist in the fact that the sweepers do not sweep, that the pavers do not pave, the police do not police, the justices do not judge, or judge wrongly or corruptly, the tax-spenders do not spend, or spend on improper objects, that the Park Commissioners are unfaithful to their trust, and the Park laborers loaf and drink? Why, the whole city government is simply a mass of more or less corrupt and unsavory personality. Persons are the thing to be reformed. Personal character and personal conduct are the things to be investigated. "Who are you?" and "How did you get here?" and "What are you doing?" are the city reformers' first, second, and third questions.

The main duty of the City Club will be, therefore, unless we are greatly mistaken, the duty of finding out who these creatures who reign over us are, how they get into city service, and in what manner they are earning their salaries, and of explaining to the voters what they discover. Next after it will be the protection, which only a strong organization can give, to the poor voters who are now intimidated into subservience to Tammany by the police justices, the police captains, and the "leaders" of the various districts. This class must find in the Club a strong tower of defence. Moreover, it must relieve the newspaper press of some of the expense and risk of tracking these unclean animals to their original lairs, and showing in what manner they qualified for the profession of public plunderers. Nor is it by any means necessary, as some try to persuade us, that the members of the Club must spend their evenings in the slums, and labor with the refuse of the city population, in order to roll up majorities against Tammany. Nothing the Club or any organization can do will oust Tammany from its control of the haunts of extreme poverty, and of vice and crime. In those depths the Boss will always reign supreme. The business of the Club is to organize against Tammany that large majority of decent people, rich and poor, which has always existed, which has never voted the Tammany ticket, but which is defeated, betrayed, and confused at every municipal election by the raising of Federal issues. It was not from the slums that the 30,000 registered voters came who refused to vote at the last municipal election; it was from comfortable or luxurious homes. The evangelization of these heathen is to be the proper work of the Club, and it will be neither difficult nor repulsive.

A PERSISTENT LITERARY SUPERSTITION.

A PICTURE of publishers sitting at a banquet where wine was quaffed from the skulls of their victims—the unfortunate writers of the books out of which they had made enormous profits—would be regarded by most people as belonging to almost the prehistoric age of literary caricature; yet the idea underlying it has a surprising vitality even at the present day. No one at all in contact with the book-publishing trade, or with periodical literature, can have failed to come upon occasional survivals of the old superstition. Now it will be a beseeching letter from some struggling genius unable to make head against the universal conspiracy of publishers to prevent his writings from winning that immortal renown which type, ink, and paper are alone needed to secure. Again it will be the fine bravado of some book printed by its author, defiantly announcing that it had been declined by all the leading publishers of the country, who were now to see what a mistake they had made. Perhaps it will be a puzzled request to be shown how to get the "entrée" into a specified magazine or quarterly. The evidence rapidly accumulates, in short, before any one in a position to observe it, that there are multitudes of people who still think that publishers are set for the suppression of talent, and that there are some mysterious and occult paths of "influence" which a writer must learn to tread before he can hope to arrive at publication.

This old and persistent illusion was made the subject of remark in a speech by Mr. Frederick Macmillan at the Booksellers' Annual Trade Dinner in London last month. Speaking in the name of publishers in general, he affirmed that "the necessity of having successful books on their lists is only equalled by their assiduity in looking for them." He also cited some statistics of the publications of the Macmillans during 1891, which have an interesting bearing upon the question of the relation of publishers to authors not yet known to fame. The house mentioned published during the twelvemonth 166 new books. Of these no less than 144 were what might be called bespoken—that is to say, they had not, for a variety of reasons, to be passed upon in the manuscript stage; they were either in continuation of a series already begun, or were volumes which well-known writers had been commissioned to produce, or were the works of authors whose names were alone a guarantee of success, and for whose writings many publishers are eager competitors. The remaining twenty-two volumes were voluntary offerings to the firm, and were accepted on their merits; but they were the only survivors out of a total of 315 manuscripts offered.

Such an experience very well epitomizes the general course of the publishing business. Because it is a business, and not a philanthropic or happy-go-lucky enterprise, it necessarily follows that publishers must have their main dealings with writers who have already won a place in the profession. In other words, publishers must know beforehand what the bulk of their year's output is to consist of; they must have their foregoing engagements and contracts, and cannot sit back idly awaiting a volume of poems from Gifted Hopkins

or a novel from George Winton Wood—that preposterous character in Crawford's latest story who writes in ten days a powerful novel which soon brings him in $10,000. But this is not to say that they will not give a fair and respectful hearing to the effusions of Gifted and of George. It is curious how strong is the conviction of many unsuccessful literary aspirants that their manuscripts are rejected by publishers because returned unread. It seems to them simply impossible that their genius could have failed to be recognized except in that way. So sure are some mute, inglorious Miltons that this is the case that, as Mr. Macmillan asserts, it is becoming their practice to propose to bring their manuscripts in person and read them aloud in the publisher's astonished ear, thus putting their talent in open and incontrovertible evidence.

Such offers are, we believe, generally declined with thanks; but there is really no occasion for making them. True genius is not half so anxious to find a publisher as a publisher is to find true genius. Vast as is the supply of writing in these days, the supply of good writing is nowhere near the demand for it. Its dearth is all that drives an editor or a publisher to search through the masses of manuscript sent him. In spite of the teachings of a long and discouraging experience, he still hopes to find a brilliant article or an original book turning up in some unexpected quarter. His ghoul-like glee is not, as is commonly supposed, exhibited in the act of returning a manuscript, but when, scarcely believing his own eyes, he electrifies his associates by telling them that he has discovered a bit of high-class work in a writer whom nobody ever heard of before. No, the struggling geniuses and their friends are altogether wrong in contending that the publisher is their great obstacle and enemy. They are the very ones he is on the watch for and spends his time and money in trying to find. His idea of what a genius is may be somewhat different from theirs, but when he finds the genuine article, or thinks he does, he is happier than the genius is. So eager is he in the search for this hid treasure that he is often over-credulous instead of, as usually said, over-sceptical, and has to pay dear for being too confident that he has at last found his man. The hardships and losses of the unrecognized author have been a frequent theme of the melancholy muse; who will ever sing of the disappointments and losses of the publisher who, to his cost, has recognized an author only to find that the reading world will not recognize him?

We are not propounding publishers as fit for immediate canonization; they doubtless have their faults, and there is a goodly array of Devil's Advocates to exhibit them skilfully and with a loud noise. Into the general question of their relations with authors we have not here entered. All that we have sought to do is to point out the folly of supposing that it is their interest, or is ever imagined by them to be their interest, to discourage young or unknown writers. They do discourage unknown stupidity or mediocrity, and are properly shy of unknown eccentricity; but to suppose that they deliberately suppress what the public would enjoy or profit by is to suppose that they are not only knaves, but fools.

THE REGENERATION OF EGYPT.

Menlo Park, Cal., March 15, 1892.

In the Valley of the Nile to-day there are three Egypts. There are the sub-stratum dominions of the Egypt Exploration Fund—an ancient land of sphinx, pyramid, mummy, and scarab, ruled over in this century by a dynasty of archæologists. Superimposed is the Egypt of Mohammed, with its tapering minarets, swelling domes, and dusky bazaars, and all the torpifying influences focalized at Cairo in the teachings of the great university-mosque of El-Azhar with its 19,000 students swaying and muttering over the Koran. Above this, in turn, is the Egypt of the English occupation. The English soldier kicks football in the yard of the barracks where Arabi hatched his rebellion, and the English tourist plays polo under the shadow of the great pyramid, to the regimental music of the Royal Irish Rifles.

England is known to be the greatest of colonizers and the most successful governor of Orientals, but the reforms she has wrought in Egypt during the past nine years are simply astounding. A looted treasury, a disorganized and almost hopelessly corrupt administration, a rebellious and cowardly army, and a people crushed under unbearable taxation have in this short space of time, and in the face of Oriental apathy and French obstruction, been metamorphosed into order, plenty, and content. This work of the English in Egypt is an achievement of which every Anglo-Saxon must be proud. And yet there has been little romance in this restoration. It is chiefly a story of common sense, honesty, and straightforward hard work. The sole trustee of an insolvent people first sought to reëstablish their financial credit. The basis for any such substantial improvement must be intelligent care of the resources of the country. The wealth of Egypt is exclusively agricultural; the productiveness of the soil depends primarily upon irrigation and the regulation of the Nile; therefore, attention was first turned to engineering works for the proper accumulation and distribution of the water supply.

English irrigation officers of long experience in India were brought to Egypt, and they immediately set to work to remedy, first of all, the sorry condition of the Delta. Here the irrigation is done by deep canals, and an attempt had been made in former years to supply these canals by holding up the waters of the Nile at the apex of the Delta by means of a great barrage, or weir. The barrage had been constructed by a French engineer at a cost of $10,000,000, but as soon as completed it had cracked, and, for eighteen years before the English occupation, had been abandoned. At the time of the arrival of the English engineers, a contract had been made for forcing the water into the canals of one province only, at an annual cost of from $250,000 to $300,000, and arrangements had about been perfected for supplying the rest of the Delta in the same way at an initial cost of $3,500,000 and an annual expense of $1,250,000. But the English engineers at once repaired and strengthened the condemned barrage, and steam-pumps were rendered unnecessary. Continuous irrigation must be accompanied by drainage, and 1,500 miles of drains have been put in since 1884. Lagoons in the north of the Delta cover 1,280,000 acres, but in a few years half of this land will have been reclaimed and cultivated. Already 200,000 acres have been reclaimed. In upper Egypt the defects were likewise great, for the water failed to reach the higher lands, and in years of average Nile flood there was an annual loss of nearly $200,000. In the very deficient flood of 1877, the loss was about $5,500,000; in 1888 it was $1,500,000; but even then there was water enough if it could have reached the land. Col. Ross, the chief irrigation officer, has proved that by a system of canals, sluices, siphons, escapes, and weirs, the whole Nile Valley can receive the necessary mud-charged water, even in the worst years. These works, now under construction, will be completed in 1893 at a cost of $3,000,000.

A few instances of the economies effected by the English engineers may not be uninteresting. In 1885, at a cost of $25,000 for cutting a main drainage channel between the canals Tanah and Gabada, 30,000 acres, water-logged and worthless from salt infiltrations, were reclaimed. In 1886, a new head channel was given to the Kurtamia Canal at a cost once for all of less than $10,000, thus saving an annual outlay of $7,500 for silt-clearance. The Samana Canal had been neglected for twenty years, and all the lower portion of the tract it should have supplied with water had been thrown out of cultivation and was inhabited by a few Bedouins; but a judicious expenditure of $15,000 on the canal brought back into cultivation 50,000 acres, and the deserted villages are all rebuilt. To clear the Sahel Canal of silt each year used to require 18,000 men working for forty days; but by a junction canal and a siphon the canal now clears itself—or, in other words, by an expenditure once for all of $27,000, an annual saving of $35,000 has been effected. One of the results of the work of the Irrigation Department is that, since 1884, the average annual yield of cotton has been 150,000 tons greater than in the five years preceding 1884, representing a value of over $4,000,000 yearly, exclusive of the cotton seed. The cotton crop of 1891 in Egypt was the largest ever known.

A word must be said as to the character of these engineers who have been foremost in the redemption of Egypt. They have had to contend with vested abuses on every side, learn the spoken Arabic of the common people, and overcome religious prejudices and superstitions which, as Balzac says, are the most indestructible form of human thought. While the French engineers always stayed in Cairo, each of the present irrigation inspectors travels over his district again and again, often on foot, suffering much hardship, and seeking the shelter of the humblest mud huts, lest, by accepting the entertainment of the wealthy proprietors, he be suspected by the poorer natives of having been bribed. In Ismail's time the canals were first tapped for the estates of the Khedive, then for the pashas and village sheikhs, and last of all for the poorest native; but now all are served alike. In times of scanty supply, the water is given in rotation to the land without reference to the owner. In former days a poor man was completely at the mercy of his rich neighbor and of the corrupt native inspector, who, unless bribed, would not open a sluice at a critical time for the crops. Now the poor no longer have to

bribe for water; they have confidence in the English inspectors and have learned that petitions will be listened to and wrongs redressed. The actual head executive officer of public works is Sir Colin Scott-Moncrieff; the chief of irrigation works is Col. J. C. Ross, who knows thoroughly every canal and something of nearly every landholder in Egypt. Of course the history of these public improvements is not a record of monotonous successes. There have been mistakes and failures, but the errors were almost worth committing for the sake of the candor, no less refreshing than astonishing, with which they are admitted in the official reports. Here is a sentence from Moncrieff's report for 1886: "The dredging contracts have been altogether badly drawn up, a circumstance I regret all the more that I am directly responsible for them." In his report for 1888 he says: "I am sorry that I cannot accept this view of the case. The consequences show that the Council and Mudir were both wrong, and that Maj. Brown, their technical adviser [an irrigation inspector], was still more wrong, his error being shared by the direction in Cairo whose representative he was and who tacitly approved of his action."

The greatest social reform carried out by the English is one connected with the annual clearing of these canals from silt. From immemorial times public works had depended for their execution upon forced unpaid labor, and this system was the core of most of the official corruption. The sheikh compelled the poor man to give his labor for weeks on the canals, while the rich bribed exemption for their laborers, and the crops of the wealthy flourished, while those of his absent neighbor suffered for want of cultivation. The English set about to abolish this system and to substitute paid contract labor, but were met with a prophecy that wages would not bring the laborers and only force could drive the fellaheen to clear the canals. Nevertheless, the gradual suppression of the *corvée* was undertaken. In 1883, the amount of this forced unpaid labor was equal to 202,650 men working for 100 days; in five years it had been reduced to 58,788 men for 100 days; and in December, 1889, the *corvée* was totally abolished for the first time, probably, in all the thousands of years of Egyptian history. Slavery, too, really no longer exists. An office for the abolition of slavery was created, and from 1883 to 1889 over 10,000 slaves were set free, the provincial governors being required to refer all cases of slavery to this department. In one province of upper Egypt nine-tenths of the workmen employed in lifting water were formerly slaves, but the number has now been reduced to one-tenth.

Another interest under the care of the Department of Public Works is the construction of agricultural roads. Until three years ago it would have been impossible to take a cart-load of produce from one centre of population to another in the Delta. Few of the canals being navigable, the cotton was carried to the railway on camels, which, though adapted for the desert, were not suited to the alluvial soil of lower Egypt. In 1889 surveys were made, roads were begun, and, from results obtained on local private roads on the State domain, it is expected that carts will take the place of camels.

Before the arrival of Sir Evelyn Wood, into whose hands and those of English officers was given the reorganization of the Egyptian army, the lot of a native soldier was ill-fed imprisonment and the lash. Systematic abuse had extinguished every spark of courage. Twelve thousand men had been sent to the Russo-Turkish war, but the behavior of a brigade put under fire at the battle of Karahassankeni was so unsatisfactory to the Turkish commander that none of the Egyptian troops were brought into action again. Their cowardice at the battle of Tel el-Kebir is a matter of more recent history. Now, the whip has been abolished, the native soldier has enough to eat and is paid regularly. When Capt. Hallam Parr wanted six men for hazardous service at Suakin, the whole battalion volunteered. At the joint reviews of English and Egyptian troops held last winter in Cairo, the natives really carried off the honors for soldierly appearance and proficiency in tactics. When Tokar was retaken by the engagement of a year ago, there was no complaint of want of bravery on the part of the natives who were now fighting under English officers. The fellaheen soldier had not forgotten that, during the cholera epidemic of 1883, it was English officers who had nursed him day and night, doing the most menial labors for him, and burying those of his comrades who succumbed to the disease.

In the civil service, too, reforms were immediately set on foot. The number of employees was reduced during the first year of the English occupation to an extent effecting an annual saving of $113,000. The number of English in the civil service is, however, still much smaller than of French or Italians. Previously there had been no fixed rules for promotion. It had been customary to increase the salary of an official without reference to the post he held, while now the salary of a position is fixed and without regard to the individual who holds it.

In 1890 there was a reduction of 50 per cent. in the rates of internal letter postage, with a result that the number of letters increased by a like per cent.; and it may be said in general that the postal arrangements of Egypt are now equal to those of Europe. At the beginning of last year, a reduction of one-half was likewise made in telegraph rates, yet the month of January, 1891, showed a considerable increase of receipts over the same month of the previous year. The railway service has been improved; trains now run on time, and the number of passengers carried in 1889 was over a million more than in 1886.

The police, at present numbering about 7,000 men, were formerly undisciplined and subject to the provincial governors; the body has been put under English officers, completely reorganized, and is subject to proper discipline. A large number of small prisons have been abolished, records of offenders are kept, hygienic rules and prison labor have been adopted, and the prison administration is not behind that of European countries.

Probably the most serious obstacles have been encountered by the English sanitary officers. They have had to combat the prejudices of an ignorant, teeming population which was ready to attribute every epidemic to the decrees of fate. The mosques, with their unsanitary latrines, and the cemeteries are all fruitful beds of disease, but, as they are connected so intimately with the religious life of the people, it is difficult to remedy the existing evils without arousing fanatical antagonism. Something, however, has been accomplished, and, in Cairo, old sewers that were nothing more than elongated cesspools whose course could be traced by the cases of typhoid fever occurring in the adjacent houses, have been filled up, and in 1890 30,000 tons of sewage were removed from the city. Under the old régime, the hospitals were unclean pens to which a native would not go unless taken forcibly by the police. Now these establishments are clean, properly equipped, and have their dietary. Patients are no longer brought in chains, and may leave when they like. At Kasr el-Aini, in Cairo, considerably over 100,000 cases were treated during 1890, and most of the provincial hospitals show proportionate returns. Moreover, dispensaries have been opened in thirteen towns; registration of births and deaths is required; vaccination is obligatory; a veterinary department has been established to suppress cattle diseases; barbers and midwives, the former being practitioners of minor surgery, are required to submit to an examination to determine their proficiency; and, as a matter of special importance, there has been organized a system of flying hospitals for stamping out epidemics of smallpox, typhoid, and typhus fever. It is true that all of these sanitary reforms are not yet perfect in their practical workings.

In 1887 there were only twelve schools under the Ministry of Public Instruction, with an attendance of 1,919, of whom only 50 per cent. were paying pupils. Three years later the number of schools and pupils had quadrupled. This is the more noteworthy because education is not compulsory. A training college for native teachers and an agricultural college have been opened, and the medical school has been reorganized with a six years' course. The Government schools are now superior to private schools, while formerly the contrary was the case.

The most recent reforms have been concerned with the judiciary; Justice Scott, a Judge with experience in India, having last year been appointed judicial adviser to the Government. This appointment means English inspection of the native courts; the facilitation of justice to litigants; a reduction of the opportunities for influencing the decisions of the native judges; and the prevention of interference on the part of higher native officials connected with the executive department of the Government—an interference that has been recognized as existing. Last year, soon after the establishment of the new courts of summary jurisdiction as a part of this reform in upper Egypt, the business disposed of was five times that transacted under the old system.

This, in brief, is the story of what the English have done in Egypt. The history of the regeneration wrought has been admirably epitomized by Mr. Alfred Milner, the Under Secretary for Finance in Egypt:

"Does it make for the independence of Egypt that her material prosperity should be placed above the reach of accident by great durable public works? that her army should be taught to fight? that justice should be brought within the reach of the poorest peasant? above all, that a new generation should be brought up in the practice of, and the demand for, conscientious and incorrupt administration? So much for our honesty on the positive side. Now look at it on the negative. Have we pursued any exclusively English interest? No. Have we laid hands on the privileges of any other nation, on the capitulations, the international tribunals, the Caisse de la Dette? No. Have we sought to use our predominant influence to favor English trade, English residents, English contractors, to the prejudice of those of other nations? No. Have we, as we are sometimes accused of doing, crammed the public service with English officials? No, a thousand times no. The great work of irrigation, of which we have spoken so much, involves the employment of only seventeen Englishmen, from top to bottom, and, in the other departments which we

control, the number is even smaller in proportion. In the Ministry of Finance, with its hundreds of employees, there are just half-a-dozen English. Wherever a vacancy arises for which there is a competent native candidate, it is filled by a native. It is not our aim to make the public service English in its personnel, but to make it English, or rather let me say European, civilized, progressive in its spirit."

EDWIN H. WOODRUFF.

GONCOURT AND HIS FRIENDS.

PARIS, April 1, 1892.

I MUST confess having read with much interest all the successive volumes of the 'Journal des Goncourt.' The memoirs of the literary and artistic society of our time have an extraordinary degree of sincerity. Goncourt—why should we say any more the Goncourts?—is an impressionist, a photograph; he might almost be called also a phonograph—he can repeat a conversation word for word. His receptive faculties have prepared him admirably for the work he has undertaken. Instead of thinking at his fireside and allowing his thoughts to vanish like the smoke and flame of his chimney, he thinks with his pen in his hand, and we become his confidants. The new volume, which is the sixth of the series, and extends from 1878 to 1884, is the last which will appear in his lifetime. You remember, perhaps, that the fourth volume was the occasion of a bitter quarrel between Goncourt and Renan. I must suppose that by refusing to publish in his lifetime the part of the 'Journal' which relates to the years after 1884, Goncourt has taken a wise precaution; most probably he speaks in this latter part of many people whom we see every day, he breaks many idols, he goes against the current of public opinion at many points.

As usual, Goncourt gives at the end of his volume an alphabetical list of names; from it it is easy to find out at a glance the persons who play the greatest part in his existence. Princess Mathilde is one. One day she confided to him her excessive love for France and Paris:

"I have a real need of Paris, of its pavement, . . . the quays, in the evening, with all their lights. . . . There are some days when I feel so happy to live in it. . . . It has so long been my desire to inhabit it. . . . No, when I am not in France, there is a real perturbation in me. I have the *diable au corps* to return to it, to find myself with Frenchmen. . . . The first time I put my foot on French soil, in August, 1841, it was two o'clock in the morning. . . . The first *pantalon garance* I saw was too much for me; I leaped from my carriage to embrace him. Yes, I embraced him!"

Another day, "walking in the streets of Montmorency, in fine health, the Princess, leaning on my arm, and smiling at the beautiful sun, at the happiness of her life surrounded with the affection of a small, friendly society, stopped suddenly and said: 'Yes, it would be hard to go away; I confess that I find life good.'"

These little extracts have a touch of reality which gives the 'Journal' its character; they are bits of life. One day, the Princess speaks of her return to Paris after the war and the Commune; she had to walk from the northern terminus to the Boulevard Haussmann, without being able to find a carriage. "At last, dead with fatigue, she sat on a bench which still stands opposite her former hôtel in the Rue de Courcelles, and there, dying with thirst, and not daring to enter any house, she sent Julie, her maid, to get her a glass of *groseille* in a wine-shop at the door of her hôtel." The conversation falls one day on the beauty of the Princess when she was young: "Yes," said she, "I had an extraordinary complexion. I remember that in Switzerland, when I was fourteen years old, they put on my cheek a leaf of a Bengal rose, and it was impossible to see any difference." The Princess has a sense of fun: she tells one day of a quarrel she had had with her coachman about an old horse she wished to sell. "How can the Princess think of getting rid of the last horse we have . . . that has had arms presented to him?" (That was during the imperial days, when the guard of the Tuileries presented arms to the Princess.)

The new volume of the 'Journal' is full of Daudet and of Daudet's family. Those who admire Daudet's novels will find much in it that will interest them: "I am entirely subjective," says Daudet one day; "I can invent nothing. . . . I have already put all my family in my books. . . . I cannot go any more to the South." It is quite true that Daudet is not a creator, he takes all his types from life; he has used in his books Gambetta, Morny, and a number of others; we all know in Paris who the Nabab was, we can put the names on all the characters of his novels. Daudet explains the subject of 'Les Rois en Exil' to Goncourt: "A very good conception, as it is at the same time poetical and ironical. He wants to make a king's tutor out of the son of a democrat, whom two friars find in a hôtel in the Latin Quarter, with its stairs full of girls *en savates*. This, well done, would be of a delicate and great modernity. Suddenly Daudet interrupts himself: 'You see, it is very unfortunate . . . In reality, you have perturbed me—yes, Flaubert and my wife . . . I have no style—no, no, that is positive. The man born on the other side of the Loire cannot write French prose.' And so he goes on, thinking aloud." The conversation of Daudet can be defined in a word: it is improvisation. It is a mixture of pretty little things, of fine observation, of droll remarks, of fancies poetically comical.

The drama made of the 'Rois en Exil' was first read at Daudet's house. Coquelin had given his advice to Delair, who had constructed the drama. "Coquelin is quite amusing with his infantine admiration for the work which he has hatched. 'You will see how it is done. . . . That's what I call *du théâtre*,' and he begins to read the thing as if sugar were melting in his mouth. Gambetta hears all the play standing, in the posture of a caryatid. He is gay, *bon enfant*, amiable. Really, it must be confessed, among the political men he is the only one who has a social charm—a charm in which disappears at times the vulgarity of his person."

Turgeneff comes in for a large share in the 'Journal,' and, as usual, the citations made of his conversations are very original. At one of the dinners of the Five (they were only four after the death of Flaubert), there was a rambling conversation on death—"love or death, curiously enough, is always the subject of our conversations after dinner." Daudet says that this idea of death poisons his life; he never has entered a new apartment without looking for the location of his coffin. Zola is not more cheerful; since his mother died and, the staircase being too small, had to be taken down by the window, he never looks at this window without thinking who will come down first from it, he or his wife.

"'Yes, death, since that day, is always in our thoughts and often—for we have now a light in our bedroom—when I look at my wife, who does not sleep, I feel she thinks of that, too, and we remain thus, without making an allusion to what we are both thinking of, . . . from a sort of *pudeur*, yes, of *pudeur*. . . . Oh! it is a terrible thought [and I see terror in his eyes]. There are nights when I spring suddenly to my feet and remain for a moment in a state of unspeakable terror.'

"'As for me,' says Turgeneff, 'it is a very familiar thought, but when it comes, I dismiss it so,' said he, making a gesture of refusal. 'For for us, the "Slav fog" (*brouillard slav*) has something good—it has the merit of protecting us against the logic of our ideas, against the extreme pursuit of deduction. With us, you see, they tell us when we are in a blizzard, "Don't think of the cold, or you will die." Well, thanks to this fog I was speaking about, the Slav does not think of the cold, and with me the idea of death effaces itself and is rapidly dissipated.'"

On February 1, 1880, Turgeneff gave a dinner to Zola, Daudet, and Goncourt on the eve of his departure for Russia.

"He leaves for his country, this time, affected by a strange sentiment of incertitude—a feeling, he says, which he had in his early youth, in crossing the Baltic, when the ship was completely surrounded by fog, and when he had no other companion than a monkey chained on the bridge. Then, while we are still alone, he begins to talk of the life which he is going to lead during six weeks, of his home, . . . and of the interviews he has from a little balcony, which almost touches the ground, with the peasants his neighbors. Delicate observer and fine comedian that he is, he gives me the representation of three strata of the present generation: the old peasants, whose sonorous and empty talk he imitates, composed of monosyllables and endless adverbs; the sons of these peasants, who speak like lawyers with fine words; the grandsons, the silent, diplomatic stratum, the destructive stratum; and when I said that these conversations must tire him, he replied, no; it is very curious what you can draw from those illiterate people, whose heads are always at work in solitude and quiet."

Flaubert is very often mentioned and cited. Flaubert makes at times very true remarks: he says, for instance, that all the descendants of Rousseau, all the Romantics, have no very clear conscience of right or wrong; he cites Chateaubriand, Madame Sand, Sainte-Beuve, and he ends thus, after a moment's reflection, "It is true, Renan does not feel indignant at injustice." Flaubert, however, is not flattered; he is represented as a sort of coarse and Pantagruelic companion, full at times of an exuberant gayety; at other times falling into a kind of aggressive sadness. "He must be allowed always to play the leading part; he likes to talk on nasty subjects; with his brick-colored face, redder than a Jordaens, and his long flowing hair, he makes me think of a descendant of a Red Indian." Flaubert delights in abusing and astonishing the bourgeois.

On Easter Sunday, in 1880, Daudet, Zola, and Goncourt go and make Flaubert a visit at Croisset. Maupassant takes them from the station at Rouen to Flaubert's house, who receives them with his hat on, in a sort of pinafore (*calobre*), and with "his good affectionate face." "It is really very fine, his place: this immense Seine, on which the masts of the boats are not seen to move as they would in a theatre; the great trees, with their forms tormented by the winds of the sea; the park; the long terrace to the south, the peripatetic alley—all makes a true asylum for a man of letters."

They all returned soon afterwards to Croisset to attend Flaubert's funeral. The doctor took Goncourt into a corner:

"'He did not die of apoplexy, he died in an epileptic attack. . . . In his youth, you know, he had had fits. The journey in the East had nearly cured him—he remained sixteen years without having any; but the annoyance of his niece's affairs made him ill again, . . . and last Saturday he died of an attack of congestive epilepsy, with all the symptoms, with foam at the mouth. . . . Perhaps if

I had been there, by making him breathe for half an hour, I might have saved him.' Oh! it was a terrible impression to enter into the room of the dead: . . . his handkerchief on the table, near his papers, the little pipe with the ashes in it, the volume of Corneille in which he had read the day before, only half put back on the library shelf. The procession begins; we go up a dusty road to a little church—the church in which Madame Bovary made her confession."

I must end. I will only add that this last volume of the 'Journal' seems to me the best of the series.

Correspondence.

WALT WHITMAN.

To the Editor of The Nation:

Sir: It is with great hesitation that I venture to protest against the judgment passed on the dead poet in the *Nation*. But some one who knew Walt Whitman in his later years should tell your readers that he was not prematurely broken down by indulgence and excess. He died an old man with the clear mind and kindly heart which had always been his. Strong emotions and neglect of regular habits may have helped to bring on a stroke of paralysis, but poets are not commonly censured for these. The egotism of Walt Whitman was that of a little child, who likes to be petted and loved. His praise of America was that of a little child, who sees no fault in his mother or his home. His outspokenness was that of a little child, who has not been taught the conventions of polite society. Anything in his poetry objectionable to our hypersensitive taste is allied to the contents of the Elizabethan drama—in no way to the licentiousness of the Restoration.

Walt Whitman may not be much read by the common people; but what poet is read by the common people? At all events, the common people who knew him loved him. The formal faults pointed out by your critic may be present, but good technique is common in the world; insight and inspiration are rare.

"Mighty Prophet! Seer blest!
On whom those truths do rest
Which we are toiling all our lives to find,
In darkness lost, the darkness of the grave;
Thou, over whom thy Immortality
Broods like the Day, a Master o'er a Slave,
A Presence which is not to be put by;
Thou little child. . . ."

Garrison, N. Y., April 13, 1892.

THE TEACHING OF ENGLISH LITERATURE.

To the Editor of The Nation:

Sir: Naturally I am greatly gratified to find Prof. Emerson declaring that my little paper in the April *Educational Review* "will be of service," despite his opinion that it is "somewhat behind the times," since I am apparently not "acquainted with the literature of the subject." Therefore I was grieved to discover also that he had not been quite candid in his presentation of the "facts" to which he called your attention, and by means of which he sought to convey the impression that I had carelessly or wilfully overlooked certain institutions of learning where that is done which I had said was not done anywhere, so far as I knew.

What I wished to show in my paper was, that there was no institution of learning in the United States acknowledging that the teaching of the English language and the teaching of English literature are equally important, and wholly unrelated one to the other, and recognizing this truth by the establishment of two full and independent professorships, one of the English language and one of English literature. If Prof. Emerson knows the name of any college or university where these two equal professorships exist side by side, he failed to include its name in his letter to you.

Brander Matthews.

ANOTHER WORD ON DANISH LITERATURE.

To the Editor of The Nation:

Sir: Having for some time past made a special study of Danish literature, I feel tempted to say a few words anent the letters on this subject recently published in your valuable paper. Though sympathizing with the sentiments that evidently prompted their writers, I feel bound to say that these gentlemen have fallen into the error, not uncommon with explorers in a new field, of somewhat overrating the intrinsic value of what they came across, simply because it presented a new and unfamiliar aspect.

Thus, I venture to say that the mention made, with a certain respect, by Prof. Bronk of a writer whom he styles "Schjoerring," would make any Dane of education smile. There is, to be sure, a lady by the name of Miss Johanne Schjoerring, who, like our own Charlotte M. Braeme, produces numerous novels much relished by certain members of the gentle sex; but to consider this well-paying rubbish part of Danish literature, in the strict sense of this term, has, to my knowledge, never occurred to any of the compatriots of the immortal Hans Christian Andersen.

There are writers among those mentioned both by Prof. Bronk and by Mr. Dodge who may hardly be said to rise far above the "Schjoerring level"; there are others, like Ploug, who, no doubt, are of a nobler description, but yet not at all suitable for transplantation into a foreign idiom. Not even in the success, in English dress, of a book like Drachmann's 'Pledged' should I have much faith, the novel in question being too ponderous and diffuse; but several of the minor pieces of this writer are of unexceptionable merit, and I am sure that, in these days of short stories, a collection of Drachmann's sailor tales would prove a boon to both publishers and readers. Then there is Jacobsen's 'Marie Grubbe,' an historical novel wherein the psychological subtlety of a Turgeneff or a Bourget is blended with the amazing picturesque powers of a Gautier or a Sienkiewicz. But for the horribly affected dialogue of Jacobsen's other novel, 'Niels Lyhne,' this study of modern Danish society might be likewise recommended, but I confess that the high rank awarded to this book by the great critic, Georg Brandes, and other Danish writers, to me seems somewhat imperilled by the intolerable Gongorisms in which it abounds, especially, as noticed, in what is supposed to be the every-day talk of men and women of the nineteenth century.

Schandorph, whose name is given by Prof. Bronk, is an excellent writer of short, humorous stories—his novels strike me as a trifle heavy; and Herman Bang has produced at least one masterpiece, the tale 'At the Roadside' (*Ved Veien*), a pure gem of delicate irony and penetrating sadness. Of Georg Brandes it were needless to speak, most of his beautiful works being familiar to students of literature, in either German or English translations, but I wish some one would give us a translation of some of the dramatic essays written by his brother, Edward Brandes. I am convinced that all who know this delightful writer will agree with me when I declare that very few, even among the most famous French critics of matters dramatic, have equalled the Dane, and that by none has he been surpassed. Of course, what he has written concerning Danish plays and actors is, as a rule, of local interest only, but his papers on Salvini, Sarah Bernhardt, and other celebrities of universal fame may be enjoyed by readers of any nationality, and they possess the rare merit not only of conveying an impression, vivid and profoundly conceived, of the subject directly treated, but besides that of enouncing—by the way, as it were—a whole code of dramatic philosophy, so to speak, as sound and well-founded as it is clearly and brilliantly formulated. Edward Brandes is also the author of sundry plays, some of which, "A Visit," for instance, are masterpieces; but I regret to say that the present state of the American stage would scarcely encourage an attempt to introduce them before our footlights. There are no fire-engines or tanks in Dr. Brandes's dramas, not even an Italian Minister of Foreign Affairs who unites with his state office that of chief of a gang of assassins.

GOV. ANDREW ON THE DRED SCOTT DECISION.

To the Editor of The Nation:

Sir: I have been much gratified by the elaborate review of 'The History of the Supreme Court of the United States,' appearing in your pages for March 31 and April 7. The reviewer has called my attention to an analysis of the Dred Scott case by the late Gov. Andrew of Massachusetts, while a member of the Legislature of that State. I confess that this escaped me. Will you kindly refer me to the debate in which this analysis was stated? I would very much like to read it.—Very truly yours,

Hampton L. Carson.

Philadelphia, April 8, 1892.

[The analysis above referred to was made by Gov. Andrew in a speech in the Massachusetts Legislature, delivered in 1858. His speeches, addresses, and other writings have never been published in book form, and Chandler's Memoir contains no allusion to this speech. At the time when the "Dred Scott decision" was a subject of discussion, the analysis was cited and quoted, and is to be found in (among others) the annotated edition of Mr. Lincoln's Cooper Institute Address, and in the "Oration of George Sumner, delivered before the municipal authorities of the City of Boston, July 4, 1859." As we have had more than one inquiry concerning it, and it is something not easily accessible to readers, we subjoin the extract given by Mr. Sumner.—Ed. Nation.]

"On the question of the possibility of citizenship to one of Dred Scott's color, extraction, and origin, three justices, viz., Taney, Wayne, and Daniel, held the negative. Nelson and Campbell passed over the plea by which the question was raised. Grier agreed with Nelson. Catron said the question was not open. McLean agreed with Catron, but thought the plea bad. Curtis agreed that the question was open, but attacked the plea, met its averments, and decided that a free-born colored person, native to any State, is a citizen

thereof, by birth, and is therefore a citizen of the Union, and entitled to sue in the Federal courts. But three judges of the Supreme Court have, as yet, judicially denied the capacity of citizenship to such as Dred Scott and family.

"Had a majority of the Court directly sustained the plea in abatement, and denied the jurisdiction of the Circuit Court appealed from, then all else they could have said and done would have been done and said in a cause not theirs to try and not theirs to discuss. In the absence of such a majority, one step more was to be taken. And the next step reveals an agreement of six of the justices, on a point decisive of the cause, and putting an end to all the functions of the Court.

"It is this. Scott was first carried to Rock Island, in the State of Illinois, where he remained about two years, before going with his master to Fort Snelling, in the Territory of Wisconsin. His claim to freedom was rested on the alleged effect of his translation from a slave State, and again into a free Territory. If, by his removal to Illinois, he became emancipated from his master, the subsequent continuance of his pilgrimage into the Louisiana Purchase could not add to his freedom, nor alter the fact. If, by reason of any want or infirmity in the laws of Illinois, or of conformity on his part to their behests, Dred Scott remained a slave while he remained in that State, then—for the sake of learning the effect on him of his Territorial residence beyond the Mississippi, and of his marriage and other proceedings there, and the effect of the sojournment and marriage of Harriet, in the same Territory, upon herself and her children—it might become needful to advance one other step into the investigation of the law; to inspect the Missouri Compromise, banishing slavery to the south of the line of 36° 30′, in the Louisiana Purchase.

"But no exigency of the cause ever demanded or justified that advance; for six of the Justices, including the Chief Justice himself, decided that the *status* of the plaintiff, as free or slave, was dependent, not upon the laws of the State into which he had been, but of the State of Missouri, in which he was at the commencement of the suit. The Chief Justice asserted that 'it is now firmly settled by the decisions of the highest court in the State that Scott and his family, on their return, were not free, but were, by the laws of Missouri, the property of the defendant.' This was the burden of the opinion of Nelson, who declares 'the question is one solely depending upon the law of Missouri, and that the Federal Court sitting in the State, and trying the case before us, was bound to follow it.' It received the emphatic endorsement of Wayne, whose general concurrence was with the Chief Justice. Grier concurred in set terms with Nelson on all 'the questions discussed by him.' Campbell says, 'The claim of the plaintiff to freedom depends upon the effect to be given to his absence from Missouri, in company with his master in Illinois and Minnesota, *and this effect is to be ascertained by reference to the laws of Missouri.*' Five of the Justices then (if no more of them) regarded the law of Missouri as decisive of the plaintiff's rights.

"The Chief Justice and Justices Wayne and Nelson and Grier plainly hold that, on this point, the Courts of the United States were bound to follow the decision of the Court of Missouri, which had already passed upon the question. And if Campbell did not intend to be bound by the Missouri Court, we are at a loss to understand what he does mean; since, asking, 'What is the law of Missouri in such a case?' and, after citing Scott vs. Emerson in the 15th Missouri reports and various authorities of several States, he concludes that 'questions of status are closely connected with questions arising out of the social and political organization of the State where they originate, and each sovereign power must determine them within its own territories.' He held conclusively and distinctly, and so also did Mr. Justice Catron, in common with all the judges besides McLean and Curtis—on their own investigation and reasoning—that the law of Missouri (to be ascertained either by themselves, or by exploring the declared opinions of the courts), must rule the cause. And they all affirm that, irrespective of the law of Illinois and of the Territory, Scott was a slave by the law of Missouri, on his return within the confines of its jurisdiction.

"If the law of Illinois could have had no possible effect to secure freedom for Scott when again remitted to Missouri, it follows that neither could the laws of the Territory have availed him. The majority of the Court had no occasion, therefore, to follow them into the Territory, in order to look into the condition of Harriet and the children; because Dred, as a slave, could have no wife nor child known to the law or recognized by the Court. But if any such occasion had existed, the same answer—the effect of the Missouri law—was sufficient to control the cause."

CHOICE OF ELECTORS BY PROPORTIONAL REPRESENTATION.

To the Editor of The Nation:

Sir: In the *Forum* for February, Mr. Edmunds and Mr. Phelps discuss the question whether Presidential electors should be chosen by Representative districts, as is proposed this year in Michigan. Mr. Phelps approves of this method; Mr. Edmunds objects, and suggests that some form of proportional representation, preferably the cumulative vote, be tried instead.

There is no doubt that the choice by Representative districts is open to at least two objections: the temptation to gerrymander, and the injustice of allowing the party of the majority to name the two Electors-at-Large—an important matter in the small States. On the other hand, the cumulative vote, whatever be its theoretical merits, is very uncertain in its working, is not well adapted to the choice of large bodies, and is unnecessarily complicated for the appointment of Electors. In voting for Electors, the people are not selecting men for their merits, but are merely naming clerks to perform an almost mechanical duty. People vote, not for these men rather than for those, but for the party or the men giving their name to the ticket. That form of proportional representation is, in this case, the best which most accurately and simply gives expression to the will of the voters.

The best-known forms of proportional representation are, in the order of their simplicity, the free list, the limited vote, the cumulative vote, and the assignable vote, commonly called the Hare system.

The two last methods are too uncertain and too complicated for the present purpose. The limited vote has great merits where selection is to be made among candidates of all parties (or of no party), where independence at the polls is to be encouraged, and where care must be taken to prevent objectionable men from slipping in at the foot of a successful ticket. But for the choice of Electors, where voters are divided by party lines, where it is of no importance which names on a certain ticket are selected to perform the clerical duty, and where it is of the utmost importance that each ticket shall have assigned to it, obviously and without question, the exact number of Electors to which it is entitled by the number of its backers, there is no method at once so simple and so accurate as that of the free list.

To illustrate the method: Suppose that a State entitled to 12 Electors casts about 300,000 votes. There are three tickets in the field. The Republicans cast about half the votes, the Democrats about a third, the Prohibitionists the other sixth. Obviously the Republicans are entitled to 6 Electors, the Democrats to 4, the Prohibitionists to 2. The executive officers, therefore, after canvassing the votes, send certificates of election to the first 6 names on the Republican ticket, the first 4 names on the Democratic, the first 2 on the Prohibitionist; and the votes of these 12 men, when opened at Washington, express with accuracy the decision of the people of the State. Under our present system, the Republicans in this State would secure all the Electors, even though their vote were much less than half of the whole. Under the proposed district system, they would secure the two Electors-at-Large, and probably from six to eight of the rest—eight to ten in all; while the Prohibitionists would not be represented at all.

It is obvious that, if all the States were to choose their Electors by the method of the free list, not only would the Electoral vote of each State be an accurate echo of the popular voice, but the result for the whole country must be much more accurate than under either the present system or the district method. To test the matter, the figures of the election of 1888 have been examined, and the actual result of the election has been compared with (1) the "ideal" result, obtained by dividing the entire Electoral vote of the country among the various tickets in proportion to the vote received by each; (2) the result if each State had used the free list; and (3) the result if each State had voted by Representative districts. (In the last case, it was necessary to suppose that each district would have chosen an Elector of the same political faith as the Representative actually chosen.) The results are interesting.

At the election of 1888, the Republicans secured 233 Electors, the Democrats 168.

(1.) *Ideal.* The country cast about 11,000,000 votes. Of these the Democrats cast 5,500,000, the Republicans 5,400,000, the Prohibitionists 250,000, and the Labor parties, combined, 130,000. Of the 401 Electors, therefore, the Democrats should have had 195, the Republicans 192, the Prohibitionists 9, the Laborers 5.

(2.) *Free List.* Under the operation of the free list, the result would have been: Democrat 203, Republican 189, Prohibition 5, Labor 4.

(3.) *Districts.* If the two Senatorial Electors in each State had been elected by general ticket, and the others by Representative districts, the result would have been: Democrat 190, Republican 211—certainly an unfortunate test of a system that aims to secure a result representing, even roughly, the popular will.

It is hardly necessary to say that, on the adoption of a just system of proportional representation, the rule requiring a majority vote of the Electoral College, with the alternative of a choice by the House of Representatives, should be repealed. When the country has a method of election which secures the appointment as President of the person representing the largest number of voters, the antiquated "majority" notion, which still, with unhappy results, controls elections in one or two small communities, may well be abandoned.

There is much to say in favor of the use of the free list, or of the limited vote, in choosing aldermen, public boards and committees, and even Representatives in Congress, especially in those States which have adopted the official ballot; "but that's another story." C. P. W.

Milton, Mass., April 10, 1892.

THE EDUCATION OF YOUTH IN THE SOUTH.

To the Editor of The Nation:

Sir: Your paper of March 31 is before me, and it would give me great pleasure to accept the conclusions of "W. W.," in his letter on "The Education of Young Men," as applying

to the South; but the facts, as observed by me while living at different times in three States of the South, all go to confirm the view of Mr. Holmes as expressed in your issue of March 10. So far as the North and the West are concerned, I cannot speak from personal knowledge, but am perfectly willing to accept the opinion expressed by three such papers as the St. Louis *Republic*, the Buffalo *Courier*, and the *Nation*. Mr. Holmes has correctly enumerated the causes that have conspired to bring about this sad result in the South; but I think we may add another. The emancipation of the negro in the South emancipated another class —the poor white; for before the war there was no middle class in the slave States. There was no place under the sun for the poor white. After the war all was changed. The members of this class found opportunities for improving their condition which they were quick to seize. Many of them were possessed of a shrewd common sense which was readily convertible into gold, given only an opportunity. They did not deem it necessary for their sons to have more than the merest business education; but as their daughters could not go into the counting-room, and could not run the plantation, they decided that the best thing they could do for them was to give them a good education, and this they have done in many cases, and the daughters in turn have made desirable marriages.

I have observed that the same disparity exists among the German and Swedish emigrants in Texas, as regards the education of their sons and daughters. In other words, the great upward movement in education among the lower classes has affected girls mainly. Visiting a number of the schools of this State recently, I was struck with the fact that in the high-school grades the girls outnumbered the boys very largely. The boys had stopped to go into business, or in many cases to do nothing, while the girls had the perseverance and the ambition to continue. The evil exists most glaringly in the smaller towns and more newly settled communities of the South. One of the larger towns of the State of Texas, with which I happen to be acquainted, will serve as an example. In this town there is an unusual number of accomplished young women, but the young men with whom they associate are, to say the least, ordinary; the sum total of their "book knowledge" being, in most cases, confined to the three R's, and their sole accomplishment the ability to dance with grace. On one occasion I asked one of the young ladies who received the attentions of such men, how she could tolerate them. She said in substance: "I *don't*, but it is this or nothing, and I don't care to be placed upon the retired list at present." This young lady, rather than select a life partner from such a herd, gave her hand to a man twenty years older than herself. Can we blame her very much because she did not have the grace to allow herself to be "shelved"? Let those of her sisters who would have acted differently cast the first stone at her. It has come to be the exception, and not the rule, for a young woman in the South to marry a man who is, so far as education goes, her equal.

It does not seem to me that "W. W." is correct in his analysis of what education is. He asks: "Is it not the acquiring of knowledge, irrespective of how it is acquired?" This we cannot admit unqualifiedly. A blacksmith may each day become more and more intimately acquainted with his trade—may, in fact, daily learn something new about it; still, at the end of a long life, he will not be known as an educated man. It does not seem, then, that "W. W.'s" position is a tenable one when he urges: May not the young business man be an educated man though he knows little about books? for is he not thoroughly up in his business, and is he not in this direction adding something daily to his store of knowledge?

"Si dives, qui sapiens est,
Et sutor bonus et solus formosus et est rex,
Cur optas quod habes? Non nosti quid pater, inquit,
Chrysippus dicat: Sapiens crepidas sibi nunquam
Nec soleas fecit, sutor tamen est sapiens."

Making shoes is one thing, and being a king is another and a very different thing; though some people, both in years gone by and in the present year of grace, have thought that the one implies the other. A. L. B.

University of Mississippi, April 4, 1892.

"LAW ENGLISH."

To the Editor of The Nation:

Sir: The article in your issue of March 31, entitled "Decay in Professional Mannerisms," suggests decay in other respects than those mentioned. Certain changes in progress in the legal profession, which are unfortunately not as commendable as those that you point out, readily occur to a member of that profession. Not to mention decay in professional ethics, oratory, or even manners, which the evidence of tradition at least tends to establish as a fact, one of the most noticeable and rapid processes of deterioration is the decay in professional language.

An example of this is the language not only being spoken but written in the community in which this letter is penned.

There seems to be a steady growth of what, after the analogy of that moss-grown corruption of the classical tongue, known as "Law Latin," may not inaptly be called "Law English." The following are a few illustrations of "English as she is spoke and writ" at the bar and on the bench of the State of Illinois.

The use of the word "office" as a verb not only has become common among attorneys-at-law, but has lately received the sanction of the Supreme Court: "An attorney officing in the same building" (126 Ill., 587).

The Appellate Court speak of a witness who "testified . . . that he was up to G's house" (37 Ill. App., 381). By a failure to see quotation marks in the opinion, the Court indicates an appropriation of the witness's choice phrase.

"We are satisfied that the testimony given by the appellee . . . establish these facts" (54 Ill., 198).

"The train ran from Quincy to Hannibal and return" (109 Ill., 320).

"We cannot say that five thousand dollars is a compensation too large for an injury so serious, and which at any moment may become strangulated and produce death" (38 Ill., 245). Whether it was the injury which the judges feared would at any moment become strangulated, or whether they were harrowed by the thought of the compensation's producing death, is left in some doubt.

The last three quotations are samples of the deliberate utterances of the highest tribunal in this State. "If they do these things in a green tree, what shall be done in the dry?" S. R. T.

Chicago, April 4, 1892.

"DOG GONE IT."

To the Editor of The Nation:

Sir: Fifty years ago, people of pretty good habits of speech in Virginia, and their children in Ohio, said, in the first person, "I'll be dog'd"; second person, "Dog on you"; third person, "Dog on it, Dog on him." Others, of inferior speech, said *dawg* for dog, and *awn* for on—"I'll be dawg'd," "Dawg *awn* you," etc. Then, as often occurs in similar cases, the *g* was carried forward from *dawg* to *awn*, making "Daw' *gawn* you," "Daw' *gawn* him," "Daw' *gawn* it." In our time, people trying to be correct put the *g* back in *dawg* without removing it from *awn*, and so have made "Dog gone it," and I observe that some dialect story-writers make their people say, "I'll be dog goned." But in the old phrase nobody said, "I'll be dog *on'd*." The *on* came in only in the second and third persons.

Dialect often has a grammatical structure which is not to be disregarded, but few writers have the thoroughness of knowledge which distinguished Mr. Lowell's handling of his dialect, or, perhaps, his sense of the importance of accuracy in the matter. But entire accuracy is not easy. I think "Dog gone it" is simply "Dog on it." The Southern and Western people of those earlier times swore outright, without circumlocution, and profaned the Sacred Name with shocking readiness; but although the queer oath of Socrates —"By the dog of Egypt"—may have been solemn originally, I think our phrase has no relation to anything higher, but is derived from the use of the dog as a soldier, or as a fierce beast under control. These qualities gave him great social and economic importance in wild regions. It was no light thing to be dogged—that is, chased, bitten and worried by a powerful and furious dog. The verb *to dog*, in the sense of setting on or inciting a dog to attack an animal or a man, was much used when I was young, but I do not often see it in literature of late. J. B. Harrison.

Franklin Falls, N. H., April 15, 1892.

SCHLEIERMACHER, NOVALIS.

To the Editor of The Nation:

Sir: Whether the expression *Gott-trunkener Mensch*, as applied to Spinoza, is also used by Schleiermacher, as well as by Novalis, I do not know; but in the second of Schleiermacher's "Reden über die Religion," page 38 of Carl Schwarz's edition in the "Bibliothek der deutschen Nationalliteratur des 18. und 19. Jahrhunderts," may be found a passage which is sometimes quoted or alluded to in histories of philosophy, and, being as enthusiastic as Novalis's expression, may explain your critic's inadvertence, if such indeed it be. The passage begins as follows: "Opfert mit mir ehrerbietig eine Locke den Manen des heiligen verstossenen Spinoza! Ihn durchdrang der hohe Weltgeist, das Unendliche war sein Anfang und Ende," etc.—Yours truly,

H. C. Bierwirth.

Phillips Academy, Andover, Mass., April 15, 1892.

Notes.

A. C. McClurg & Co., Chicago, announce a 'Life of Joshua R. Giddings,' by his son-in-law, George W. Julian; 'The Best Letters of Charles Lamb,' edited by Edward Gilpin Johnson; 'A Cabinet of Gems [from Sir Philip Sidney]' and 'Selections from Sir Walter Raleigh'—first volumes in "The Elizabethan Library," edited by Dr. A. B. Grosart.

J. B. Lippincott Co. have in press the

'Itinerary of Gen. Washington, from June 15, 1775, to December 23, 1783,' by William S. Baker; 'In Starry Realms,' a new work on astronomy, by Robert S. Ball; and 'A Too Short Vacation,' by Lucy L. Williams and Emma V. McLoughlin, illustrated by the authors with their own kodak.

Macmillan & Co. are about to bring out a new and enlarged edition of S. Dana Horton's 'Silver in Europe'; a new, thoroughly revised and corrected edition of Prof. Jowett's translation of the 'Dialogues' of Plato, in five octavo volumes; and (by way of the Clarendon Press) a 'History of the New World called America,' by E. J. Payne.

Bernard Quaritch, 15 Piccadilly, London, will publish in parts 'Old Wedgwood: The English Relief Art Work of the Eighteenth Century, made by Josiah Wedgwood at Etruria, in Staffordshire, 1760–1795,' by F. Rathbone, with illustrations in color from the best-known examples in public and private collections.

Among minor books of reference of its class, 'The New Cabinet Cyclopædia,' just issued in eight duodecimo volumes by Gebbie & Co., Philadelphia, may meet a certain want for very condensed information, occupying little room on the shelf, and costing comparatively little. The chief editor has been Dr. Charles Annandale, an experienced dictionary-maker, and the American portion has been revised by Mr. A. R. Spofford of our National Library. So far as we have tested it, it has been pretty well brought down, for events, to the date of the present year. Thus, the recent fortunes of Chili are traceable under Balmaceda, Chili, and the United States, but very briefly. On the other hand, so remarkable a find as that of Aristotle's 'Constitution of Athens' is not alluded to under Aristotle or under Papyrus, where the unlimited field of discovery opened by the mummy-cases surely deserved mention. Under Aluminium, no hint is given of the extraordinary decline in the cost of producing that metal, so that it now has about the value of copper. Under Egypt, the English occupation and administration of the country are not explicitly stated. Among the biographical entries, Crispi will be sought in vain. Under Phonograph, the name of the inventor is ignored, though the machine is enumerated in Edison's list. In general there is no reference to the sources of fuller or first-hand information. The lack of scholarly and consistent editing is shown by the spellings "Tourguenieff" (main title), and "Turgenieff" (under Russia). That Bismarck should be said in the same short article to have resigned his Chancellorship in 1889 and in March, 1890, is evidence of faulty proof-reading as well as editing. The numerous full-page maps are very good; the cuts but ordinary.

Mr. Arthur John Butler's translation of the 'Memoirs of Baron de Marbot,' which the Messrs Longman publish in two handsome volumes, with portraits and maps, is very fluent and idiomatic, and has been anything but mechanically performed. To compress the work, Mr. Butler has paraphrased certain portions of it, marking these abstracts by brackets. He has also occasionally called attention in foot-notes to the different, if not more correct, views held by historians and students. Finally, he has provided an index, but this ought to have been analytic; and so simple a device as the running date-line should not have been neglected. In all other respects this reproduction of a first-rate memoir deserves to be praised. Marbot's face, by the way, is not especially attractive at either age.

From Macmillan & Co. we have a new edition of Prof. Hales's useful 'Essays and Notes on Shakspere,' still bearing the London imprint of George Bell & Sons, as in 1884, when we commented on it. It appears to be quite unchanged. Also, a fresh issue of the reprint of the first edition of the 'Pickwick Papers,' published in 1886, with the original illustrations and a bibliographical introduction by the younger Dickens. The nature and the reduced price of this edition must tend to make it the most popular among all classes. Finally, the same firm contributes a little 'Tennyson for the Young,' selected and edited by Albert Ainger, and contrived *not* to be usable for examinations in English literature. We cannot doubt its attractiveness for English children, but the dialect poems will in this country be generally passed over.

Mrs. Gaskell's 'Cranford' forms volume 37 of the "Knickerbocker Nuggets" (Putnams), and we are pleased to observe that in it Martha's "lion" is not turned into a "loin"—a blunder which has marred other recent editions of the book, as has been pointed out by correspondents of ours.

A good idea has been imperfectly carried out in 'Public Statues and Monuments of New York' (Palliser, Palliser & Co.). These heliotype prints have been grouped with relevancy, but the "decorative" borders and legends are in poor taste, and the individual work is sacrificed to the group. The smaller scale should have been reserved for the poorer statues—*i. e.*, for the greater number. There is, of course, a moral in bracketing Brown's Lincoln and St. Gaudens's Farragut, but the latter statue deserved a page to itself, and the first in the book.

One of the latest of the series of "Artistes Célèbres" published by *L'Art* (Macmillan) is 'Les Brueghel,' by Émile Michel. We must say that the Brueghels seem to us to be among the painters whom the world might willingly forget. It is a license of speech to call the nightmares of the elder Brueghel art at all, while the flower and landscape-painting of his son "Velvet" Brueghel hardly rises above an elegant mediocrity. He was a neat and accomplished craftsman, but assuredly not a great man. The other members of the family are even less worth remembrance. The book is, as usual with the series, well made and profusely illustrated.

'Longmans' School Geography,' noticed by us a few months ago, is now followed by two valuable atlases, the 'New Atlas,' political and physical, and the 'New School Atlas'; the first with fifty, the second with a selection of thirty-eight maps. Both are prepared by Stanford, the well-known London map publisher, and edited by Chisholm and Leete, the authors of the geography above named. Apart from a certain lack of delicacy in coloring, the maps are neat and attractive. Strong emphasis is given to physical features, and the variety of illustration in this direction is unusual. Both atlases are well adapted to use in this country by the arrangement of the sheets, which places the United States on early pages, and by the introduction of appropriate physical maps of our territory. The omission of names from the maps has been carried, in our judgment, too far: only seven cities are given in Indiana, only eight in Iowa. A small book of 'Questions to Longmans' School Geography' is also received; and for this all our teachers of geography should be grateful. It makes no claim to completeness, but it is extremely suggestive.

The manner in which islands are tied on to the adjacent mainland by sand bars is illustrated on an extraordinarily large scale in the case of Ceylon, where Adam's Bridge is found by Dr. Walther of Jena (Supplement 102 to *Petermann's Mitteilungen*) to be a string of sand and coral reefs, built out chiefly from the coast of India by the strong currents of the southwest monsoon. The shoals that connect the northern point of Ceylon with Calymene Point on the mainland are less developed, presumably owing to the relative weakness of the northeast monsoon; but if the process goes on, there will in time be an enclosed lagoon between the two bars, comparable in kind but not in size to that now seen behind the little peninsula of Giens, near Toulon, on the southern coast of France.

Among the early Bulletins of the Geological Society of America containing papers read at the Columbus meeting last winter, none is more important than one by Salisbury, who announces the results of his studies on the drift of New Jersey south of the generally recognized terminal moraine. The sharp definition of the glaciated area announced more than ten years ago by the Geological Surveys of New Jersey and Pennsylvania has been generally accepted as conclusive, but must now be regarded as applicable only to the latest ice invasion, while the more weathered drift of a greater and much older invasion is found twenty or thirty miles further south. The complication of the glacial period by division into at least two glacial epochs, widely separated in time compared to the duration of either epoch alone or of post-glacial time, is thus confirmed in the East as well as in the Western States.

Another notable contribution to the glacial problem is found in Leverett's essay on the "Moraines and Raised Beaches about Lake Erie" in the *American Journal of Science* for April, with a map illustrating in rather too rough a manner the prolonged studies of the author in the field. This work has been under the direction of President Chamberlin, for the United States Geological Survey, and serves to illustrate how far theory had outstripped observation; and also how rational the theory is when extended observations, such as are here chronicled, call for so few serious changes in the conclusions already inferred. The southwestward overflow of the glacial Lake Erie, as announced by Gilbert over twenty years ago, is here confirmed; and an indirect discharge for a later phase of the same lake at a lower level is inferred by the way of Lakes Huron and Michigan past Chicago to the Mississippi. At the present rate of discovery, we shall have a good basis for theories of glacial climate by the close of this century.

Cambridge Historical Essays, No. V., is entitled, 'The Influence and Development of English Gilds, as illustrated by the History of the Craft Gilds of Shrewsbury,' being the Thirlwall Dissertation for 1891 by Francis Aidan Hibbert, B.A. (Cambridge, Eng.: University Press). The attention of the author is concentrated, as the title indicates, on the craft gilds of Shrewsbury, but he also strives to point out "how the Shrewsbury records bear upon the various theories which have been put forth respecting Gilds." After a few introductory remarks concerning the place of this borough in gild history (ch. i), and a short sketch of the rise of the gild merchant and craft gilds in general (ch. ii-iii), the history of the Shrewsbury craft fraternities is considered, from the fifteenth to the nineteenth century inclusive (ch. iv-viii). The book throws much light on the trade and customs of an ordinary provincial town, especially in the seventeenth and eighteenth centuries. The development of craft fraternities remains

the obscurest portion of the gild history of England. This gap would soon be filled up if students would make special investigations into the history of crafts in particular towns, as Mr. Hibbert has done in the case of Shrewsbury.

A new "monthly review of scientific progress," called *Natural Science*, was launched last month by Macmillan & Co. Its aim is "to interpret simply and without excessive technicalities the main results of contemporary work in natural science to those who try to follow the general progress of modern thought." It is reactionary, in favor of the amateur, against the undue development of professionalism. Its scheme consists of notes and comments, signed contributed articles, book reviews; news of universities, museums, and societies; and correspondence. The table of contents in No. 1 is varied. Several of the ten papers are illustrated, and typographically the magazine is open and attractive.

The *Journal of American Folk-Lore* for January–March has an interesting paper, by Henry R. Lang, on the "Portuguese Element in New England," and chiefly at New Bedford, where from seven to eight thousand are congregated. The annual immigration, mostly from the Azores, is from 1,500 to 2,000. They are a good class of population, their names and speech are rapidly Anglicized, and they prefer the common to the parochial schools. Mr. Lang does not intimate that they have made any additions to the local idiom or vocabulary of their American neighbors.

We do not remember to have met before with such a document as is printed in the *New England Historical and Genealogical Register* for April, viz., the newly found paper in which Maj.-Gen. Daniel Denison, on December 26, 1672, "in the sixtieth and one year of his age," "thought meet to acquaint you [his grandchildren] with your predecessors, and your decent from them." Such light on New England pedigrees and British connections has been so conspicuously wanting that Savage, Chester, Waters, and the *Register* itself owe their genealogical existence to the defect. In the same number it is stated that the earliest known Bible provided with blank pages for family records was printed for Mathew Carey in Philadelphia in 1802.

The Bulletin of the Boston Public Library for April contains the diary of a tour in the Eastern States by Robert Gilmor of Baltimore in 1797. The text has real value, as witness the following regarding Boston—"a handsome town, filled with well built houses in general, and some very superb ones, though mostly of wood. The streets are, however, bad, being narrow, wretchedly paved, and no sideway of brick for foot-passengers: my feet were quite sore with traversing the round stones." But Mr. Gilmor also made pen drawings of houses and landscapes, and these too are of no little value. The Bulletin gives them in facsimile. One of these is a curious "view of New York taken on the road to Utrecht baths, that leads through the narrows"; another is of Broadway from the Battery. The views of Boston show the beacon behind the State House.

Every catalogue of English Prose Fiction is welcome, as sure to differ from every other. That of the St. Louis Public Library is before us, with appendices of musical novels, and of historical novels arranged chronologically and by countries.

—A continuous stream of new text-books in English history and geography testifies to the growing interest felt by Americans of to-day in the elder branch of their race. Among these is a pleasant little book, entitled 'A Short History of England,' by Miss E. S. Kirkland (Chicago: A. C. McClurg & Co.). It gives no evidence of any study beyond the usual standard authors; but the story is told in an interesting, gossipy way, and is enlivened by brief and apt extracts. It has the merit of being easy to read; but as a text-book it has too many defects of plan and knowledge to be recommended. The book is devoid of the usual conveniences which the reader has a right to expect, and which are indispensable in a school-book: the table of contents is very scanty; there are no maps; and there is not even an index. The old-fashioned proportions are observed: about six-tenths of the book is devoted to the period before 1600, and about one-tenth to the period since 1783. American colonization and its effects on England are dismissed with four allusions. The book departs little from the conventional history, and presents no new views. With a certain liveliness of style there is occasionally a didactic strain which borders on the ludicrous. Thus, the readers are warned that James I. was "an habitual profane swearer." Since Elizabeth had a similar aptitude for strong language, it is hardly fair to single her successor out as a sinner beyond his fellows. The foot-notes often stop to define terms which may be found in every dictionary. While not very erroneous, the book establishes no claim to supplant other text-books now in use.

—Osmund Airy's text-book of 'English History from the Earliest Times, for Colleges and Schools' (Longmans, Green & Co.), is much more dangerous, because it is backed by the name of a well-known historical scholar, and has a well-considered apparatus: side-headings and running dates are provided; there are elaborate sub-sections for class use, and a good index. The genealogical tables, the summaries of dates at the ends of the chapters, and the rough but serviceable maps, suggest that the book is meant to be crammed. A careful examination strengthens the suspicion; like Bright's useful book, this seems to bring in, or at least to allude to, everything that a student of English history ought to know. Thus, on page 509, we have board schools, abolition of the sale of commissions, disuse of religious tests, the Ballot Act, the Supreme Court of Judicature, the Education Bill of 1873, the election of 1874, and, in a foot-note, the war of 1870–71, the creation of the German Empire, and the unification of Italy. The foot-notes are often made a mausoleum for events for which there is no room elsewhere. In order to get in this mass of details, it has been necessary to condense and often to distort more important matters. Thus, after describing the interference of James I. at the Synod of Dort (p. 241), the narrative goes on to say: "There . . . the North beat the South. The works of Vorstius were condemned; Barneveldt . . . was put to death." Surely, Maurice of Nassau had some influence. This habit of throwing together two things, each correct, but of which the relations are completely distorted, is not made any better by Mr. Airy's omissions. Canning's influence on English affairs before 1822 is ignored. The difficulties with America over the neutral trade, and the war in which the pride of the English navy was humbled, are dismissed in the following foot-note: "War had broken out in 1812 with the United States through the anger caused by the orders in council. It was brought to a close in 1814 by the Treaty of Ghent." Mr. Airy is not bound to write the history of the United States, but he is bound to give American and English boys alike some notion of the commercial warfare which was so essential a part of the Napoleonic struggle. On things American the book is throughout very faulty. One of the colonies in 1763, he tells us, was "Hampshire"; during the French and Indian war, "the loyalty of the colonists went to the winds" (p. 393). In 1630 the people of "New Plymouth . . . were joined by 1,000 Puritans under John Winthrop" (p. 247). Cornwallis was captured at "Yorktown at the mouth of the Chesapeake." The map of the colonies in 1775 (p. 393) shows the same degree of special knowledge. A book of the compass of Mr. Airy's might be written which would show the development of the English nation; in the attempt to give too much, the whole is obscured and confused, and serious errors go uncorrected.

—It is a pleasure to examine and to commend Mr. S. R. Gardiner's 'School Atlas of English History' (Longmans, Green & Co.). It goes far to remove the greatest difficulty in the way of good teaching of English history, for it furnishes a clear, well-engraved set of maps covering the whole period to 1891. The author properly includes maps of Europe, America, India, and Africa, to illustrate English settlements, diplomacy, and campaigns. An excellent index adds much to the value of the whole. A set of twenty-two plans of battle-fields makes up the total number of distinct maps to eighty-eight. A few errors may be noted in the European maps, as Switzerland in No. 28, and the Empire in No. 51. The American maps, Nos. 45, 46, and 48, are bad enough to pass for a practical joke. There does not appear to be one State boundary correct in the map of the United States in 1783. If these be domestic and unimportant matters, at least the boundaries of Quebec and Nova Scotia and the line west of Lake Huron belong to the history of England. With these maps replaced, the atlas will be in all respects serviceable and praiseworthy.

—A noteworthy revival of Byzantine studies has marked the last twenty-five years. Until then the traditions of Allatius and others of the seventeenth century were kept up by only a few scholars, whose labors met with little encouragement. Among the most remarkable of these disinterested workers was the late Prof. Sophocles of Harvard, who has unfortunately left no one to continue his labors in America. Many other Greeks have worked in various parts of the vacant field, and among these Paspatis has accumulated invaluable materials relating to the Byzantine monuments of Constantinople. Much has also been done for the understanding of Byzantine architecture in France. It was at Marseilles that Demetrios Bikélas, recently named Chevalier of the Legion of Honor, delivered his lectures "Περὶ Βυζαντινῶν." These were published in Greek (London, 1874), and were translated into English for the *Scottish Review*, where they appeared in 1886–1887. They are essays on "Byzantinism," "Hellenism," and "The Subjects of the Byzantine Empire," and form by no means the least important part of a book of Bikélas's essays, published in 1890 by the Marquess of Bute under the title of 'Seven Essays on Christian Greece.' In England, meanwhile, the Hellenic Society, having on its council Dr. Freshfield, an enlightened student of Byzantine antiquities, has begun a very important work with the generous support of two or three liberal givers. Messrs. Schultz and Barnsley have spent laborious months at the Monastery

of St. Luke on Mt. Parnassus, at Saloniki, and at the little church of Daphnæ, half way between Athens and Eleusis, as well as at other Byzantine churches in the Levant. Students of the mosaics at Venice and Ravenna will be glad when these wonderfully faithful reproductions and plans are ready for publication. Facilities for subscribing will then doubtless be afforded. Meanwhile, Dr. Karl Krumbacher, professor at the Munich University, has issued the prospectus of a *Revue Byzantine*. Teubner of Leipzig is to be the publisher, and David Nutt, 270 Strand, will receive subscriptions. The projected periodical is to appear quarterly, and its articles will be mainly in French and German, although the collaboration of Greek, English, and Italian "Byzantinists" is already pledged to support it. Its pages will afford a much-needed meeting-ground for all workers in this hitherto neglected branch of learning, and it is to be hoped that America, the adopted home of Sophocles, will give ungrudging support to this effort at organizing the studies which he did so much to make profitable.

—Among the most important researches which astronomers have in hand at present is an investigation of that period of minute oscillation of the earth's axis which gives rise to the phenomena of variable latitude. At its last meeting in the autumn of 1890, the International Geodetic Union, on the motion of Prof. Foerster of Berlin, resolved to send an astronomical expedition to Honolulu, for the purpose of making a twelvemonth series of latitude observations, coincident with a like series at the Royal Observatory, Berlin. Dr. Marcuse of Berlin and Mr. Preston of the United States Coast and Geodetic Survey accordingly went out for this purpose, and the first three months of their work produced substantial results of a most promising character. Upon coördinating several hundred determinations of Honolulu latitude with corresponding results at the Berlin Observatory, Dr. Foerster finds that beyond doubt the latitude in Berlin during this period increased by one-third of a second (about thirty feet), and decreased in Honolulu by almost exactly the same amount. So long ago as 1876, Sir William Thomson, in his Glasgow address, presented a dynamical conclusion that irregular movements of the earth's axis to the extent of a half second may be produced by the temporary changes of sea-level due to meteorological causes, and this striking result of the Honolulu expedition is to be regarded as observational proof of Sir William Thomson's conclusion. It is to be expected that England will coöperate with the other great nations in carrying out the plans of the International Geodetic Union for the most minute investigation of this fundamental problem in astronomy. As a first effort it is proposed to establish four permanent stations for regular and continued observations of this geographical coördinate, at points of approximately equal latitude and on meridians about 90° apart. In this way it is hoped to ascertain the cause of those variations of latitude which have for a long time been suspected at Berlin, Greenwich, and other great observatories, and which could not be wholly attributed to errors of observation. Not only is the research of the first importance in respect to the fundamental observational work in astronomy, but it has exceeding interest in connection with tidal, meteorological, and geological observations and speculations.

PATRICK HENRY.—I.

Patrick Henry. Life, Correspondence, and Speeches. By William Wirt Henry. 3 volumes. Charles Scribner's Sons. 1891.

If William Wirt, the first biographer of Patrick Henry, felt constrained to admit that the materials from which he wrote were "scanty," "meagre," and "utterly disproportionate to the great fame" of his hero, Mr. William Wirt Henry, the learned author and compiler of these three portly volumes, acknowledges that he can make no "such excuse" for either the character or proportions of his work. He is embarrassed rather by the riches of his materials. The new matter he has gathered is indeed of great value, not only for the light it sheds on Patrick Henry's career, but also for the clearer view it gives of many Revolutionary records which are hidden from the public eye in the Executive journals or letter-books kept by Patrick Henry during his five years of service as Governor of Virginia; and others of which are obscured rather than preserved in the manuscript or printed journals of the deliberative bodies in which he sat, whether as a member of the Virginia House of Delegates or of the Continental Congress. The first two of these volumes are devoted to a minute and circumstantial narrative of the life of Patrick Henry, considered in connection with the eventful times in which he acted such a leading part. The third volume contains his correspondence, so far as it has been collected, and a report of the speeches he made in the Virginia Convention of 1788, when sitting in judgment on the Federal Constitution.

If at some few points the reader may be tempted to dissent from the biographer's distribution of his praises and censures, it must none the less be conceded that he is as intelligent and candid in the use of his materials as he has been industrious in their collection and conscientious and impartial in reproducing them with textual accuracy. The eminence of Patrick Henry as a natural orator, even in the absence of any authentic reports of his speeches, is proved by the immediate effects of his eloquence, and by the acknowledged leadership which his eloquence won for him not only among his fellow-citizens in Virginia, but among the members of any deliberative assembly. The style of his eloquence, described by Jefferson as "bold, grand, and overwhelming," has been likened to that with which Mirabeau stormed from the French tribune. The imperious sway with which he controlled the currents of public opinion in his native commonwealth is evidenced not only by the large popular following which he always commanded, but also by the dismay which he often carried into the ranks of his political opponents whenever he set up his banners against them. In 1787 we find Madison confessing himself startled by the spectre of the "omnipotence" which Henry was likely to wield in the debate over the adoption of the Constitution, and at a little later date we find Gen. Washington complaining that "the edicts of Mr. Henry" against Federal measures "are enregistered with less opposition in the Virginia Assembly than those of the grand monarch by his parliaments."

Perhaps the celebrity of Patrick Henry's fame as an orator is proved best of all by the luxuriant growth of popular traditions which gathered in later years around the fallen shrines of his prowess in debate, long after that prowess had passed into the dimness and haze of popular reminiscence. Grote, the historian, has told us in one of his *Westminster* Essays—we quote his idea, not his words—that wherever the popular *Mythus* hides its head in the clouds, and turns the clouds into a nimbus for the glorification of some saint or hero, we may be sure that the saint or hero had some species of preëminence which was sufficient to create in his favor a whole cycle of legends, along with a popular appetite for believing in their authenticity. Of such myths it may be said, that whenever they attach themselves to certain names they do not spring up unbidden, but appear only at points where some great power has been exercised over the emotions of men. That is, the *Mythus* never rushes in with its distortions and exaggerations except at points where some great event or some great character has prepared in the popular imagination a darkened chamber for the display of its enchantments. The oratorical legends which cluster around the name of Henry are all so many tributes to his surpassing eloquence.

Yet, in spite of the sudden brightness into which the name of Patrick Henry leaped at the epoch of the Revolution, it must be admitted that his latter-day fame has come to lack somewhat of the clear definition and large significance in which it loomed before the eyes of his contemporaries. And this result, it seems to us, is not entirely due to the improvidence with which he scattered his oratorical wealth, or to the flimsiness of the materials out of which Mr. Wirt contrived to weave the captivating but unsubstantial first biography of our "forest-born Demosthenes." It is due, we think, in largest part, to the fact that Patrick Henry, in following his sense of public duty, was called to fight two great losing battles in the two supreme crises of American history. In these two supreme conjunctures the conquering cause was pleasing to the gods, but the conquered cause was pleasing to the Virginian Cato. He vehemently opposed the ratification of the Federal Constitution in 1788, and, after that Constitution was adopted, he declared that he "would have nothing to do with it," and fell for a time so completely out of touch with his countrymen that he not only refused to embark his political fortunes in what he called "the crazy machine" of the Federal Government, but became so disaffected to the new polity that, in the first flush of his disgust, he thought of emigrating to North Carolina, where he would be outside of "the more perfect Union," inasmuch as that State, sharing in his fears, and, as some charged, following his lead, had at first rejected the Constitution. At a later date, when North Carolina had acceded to the Union, he joined with some land companies in the purchase of vast demesnes in the remote and unsettled parts of Georgia—the tract bought by all the companies comprised 15,000,000 acres—not only, as he confessed, from motives of speculation, but also from a wish to get on the "frontier" of our consolidated empire, where, far from the "tyranny" that was likely to be established in the metropolitan seat of Federal power, he might breathe the natal air of freedom.

Yet this Republican Cato, who, in his dread of "centralization," was moved in 1790 to seek "an asylum from tyranny" in the wilds of the South, was moved in 1799 to join the Federalist party at a moment when its centralizing tendencies had become so extreme that the party itself was on the point of sinking beneath them into the popular odium from which it was never afterwards resuscitated. For reasons which seemed to him imperative, and from motives which were undoubtedly in the highest degree patriotic, he broke with the "Jef-

fersonian Democracy" at the very moment when that Democracy was on the eve of the long ascendancy which was destined to give to our politics a new complexion and to our polity a new destiny. For this "defection" he was branded by Jefferson as an "apostate," and it was but natural that as the star of Jefferson rose higher and higher towards the zenith, the old-time fame of Henry should have passed, for a season, into the shadow of the decadent Federalism. When it was proposed at the session of the Virginia Legislature which first convened after Henry's death that a marble bust of the Revolutionary patriot should be placed in the hall of the House of Delegates, the resolution was laid on the table by Republican votes. And so it came to pass that Patrick Henry, who, during the Federalist domination, had never enjoyed the grace of Federalism because his Republicanism was so impracticable, fell from the grace of Republicanism at the moment of its advent to power, because he selected that critical moment for embracing the Federalism which had become impracticable in the eyes of the people. We intend no reflection on either the intelligence or patriotism of Patrick Henry in thus adverting to the game of political cross-purposes by which, during the last ten years of his life, he voluntarily and persistently put himself into stalemate on the chess-board of Federal politics, so far as Federal office-bearing was concerned. In the perplexities and obscurities of concrete politics, it may often be the highest duty of a patriot to fight a losing battle; but it is quite impossible to lead a forlorn hope on some stricken field and at the same time take at its flood the tide in human affairs which leads on to fortune.

It is easy enough to follow the logic of Henry's ideas as well in his sullen opposition to the Constitution as in the sudden *revirement* with which he turned from the Republicanism he had once loved to the Federalism he had once detested. In 1784 he was anxious to strengthen the Federal arm of the Government. Even under the Articles of Confederation, he was willing, if necessary, to enforce the requisitions of Congress "by such distress on the property of the defaulting States or of their citizens as the United States in Congress assembled might deem adequate and most eligible." From this attitude he was shaken by the proposed surrender of the Mississippi River to Spain (for a term of years), at the behest of the Northern and Eastern States. The rights and interests of the planting States were magnified in his eyes precisely in proportion as it was sought to disparage them by this untoward project, and at the close of the year 1786 his mind was so "exceedingly soured" (the phrase is Madison's) by what had already passed under this head that, from being "a champion of the Federal cause," he relapsed at first into a doubtful advocate of constitutional revision, and stepped forth at last as a bitter opponent of constitutional reform on the lines projected by the Federal Convention. What wonder, then, that when the Constitution came before him in this frame of mind, he should declare that he "could not see a single Federal feature in it"; that it was confessedly a "national" Government; that it had "an awful squinting towards monarchy"; that under it the rights of the States would be extinguished, the liberties of the people would be put in jeopardy, the interests of the Southern States would be placed at the mercy of a "Northern conclave," the proceedings of Congress would be "hidden from the yeomanry of this country," and the Northern States would never "assent to regulations promotive of Southern aggrandizement"?

He had hoped for a time to secure the States in their "sovereign rights" under the new Constitution by insisting on previous amendments to this effect as the condition precedent of Virginia's ratification of the instrument. After the Constitution had been adopted as it came from the Federal Convention, and after the amendments which were subsequently added to it had not essentially changed its nature in his eyes, it was but logical that Patrick Henry should hold with the Federalists that the instrument was designed to create a strong national Government, and it was natural, too, that, as an honest man, he should refuse to conspire with the Republican leaders of 1798 in what seemed to him an attempt on their part to read "State rights" between the lines of a constitutional text which was, to him, nothing if not "national." He had forewarned the people of Virginia that if they made their bed on the Constitution, they must expect to suffer much amputation of their personal and municipal liberties at the hands of the Federal Procrustes; and when the Alien and Sedition Laws came to point his moral, he felt that he could not say the laws were "unconstitutional," however impolitic he may have thought them or the Constitution which authorized them. And he could not honestly say that the Kentucky and Virginia "Resolutions of '98" expressed the true intendment of the Constitution when, if there was anything about which he had been emphatic at the epoch of the ratification of the Constitution, it was that by that "abominable" instrument the States which before had been "the characteristics and the soul of a confederation," were to be crushed beneath "one great consolidated national Government of the people of all the States." The very extravagance of his language as a "State-rights" opponent of the Constitution, before its adoption, returned to plague him after its adoption, and shut him up to the hard alternative of being either a political anchorite in his Virginia Thebaid, or of being a Federalist *malgré lui* in the forum of national politics.

In the change of his party affiliations in 1798 and 1799 he was doubtless helped by his horror of the "French infidelity" with which Jefferson was then supposed to sympathize, and by his settled aversion to Madison, whom he had a double reason for disliking when that statesman became, in 1798, the author of the famous Virginia "Resolutions" of that year, after having been the great defender of "Federal rights" in the Virginia Convention of 1788. Patrick Henry had defeated the election of Madison as Senator of the United States in the first choice of Senators made by the Virginia Legislature under the Constitution, and in doing so had pronounced a "philippic" on the political principles of which Madison was assumed to be the exponent in 1788. He disliked Madison only the more when, in 1798, the quondam apologist of the Constitution, with all its national features, came forth as the champion of a State-rights metaphysics which had to Henry, as he understood the Constitution, the air of a spurious constitutionalism.

THE GROWTH OF NAVIES.

The Development of Navies during the Last Half Century. By Capt. S. Eardley-Wilmot, R.N. Charles Scribner's Sons.

THIS book, which is finely illustrated, is one of the series entitled "Events of Our Own Time," which was so well begun by the story of the 'War in the Crimea,' by Sir Edward Hamley. The period covered by the past fifty years is coincident with the reign of Queen Victoria, to whom this book is dedicated; and the development and progress of the English navy—the greatest military marine of the world—during the Victorian era, not improperly engrosses the greater part of the text and illustrations. The changes in the matériel of navies have been so great and striking during the last fifty years that the author is also justified in devoting himself mainly to that branch of the subject, though it should never be forgotten that the value of the matériel depends upon the personnel by which it is actuated.

The first chapter enters into a review of the English navy as it existed in 1840, which year was shortly after the introduction of steam into that service, there being at that time but nineteen steamers upon the list, and these all fitted with paddle-wheels. The first vessel with screw propeller was the *Archimedes*, which began its career also in 1840. Reference is made in this part of the book to the two principal naval operations between 1840 and the beginning of our civil war. The first one was the successful attack upon Acre in 1840, and the second the attack by the allied naval forces upon the sea defences of Sebastopol in 1854. This attack was unsuccessful, and brought forcibly to the notice of the naval and military world the great effect of a plunging fire upon attacking vessels. The attack of the *Galena* and the *Monitor* upon Drury's bluff during our own war emphasized this fact anew. In further discussing the part the navy took in the Crimean war, Capt. Eardley-Wilmot takes issue with Gen. Hamley in regard to the conduct of Admiral Lyons, whom Sir Edward Hamley terms the evil genius of Lord Raglan. We are not disposed here to comment upon this discussion, any more than to quote in this connection the criticism made by Sir Stafford Northcote upon the Crimean war, that "our weakness was shown in the confusion of our arrangements and the absence of military skill." It is quite certain, however, that without the naval supremacy of the allies in the Mediterranean and Black Seas, they would not have been enabled to prosecute this distant war to a successful conclusion, and to repair the many blunders that marked the supply, transport, and hospital services of the English army.

The first appearance of iron-clad vessels took place during this war at the allied attack upon Kinburn, the vessels being little more than floating batteries. The author gives to Col. Paixhans of the French army the credit of originating, in 1825, the idea of iron-clad vessels. France was also the leader in the construction of the iron-clad batteries used at Kinburn, as well as in the creation of the first sea-going iron-clad. In 1859 the celebrated Dupuy de Lôme, chief constructor of the French navy, presented to the world the sea-going armored vessel *La Gloire*, built of wood and armored with five inches of iron. From this vessel and from the *Warrior*, the first English sea-going iron-clad, is traced in the book the development of the broadside armored vessel until the *Alexandra*, with her twelve inches of armor, is reached.

In passing from broadside armored vessels to the early turret ships, the author makes the statement that the idea of a revolving turret upon a low iron-plated vessel originated with Capt. Cowper Coles of the English navy. It seems to be a singularly difficult matter to eradicate this idea from certain English minds. As a proof of his statement, the author mentions the fact that in 1855 Capt. Coles, during the Crimean

war, mounted a thirty-two-pounder on a raft for service in the shallow waters of the Sea of Azov, and that from this the plan of a turret iron-clad seems to have originated. But as a matter of fact Ericsson had already, upon the 26th of September, 1854, submitted a drawing of an iron-clad steam battery with revolving cupola to the Emperor Napoleon III. at Paris. This drawing was accompanied with an elaborate description and a demonstration of the utility of the battery. The receipt of these papers was promptly acknowledged by the French Emperor, through Gen. Favé, in very flattering terms.

Another error upon the part of the author is to be found in his description of the action between the *Kearsarge* and the *Alabama*, in stating, as one of the principal reasons of the defeat of the *Alabama*, the protection afforded to the *Kearsarge* by the sheet chain secured up and down the side of the ship in the wake of the machinery. Considering the fact that out of 370 shot and shell fired by the *Alabama*, only fourteen struck the hull of the *Kearsarge*, and only one (a thirty-two-pounder) struck the chain protection, this cannot justly be said to have performed a very important part in deciding the action. Superior skill in gunnery and heavier guns decided it, the *Kearsarge* having fired but 173 projectiles when the sinking of her antagonist closed the affair.

The performance of the American monitors led England to build a turret vessel, the *Captain*, but upon the plans presented by Capt. Coles. This vessel, which was masted, capsized in 1870 with nearly all hands, while carrying sail in a squall of wind off Cape Finisterre. The loss of the *Captain*, with its designer, led to an abandonment of the use of sail power upon turret vessels. The turret ship that followed after a long interval, the *Devastation*, was given instead twin screws, increased coal supply, and additional displacement and freeboard. The success of the *Devastation* as a sea-going vessel led to a further development of the type in the construction of the *Dreadnought* and *Inflexible*, the latter having twenty-four inches of armor, a displacement of more than 11,000 tons, and, in a length of 320 feet, the remarkable breadth of beam of seventy-four feet. The barbette system of iron-clads was the next to come to the front, having originated with the French; the turret system was used by them only for coast-defence vessels. The barbette, in this system, consists of a thick inclined wall of armor, usually pear-shaped, built into the ship, and enclosing a turntable which carries a gun at a sufficient height to permit it to fire freely over the wall in any direction.

We have thus described for us, in sufficient detail, by the author, these three systems of armored battle-ships, the broadside, turret, and barbette. To these types have been added others which are combinations or modifications of the three principal systems. The latest type of the first-class battle-ship constructing for the English navy is represented by the *Empress of India*, which vessel is a combination of the barbette and broadside types, with a displacement of 14,000 tons, an armor of eighteen inches in thickness, an armament of four sixty-seven-ton guns in barbette, and ten six-inch guns in broadside, a maximum speed of seventeen and a half knots, and a coal endurance of 5,000 miles at the rate of ten knots an hour. It may be mentioned here that very considerable discrepancy has been found in practice between the estimated and actual coal endurance of most modern men-of-war. Due allowance is not generally given to the drain upon the coal supply caused by running of the dynamos for electric lighting, the distillation of drinking-water, the amounts needed for cooking, heating, ventilation, pumping, and for hoisting purposes.

The English Admiralty, in their system of naval defence, have done little to establish or develop a type of vessels for purely coast defence, wisely using their sea-going armored vessels for that purpose. Upon this subject the author says that "the principle of building special ships for operations confined to the coast found no favor with our ancestors, taught by the experience of long wars that a sea-going fleet is the best defence against any attempt on the part of an enemy to approach our shores." It is a serious question with naval authorities whether a special type of coast-defence vessels is ever desirable; England no longer favors them, the best French writers are opposing further construction in that direction, while Italy does not provide for them in her naval programme. Our conditions are somewhat different, with our more numerous bays and harbors of moderate depth; but even with these conditions there should be very few of this type constructed, and they should be the last to be built. It is not probable that our navy will consist of many armored vessels, and hence the types adopted should be thoroughly sea-going, capable of using their battery in rough weather, and with sufficient speed and coal endurance to enable them to care for the interests of the United States abroad as well as at home. It is a singular state of affairs that the only armored vessels available or nearly ready at the present time for service are vessels designed and built for restricted coast-defensive purposes.

A chapter of the book is devoted to unarmored cruisers, these vessels being rightly considered as the successors of the old-time sailing frigates—the eyes of the fleet, as they were called. Speed was the first essential of the frigate, and should be also of the cruiser, and the old relation between the ship of the line and the frigate should exist between the armored battle-ship and the fast cruiser. The fight between the unarmored English cruisers *Shah* and *Amethyst*, and the small and badly manned Peruvian (now Chilian) iron-clad *Huascar*, dispelled the idea that a modern unarmored vessel of large displacement, even when aided by a second vessel, could cope with a small iron-clad.

After dealing with ships and their various types, the author proceeds to review the progress and development of ordnance, treating of the introduction of rifled guns, their growth in size, the adoption of the breech-loading system, and finally the advent of machine and rapid-firing guns. In the same way torpedoes and torpedo warfare and the advance in propulsion by steam are laid before the reader in a concise but intelligible and interesting manner. The final chapters are devoted to a short review of foreign navies, first European, then those of the United States and the South American countries. The great progress in European navies dates from the close of the Franco-German war. Previous to that time, France and England were the only nations that paid much attention to the development of their naval force, but since then Germany and Austria have each made and continue to make decided progress as naval Powers; Italy has created a strong navy, and ranks high as a Mediterranean naval Power, while Russia, handicapped as she is both by climate and by limited and badly placed coast line, is making rapid and well-planned advance. England has a definite aim in her naval policy, and that is to possess a navy sufficiently large to cope with the combined navies of any two European Powers—France and Russia, for example. France, without proposing to equal England in naval force, aims to have a navy equal in strength to the combined navies of Austria, Italy, and Germany.

In the United States we seem to have neither a definite nor a continuous naval policy. After many years, during which our navy was in a most humiliating condition and our coast line exposed to attack from any insignificant State possessing modern iron-clads and fast cruisers, we have begun to build a modern navy. This we have done in reverse order—fast cruisers, coast-defence vessels, and then battle-ships. But, unfortunately, from our historical experience we have no great reason to believe that this reconstruction, or rather replacement, will be sure to continue until a navy of sufficient strength has been built to protect our extensive maritime frontiers upon the Atlantic and Pacific, as well as our many and growing interests abroad. It must be remembered that the sea to us is no longer a security against attack; in these times of swift vessels with large coal endurance there is no frontier so weak as that along the sea—certainly none is more accessible, for the ocean is full of invisible roads leading from all directions. The construction of a ship canal across the Central American isthmus, whether under private or Government auspices, is only a question of time. This water link between our eastern and western coasts will put upon this country naval burdens and duties, and will demand from us a navy of sufficient strength to control the waters adjacent to the entrances of the canal so that we can assure to the world the neutralization and free use of the canal under all circumstances and against any Power. With these possibilities dawning, we should be impelled, as the French republic has been impelled, to consider the future needs of the republic, and, by legislative commission or otherwise, officially present to the people a naval policy both definite and lasting.

The Chinese, their Present and Future: Medical, Political, and Social. By Robert Coltman, jr., M.D. Philadelphia: F. A. Davis.

In this unpretentious volume of about two hundred pages we have the valuable impressions of a medical missionary in China honestly stated. Dr. Coltman became interested in the Chinese people while studying specimens of the race in Philadelphia. Their amazing skill in the use of the mouth as an atomizer for spraying shirt fronts in the laundry fascinated him. Thence he progressed to the perusal of books on China, only to find in them a lack of detail and meagreness of description in regard to the social state of the people and country at present. Thereupon he determined to go to China to study Chinese humanity at home. Receiving appointment as a medical missionary under the Presbyterian Board to Chinan-fu, the capital of Shang-tung, he reached his post in the autumn of 1885. He at once began the study of the language, and was soon at work among the people.

In plain, straightforward style, and in briefest phrase, Dr. Coltman tells so interesting a story that it is hard to leave the book until one has finished it. He does not describe all China, but he gives us a wonderfully vivid account of what he saw in Northern China. He describes the home life of the well-to-do and the average people, and sketches the routine of the laborers,

who scarcely keep body and soul together. It is refreshing to find a missionary telling the truth as he saw it, without feeling it necessary to blacken the character of the heathen. Evidently the author is somewhat like the famous translator of Confucius, the Rev. James Legge, who refused to attend meetings in Exeter Hall where the Chinese would be misrepresented. The facts are stated without reserve. Infanticide in the case of female children is rare in North China, for Dr. Coltman—like scores of inquirers in the same region—never heard of a single case. Nevertheless, the girls are often neglected, ill-fed, and poorly clothed, while their brothers receive every gift the fond fathers can lavish upon them. Even the mothers often despise their female offspring and abuse them beyond belief. Fighting among men is rare, except when a creditor tries to collect a debt. It is not often that injury is done; nor is swearing or blasphemy indulged in, the foulest of obscene language taking the place of oaths. Suicides and adultery (in spite of the seclusion of women) are common. The Chinaman is a born gambler. The deaths by starvation are numerous, and the picture of the laborer's struggle for life is pathetic. Yet, as Dr. Coltman points out, the Chinese need not emigrate across the ocean, so long as fertile land is so cheap in Manchuria. Naturally, the longest chapter is upon the diseases prevalent in China. Badly cooked food, vitiated water supply, and malarial climate combine to produce the almost universal stomach troubles. Practising no hygiene, ignorant of the germ theory of disease, yet knowing that no unboiled water is safe to use, they drink only hot water, and look with horror upon foreigners who like cold water. Eye-troubles come next to those of the alimentry canal. Nervous diseases are rare, and the people bear surgical operations well. In discussing syphilis, which is so prevalent, the author shows that this disease is usually the precursor of leprosy. This latter disease the author pronounces only moderately contagious or infectious, and to it he devotes a whole chapter.

On the whole, Dr. Coltman considers that morality in China is not far below the standard of America and England. A refreshingly unconventional chapter treats of missionaries and their work, and one which should be valuable to the merchant and intending fortune-seeker sets forth "business opportunities" in the Chinese cities. Most suggestive are the author's discussions of the present political situation and the future of China. He proves beyond a doubt that foreign intercourse has opened the eyes of a good many millions to the wretchedness of the Government and the unnecessarily hard social conditions under which they live. The causes of discontent are often those which arise from an intelligent perception that is creditable to those who complain. How to remedy the present evil and reform the abuses of ages is the question. Many of the Chinese hope for a change of dynasty, and, through revolution, improvement. Dr. Coltman believes it is not a change of dynasty, but a change of policy, that is needed. Hitherto, China's political safety has lain in the fact that European Governments have been too much occupied elsewhere to give China the attention which her turbulent people have deserved. After the riots and murders, indemnities have been paid, but the ringleaders have not been delivered up. By accepting satisfaction money, Europeans have made the Chinese think that they fear China. The time will come when the Treaty Powers will demand that China be interested in civilization. Unless this great mass of humanity awake from the fumes of the poppy, reform government, and develop resources, it must become the prey of more vigorous nations. There is less danger and menace to Christendom through a "Mongolian invasion" than conquest of China by the energetic men of the West, who want her iron and coal, her land for railways, and new customers for their own manufactures. Unless China awake, the alien will rule.

Except for its terseness and manly directness, Dr. Coltman's literary style is hardly to be commended. His English is of the local American sort, which makes one turn gladly to enjoy a classic author all the more by contrast. A number of well-executed photo-engravings enliven his pages, but there is no index. The neat cover bears in calligraphic Chinese the title and date of a book especially interesting because of its close touch with questions that are of vital interest to Americans.

The Living World: Whence it came and whither it is drifting. By H. W. Conn. G. P. Putnam's Sons. 1891. 8vo, pp. vii, 195, illustrated.

A CONCISE and forcible presentation of a widely accepted view of life and its evolution is given in this book. In the really scientific portions, those based on direct study of the recent or the fossil, it shows a discriminating familiarity on the part of the author with his subject that must be founded now on personal observation, and again on acquaintance with good authorities. It is a scientific review more or less affected by speculation and sentiment. There is some weakness in its orthography, as in "phylocarida," "stegecephala," "odontholcae," "numulitic," "eozoan," "cirrepedia," "belemites," "bracyura," and "globergerina," among other misspellings that might have been cured by a competent proofreader.

In the conjectural or speculative portions the work is open to more criticism. Numerous references make it evident that the author is thoroughly permeated by the gastræa myth. He says all biological studies point strongly to the conclusion that the sub-kingdoms of animals did not originate independently from the protozoa, but "all had a common ancestor, the gastræa, and this means that only once has the unicellular form given rise to an important line of multicellular descendants which perpetuated itself." There may be nothing impossible in this, but it is hardly probable, and it certainly has not been established. Persistent assertion, extensive advertising, and anxiety to find a common trunk for a genealogical tree have led many to accept the gastræa theory. But when the student, beginning with the single cell, considers the possible aggregations of cells in the evolution of the earlier multicellular types, scepticism at once asserts itself. The forms were limited to lines and planes and their combinations, and to solids. In shapes the protoplasmic solids naturally tended to those of drops of water; they were sub-globular, flattened on the lower side, and, as further enlarged, became depressed on the upper side, the two walls coming closer together, thus approaching the shape assigned the imaginary ancestral gastræa. Without reason that they should not, and without proof that they did not, the assumption that a number of lines, each passing through a stage somewhat resembling the mythical gastræa, were independently originated from the protozoa, is the more reasonable and evidently requires less proof. Seen from this point of view, the gastræal affinities between the sub-kingdoms become mere resemblances, due to physical causes. The plants furnish nothing to take the place of a gastræa, and it is asserted that new types were constantly arising till the cretaceous, and that there is every reason for believing they arose from the earliest existing plants in all cases.

In the sentimental portions of the work the conclusions are quite as positive as in the scientific. An orthodox believer seeking to harmonize science with his belief will regard the book with greater favor on that account. Science is usually distorted in attempts to make it accord with religion. Whether this author has avoided distortion, and whether his conclusions accord perfectly with scientific evolution, we leave his readers to judge. He has decided that the lower types have practically ended their evolution in the distant past; that man alone has possibilities of higher development, which in his case must be wholly mental; that "the new law of love" binds mankind into unity which checks the formation of castes, forcing man to advance as a whole; and that "the law of love is the only law which could produce the highest mental and moral development."

American Architecture. Studies by Montgomery Schuyler. With Illustrations. Harper & Bros.

MR. SCHUYLER is one of the few persons not architects who have something to say about architecture that is worth listening to. His book is a series of articles already published in periodicals, and mainly critical, on the architecture of New York and two or three Western cities. The criticism is very intelligent, usually just, though perhaps more magisterial than will quite please those whom it touches, and with much of the incisiveness of professional criticism, set forth with great cleverness and animation of style, and enforced by illustrations of more than common excellence. The only thing that need put the reader on his guard is a disposition to what the Germans call *Tendenz*, due to a certain partiality in the point of view which Mr. Schuyler establishes in his introductory note. This standpoint is that of sincerity, the straightforward expression of use and construction—a favorite point of view, and admirable for criticism in one degree, but too one-sided for complete judgment. Mr. Schuyler has too much sense for the art of architecture to confine himself to this standpoint, but at times he keeps close enough to it to narrow his appreciation. His discussion of the Brooklyn bridge is an example: his account of its ugliness is just, but his analysis, it seems to us, is at fault, and involves a popular fallacy. It is ugly, he says, because the anatomy of the towers and the anchorages is not brought out in the modelling. This is assertion without any foundation. It may be met by the other assertion that the piers of the bridge are ugly because Roebling lacked the sense of beauty, or else the power to express it, and that the anatomy of the towers and anchorages might have been modelled as emphatically as that of the Farnese Hercules, or of one of Michael Angelo's risen saints, and the piers have still been as ugly as now.

The truth is, that while sincerity and the expression of purpose are as admirable in architecture as in life and conduct, and while the defiance or even neglect of them produces a discord that mars or destroys the effect of beauty, they are independent of it, and no more pro-

duce beautiful architecture than good sentiment and good grammar produce beautiful poetry. He who fancies himself able to make things beautiful by simply making them sincere or useful, or by elucidating in them the laws of construction, is but laying up disappointment for himself and for those who trust in him.

Horace and the Elegiac Poets. By W. Y. Sellar, LL.D., late Professor of Humanity in the University of Edinburgh. Oxford: Clarendon Press; New York: Macmillan. 1892.

THIRTY years ago was published Mr. Sellar's first book on the Roman Poets of the Republic; after three lustres followed the first volumes of his Poets of the Augustan Age; and now, after nearly the like interval, comes its companion. It is the work of one in whom were united qualities which nowadays too rarely meet in a single man, for together with sound scholarship he had the gift of literary appreciation and the power of making others share his own enjoyment of literary art. As one lays down the book and reflects that nothing more is to follow from the same hand, strong indeed is the sense of the loss which the lovers of true classical learning have sustained. Not that Mr. Sellar stood in the front rank as scholars are often reckoned now: he invented no modification of the triple-root theory, nor troubled himself with the question whether *-dus* is from *dha-* or from *da-*. Possibly there is not a word about the subjunctive or the locative in all his writings. But he was no "play" scholar either, for a man must have a head as well as a heart to write such a book as this. He would have been the last to belittle the achievements of scholars working in the fields of pure philology, grammar, or criticism; for he knew that these are the men who make possible all intelligent literary study, which else were a vain and unsubstantial thing. But, for himself, he was content to build on the foundations which they laid.

The present book contains a portrait of Mr. Sellar, and a short memoir by his nephew, Mr. Andrew Lang. The first half of the work, some two hundred pages, is devoted to Horace, the second, of the same extent, to Roman elegy and the principal elegiac poets, concluding with a brief sketch of Ovid, left unfinished at the writer's death. The second half contains much that is good, and not the least so is the strong plea for Propertius, whose poems, indeed, in the last few years are getting to be better known and appreciated than they were formerly. But it is the part about Horace that will prove of the greatest value and most general interest. The first chapter treats of the life and personal characteristics of Horace himself. In him Mr. Sellar found "the most complete exponent of the actual life and movement of his time," and yet one who "among all the ancient poets suits the greatest variety of modern tastes." The explanation of this apparent paradox is that "to each successive age and century he seems to express its own familiar wisdom and experience"; that he never talks as from a pulpit, and that he addresses us as his intimate friends, and with the most charming frankness. His own characterization of Lucilius, "comis atque urbanus," better fits himself. He was distinctly a man of the world, knowing his own value, requiring to receive it from all, no matter what the inequality in rank, yet so capable of inspiring deep affection that the dying commendation of the favorite minister of Augustus was "Horati Flacci ut mei esto memor." But "his most marked characteristic was his self-dependence. To live for himself—that is, not to live in selfish isolation, but to be true to his own nature, to be what he was meant to be, and not to try to be or to seem to be anything else—and to be independent of fortune, is the sum of his philosophy."

These broad outlines are of course filled in with more particular treatment of the life and surroundings of the poet, of his relations to society, and of the development of his genius through the three periods into which his literary life is divided. Then follows a chapter on the Satires, their contents and quality. The two great distinctions of Horace as a satirist—his moderation and his truth to nature—are excellently brought out, as well as one of the great charms of these writings, that the satire never hurts. Even when he is laughing at you, you cannot help laughing with him, and nobody ever better hit off this characteristic than the much-abused Persius—

> "vitium ridenti Flaccus amico
> Tangit, et admissus circum praecordia ludit."

Mr. Sellar was of course alive to the excellence of the metrical form of these "Talks," for such the Satires really are. He well says: "It was as great a triumph of art to bend the stately Latin hexameter into a flexible instrument for the use of his *Musa pedestris* as to have been the inventor of a prose style equal to that of Addison or Montaigne. . . . No later writers found the secret of it any more than of his lyrical metres"—and so on into more special considerations of the niceties of the form.

Of the Odes, to which without any doubt Horace owed his immortality, Mr. Sellar points out that they have been, ever since the revival of letters, one of the chief instruments by which literary taste and a delicate sense of language have been educated. This is due perhaps most of all to the fact that a wealth of meaning was conveyed by the use of the simplest and commonest words. We cannot dwell on the chapter devoted to the Odes, though it is the best in the book. The beauty of the rhythm—and Mr. Sellar recognized the fact that Horace rather neglected the Alexandrines and went back to the "integri fontes"—as well as the beauty of the language and the thought, all find fully appreciative treatment; yet it is not concealed from the reader that Horace never reached those heights of creative imagination to which Catullus soared, "nor was he capable of the sustained union of vivid feeling with vivid imagery which we find in the Epithalamium."

Space will not allow us to touch upon the many other topics of interest in the volume, but we are glad to note that the author was not one of those who see in Horace only the Anacreontic singer of the pleasures of love and wine. He appreciated to the full the ethical and patriotic strains in Horace's poetry, and did not hesitate to place him with Virgil, side by side, as the national and religious poets of Rome. Looking at him as a man, he saw no Epicurean idler, but a true lover of books, a lover of art, a lover of the independent life of the country—in a word, a type of the finest culture of his day. The picture suggests the name of another great poet, unhappily now gone from the world—one near whose heart were such studies as these which we have been considering. For Lowell, also, "the dew still glistened on the Sabine farm," and not the least of the regrets for his loss is the knowledge that he had thought of writing something on the Roman poet. They had much in common; as we read them we come to realize the truth that the function of the poet is in the main an ethical one, and that he should be of use in his generation. No idle singers of an empty day were they, in whose poems the first rank is held by the duties of patriotism and of friendship; each was one

> "Qui didicit patriae quid debeat et quid amicis."

Economic History since 1763. Compiled by Benjamin Rand, Ph.D., Assistant in Philosophy, Harvard University. Second edition, revised and enlarged. 8vo, pp. 567. Cambridge, Mass. 1892.

THE first edition of this book was noticed favorably in our columns soon after its publication in 1888. Prepared as a text-book for collegiate students in advanced courses, this work has proved so well adapted to their wants and also so useful to general readers, that continued demand for it has led to the preparation of the present revised and enlarged edition. This consists of selections from the writings of economists, statisticians, and historians illustrative of economic history since the Seven Years' War. The design of the compiler has been to exhibit, in a series of articles of permanent value, different phases of economic thought, and to present in chronological order a narrative of some of the more important events and influences of modern economic history. This design, which was embodied in no small degree in the first edition, is realized more fully in the second edition. The selections published in the former edition were: The Colonial Policy of Europe, from Adam Smith's 'Wealth of Nations'; The Great Inventions, from Walpole's 'History of England'; Economic Causes of the French Revolution, from Von Sybel's 'French Revolution'; The Emancipating Edict of Stein, from Seeley's 'Life and Times of Stein'; The Orders in Council and the Corn Laws, from Levi's 'History of British Commerce'; The Finances of England, 1793-1815, from Porter's 'Progress of the Nation'; The Zollverein, from Bowring's Report (Parl. Doc., 1840) and from Legoyt's 'La France et l'Étranger'; The New Gold, from Cairnes's 'Essays in Political Economy'; 'France under the Second Empire,' from Levasseur's 'Histoire des Classes Ouvrières'; The French Indemnity, from *Blackwood's Magazine* and from Kolb's 'The Condition of Nations'; The Recent Progress of Italy, from Wilson's 'The Resources of Modern Countries'; Public Debts, from Neymarck's 'Les Dettes Publiques Européennes'; and The United States in 1880, which included reports from the Tenth Census on Increase of Population, 1790-1880, by F. A. Walker and Henry Gannett; on The Factory System, by C. D. Wright; on The Cotton Manufactures, by Edward Atkinson; and on The Iron and Steel Industries, by J. M. Swank.

Comparison shows that in the second edition one of these selections, that on the Recent Progress of Italy, has been omitted, and that five new selections have been introduced. These changes have enriched the volume, especially for American readers, and given opportunity for fuller treatment by experts of some of the world-wide economic disturbances since 1873. This will appear upon citation of the titles and sources of the new chapters, which are as follows: The Agrarian Legislation of Hardenberg, from Morier's 'The Agrarian Legislation of Prussia in the Present Century'; The Commercial Policy of the Restoration, from Levasseur's 'Histoire des Classes Ouvrières en France depuis 1789'; Recent Changes in Transportation and Production, from Wells's 'Re-

cent Economic Changes'; The Liquidations of 1873-'76, from Giffen's 'Essays in Finance'; and The World's Progress in Trade and Industry, translated from Neumann-Spallart's 'Uebersichten der Weltwirthschaft.' Valuable appendices have been added to this edition, containing (besides leading sections from the English Navigation Acts which appeared in the original edition) important sections of American Navigation Acts and valuable statistics relating to the cost of the American Civil War, the payment of the war debt, the growth of Canada, and the United States in 1890—its population, iron-ore mining industry, production of pig-iron and steel, municipal receipts and expenditures, and national, State, and county indebtedness.

The mere enumeration of the contents of the present edition is a sufficient description of it for persons familiar with economic literature. The superior quality and authoritative origin of its different articles may be affirmed for the guidance of others. In bringing together and making available to many readers such valuable material, the compiler has rendered a substantial service to the cause of economic education in the United States. This book especially merits the attention of bankers, lawyers, legislators, and clergymen who desire to understand the causes of present financial, industrial, and social organizations, and to give effective aid in their improvement. It would not be difficult to name some important economic events since 1763 not specifically treated in this volume. Such, for example, are the abolition of slavery in English and French colonies, in the United States, and in Brazil (1833-'71), the opening of certain ports in China and Japan to Occidental trade and emigration since 1815. Discussion of these subjects might properly have been included, but it is doubtful whether the limits of a single volume would have allowed special consideration of them together with adequate treatment of the subjects selected. Further, the avowed design of this work is limited, and the events and influences selected for discussion may fairly be deemed the more important in modern history.

The difficulties of the compiler of such a volume are apt to be underestimated. He must not only find articles of intrinsic and permanent worth, but also of suitable length and acceptable literary form. One or other of these requirements forbids his use of large masses of material, and especially of many Government reports. Despite these difficulties, Dr. Rand has been successful in his undertaking. The educational service he has thus rendered will be best appreciated by persons who know how difficult it often is to persuade college students to avail themselves of their privileges for consulting the authorities on economic history, and how many general readers interested in this subject—especially country residents—do not have access to libraries containing the works of such authorities. No other single period of equal duration has witnessed so many and such far-reaching industrial and commercial revolutions as that from 1763 to 1890. No other single volume known to us seems likely to give the college student or the general reader so instructive, so interesting, and so trustworthy an account of these events as this 'Economic History.'

This edition contains what was wanting in the first, a bibliography and an index. The typographical execution is excellent.

Across Thibet. By Gabriel Bonvalot. Translated by C. B. Pitman. Cassell Publishing Co.

THIS portly and handsomely illustrated work is not from the hands of a tyro. Gabriel Bonvalot, though, as the frontispiece shows, not an old man or even of middle age, is a seasoned traveller. He has won laurels in the exploration of Central Asia, and within three years has issued his book 'Aux Indes par Terre.' Translated into English under the title of 'Through the Heart of Asia,' it has been the talk of all in England who watch with jealousy the movements of Russia. The book told of Bonvalot's journey through and over the table lands of the Pamir. In other words, this Frenchman found a new and dangerous path overland to India, which might be possible to a Russian invading army.

Scarcely rested from his daring journey, this intrepid scrambler over "the roof of the world" prepared to find a fresh path from civilization, across the Central Asian plateau into Tonquin. The Duc de Chartres, who wished his son, Prince Henry of Orleans, to see the world, furnished the means, and forthwith Bonvalot guaranteed to supply the courage, self-command, tenacity, and knowledge of human nature so necessary in the explorer. Huc and Przhvalsky were his literary mentors, but Rockhill, the American, who has gone back to Asia to beat the Frenchman's record if possible, had not yet written. It was but a pleasure journey to leave Paris July 6 and to get to the Siberian frontier. At Jarkent (of the map, Djarkent of the text) began on the 6th of September, 1889, his true journey. Organizing his caravan and proceeding to Kuldja, which only a few years ago was wrested by the Chinese from the Russians, the two Frenchmen were so fortunate as to find a willing companion in Father Dedeken, a Belgian missionary, of splendid physique, who would return home by way of the China Sea. Their plan was now to cross over the Tian Shan Mountains, and strike southward to Lhassa, the sacred city of the Lamas. Over this plateau the travellers moved in the increasing cold, giving names to the mountains after famous geographers and explorers. The plateau is from 13,000 to 20,000 feet in height, and many of the peaks are extinct volcanoes. Between the water in the lakes and the snow, there was only an occasional lack of the means of quenching thirst in this land of stones and sand. Although they met caravans and passed through villages, yet no hostilities were encountered along the route, and no startling adventures were experienced during the entire journey. Crossing the ice of a frozen lake which lay in an old crater, passing through a valley of dry bones, straddling the few inches' width of the possible source of the Yang-tse Kiang, celebrating the Chinese New Year's with the thermometer at 48 degrees below zero, and the death and burial of one of the caravan, were the chief excitements until the region near Lhassa was reached. Here they waited, hoping that orders granting permission to visit the sacred city would be received. Disappointed in their hopes, and with possibly sad loss to the theosophists, the Frenchmen had to content themselves with studying lamaism at the great Monastery of So, and Thibetan humanity on the roads and in the villages. Taking the eastern route at Ta-chien-la, situated at the intersection of the 30th parallel with the 100th meridian east of Paris, they again struck southward, reaching the Valley of the Red River, September 22, having finished 3,750 miles on foot or horseback.

The absence of tables of altitudes and distances, as well as the omission of the original chapter treating of the collections made by the travellers, makes it difficult to form an opinion as to the actual or probable value of Bonvalot's journey to science. Nor are there any indexes to the work, or maps, except a very fair general map of Central and Eastern Asia, with the route marked in red, and the names freshly added to the Thibetan Plateau. The temperatures have been expressed in Fahrenheit, and one cannot but note with admiration the courage, endurance, and good nature continually displayed by these Frenchmen, as well as remark the matter-of-fact tone in which the degradation of the mercury column is noted.

As a work for popular reading the book is well written and furnished. The story is lively, well garnished with wit and incident. The scores of illustrations are mostly from photographs by Prince Henry, who as skilfully as industriously worked the camera. The greasy and long-haired Thibetans are not attractive specimens of humanity, but the author seems to regard them more highly than Chinese, whom he heartily despises. In one instance, he outwitted a petty Mandarin who had kept his papers. Confiscating the official order, a warrant written by the Prefect of the district of Karachar, he gave it up only after his own were restored. Though already invited to visit and take tea with this same Prefect, he found the warrant (when photographed and translated later in Paris) to be a command to all Chinese officers to hinder and turn back the French party. This perfidy seems to be considered necessary by the Mandarins of the frontier and outlying districts of the Chinese Empire in order to prove to foreigners that administration is kept up. Practical diplomacy was usually successful, and out of numerous difficulties the patience, shrewdness, and good nature of the leader always extricated the party. Often in straits for food or water, they reached safely the fat valleys of Annam.

The question, "Is man too prolific?" receives a stereotyped affirmative answer from the Thibetans, whose Malthusianism is secured by a religious system. "Most of the males are now consecrated to Buddha, and the youth thus set apart do not marry, while they do not allow their hair to grow any more, and wear a yellow garter on their leg." This religious Malthusianism is calculated to please the economists who think that the world is too small for mankind.

The author closes his final chapter with the hope that the critics will not be too hard upon him. Since the supreme merit of a traveller is to be honest, to tell the whole truth, and to refrain from the temptation to sensational exaggeration, the critic, while praising the adventurous author for giving us a pleasing story of travel, must also thank him for the unvarnished tale. Nevertheless, Lhassa remains unvisited, and the forbidden city still lures. Unscientific as he was, Huc still remains about our only non-Asiatic authority concerning the metropolis of the Buddhist world.

BOOKS OF THE WEEK.

Abbott, Evelyn. A History of Greece. Part II. Putnams. $2.25.
About, Edmond. The Mother of a Marquise, and the Aunt's Stratagem. Cassell. 50 cents.

Government Baking Powder Tests.

UNITED STATES and Canadian Government food investigations show the Royal Baking Powder a cream of tartar powder superior to all others in leavening strength.

Statements by other manufacturers to the contrary have been declared by the official authorities falsifications of the official reports.

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

The Nation.

NEW YORK, THURSDAY, APRIL 28, 1892.

The Week.

WITHIN a week a fresh crop of rumors has sprung up in Washington touching a new international conference on the silver question. These rumors have been published in London, where they are received with much incredulity. The *Times* of that city considers Mr. Harrison's rumored negotiations on this subject "an obviously evasive and illusory attempt to temporize with the soft-money partisans." It sees no prospect of any international agreement or any improvement of the silver market, and it looks upon Mr. Goschen's expression of a desire for an enlarged use of silver as productive of more harm than good. Other English journals have expressed doubt whether there is any real ground for supposing that a new conference will be held. Until some official statement is made, no credence can be given to these reports. Yet there are obvious reasons why the Administration should desire to have a conference this year, or at all events have a hopeful negotiation on foot looking towards one. This would be a political advantage because it would put an end, for the time, to all intestine party disagreements such as those broached by Senator Teller last week. Everybody would be constrained to wait till the conference was ended before taking any step to form new alliances. In fact, Mr. Teller himself has moved for such a conference in the Senate and Mr. Lodge has moved for it in the House—these two representing the opposite extremes in the party. There is also a certain amount of international-conference feeling among the Democrats, but it is not among the free-coinage men. The Bland faction have always regarded international action as a subterfuge and a makeshift to gain time. They would not reject a conference—indeed, the Bland Bill has a clause in it looking to an agreement *after* we adopt free coinage. But they insist that our action shall not be contingent on that of any other country. Nevertheless, the actual pendency of an international conference would give them pause. It would enforce silence upon them during the interval. So the movement for a conference, if there is really one on foot, may be regarded as a temporary relief to the politicians on both sides.

When we look at practical results, we can discern nothing hopeful. Two facts militate always against a bimetallic agreement. One is, that all the governments on earth cannot prevent gold and silver from selling according to their respective costs of production. The other is, that the governments can never trust each other to the extent of believing that they will live up to the agreement. The agreement requires a mutual sacrifice of pecuniary interests to the common good. It is not an agreement which can be carried out by powder and ball or by chains and dungeons. It requires for its efficient execution the assent of all private individuals within the territorial scope of the treaty. It requires that the preference of people for gold over silver shall cease. But everybody knows that it will not cease at the bidding of a law passed by any number of governments. No government could enforce bimetallism on its own subjects beyond the settlement of contracts already in existence. As to all future bargains, the people's preference for gold over silver would find its way as easily and surely as their preference for potatoes over turnips. Knowledge of this elementary fact will always prevent the governments from trusting each other to enforce bimetallism.

The silverites contribute to the gayety of nations from time to time, and nobody is more diligent in this way than Senator Teller. In his speech on Wednesday week (the speech in which he warned the Republican party to beware of Colorado, Nevada, Idaho, and Montana), he gave a piece of his mind about Great Britain. The subject to which he was particularly directing his thought was the advantage that India gains as an exporter of wheat by having a depreciated currency. Senator Higgins of Delaware asked whether the construction of railways in India might not also have had considerable influence in promoting the export of wheat. Then the following colloquy took place:

> Mr. Teller—A Senator asks me where they got the money with which to build the railroads. Great Britain built the railroads for them.
>
> Mr. Stewart—And charged it to them.
>
> Mr. Teller—Of course India is paying for them. The financial policy of Great Britain has been to *never pay anything out to anybody where she does not get a full equivalent back.*

This financial policy is in marked contrast to that of the universal Yankee nation, otherwise Mr. Teller would not have referred to it in such severe terms. *Our* policy is to pay our money without getting anything like a full equivalent back. Yet when Mr. Blaine pointed out that we were losing $45,000,000 per annum in trading with Brazil, he did not speak of it in terms of admiration at all. On the contrary, he contended that we ought to do just as Great Britain does, namely, "get a full equivalent back"; and to this end he negotiated a treaty of reciprocity with Brazil, which has not had much effect except to show his earnest desire to recover some part of the $45,000,000.

The *modus vivendi* respecting Bering Sea provides that both Governments shall prohibit seal-killing by their subjects during the pendency of the arbitration. Article 7 provides that the agreement shall be ratified by the President, "by and with the advice and consent of the Senate," a formality which was dispensed with last year. This is a tacit acknowledgment of the illegality of last year's arrangement on our part. There was no law last year prohibiting American citizens from taking seals in Bering Sea beyond the three-mile limit. But a treaty duly ratified is a part of the supreme law of the land, and is binding on all the States and the citizens thereof. We congratulate President Harrison on his improved *modus vivendi.*

The rejection of the barbarous Anti-Chinese Bill in the Senate by the large majority of 43 to 14 is a pleasing omen, and we cannot allow it to pass without a word of thanks to Senator Sherman for his strong speech in condemnation of the measure, and especially for the high grounds on which his opposition to it was based. He said that this bill exceeded, in severity and in denial of the ordinary rights of humanity, any bill that was probably ever introduced into the Congress of the United States. With the exception of the old Fugitive Slave Law, this was undoubtedly a correct description. Before examining the "worse than Draconian code" sent over by the House, Mr. Sherman showed from the census reports that the Chinese population in California had actually decreased 4½ per cent. in the past ten years, the number now being 3,451 less than it was in 1880, and hence that these severe measures were unnecessary for the purpose of checking Chinese immigration. This fact staggered the Pacific Coast Senators, particularly Mr. Mitchell of Oregon, who had discovered from his inner consciousness that the number of Chinese in the whole country had largely increased. Mr. Mitchell was quite sure that if the number of Chinese in California had decreased, it was because there had been an overflow from that State all the time. The peculiarity of this cup is that the less there is in it, the more it over flows. Mr. Sherman dissected the bill carefully and exposed its shocking provisions thoroughly. Such a service deserves public recognition.

The bill pending before the Senate which requires the accounting officers of the Treasury to reopen all claims settled under a construction of law subsequently declared by the Supreme Court of the United States to be erroneous, and to adjust them in accordance with the law as construed by the Court, not only involves an immense expenditure of money, but is wholly indefensible in principle. When the Court of Claims was established in 1863, all claims against the Government

which had then accrued, if they belonged to any of the classes over which that Court was given jurisdiction, could have been presented to it for adjudication. Those whose demands have originated since 1863 have been treated with the greatest liberality. Every avenue that could be devised has been open to them. A simple, inexpensive, and easy mode of redress exists in the Treasury. Failing to secure a favorable decision from the Comptrollers, claimants have been permitted to file their petitions in the Court of Claims at any time within six years from the accrual of their demands, notwithstanding their previous voluntary submission to the decision of the Treasury. If these demands have remained so long unadjudicated in the Treasury that the six-year statute of limitations blocks their way to the court, another remedy remains. The head of the Department may—notwithstanding the adverse decision of the accounting officers—refer the demands to the Court for decision, the statute of limitation not running in such cases for the period during which the demands may have been pending before the Department. To go further and reopen all claims, however old, just because it has been discovered in a suit brought many years afterwards by some person who did not sleep on his rights, that they were improperly settled by the accounting officers, is liberality run mad.

Such a bill as this would never have been dreamed of if we had, as many governments have, a class of eminent magistrates, holding office by a permanent tenure, charged with the duty of hearing and determining claims against the public. From the beginning the Federal Auditors and Comptrollers have occupied an anomalous position. Vested with judicial functions, and yet holding office during the pleasure of the President, they have exercised their brief authority without printed precedents or the arguments of counsel to guide them, and gone out of office upon every change of administration, followed by the curses of claimants and claim agents whose clamor they had withstood, to be succeeded by other temporary officers whose chief employment consists in overturning what they tried to establish. It would be more economical to the nation, more just to claimants, and more respectful to the Treasury officers themselves, to change the whole system.

There can be no question that the stealing of a seat in Congress on Friday for Mr. Rockwell, who comes from the home district of Senator Hill, was a Hill victory. All the Hill organs are justified, therefore, in claiming it as their triumph and in crowing over it lustily. We think they are quite right, also, in hailing it as a "Cleveland defeat." Every triumph of that kind in Democratic politics has come to be looked upon in all quarters as a rebuff to Mr. Cleveland, and it is one of the many tributes to his character that this is the case. He has never been an exponent of the kind of politics which finds its highest development in stealing seats in legislative bodies, or in extracting legal election returns from the public files in order that illegal ones may be used to put men in office who have failed of election by the people. The "Hill victory" in Congress was of precisely the same character as the series of Hill victories by which he and Tammany gained control of the State Senate. Mr. Rockwell had no legal right to the seat which has been awarded him by the narrow majority of 15 votes in a House which has a Democratic majority of 150. His claim to the seat was denied by the Democratic majority of the Elections Committee, on the ground that Noyes had a majority of the votes as returned under the laws of the State, whereas Rockwell's certificate was based upon a recount. The law of New York does not authorize a recount of votes, but expressly provides that after the count has been made the ballots shall be destroyed. He would have been rejected by the House had not the Hill-Tammany combine, which elected Mr. Crisp Speaker, made a determined fight for his retention. They are as jubilant over their victory as they were over the theft of the New York Senate and the success of the snap Convention, and it is likely to do them about as much good as those remarkable achievements did.

Senator Quay, following in the footsteps of the "Hon." Richard Croker, is permitted to set forth in the pages of the *North American Review* his views upon the subject: "The Man or the Platform; Personality or Principle—Which is More Potent in National Politics?" We have not read these "views," and we doubt very much if any intelligent person will care to peruse them, for the simple reason that every such person knows that Quay cares nothing for either Personality or Principle, Man or Platform, but believes in "boodle" as the only "potent" influence in national politics. If he were to write on that subject, were to tell what he knows from experience of the achievements of "boodle" in carrying elections, it would be worth while to pay him for the article and well worth everybody's while to read it when printed. If, for example, he were to write a truthful narrative, sustained by vouchers and other documents, of the uses to which he put the great corruption fund that Wanamaker raised for him in the closing days of the Harrison campaign of 1888, it would be a wise, economic, and public-spirited act for the *North American Review* to pay him for it the largest price ever given for a magazine article, for it would be an object-lesson in political morality the like of which this country had never beheld. On that phase of a national campaign he is an unquestioned authority, but on "Personality or Principle" he is as disgusting a spectacle as Satan in a pulpit.

The Massachusetts Republicans have adopted a resolution declaring "the right of every voter to cast his vote and have it honestly counted a fundamental principle of our Government"; and the Pennsylvania Republicans, after announcing their "belief in a free ballot and a fair count," affirmed that, "unless intelligent and patriotic sentiment accord these rights to the humblest citizen in every section of the country, it becomes the duty of the Federal Government to secure them by Congressional enactment under the authority conferred by the Constitution." This, of course, means endorsement of the Force Bill. But another announcement regarding that measure was made at the Capitol which is of much more importance. Senator Teller of Colorado, in his late speech on the silver question, said :

> "I have read that bill with care and attention more than twenty times. I have read it in the light of calm consideration. And I repeat now that if it were presented to me now, with the alternative of party support or party dismissal, I should not vote for the bill. A more infamous bill, in my judgment, never passed the threshold of the doors of the Senate. Avowedly in the interest of good government, it was instigated, in my judgment, by men whose interest it was to prevent a free expression of the will of the voters at the polls."

Mr. Teller's colleague, Mr. Wolcott, is equally outspoken against the Force Bill, and there are other Republican Senators whose votes can be counted upon against it. Whatever may be the result of the Presidential election, there is good reason to hope that the Force Bill can never get through Congress.

The action of the Indiana Democratic State Convention on Thursday shows how irresistible the Cleveland movement in the party has become. Indiana was supposed to have a "favorite son" in the person of ex-Gov. Gray, and the usual attempts were made to invoke in his behalf the spirit of "State pride," but it was all of no avail. The feeling among the people in favor of Cleveland was so overwhelming that the Convention adopted a resolution endorsing his Administration, insisting that the approaching campaign should be conducted on the issue of tariff reform as defined in his famous message, and declaring him upon this issue "the logical candidate of the Democratic party." The most that poor Gray's friends could extort from the Convention was an expression of "unalterable confidence in and attachment to" him, and an instruction to the delegation to use every honorable effort to secure his nomination in case the National Convention should deem the nomination of Cleveland inadvisable. As nobody longer expects the latter contingency, this is the same thing as bowing Gray one side; and the ex-Governor must be a man of very cheerful temperament to extract much satisfaction from his treatment at the hands of his fellow-citizens.

The ingratitude which Tom Platt is showing to President Harrison at the present time is the basest in the history of modern politics. He is openly jeering at him and is "fixing" a delegation from this State to the National Convention which will, if Platt so desires, throw its vote against Harrison. What his motive is, nobody knows, of course, but there are several plausible theories in explanation of his conduct floating about in political circles. One is, that Platt, like Quay, is "striking" Harrison for terms, serving notice on him that if he desires a renomination, he must pay the price which the party bosses demand for it. Another theory is, that while Harrison gave Platt all the patronage of New York State after his election, leaving poor Warner Miller prostrate and destitute "outside the breastworks," he refused Platt's chief demand, to wit, the Secretaryship of the Treasury, and that Platt has never forgiven him for this refusal, and is now "getting even." We give both theories for what they are worth, having no means of deciding between them. Both may be erroneous, but, whether this be so or not, there is no question as to the heartless ingratitude of Platt. It has no parallel save in Harrison's ingratitude towards Warner Miller.

Col. McClure of the Philadelphia *Times* made an interesting address at the annual meeting of the Civil-Service Reform Association of that city on Thursday evening. Among other things he referred to the extraordinary growth in the use of money in elections during the last thirty years. The report in the *Ledger* says:

> "He gave a history of the campaign of 1860, in which he was Chairman of the State Republican Executive Committee, when a great party had to be crystallized into being and the State carried in October in order to defeat the party in power and to insure the election of Abraham Lincoln in November. How much money, he asked, do you suppose was expended? The entire contribution for the campaign was $12,000, out of which $2,000 was paid for rent and $3,000 for printing, leaving but $7,000 with which to organize the victory that was won. No money was needed for other than honest purposes. Political debauchery was a thing unthought of. We were certainly a great party. To-day take any one of your political masters—he will require more money to elect a Councilman in a little ward. Men are invited to battle now solely for the spoils."

Discouraging as this contrast is, Col. McClure pointed out the hopeful aspect of the situation in the fact that civil-service reform has already passed the stage of ridicule, and that "any Administration, if it does not advance in this direction, dare take no step backward. We are very near to-day," he added, "to the point that no man can be dismissed from office for political reasons, and the time is coming when the leading candidates of both parties must declare in favor of civil-service reform."

The report as to the working of woman suffrage in the Kansas municipal elections this spring, just made by the President of the Equal Suffrage Association, indicates that there has been no falling off in interest on the part of the sex. This is the "off year" for such elections, as in many cities only a part of the officials are chosen, but in such cities the woman vote was as large as in the last corresponding year. In four places the woman vote exceeded the male, and in a number of the smaller towns—or "cities," as they call them out there—the women cast this year a larger vote than ever before. Women seem to be exerting more influence all the time in the matter of making nominations. It is more common for them to be invited to caucuses and primaries. In Newton they were the first to stir in regard to holding caucuses, and twice as many women were present as men. A number of women were elected to the school boards, and women are appointed very frequently as city clerks and city treasurers.

We have received a copy of the circular of H. R. De Milt & Co. of this city, for April, 1892, saying that they have in store and for sale the first American pig tin ever brought to this market. The first paragraph of the circular says that this pig tin "is now produced in this country in commercial quantity." A subsequent paragraph requests "that orders be limited to one or two pigs," on account of the smallness of the present supply. The rather superfluous remark is added that "the price is same as for the foreign." Of course people are not going to buy this tin in a commercial way at higher prices than the foreign. Probably many people who receive this circular will be led to believe that the Temescal tinmine in California has been brought to its present state of productiveness (whatever that may be) by a good stiff duty on pig tin. It should be remarked for the instruction of such that pig tin is now and has been for twenty years on the free list, and that there can be no duty on it before July 1, 1893. Whether there shall be any then will depend upon whether the present law remains in force until that time. If it does, there will be a duty of four cents per pound on pig tin for two years, which will inure to the benefit of the English company which owns the Temescal mine. At the end of the two years (*i. e.*, July 1, 1895), the President of the United States is to determine whether there has been produced within the United States more than "5,000 tons of cassiterite and bar, block, and pig tin" within a single year. If so, the duty is to remain in force. If not, the article goes back to the free list where it is now, and the English company ceases to get its bounty.

The financial situation of the Argentine Republic was the subject of a vigorous and able article in the first number of the *Investor's Review*, the new English quarterly under the editorship of Mr. A. J. Wilson. Written by him, the article in question maintained that the so-called "moratorium"—or suspension of interest for three years—was the worst possible way of dealing with the Argentine difficulty; it was a virtual admission on the part of the creditors, he argued, that Argentina was bankrupt, and could not even pay a reduced interest. Mr. Wilson thought that the Argentines would not need to be told twice that they were able to pay nothing, but would be found very ready in taking that view of the case at the end of their three years of grace. Moreover, he argued on the basis of the cold figures that the country would not be able to "fulfil its engagements under the *moratorio* compact and resume the complete service of the public debt in December, 1893." For the expression of this opinion Mr. Wilson is to be proceeded against legally by the Argentine Government, so it is stated, though it is not made clear exactly how. But if the Government is so eager to prove itself solvent at the cost of some incredulous writer, we should say it ought to try its hand upon the editor of the Buenos Ayres *Standard*. That paper, commenting upon the announcement of the suit against Mr. Wilson, said: "It is manifestly impossible for Argentina to set aside from December, 1893, an annual sum of $19,500,000 gold, since that would be 90 per cent. of the total revenue."

A curious phase of the Anarchistic activity in France has been the outbreak, in what appears to be a prearranged and systematic form, of disturbances in churches. These seem to have been particularly planned for any date when it was known that a sermon was to be preached on social questions. Large numbers of Anarchists or wanton disturbers of the peace would gather in the body of the church, and drown the preacher's voice by loud outcries, smash the chairs and chandeliers, and make the continuance of the service impossible. Beginning in the churches of Paris, these outrages quickly spread to the provinces, and took on peculiarly scandalous forms at Marseilles and Nancy. At Beauvais, a priest who was discoursing on the apparently harmless subject of Sunday rest, was compelled to break off because he had something to say about social order and obedience to the laws. The authorities long showed themselves strangely indifferent to these disorders. In some cases, no doubt, they thought that the populace were simply taking into their own hands that clause of the Penal Code which forbids a minister of any religion to criticise a law or decree of the Government; but another clause of the same code makes it a criminal offence to break up a religious service, or to foment disorder or utter threats in any church building. Latterly, however, this form of anarchy has been taken vigorously in hand by the police. Had it been allowed to go much further, the churches must have been closed.

THE SENATE AND THE ARIZONA FUNDING BILL.

THE debate and action of the Senate on the Arizona Funding Bill deserves rather more attention than has been given to it. In fact, there has hardly ever been a more painful exhibition of downright, unblushing demagogism in that body than was presented on this occasion. It should be known at the outset that the Arizona Funding Bill, gold clause and all, was passed by the last Congress without a dissenting vote in the Senate, and that the present bill was merely to change the period of the interest payments, making them semi-annual instead of annual. It is customary in this kind of legislation to take the Territorial law, preface it with a few words, saying that Congress approves and confirms the same, and then pass it. This was done with the Arizona Funding Law in 1890, the third section containing these words:

"Said bonds shall bear interest at a rate to be fixed by said Loan Commissioners, but in no case to exceed 5 per cent. per annum, *which interest shall be paid in gold coin*, or its equivalent in lawful money of the United States, on the 15th day of January in each year."

This measure was approved and confirmed by Congress, and became a law on the 25th of June, 1890, without any question being raised as to the kind of money that the interest was payable in. Hence, when Senator Stewart the other day expressed the fear that the "gold combination" or the "Gold Trust"—he used both phrases—would make use of this bill to show that the people of Arizona are opposed to silver, he expressed a quite needless fear. If the gold combination wish to avail themselves of this omen, they can find it ready to their hand on page 175, volume 26, of the Statutes of the United States. The present bill was, as has been said, merely to amend the section in which the foregoing words occur so as to make the interest payable semi-annually. Then the scramble began.

Senator Stewart said that he was willing to allow the people of Arizona to manage their own affairs in their own way (just as he manages his when he takes any bills receivable), but, when Senator Kyle of South Dakota offered an amendment changing the words "gold coin" to "lawful money," he (Stewart) went back on his word and voted for it. Senator Peffer was "opposed to changing the tenor and spirit of the laws of the United States at anybody's request, except at the request of the people themselves"—from which it might appear that he was opposed to changing the law which now stands on page 175, vol. 26, United States Statutes, except at the request of the people of Arizona. But what he meant was exactly the contrary of this. He meant that he was in favor of changing that law against the express desire of the people concerned.

Senator Palmer of Illinois expressed in a moderate way his opinion that the Kyle amendment was an attempt to meddle with other people's private affairs. If the people of Arizona wanted to borrow money in a certain way and on certain terms, they had a right to do so, and the presumption was that they knew their own business and could manage it better than anybody else could manage it for them. Senator Daniel (Democrat of the Old Dominion) could not agree to any such levelling doctrine as that. There had evidently been a speech on the silver question growing in his head, and the quiet remark of Palmer had the effect of the axe that clove the skull of Jupiter when Minerva was ready to be born. The speech sprang out without more ceremony. Here is a sample of it:

"Gentlemen sometimes say that gold is of a value which supports itself. It does not support itself. The gold bullion is always equal to the gold dollar, because the law will always turn it, at the expense of the whole people of the United States, into a gold dollar at any one's request."

This shows what a tremendous mistake the exporters of gold make when they ask for gold bars instead of coin. It shows, also, how the Senate erred in passing a law a year or two ago putting a premium on gold bars over gold coin at the Treasury.

Senator Pugh of Alabama backed up Mr. Daniel with some equally conclusive observations, saying among other things that 'we should not ratify a contract which shows on its face that it is contrary to the expressed public policy of the United States. You cannot legalize a contract that is against public policy." Here we might again ask whether anything is to be inferred as to the public policy of the United States on this question, from the law of June 25, 1890, already quoted, for which, presumably, Senator Pugh himself voted. We understand that a contract was made by the authorities of Arizona for the sale of $1,200,000 of these gold-interest bonds to one of the large life-insurance companies of this city before the vote was taken on this Kyle amendment. The contract, having been made under a valid existing law, will undoubtedly be held good by the courts, notwithstanding Mr. Pugh's notion that it is in conflict with public policy.

The simple fact that the laws of this country, as construed and affirmed repeatedly by the highest tribunal, authorize the making of contracts payable in gold coin, or in pig iron, or in anything the parties agree to, was not brought to the attention of the Senate, although none could have been ignorant of it. Legal-tender laws are important only where no particular mode or thing is specified in the contract. Then the law interprets the word dollar, necessarily. Now, was it not a shame that the Senate of the United States should deny to the Territory of Arizona a privilege which every citizen exercises, and which even a foreigner may exercise here under the protection of our laws and our courts—that of making a contract payable in gold? While this low-toned debate was going on, Senator Carey of Wyoming said that the Delegate of Arizona in the House had just told him that the bill would be of no use to his people if the Kyle amendment was adopted. Nevertheless it was adopted by 28 to 24, and the privilege of saving $75,000 per annum for twenty years was denied to Arizona in order that twenty-eight Senators might put on airs and pander to an ignorance which they secretly despise.

NEW ENGLAND'S DUMB VOTE.

THERE is no subject more fascinating or more important in its bearing on free institutions than the voting impulse of the citizen. To measure, if possible, its energies, to see how far it expresses itself at elections, how it shows itself in the returns of the votes, and what classes respond to it or do not respond, is, in a sense, to test the average of patriotism as we can test it in no other way. This fact gives a special meaning to the first census returns on "voting strength," which have just been sent out for New England. They cover a region which is not only one of the oldest and wealthiest, but in which the standards of public education are supposed to be highest, where civic duties, including the franchise, have been most sedulously inculcated, and where, at the same time, the problem of assimilating native and foreigner has been, perhaps, most complex. There, as in no other part of the United States, the purest American stock has had to meet the onset of immigration under peculiar civic and economic conditions which make the "suffrage test," in most of its phases, extremely significant, especially now, after most of the old New England restrictions on the suffrage have been abolished.

Taking simply the face of the census returns for males of voting age, we get some vivid contrasts when we compare them with the highest recorded votes at elections in the New England States. Maine returns 201,241 male residents of voting age. Her highest vote—at the State election of 1888—was 144,087, or a little less than three-quarters of her male population of voting age. The corresponding figures for New Hampshire are 118,135 and 90,819; for Vermont, 101,697 and 65,153; for Massachusetts, 665,009 and 344,448; for Rhode Island, 100,017 and 54,746; and for Connecticut, 224,092 and 153,978. The figures for all New England are for males of voting age 1,410,191, as compared with what we find to be the highest recorded vote at elections of 853,231. That is to say, the most fiercely contested elections in New England have thus far succeeded in bringing out only about eight actual votes from fourteen persons of voting age, qualified and disqualified. To put the case differently, about six potential or actual voters out of each fourteen form in practice no part of the voting constituency of New England, and either have or take no share in shaping the control of nation, State, or minor civil divisions. Were we to take ordinary instead

of the highest election returns, the showing would be much worse.

But let us allow for certain disqualifications, so as to find, if possible, the real number of electors in New England, including those who can be made electors, but refuse the franchise. The actual disqualification for crime, pauperism, and insanity is so small that it may be ignored. An important factor, however, must be subtracted to represent foreign-born males over twenty-one who have not yet been in New England long enough to be naturalized. They can be ascertained approximately by finding the proportion of adult male immigrants coming in during the five years from 1885 to 1890, as derived from the Federal immigration tables. In regard to another factor, the number disqualified by Connecticut's "reading test" for new voters probably does not exceed 2 per cent., so commonly is the law hocus-pocussed by the local boards before whom the new voters are made. As to Massachusetts, where reading the English language and writing the name of the applicant are prescribed as tests of would-be voters, the number of about 50,000 which we derive as an estimate based on the census tables of 1880 for illiteracy is a very liberal allowance for the disqualifying force of the provision. Making all these corrections, we are able to construct the following table, in which, under the term "eligible to vote," are included foreigners who refuse naturalization, the figures of the table, except those for percentage, representing thousands:

	Eligible to vote.	Highest vote.	Not voting.	Per cent. not voting.
Maine	197	144	53	27
New Hampshire	112	91	21	19
Vermont	100	65	35	35
Massachusetts	568	344	224	39
Rhode Island	93	55	38	41
Connecticut	211	154	57	27
New England	1,281	853	428	33

The proportions indicate that, out of the whole number of men in New England who are voters already or who can become voters if they wish, almost exactly one-third do not seek the ballot. They avail themselves of civic protection and public conveniences without accepting the civic responsibilities of the franchise. Politically speaking, one-third are thus "carried" by the other two-thirds. The only legitimate subtraction to be made from the impressive figures is the votes of men whom at each election sickness or other imperative necessity keeps from the polls—not a very large number if the voting obligation is strictly regarded. In the case of New England it may also be stated that the obstinacy with which large numbers of the factory class of British immigrants and of French Canadians have clung to their old nationality doubtless emphasizes the showing without at all impairing its political significance.

Some of the details of the table are worth examining. Connecticut naturalizes more of her adult foreign-born males than any other New England State, namely, 49.39 per cent. Yet her largest vote (in 1888) of 153,978 fell about 57,000 short of her full possible vote, and her registration in 1890 of 163,746 falls about 47,254 short of it. The latter number apparently refuse even to be made voters in Connecticut. The traditional "dumb" vote of Massachusetts appears in her 224,000 and 39 per cent. of non-voters, even after her educational qualification is allowed for liberally. New Hampshire has long been famous for the large proportion which her vote bears to her whole population, rising in one year (1888) to a ratio of almost one to four; yet even she has a "dumb" vote of 19 per cent., while Rhode Island at the recent election, when both parties put forth their utmost efforts, fell 41 per cent. below the number which apparently might have been put on her voting lists. How largely the dumb vote is made up in New England of foreign elements is to be shown by figures partly derived from the census, indicating that in Maine there are 11,208 immigrants who refuse to be naturalized after being five years in the country; in New Hampshire, 7,249; in Vermont, 7,434; in Massachusetts, 71,032, not excluding, however, those disqualified by the educational test; in Rhode Island, 12,824; and in Connecticut, not allowing for the farcical "reading" test, 27,819. In all New England there are about 127,566 adult foreign-born males who refuse naturalization and the assumption of the duties of citizenship. A curious commentary are these numbers, as well as the magnitude of the dumb electorate, on the ability of party machinery to "get out the vote" even when that machinery is worked with its highest vigor.

How far is this "dumb" vote of New England made up of the wealthy and educated class of "pure" natives, who have the greatest interests to be protected by the franchise, yet flout it? The question manifestly cannot be answered accurately by figures. Yet the New England politicians, the Republican politicians especially, tell us ever and again of the increasing difficulty with which they get out the "gilt-edged" vote, and of its growing indifference to the ballot. On that ground, too, coupled with "Mugwump" defection, the same politicians try to palliate "boodle" campaigns and their appeals to the prejudices of the immigrants. It is a point on which our figures cannot throw clear light, but as to which they have very sinister and discomforting suggestion.

THE EUROPEAN EXPLOSIONS.

THE French and Spaniards are busy dealing with what is probably the most difficult police problem that has ever been presented to civilized communities. The explosion of dynamite bombs continues in both countries in spite of all the efforts of the police, and is in France apparently demoralizing the officers of justice. It is said that the judges, even, are making all sorts of excuses to avoid sitting at the trial of Ravachol, and landlords are getting chary of renting apartments to officials connected with the administration of justice. It appears, too, that the difficulties of detection are very great, owing to the ease with which explosives of extraordinary power are now made, the smallness of explosive packages compared with their destructiveness, and the facility with which the criminals get away by using clockwork or slow-matches. The Spanish Cortes has had a narrow escape from much more complete destruction than that with which Guy Fawkes threatened James I. and his Parliament, and, according to the latest revelations, the assassination of the little King was part of the same conspiracy. In England a dynamite conspiracy, for the general destruction of property, has also been discovered, and the chief members have been sent to the penitentiary for long terms; but it is not likely that this particular kind of criminal will give much trouble in that country. General hatred of the social organization is very rare in any of the British Isles. Discontent, both in Ireland and England, has often found expression in murder, or in the destruction of property, but it has always been as an expression of hostility to a particular class on account of a particular grievance—in Ireland, high rents, "land-grabbing," or some sort of landlord oppression; in England, labor troubles with farmers or manufacturers.

The Continental dynamiters are, on the other hand, either common criminals who work mischief for mischief's sake or to provide opportunities for robbery, or else people who are hostile to the whole social organization—Anarchists, as they call themselves—that is, people who are opposed to all government, to property, and to marriage, and want a general dissolution of the social bond, in the belief that if there were plenty of good things lying about without owners, they would get a larger share than they have now. These, of course, form a comparatively small body in any country, but the bombs afford them means of terrorizing the community so effective as to make up for the smallness of their numbers. They are likely to give a great deal of trouble, and to be pursued with increasing ferocity, but it will probably be a long while before they are completely extirpated. They have got hold of a weapon which bears about the same relation to the old assassin's dagger or pistol as a magazine rifle to a bow and arrows, and their complete suppression will task the ingenuity of modern police to the uttermost.

Who is responsible for their existence? or are they simply an embodiment of natural depravity? Well, of course, nobody is completely to blame for them, but it is

quite safe to say that the growth of anarchical doctrines in classes not actually criminal—that is, not driven into crime by laziness or greed—has been greatly stimulated by the preaching of the modern school of philanthropists, who hold "Society" responsible for every individual's poverty and vice and crime. The extent to which this has been done during the last twenty-five years by a certain class of clergymen and philanthropists would astonish the world if their sermons, addresses, articles, and manifestoes could be got together. It is not many years since a Boston philanthropist made a speech to the young criminals on Deer Island, in which he completely absolved them from all responsibility for their offences, and took it on himself and other decent people who had not fallen into the hands of the police. It was "Society," he said, which had got them into trouble, and he was himself, consequently, almost ashamed to look them in the face. Instead of their having to ask pardon of the State, it was the State that should ask pardon of them. This view, with a little mixture of the automaton theory of certain physiologists, which makes man a self-acting machine, has spread all over the Continent, and is acting on the poor like subtle poison on the human body. That it is largely responsible for the present Anarchist attacks on property and order, we have very little doubt. The Anarchists cannot go wrong in their work of destruction, because everything that society considers valuable has been obtained by cheating, and why should they wish to build up another social organization when the present one has turned out so badly?

If the present crisis does anything towards bringing the clerical philanthropists and the humanitarian economists to their senses, and brings home to them the tremendous force with which their attacks on individual responsibility act on the ignorant, the half-taught, the unsuccessful, and the vicious, it will do a world of good, even if it cost us a great many bridges and public buildings. To go much further with the doctrine that all unsuccessful and poor people are entitled to treat their condition as the fault of our civilization, is to put our civilization in peril. This civilization may be, and doubtless is, very faulty, but, like the human race, it is the only one we have got, and it has taken 5,000 years to build it up. Nobody has any other ready to put in its place, and the supply of skins of wild animals for clothing is short and grows shorter.

PROFESSOR FROUDE.

THE appointment of Mr. Froude as the successor of Mr. Freeman in the Chair of History at Oxford has roused indignation in England which is by no means confined to the Liberals and the Irish. The literary adherents of Lord Salisbury are nearly as much perturbed by it as the fiercest of the Gladstonians, for there seems to be little doubt that it has, what an appointment to a professorship in a great university ought not to have, a political significance. Moreover, it has, to Mr. Freeman's friends, the air of a slight to that distinguished historian's memory, for, as everybody knows, he had for fully twenty years pursued Mr. Froude like a sleuth-hound, and made the exposure of his inaccuracies part of his weekly work in the *Saturday Review* and elsewhere.

This professional loathing for Froude is, it is well known, shared by Bishop Stubbs and indeed the whole of the new school of history, although none of them was willing to express it with as much freedom as Mr. Freeman. For what this new school puts high above other qualifications for writing history is not only thorough familiarity with the original authorities, but absolute adherence to them in the text, to the exclusion of picture-writing or rhetorical embellishment. Mr. Froude, on the other hand, they maintained, made the authorities merely what the musicians call a "motive" on which to base a limitless amount of melodious prose, in which the citations were apt to be inaccurate and the gaps to be supplied by the imagination. Mr. Froude, too, has, since he stopped writing history, furnished corroboration to his enemies among the historians by inaccuracy carried to the point of drollery in his books of travel. It is true that no man is ever hunted very long without having his defects grow in number and in gravity in the eyes of his pursuers, and Mr. Froude did not escape this fate. He became years ago, in the mind of Mr. Freeman and Mr. Goldwin Smith, not only wanting in veracity, but constitutionally incapable of telling the truth; and Mr. Freeman went down to the grave entertaining this opinion of him. This was no doubt exaggerated and unjust, but Mr. Freeman was able to make a show of reason for it.

To appoint, under these circumstances, to Mr. Freeman's vacant chair Mr. Froude, whom Freeman would have pronounced the least fit for the place of all living historians, looks like an expression of contempt for Freeman which his friends bitterly resent; and among his friends in England are all the eminent writers of history. What makes the matter worse is that Mr. Gardiner, the really great historian of the Civil War and the Commonwealth, has been passed over, to say nothing of Bryce, a still younger man, who has shown himself by his 'Holy Roman Empire,' as well as by monographs, no unworthy successor, in his own University, of any of those who have filled the chair. The appointment, too, recalls that of Kingsley, who was a deplorable failure, and scandalized the scholars by serving out gorgeous pictures of ancient and mediæval life, in lieu of the rigid exploration and dry scientific reports which are now expected from everybody who undertakes to extract instruction from the past for the benefit of his contemporaries. His professorial career was used by a distinguished wit, now deceased, of another University to give point to a sarcasm directed against Kingsley's successor, whose inaugural lecture the wit attended. After listening some time, he observed to his neighbor, "Well, well, who would have thought we should be lamenting poor dear Kingsley so soon!"—two very successful shots with both barrels.

When people ask why the appointment of Mr. Froude was made in this somewhat offensive fashion, the answer which, whether true or false, comes most readily is that Freeman was a Liberal and Home-Ruler, and so are Gardiner and Bryce, while Froude is a good old-fashioned "give-him-a-dozen" Tory; but these are reasons of which literary men—and *a fortiori* scientific men—are a little ashamed. Their inadequacy is increased by the fact that Mr. Froude is over seventy, which ought to be an absolute disqualification for the place of teacher for any man whose life has not been devoted to teaching. He cannot, in the order of nature, hold the post very long, and it seems a pity that the closing years of his career should be disturbed by the acrid revival of all the old charges against his integrity as an historian brought by Freeman and others, which if collected would make a very stout volume. A worse introduction to the young men who are to sit under him, and presumably are to profit by him, could hardly be imagined. The enemy's artillery, too, is now opening on his English, which for a whole generation has constituted his glory in the eyes of the "general reader." The last London *Speaker* contains a three-column attack on a page taken at random from his 'History of England,' which is most destructive, and makes it surprising that Freeman did not employ a grammarian to hang on his flank while he assailed him in front.

AN ENGLISH GLACIAL MYTH.

OBERLIN, April 15, 1892.

THAT there are myths in modern science as well as in ancient history has recently been brought to light by some interesting glacial investigations in Great Britain. Briefly stated, the facts are as follows: At Moel Tryfaen, on the northwestern flanks of Mount Snowdon, in Wales, and on the western slope of the Pennine chain, a little south of Manchester, there occur extensive glacial deposits at all elevations up to 2,000 feet in height. At an elevation of 1,100 feet upon the Pennine chain, and of 1,400 feet at Moel Tryfaen, there occur thin laminæ of water-washed gravel containing numerous shells consisting largely of subarctic species. These beds early attracted the attention of English scientific men, and down to the present time have been objects of unfailing interest. They have been examined and written upon by no less eminent authorities than Mr. Edwin Forbes, Mr. Trimmer, Mr. Darwin, Sir Charles Lyell, and Profs. Ramsay and Prestwich.

When attention was first directed to these shell-beds, it was prevalently believed that all of what we now recognize as glacial deposits took place beneath the water, and

that icebergs were the principal agents in the transportation of boulders and in the striation of rocky surfaces. With this theory in possession of the field, the occurrence in glacial deposits of shell-beds containing arctic and subarctic species created no surprise, and their submarine origin was unquestioned. But when the views of the Swiss glacialists came to prevail, which attributed to land ice the transportation of boulders, the striation of rocks, and the deposition of boulder clay, these shell-beds came to be objects of increasing curiosity. That they were water deposits could not be questioned; that the shells had originally flourished in salt water was equally evident. It seemed, therefore, a most natural conclusion that, at the time of their deposition, the level of the ocean relatively to that of the land was from 1,400 to 2,000 feet higher than it is now.

It is largely upon these facts that there has arisen the theory of two glacial epochs in England, with an interglacial period, during which the central and northern parts of the British Isles were submerged to a depth of 2,000 feet or upwards. Indeed, so clear has seemed to be the evidence upon this point that this theory has passed unquestioned into nearly all the text-books and treatises which have appeared upon the subject during the last twenty-five years. But in view of recent investigations it now seems clear that this explanation of the shell-beds is altogether erroneous, having arisen from the mistake, so often made in inductive reasoning, of resting too implicitly upon conclusions drawn from an imperfect collection of facts.

While conducting, with the late Prof. Henry Carvill Lewis of Philadelphia, the survey of the glacial boundary in Pennsylvania in 1880, the new conceptions of glacial phenomena forced upon us by the facts there brought to light led us to discuss the importance of having the same work done in Great Britain which we were then beginning to do in the United States. In accordance with plans then laid, Prof. Lewis devoted two subsequent summers to the field work necessary to ascertain the exact limits of the glaciated area in the British Isles. The partial results of his observations were published in papers read before the British Association in 1886 and 1887; but his untimely death, which took place soon after, prevented the publication of his matured conclusions, and left nothing but a great mass of field notes which still remain unpublished. A large number of English geologists, however, became acquainted with the results, and have been prosecuting with great energy the lines of inquiry which he opened. One of the most important of his inferences relates to the origin of the shell-beds under consideration, though it must be said the conclusions to which he came had been dimly foreshadowed by two or three English observers, among whom was Mr. Clement Reid of the Geological Survey. Under the guidance of various geologists who had become familiar with Prof. Lewis's views, I was permitted last summer to visit the typical places for testing his theory. What I then saw, especially when taken in connection with the publication of recent papers upon the subject by Prof. Percy F. Kendall, the Rev. Dr. H. W. Crosskey (the worthy pastoral successor of Dr. Priestley, in Birmingham), and of Mr. Clement Reid, enables me to endorse with great confidence Prof. Lewis's explanation of the origin of these shell-beds—an explanation which really revolutionizes the prevalent views concerning an interglacial period in England.

Prof. Lewis's theory was, that the shells occurring in these interglacial laminæ of gravel were carried up to the height found upon the Welsh mountains and the Pennine chain by the movement of land ice which had come down into the Irish Sea from the southwestern portion of Scotland, from the Lake District in England, and from the northeastern part of Ireland, and which had filled the Irish Sea, and in its movement had pushed up portions of its bed, and left them as deposits over the land surface of England and Wales as far as the southern and southeastern movement of the Irish Sea Glacier had reached. This theory, which would at first seem so incredible as to be almost unworthy of notice, is now supported by a variety of evidence which seems to place it upon an unassailable foundation.

In the first place, the unstratified glacial deposits in the vicinity of these high-level shell-beds are full of fragments of shells, of the same character with those in the laminæ of gravel, mixed in with the boulder clay as the ordinary pebbles are which have undoubtedly been transported by glacial ice; while observations of Mr. Lamplugh upon the east coast of England, and of Mr. Upham on the glacial deposits about Boston Harbor, show that beyond doubt shells have been pushed up from the sea-bottom to a height of a hundred or more feet without suffering serious injury. The glacialist is fortunate, also, in having in ice a material which can turn itself into water at any height, and produce the limited amount of stratification necessary to sort out the gravel and shells included in a general glacial deposit. Hence the theory starts with a true cause, and is by no means incredible.

The confirmatory evidence is also of the most interesting and satisfactory character. Accurate observations have established the fact all over England that the shells found in glacial deposits considerably above sea-level are limited to areas which are shown by the transportation of boulders to have been covered by glacial ice that moved over sea-bottoms. For example, in the northwest of England and Wales, wherever high-level shell-beds have been reported, it has been found perfectly safe to prophesy that in the near vicinity there would occur boulders from the Lake District of England and from the southwest of Scotland, whose route to their destination lay over the Irish Sea; while in the areas beyond the reach of such boulders, shell-beds of this character are looked for in vain. The same is true upon the east coast of England, which was invaded by Norwegian ice. The shell-beds in glacial deposits much above sea-level are limited to the area which was covered by Scandinavian ice that had moved across the North Sea.

Again, close attention to the character of the shells found associated in these glacial deposits shows that they did not grow under similar conditions, for the species are as various as those which represent cold-water forms and warm-water forms, together with rock-haunting and sand or mud-loving varieties. In the same beds also late Tertiary species, whose nearest allies are now found in the Mediterranean Sea, occur side by side with arctic species, and Mr. Clement Reid has recently reported that near Oswestry, in Wales, delicate Lias fossils have certainly been transported without serious injury and raised to a considerable distance by the glacial movement that passed over the region. Moreover, now that the limits of the glaciated area of Great Britain are definitely known, there is abundant evidence that there has been no recent deep submergence of the extensive unglaciated areas existing in the central and southern parts of England. If the shell-beds under question had been deposited during a general submergence, there would have been some signs of the submergence upon the east side of the Pennine chain as well as upon the west side. Sea-beaches and water-worn caverns and shell-deposits such as invariably characterize a sea-bottom would occur over the broad area in the centre of England extending all the way from Leeds to Oxford. The absence of such marks of geologically recent submergence is indubitable evidence that it did not occur.

Briefly stated, the glacial history of the British Isles is as follows: In the early stages of the period, the glaciers which began to form upon the Welsh mountains pushed southward to the Bristol Channel and eastward to the valley of the Severn, where in the northern part they reached as far as Birmingham. Over this area there are no shell-beds. Meanwhile the great Scandinavian glacier crept over the North Sea until it met a limited easterly movement of ice coming down from Scotland and the north of England. The prevalence of the Scandinavian ice is first indicated at Flamborough Head, east of York, by Norwegian boulders which are found more or less over all that portion of England lying east of a line drawn from Flamborough Head to London. Meanwhile, also, the Irish Sea was filling up with the ice which moved off from the southwest of Scotland, the Lake District of England, and the eastern coast of Ireland. Eventually this great confluent glacier reached the Welsh mountains and divided, one portion passing westward over Anglesey and along the channel of the Irish Sea, and the other portion down the Vale of Chester to the upper part of the Severn Valley, near Birmingham. The shell-beds are limited to these areas.

Evidently, therefore, the ice-movement in Great Britain was a unity, accompanied only with those minor episodes and those complicated results of deposition which would naturally be connected with the advance and retreat of so peculiar and complex a substance as glacial ice is known to be. The theory of an interglacial submergence will hereafter disappear from geological text-books, and the cautious note of Sir Archibald Geikie's volume, written five years ago, in which he acknowledges that Prof. Lewis's theory is worthy of consideration, will find its place in the body of the treatise to describe a well-established fact. G. Frederick Wright.

ART TREASURES IN JAPAN.

Tokio, March 1, 1892.

When Justinian's codifiers wrote

"Nullius autem sunt res sacræ,"

it doubtless served as a satisfactory solution of a then not very difficult question. Where art appears only as the handmaid of religion, the title of the deity to the ownership of temple treasures conflicts with no other claim, and fulfils completely the purposes of the votaries who present as well as the priests who guard the pious offerings. The Japanese solution was that of the Romans. To the Buddha were given and to the Buddha belonged the masterpieces of painting and of bronze which have accumulated in the thousands of temples during a thousand of years. But times change; art and religion separate. Posterity accepts

the inheritance of the past, but accords to it a different reverence, and the nation competes with the shrine for the possession of the treasures. It has now become in Japan an interesting question whether the Government is justified in transferring them from the temples to the museums. The question would be a less difficult one if the interests of religion or any other high interests were served by keeping the property as it is. But so many dangers threaten it under present circumstances, so important are the artistic interests involved, and so selfish and undeserving are the aims of the custodian priests, that expediency and justice give but one answer. On the one hand, then, the public good clearly authorizes the assumption of control by the Government. On the other hand, however, remain the technical difficulty of finding a legal right to take control, and the practical one of avoiding the creation of a popular opposition at a time when the Government, for its own sake, must furnish as few causes of offence as possible. My purpose in this letter is to give briefly some account of the measures that have been taken for preserving the temple treasures of Japan, and of the conditions attending the work.

I must mention at the beginning, and often, a name which would by this time have become more familiar to the reading public had it not been for the modesty of its bearer. From the time when Mr. Fenollosa came from Boston, in 1878, to take the professorship of Philosophy at the Imperial University, until he left Japan, in 1890, to accept a curatorship at the Boston Museum of Fine Arts, the story of the revival of Japanese art is the history of his efforts, ably assisted by Mr. Okakura (now director of the Art School), Mr. Hamao (in the Department of Education), and a few enthusiastic disciples. In 1878 the rage for things foreign had almost reached its height. On one side stood a set of radical young men, who had been educated abroad, the most extreme of them committed to the adoption of anything and everything foreign, privately declaring that the Japanese were an inferior race, and utterly opposed to native Japanese art. The opposite party was even less to be looked to for sympathy: a group of old-fashioned conservatives, worshippers of Chinese traditions, obsequious adherents of unprogressive formalism, and deeply jealous of the influence of the foreigner. Of a true and intelligent appreciation of the place of Japanese art in world-art, or of the possibilities of inherited methods or of improved technique, there was little trace. The cultivation of such a taste and understanding was the work to be accomplished.

But the foundation of all efforts in this direction was the study of the art-inheritance received from Old Japan, and the collection and preservation of the country's treasures now became the immediate and practical duty of the little band of enthusiasts who had gathered around Mr. Fenollosa. From 1880 until the great search-expedition of 1888, under the direction of Mr. Kuki, some six trips were made into the interior by Mr. Fenollosa, Mr. Okakura, and a few others, either alone or together, for the purpose of cataloguing the paintings, carvings, bronzes, and other objects of value in the myriads of temples. In 1879 the Government had caused a preliminary and partial record of these treasures to be made, but it was quite insufficient for the purpose. Apart from the meagreness of the territory covered, the word of the priests had been taken as to the existence and character of the articles, and numbers had not been reported at all, while the record was so general in terms ("A Buddha," for instance, was regarded as a sufficient designation of a painting) that substitution of worthless pictures was often practi ed, and identification at the annual inspections was impossible. The amendment of such defects and the completion of the catalogues was the object of the subsequent expeditions. The zeal and system with which the work was now prosecuted brought great results. In 1886 the districts around Nara and Kioto were well covered. In 1888, immediately after the return of the Art Commission (Messrs. Fenollosa, Okakura, and Hamao) from Europe, the remainder of the central region, known as the Gokinai (Home Provinces), was practically finished.

By this time official interest in the undertaking, under Count Ito's enlightened patronage, had been thoroughly awakened, and the company included representatives of the imperial household and of various Government departments, as well as numerous experts and reporters. Photographs were carefully taken; every object of art was inspected, classified (in one of six grades), measured, stamped, and inscribed in an official register. Even manuscripts were registered, where they seemed of value. Among the notable results was the discovery of important Chinese paintings from the sixth to the ninth centuries, and the first attempted construction of the history of Japanese art for the same period. But by this time also the various obstructive influences had gathered force. In the first place, age and neglect had told with increasing effect on many of the temples. The decay of the abandoned buildings had proceeded apace, and much of value had been lost. But chiefly the effects were felt of the outside demand for the very treasures sought by the Government. The rapacity of the collectors combined with the poverty of the priests to deprive the nation of some of the finest works of art. Even since the preceding inspection of 1886, numbers of articles had been made away with. In many cases it was a race between the dealers and the Commission to see who should become the possessors of some well-known masterpiece, and a day or two sometimes decided the destination of the prize. Earlier in the same year, and just before the visit of the Commission, the great monastery of Koyasan, containing scores of paintings, had been burned to the ground; and it was a matter of common belief that the valuables had first been abstracted, and the building then burnt to destroy the traces of the plundering. Nor was this an isolated instance of resort to such expedients.

The sources of this demand were many. The agitation in favor of an adapted Japanese art had called general attention to the importance of these treasures, and the revival of national feeling, which began to show itself about 1887, had helped to swell the general interest. The chief factors in creating the demand seem to have been the art-loving members of the aristocracy, who were anxious to secure the masterpieces for their own collections; the rich merchants having similar ambitions; the conservatives who desired to save the classic relics from desecration; and the brokers who catered for the foreign market. The tactics resorted to were many and devious. By previous collusion with the priests, a process of substitution became the commonest means of achieving their ends. Where every movement of the Commission was made publicly, and with official deliberateness, there was abundant opportunity to thwart its plans.

In the meantime the new departure had been showing visible results in the domain of original art-work. In 1880 Prof. Fenollosa began a series of private lectures, having for their object the awakening of the Japanese people to a practical knowledge of the importance of their art to themselves and to the world, and of the conditions of its revival. In 1884 an association called the *Kangakwai* was founded by him for the encouragement of the work of the new school, and its first exhibition, in the spring of 1886, was an unqualified success. In spite of temporary opposition, both from without and from within the Government, this school soon came to represent the dominant influence, and the present School of Fine Arts is conducted upon the methods elaborated by Mr. Fenollosa, and faithfully continued by Mr. Okakura, upon whom his mantle has fallen.

These results have been referred to merely to indicate the success that has attended the work of the little group of enthusiasts, and the larger influence now at their command. They are ready now to utilize with the greatest profit their opportunities for the study of classic models, and to prosecute with their more extensive power the work of preserving the relics of antiquity. Since Mr. Fenollosa's departure, in 1890, several other provinces have been visited, and the cataloguing proceeds without cessation. Some 1,500 photographs in all have been taken. The superstition of the temple-custodians has required of the officials in many cases a pledge that the sanctity of the deity's possessions shall not be violated by the publication of the photographs. But before long a preliminary sketch of the history of Japanese painting, based on a study of the canvases themselves, may be expected from the press, and some 100 of the photographs will accompany it.

But the problem of property is yet unsettled. Just what could be done by the Government if it were disposed to remove certain of the masterpieces to local or national museums, is the question which the friends of art are debating. It is obvious that there are in Japan's case certain special difficulties which have not been so noticeable in the kindred undertakings of European Governments. The treasures of classic art in Japan are not abandoned monuments of architecture or buried sculptures, sacred only to the memory of antiquity. They are objects of living interest to vast numbers of human beings, votive offerings to deities who still receive at least a conventional veneration from the people, even if they no longer command the devotion which prompted such offerings. The Government has to deal not merely with the greed of speculators, but with the beliefs of a nation. Besides this, the political situation is at this moment such that the Government cannot afford, however earnest its disposition to aid the cause of art, to seek by new legislation to cut the Gordian knot. There are pegs enough on which the Opposition may hang its arguments, and it has become expedient to avoid giving it any further opportunities to hold up the present Government as the subverter of popular rights.

In these circumstances the chief reliance of those who have in charge the interests of art must be upon precedent and acknowledged legal rules, so far as they may be found to give any support. It will be apparent that for this purpose three sets of facts in particular will be of importance. One is the source of the temple donations and the traditional notions as to the effect of the gift. Another is the customs defining the relation of the parishioners to the treasures. A third is the precedents indicating the extent of control exercised by the Tokugawa Government over temple property. As

to the first, there is much interesting learning. No one who is familiar with the feudal history of Europe will fail, in studying Japanese history, to observe that similar conditions prevailed. The temples waxed great in the middle ages with the possessions that were showered upon them. Down to the latest times there were definite customs as to *kifuchi*, or endowed lands. The portable treasures, as well as the lands, they owed chiefly to the benefactions of Emperors, daimio, samurai, and even commoners, wishing to obtain happiness in the other world. Now it appears in some regions that endowed lands could be taken back if ever the family of the donor fell into want; and the possibility of a lapse of the gift being thus established, it remains to investigate the whole subject and to learn clearly what other conditions, if any, were recognized as affecting the permanence of the temple-custodianship. We know, for instance, that the Tokugawa Government not infrequently forfeited a work of art for some fault on the part of its custodians, and that more rarely the delivery of some valuable—a gift in name, but not in fact—was required for the adornment of the Shogun's palace.

Turning next to the third topic, the measure of control exercised by the Government, we note that it was, as might be expected, by no means a restricted one. The Tokugawa family, conservative enough in every matter of vested rights, was not in the habit of holding its hand whenever the public interest was in any way concerned. "The Temple-Magistrate," said Iyeyasu, the great Consolidator, in his Eighteen Laws (of 1615), "shall according to old custom superintend all Buddhist and Shinto temples." A rule existed under which an annual inspection of certain important temples and a registration of their possessions was made by the Shogun's commissioners; and though doubtless the opportunity to keep a watchful eye upon the state of the forces of powerful daimios and the appearance of their fortifications influenced the perpetuation of the practice, it becomes in the present connection a precedent of much significance. The inclination of the priests to dispose of the treasures for their own gain was doubtless as strong then as now, for we find in 1738 a proclamation "As to the Pawning of Temple Effects":

"Of late it has frequently happened that the images, votive offerings, utensils, and other effects of temples have been freely pawned or sold to raise money. This is wrong. Hereafter not only those who obtain such loans, but also their sureties, shall on conviction be punished. The creditor, too, is a partaker in the wrong, and shall recover nothing."

All these signs make it worth while to follow up the subject carefully and see how far the present Government may go while keeping within the track of its predecessor. The rule already established by it is, to be sure, less strict than that of the above proclamation. About 1878 a regulation was made, dividing temple property into two classes, common and special. The former may (as a rule) be sold only with the written consent of the priest and all the parishioners. The latter embraces the *hōmotsu*, or valuables—relics, censers, paintings, etc.—and may be sold under the same formalities, but only when it is absolutely necessary in order to preserve the existence of the shrine. We are here introduced to the parishioners, who are to-day, in fact, becoming the most important element in the problem. The *danka*, or parishioners, of the local temple or temples are one of the interesting features of village life in Old Japan. No one would expect to find the English vestry and church wardens in the communities of Buddhist worshippers in feudal days under the Tokugawas; but there they were, or something very like them. To describe just the extent of their interest in the temple property and their share in its custody would be a long story, and in fact an impossible one, in the present state of our knowledge of Japanese institutions. But if the religious belief of the rustics inspires in them a traditional regard for the painted Shaka or Amida, equally with the tooth of the saint or the claw of the *tengu* hobgoblin, they are none the less moved by material needs and mercenary desires, and they would often dispose of the treasures, if they could, for money to pay the town taxes or some of the other burdens of the hard-working farmers. It is this claim of the parishioners or the villagers to dispose of the valuables which is at present of most importance. So far as concerns the right of disposition for personal profit, the Government has settled the question in accordance with propriety and with precedent by forbidding the sale, except under the circumstances above mentioned. But the right of the Government to withdraw the treasures to local or national museums is still an open question; and some solution of it which shall be legal and at the same time fair to all parties and conducive to the best interests of art and of patriotism, is the desideratum of to-day. J. H. W.

Correspondence.

DRED SCOTT AND HIS BACKERS.

To the Editor of The Nation:

Sir: Can you or any of your readers tell me who "put up" the Dred Scott case—that is, backed him in suing, paid the fees, and used him for a dummy to get an important political decision? Of course he had neither power nor money himself, and would have been promptly knocked in the head if it had not suited somebody to let him go forward. Who originated the case? I know the counsel gave their services gratuitously, but that cannot have covered all expense, and does not account for his having permission and stimulation to carry on this long contest. He was a stalking-horse for some set of men. Who? This question has long been one of great curiosity to me, and I have never seen any allusion to it in the enormous literature of the case. Probably it is not determinable; if it is, others of your readers will thank me for bringing it up. I suppose it was of Southern origin, to bring out a foregone decision. F. M.

April 21, 1892.

THE TEACHING OF ENGLISH LITERATURE AND LANGUAGE.

To the Editor of The Nation:

Sir: I notice in the *Nation* of April 21 the challenge of Mr. Brander Matthews to name a university with "two full and independent professorships, one of English language and one of English literature."

But why is the challenge put in this particular form? There was no mention of full professorships in the original article, and in any case Mr. Brander Matthews is not taking refuge behind mere names. The point at issue is, to quote his letter, "that the teaching of English language and of English literature are equally important and wholly unrelated to each other." It was while urging the complete separation of the two that the statement I quoted in my former letter was made, including the clause, "perhaps Columbia College has shown the fullest understanding of the exigencies of the situation."

Now I have not the slightest desire to say anything against Columbia, and I purposely refrained from mentioning Harvard, Yale, and Princeton, because Mr. Brander Matthews had already, somewhat dangerously, made the comparison with those institutions. I merely gave the facts in regard to three universities in which the teaching of English language and literature is completely separated, and in which equal importance is given to each. Whether the two associate professorships at Johns Hopkins are finally to be made full professorships probably rests with the trustees of that institution, but they have certainly thus far recognized the equal importance of the two lines of work. So if Michigan University separates English literature, English philology, and rhetoric, it matters not to the discussion whether this is done by means of three full professorships, or through the agency of three competent men with other titles. The facts at Cornell are also exactly as I stated them, notwithstanding the charge of lack of candor. English literature stands wholly by itself, under the charge of a full professor. English philology is entirely separate from the literature, under a full professor whose title is Rhetoric and English Philology. Certainly it might be claimed that rhetoric belongs to the study of language rather than to literature; but there is no need to make this claim, since that point was not touched by the article in question. This is, however, a complete separation in different departments, under full professors, of English language and literature. But if the question is one of names only, I might ask why "Columbia has shown the fullest understanding of the exigencies of the situation," when she has, according to the article in the *Educational Review*, neither a full professorship nor an assistant professorship of English language apart from literature, and the instructorship mentioned includes only Anglo-Saxon?

Let me say, finally, that, whether Mr. Brander Matthews is pleased with my good opinion of his article or not, we are both sincerely interested, I hope, in the actual status of English literature and language in American colleges and universities. It has been usual for a long period to make provision for English literature. Thanks to the influence of such pioneers as Prof. March of Lafayette, to the example of such men as Prof. Child of Harvard and Prof. Cook of Yale, and above all to the willingness of Americans to profit by the thoroughness of German scholarship, English philology is now on a firm basis in a dozen or more institutions in America. Oliver Farrar Emerson.

Ithaca, N. Y.

Notes.

The concluding volumes of Mr. Edward L. Pierce's Life of Charles Sumner are now in press. The first two appeared in 1877.

The *Times* Publishing Co., Philadelphia, will shortly publish by subscription 'Lincoln and Men of War Times,' a work consisting of Mr. A. K. McClure's recent articles in his journal, and embellished with twenty-seven full-page portrait and other illustrations.

D. Appleton & Co. will have ready on April 30 the Memorial volume on the Centennial of Washington's Inauguration, which is issued in

a limited edition to subscribers. They have also nearly ready 'The Jew at Home,' *i. e.*, in Austria-Hungary, by Joseph Pennell.

A history of the Witchcraft delusion in Salem, Mass., two hundred years ago, with some notice of cases elsewhere, by Winfield S. Nevins, is announced for June next by Lee & Shepard, Boston, and the North Shore Publishing Co., Salem.

We are glad to learn that Mr. Henry C. Lea is passing through the press a new work, called 'A Formulary of the Papal Penitentiary in the Thirteenth Century,' printed from old manuscript possessing a singular interest. The Penitentiary was the body intrusted with the papal power of absolution and dispensation throughout Europe; and its use of this power, as exemplified in the several hundred cases embodied in the Formulary, throws light upon many points in the relations between the Holy See and the rest of Christendom and on the morals and manners of the period. The text of the MS. will be accompanied with an introduction and notes by Mr. Lea. The whole will make an octavo volume of about 200 pages.

Charles Scribner's Sons are about to bring out a work on china-collecting in America, by Mrs. Alice Morse Earle; 'The Colonial Era,' by Prof. George P. Fisher; 'The Old South,' by Thomas Nelson Page; 'A Tramp Across the Continent,' by Charles F. Lummis; 'The Bull Calf, and Other Sketches,' by A. B. Frost; and a volume of poems, 'Dreams and Days,' by George Parsons Lathrop.

Harper & Bros. announce 'The Letters of Samuel Johnson,' edited by G. Birkbeck Hill; 'The Light-Bearers,' papers on Tennyson, Ruskin, and the Brownings, by Mrs. Anne Thackeray Ritchie; and the 'Technique of Rest,' by Anna C. Brackett.

A book on 'The Claims of Decorative Art,' by Walter Crane, with illustrations, and a Life of Henry Boynton Smith, by the late Prof. Lewis F. Stearns, are on the list of Houghton, Mifflin & Co.

Mr. George A. Aitken, the biographer of Steele and Arbuthnot, has edited Marvell's poems, and this work will presently be published, in two volumes, by Messrs. Lawrence & Bullen, London. The fact that Marvell went to the school at Hull where Mr. Aitken himself was educated must have given enthusiasm to the present undertaking of the latter. Mr. Aitken has further undertaken to edit Burns's poems for the new edition of the Aldine poets. This work will not appear until the autumn. Among other forthcoming books of the new firm just mentioned, who have already accustomed us to a pleasant combination of good literature and good manufacture, are an edition of Anacreon in the Greek, with Stanley's translation, metrical renderings by various hands, and illustrations; the Fairy Tales of Mme. D'Aulnoy, with an introduction by Mrs. Ritchie, and illustrations; and Mr. Joseph Knight's 'Theatrical Notes,' a contribution to the history of the English stage.

Mr. Austin Dobson has been editing Fielding's 'Journal of a Voyage to Lisbon,' and it will be published shortly by the Chiswick Press. A one-volume selection from his poems, made by himself, has been issued at Leipzig in the English Library which the late Wolcott Balestier founded just before he died, as a rival to the Tauchnitz Series.

The Knickerbocker Press of the Messrs. Putnam has just taken possession of its new building at New Rochelle, on the line of the New York and New Haven Railroad, with enlarged facilities for all the processes involved in bookmaking.

Mr. John Vance Cheney publishes under the garb of essays what were originally meant as "talks" for young people, and had for their purpose to encourage the knowledge and love of poetry. The title of the volume, 'The Golden Guess' (Boston: Lee & Shepard), indicates a degree of uncertainty which is not apparent in the text itself. The definition of poetry, it is true, consists of a series of quotations from a large number of masters of eloquence and epigram, and leaves the answer at last in the "inner consciousness"; but that the Hebrew poets were the greatest of all is as plain as the nose on your face, and that Matthew Arnold was the master of those who know, except, of course, in the point of Hellenism vs. Hebraism, is the beginning of understanding. These things being premised, the essays on Tennyson, Browning, Swinburne, Music, and Hawthorne follow a safe and beaten track. Susceptibility to literature and a modicum of good sense and good morals make up the author's critical stock-in-trade, and this is not a bad outfit for the popularizer of good books as the times go; but, on the other hand, the predilections we have indicated and the slavish Arnoldism of the essays, except when dealing with the Hebrews, disable the writer in the higher field. Even the young, to whom he especially appeals in his preface, could find better guides; for though his observations are as a rule just and plain, the mood is vague and sentimental, and suffuses what is sensible with an unwholesome feeling.

The eighth volume of Prof. Henry Morley's 'English Writers' (Cassell) brings that useful repertory of the facts of our literary history down to 1579, so that the present year bids fair to see Spenser and Shakspere fully included in the range of the bibliography. This will increase the value of the work for those purposes of reference for which it is best adapted in schools and colleges, though the method begins to show its incompleteness more obviously in proportion as the subject of study becomes pure literature. The history of literature, however, on the side of biography, phases of the national life and of European culture, and the catalogue of books issued, has never been so comprehensively treated; and the very unattractiveness of these annals makes easier for the student the line of demarcation between the literary and the historical interest. If the philological side of literature could be so adequately treated by itself in a similar way, the much discussed question of how to treat literature would be greatly simplified. Literature as history is not less to be objected to than literature as language, and it is much to be suspected that instruction which avoids the latter error falls into the former one; but the more these different aspects of literature are separately presented, the less confusion there will be. Prof. Morley, as an encyclopædist of fact, does most useful service, and it is a great gain to his work that he has no room for more than one point of view.

The name and fame of Landor is one of the lost causes of literature, and shares the same attraction for the neophyte in criticism that Charles I. has for the tyro in history. The essay upon him is calculable: its argument shows the engrossment of the writer with the manner of his master in the two points that it is dignified and that it fails to convince; and, like all pleaders for lost causes, the author is aware from the first line that the best he can say is useless. Mr. Edward Waterman Evans, jr., who contributes the latest of these unhoping encomiums on greatness deferred, 'Walter Savage Landor: A Critical Study' (Putnams), does his task with commendable taste and in sincerity; he has made out Landor for himself, and knows why he ought to like him, but, through no fault of his own, he cannot divest Landor (Landor could not divest himself) of the qualities of a *simulacrum:* his hero never passes the point of *seeming* to be great. Mr. Evans's essay is notable as a sign of interest in the higher literary criticism, and is academic in quality. A new writer begins by making his devotions at the shrines; after that, he gets down to work.

The protest against English philology under the disguise of literary study begins to bear fruit in text-books, and among the first of the reformed order is "Hamlet," edited by Carroll Lewis Maxcy (Boston: Ginn & Co.). The language element is reduced to a minimum in the notes with success, and the stress of instruction is laid on the minute development of the play as a story—in other words, on dramatic construction. The ability to make an exact plain prose paraphrase in the shape of a tale would seem to be the aim of the instruction. This fact illustrates what we recently said of the experimental character of the new teaching of literature. Can we be sure that this is a better way of studying Shakspere than the old method? and does it not err in the same point, namely, of treating "Hamlet" as something to ask the greatest number of questions about? If dramatic construction is to be studied, is Shakspere the best author to use? If Shakspere is to be studied, was dramatic construction anything more than an incident in his genius? It is a gain, no doubt, to substitute, in literature courses, the study of a literary form for that of a language form; but the main effort of the new method is, we believe, to get at the substance of literature, at what is expressed, and not at the mode of expression, which is to be treated secondarily. These queries and remarks indicate that the present text-book, which is in its own way admirable, merely substitutes one sort of narrowness for another; the most it can accomplish is to help dissolve the old tradition, and in time a more catholic treatment may come.

Spencer's 'Philosophy of Style' is reissued with an introduction and notes by Prof. Fred N. Scott (Boston: Allyn & Bacon) in a form suitable for school use. The barrenness of the essay, relying as it does on a single principle of style, is eked out by the addition of a second paper, by T. H. Wright, which succeeds in showing how limited was Spencer's view but does not add very much except by suggestion. The editor appears to be a propagandist of Spencerianism. There was certainly no reason for the bibliography of Spencer's works in the introduction except the wish to use the opportunity for spreading the faith. A Rhetoric can easily dispense with a laudatory biography of its author, the insertion of which here, in an ordinary text-book, is most uncalled for.

The Book-Lovers' Library, which we have commended as a most interesting collection of out-of-the-way yet desirable information, adds to its already rich list 'Books Condemned to be Burnt,' by James Anson Farrer (A. C. Armstrong & Son). This does not deal exhaustively with the subject, and merely glances at the general history of the burning of books in an introductory chapter, the body of the volume being reserved for the English record. The occasion for such conflagration was, of course, politics or religion, and in the course of the inquiry one comes upon curious illustrations of the growth of opinion, upon books whose very substance of thought has become ashes long ago, upon passions and vagaries of the sort whose remembrance seems to resolve the past into a history of folly; but for the most part the list is that of a very "antique" catalogue. The lover of books must be something of an an-

tiquarian to relish the titles truly and to feel interest in the lives and fortunes of the authors. The last book burned, it appears, was 'The Present Crisis with regard to America Considered' (February 24, 1775), and no copy of it seems to be known.

Mary R. Silsby has collected and arranged a volume of 'Tributes to Shakespeare' (Harpers), in which some pieces not easily accessible are contained, so that for the earlier centuries the volume has a certain value; but it tapers off at the end into a mere scrap-book of latter-day verse, and a large proportion of these later pieces are without any sort of claim to remembrance, and the best of them, with a scant half-dozen exceptions, are only commonplace.

In 'The Bible, the Church, and the Reason' (Scribners), Prof. Briggs prints seven lectures delivered by him at various times and places. They find their pertinence to the controversies with which his name is now connected in being mainly a positive reaffirmation and expansion of the views which have brought him under ecclesiastical process. The volume will go far to extend his reputation as a heretic who arraigns his prosecutors, insists that they are the ones to recant, and, in general,

> —"bangs and bethwacks them—their backs he salutes
> With the whole tree of knowledge torn up by the roots."

Mr. Wilbur Aldrich's 'Farming Corporations' (New York: W. Aldrich & Co.) adds another to the schemes for the easy and complete cure of the evils of the social body. In simplicity of thought and in innocent faith in the effectiveness of his panacea, the author may easily take rank with his fellow-Utopians, of whom the last few years have brought so plentiful a supply; but in economic training he falls far below speculators like Hertzka, or even Bellamy. He proposes an association of farmers in his native town in Maine, who are to form what the economists call a society for coöperative production. The success of this association will be such that a speedy reorganization of the nation on the same lines is sure to follow, and trade, banking, canals (canals, by the way, are to be greatly enlarged and extended), railways, insurance, and everything else soon drop into association hands, and all are happy. Mr. Aldrich's plans are presented with little detail and with no appreciation of the real difficulties of the problem.

The public will have to stand on its guard against the device of American publishers to secure copyright for fiction that appears first serially in England, by issuing amputated portions without advertising the fact. This was what lately happened in the case of Mr. Barrie's 'Little Minister,' and still more recently in the case of Mr. Mallock's 'A Human Document,' which comes to us from Cassell before it is finished in the *Fortnightly*, and hence ends with the sixteenth chapter, about the middle of the February instalment. This is a very reprehensible practice, and is by no means atoned for by the subsequent publication of the work in full.

"An Episode in the Life of James Russell Lowell" is related by Mrs. Anna Davis Hallowell in *Harper's Weekly* for April 23, with the aid of letters revealing the poet's friendship with her parents in the early days of his married life. Some of these are among his best, and notably extend in prose his already remarkable list of anti-slavery portraits in verse. Some anti-Texas stanzas, published purposely without his name and never admitted to his collected works, are also printed. One stanza, beginning,

> "Grey Plymouth Rock hath yet a tongue,"

was a familiar abolition quotation. But the cream of the "Episode," after all, is Lowell himself, the bridegroom of 1845, with his wife, from daguerreotypes. Here is Hosea Biglow in person, with flowing necktie and flamboyant waistcoat, with a twinkle in his eye, and dialect trembling on his tongue. The cut misses the subtlety of expression in the original sun-picture.

Mr. George W. Julian contributes to the Indiana Historical Society's publications a vindication of the rank of the Quaker Charles Osborn as an anti-slavery pioneer. In so doing he ignores the Rev. George Bourne's distinct enunciation of the doctrine of immediate emancipation and opposition to African colonization in 1816 (in his 'The Book and Slavery Irreconcilable,' a document that outweighs the entire sum of Osborn's printed utterances against slavery); gives Osborn the undue credit of having "published the first anti-slavery paper in the United States," whereas his paper was devoted to general reform; and vastly overrates his abolition efficiency, except in furnishing a medium for Benjamin Lundy's budding zeal in the same cause. The fact is, as any one must see who reads Osborn's 'Journal,' that he was much more of a sectarian than an anti-slavery crusader, and two circumstances prove this: his end was embittered, if not hastened, by his disownment by his pro-slavery co-religionaries; and when the banner of immediate emancipation, newly set up in Boston, was carried flaming from one end of the North to the other, he never rallied to it in the twenty years of life still left him. Bourne, on the contrary, rallied to it promptly. Osborn, again, did not, like Lundy, give up everything to the slave, nor can he be compared for one instant with Lundy as a reformatory and apostolic power. Yet Lundy was a gradual emancipationist.

A useful piece of historical research has been performed by Mr. Charles Edgeworth Jones in his little pamphlet, 'Political and Judicial Divisions of the Commonwealth of Georgia' (Atlanta: Jas. P. Harrison & Co.). The writer deals in successive sections with the Earliest Division; Parishes; Counties; Congressional Districts; State Senatorial Districts; and Judicial Circuits. Not content merely to display the result of his labors, Mr. Jones refers throughout to the sources of information. The naming of the 137 counties offers a curious study. Brooks County was named (in 1858) after the assailant of Sumner, and all but ten of the names are personal, commemorating eminent Americans, North and South, with much catholicity; seven are Indian, two (Liberty and Union) symbolic, and one (Rockdale) topographical.

A Summer School of Higher Pedagogy and of Psychology will be held at Clark University, Worcester, Mass., from July 18 to July 30. It is designed for superintendents and instructors, and the courses will be given by Dr. Wm. H. Burnham, Dr. E. C. Sanford, and President G. Stanley Hall. Particulars may be had of Dr. Burnham, Dean of the University.

The second annual session of the School of Applied Ethics will be held at Plymouth, Mass., from July 6 to August 17. The courses will be in the history of religions, economics, and ethics, this last being given by Prof. William Wallace of Oxford. For particulars, application should be made to the Secretary, Mr. S. Burns Weston, No. 118 South Twelfth Street, Philadelphia.

A prominent fi ure was removed from the publishing world by the death in this city on April 19 of Mr. Roswell Smith, President of the Century Company, in the sixty-fourth year of his age. Mr. Smith was a native of Lebanon, Conn., and was born into an atmosphere of books and book-making, and had his first training in a publishing-house in New York. He afterwards, however, pursued his education at Brown University, and entered the legal profession, which he practised with great success in Indiana. He returned to his first love at the instance of the late Dr. J. G. Holland, with whom he embarked in the original *Scribner's Magazine*, afterwards the *Century*, and made that periodical the success which it soon became and has ever since continued—with all that is implied therein for American letters and art. *St. Nicholas* was started at his suggestion; his, also, was the idea of the 'Century Dictionary,' and the faith which carried through so laborious and costly a work. The building up of the De Vinne Press is a part of his monument. Mr. Smith possessed remarkable executive ability, and was fertile in projects and resources. He habitually manifested a rare large-mindedness and liberality, and impressed these qualities on his associates. He carried his religion into his daily work, and abounded in acts of charity and benevolence. His failing health had latterly prevented his taking an active share in the direction of the c mpany.

—The illustrations in the May *Century* accompanying Mr. Van Brunt's description of the "Architecture of the World's Columbian Exposition" exhibit to the eyes a graphic impression of the features of the *mise-en-scène* of our approaching Fair, that is most gratifying to the pride of the country, and conveys every promise of conferring honor on the distinguished group of architects and artists who have had the plan in charge. The text of the paper explains what is necessary to an understanding of the aims and methods involved, and, in connection with the cuts, is the most important popular document concerning the matter yet put forth. The Fair is also the occasion of the eloquent characterization of the personality and times of Columbus by Señor Castelar, which may profitably be put in contrast with Mr. Eugene Lawrence's article on the same subject noticed last month. Castelar will have nothing to do with the romantic doubts and legends of Mr. Lawrence, and certainly the portrait he draws, having in it much less of the mediæval and much more of the Renaissance tone and color, seems to us best supported. He brings in what might be called the psychology of history to interpret the mystery of Columbus, and the figure he draws is one harmonious with the complexion of the age; at the same time he puts the practical faculty of Columbus, his trader instinct, in full light, and reconciles it, historically and in national temperament, with the prophetic and mystic element. In the remainder of the number art is a prominent subject, and among the others the paper on Couture is especially successful in rendering that artist's rough individuality, and enlivening the mere story of a career with anecdotes unobtrusively told. Neither can we pass over the admirable paper upon yachting, which, besides much technical information about boats, brings out the fact that not far from 60,000 persons must follow this sport on our waters; and also not to be neglected is the attractive description of the

country life of Kentucky, with its analysis of the character of the people of that State, their past social history, and the rich opportunity the blue-grass region offers for the country-place which appeals so persistently to the taste of our English race. Both these latter articles are charmingly illustrated. There is a profusion of fiction and poetry in the number, and of these Mr. Aldrich's sonnet is one of unusual felicity in touch and feeling.

—In the *Harper's* it is a pleasure to find Mrs. Sutherland Orr's biography of Robert Browning and his wife supplemented by so capable a writer as Mrs. Ritchie. The biography was most dry and meagre in just those touches of personality which in this paper are made the stuff of the story. One finds no "revelations," of course, but much pleasant illustration of the two poets' lives and manners, and of their friends, such as John Kenyon and Mr. Milsand, and others less known, but necessary to make up a circle. The new material consists of memoranda and of some letters to Prof. Knight, in the main, with reminiscences by Mrs. Ritchie herself; there are the usual portraits and facsimiles which garnish such papers, mostly as a matter of custom. The solid articles of the number are an elaborate one, of the well-known pattern, upon the German Army, with full illustrations; a second, of an equally conventional style, upon "The Dakotas," by Mr. Julian Ralph; a thoughtful but not over-progressive paper on "The Private School for Girls," by Anna C. Brackett; and an instalment of Mr. Frank Millet's Danube voyage. The novelties are the beginning of Miss Wilkins's story, of which much is expected, and a poem by Mr. Howells.

—The second supplement to the 'American Catalogue,' published in 1876 by the joint labors of the late F. Leypoldt and R. R. Bowker, has now been put forth under the editorial direction of Mr. Bowker, who also furnishes the preface. It records books published (and imported in editions) in the years 1884–1890, and its appearance, considering the laborious character of the work and the perfection of the typography, is very punctual, though it has been unavoidably delayed. We are told that 6,000 more books and 7,000 more entries, requiring 138 more pages, are included in the present volume as compared with its immediate predecessor, which, moreover, covered a period of eight as against one of six years. Several new features have been introduced: reference is made by page to the issue of the *Publishers' Weekly* in which the entry is fully set forth; and there is a list of State publications (1884–1890)—a first attempt, and as imperfect as must needs be the case in the present condition of State library administration; but the editor aims to make it the basis of a retrospective bibliography. The list of publications of societies has been so much enlarged as to become almost a novelty. Mr. Bowker hopes at some future date to tackle privately printed books and municipal (city) publications. But his contemplated *magnum opus* is a 'General Catalogue of American Publications of the Nineteenth Century,' to be issued in several octavo volumes in 1902–1905. We must refer our readers for details to the preface, and will merely instance the estimated cost, viz., from $50,000 to $100,000, for which Mr. Bowker proposes a subscription of 500 guarantee copies at $100 each. We believe he can obtain it. This important work achieved, "it would then be comparatively easy to complete the national record, as would not be possible in an older nation." Mr. Bowker concludes his remarks by noting a secondary consequence of the new Copyright Law, in that it establishes an official basis for American bibliography through the records in the Library of Congress. The hearty congratulations which he tenders on the passage of the law, must be returned in thanks to him for his arduous and disinterested services both to that end and to the rearing of this imperishable and invaluable monument.

—As perhaps not one in ten of our readers has ever seen the 'American Catalogue,' it will not be superfluous to say that the original issue enumerated the titles of all books in print in this country on July 1, 1876, and that the local branches of English houses were treated as American, so that the scheme comprised (as it does still) a great many English publications. A complementary volume was made a subject-catalogue, and this, too, has been kept up, though the issues now consist of a moderate-sized single volume, embracing both authors (and titles) and subjects. This apparatus enables one at a glance to discover the total product of a given author in the given period, and to learn all the necessary particulars about the date of a book's appearance, its size, cost, editions and styles, and publisher; on the other hand, to ascertain whether any work has appeared on a given topic. Such a book of reference obviously ought to be found (1) in every public library in the land without exception; (2) in every considerable bookstore; (3) in every leading newspaper office. It would thus be within easy reach of the great body of book-buyers, whose purchases could be made with greater ease, certainty, and economy, and with less trouble to others by inquiry for information, than is now the case. Students and authors would be correspondingly benefited. Moreover, the compilers would receive an adequate compensation for their toil. That they do not is proof that the 'American Catalogue' is not yet appreciated or distributed according to its deserts; yet the present volume contains a list of 1,700 American publishers alone.

—The Chairman of the Managing Committee of the American School of Classical Studies at Athens has just received the following note from Dr. Charles Waldstein, with further information about the excavations conducted at the charge of the American Archæological Institute:

"We have found besides the wonderful head and two smaller ones, a torso of a metope in perfect preservation, altogether presenting a revelation of the Polyclitean art of Argos in the 5th century B. C., which will force all to rewrite the history of art for that great period. The hundreds (I might almost say thousands) of smaller objects, bronzes, terracottas, vases, gold and silver, ivory, Egyptian or quasi-Egyptian objects, will keep us at work for a long time. Our men deserve the greatest credit—Brownson, Fox, De Cou, and Newhall. Prof. Poland took charge of the work for five days when I had to be in Athens. About Sparta, suffice it to say now that we have found a most interesting building—the circular building of Epimenides, built about 532 B. C. Dörpfeld and all the Germans consider it a most important find. It furnishes the only fixed point for the study of the topography of Sparta. There is also an interesting inscription. Beyond all expectations, the owners of land acceded to my request to allow tentative diggings, and I dug deep trenches in about forty places. The trench in the theatre was fifty-two metres long by two and a half wide, and in places six metres deep."

—For the first time in its history, on April 21, the American Oriental Society met in Washington, as the guests of the Catholic University and the Smithsonian Institution. Dr. W. Hayes Ward, the President, was in the chair. This was the first meeting of the Society under the new plan of holding only one longer session a year, instead of two short ones. The change has proved to be a good one. Some forty papers were presented. In view of the coming World's Exposition next year, it was eminently proper that Dr. Cyrus Adler (Johns Hopkins) should present a paper "On Christopher Columbus in Oriental Literature," with special reference to a Turkish manuscript. Dr. Adler went over the early Jewish statements in regard to Columbus, and dwelt especially upon a Turkish work called *Tārīkh Hind Gharby*, a notice of which is to be found in the first volume of the Society's publications. It was the first book printed in Turkey. Dr. Adler, while in Constantinople, was able to secure a manuscript of this work of the date 1550. The account of Columbus in it is of little value, but the maps—which, by the way, are all turned upside down—are extremely interesting. Dr. Adler was also able to give some more definite information in regard to a Mr. W. B. Hodgson, an Oriental scholar of America whose name has been almost forgotten. A catalogue of his valuable collection of Oriental manuscripts, printed in Washington in 1830, was accidentally found in the National Library in Paris. After a long search, Dr. Adler located the manuscripts—or a portion of them—in the Telfair Academy of Arts and Sciences at Savannah, Ga. These are now in the United States Museum at Washington. What has become of the others is, as yet, a mystery. It turns out that the collector, Mr. W. B. Hodgson, was chargé d'affaires for his country at Constantinople and in Northern Africa. He was the first representative sent out by the Government for the express purpose of studying Oriental languages and literatures. He reported directly to the President.

—Dr. John P. Peters, Director of the late expedition to Babylonia sent out by the University of Pennsylvania, was able to make a verbal report to the Society of the chief results obtained. Attention was directed by the excavating party to the series of mounds known by the name Niffer, once among the oldest of the cities of Babylon. They there uncovered the old temple of Bel, the chief sanctuary of the place. Tablets were found which go back to the earliest Babylonian dynasties, forty centuries before the beginning of our era. A workshop was found and colored glass—perhaps the oldest discovery of glass outside of Egypt. Dr. Peters searched long for the clay cylinders which were always placed in the corners of the building, and which are so valuable as historical material. He was unsuccessful; but, in making this search, he had occasion to test the accuracy of the orientation of the buildings. He found in most cases that this was in no way accurate or mathematical, but vague and often quite incorrect. The collections made by the expedition are now on view in the Museum of the University of Pennsylvania. In connection with Babylonia, Mr. John Dynely Prince (Johns Hopkins) attempted to settle the meaning of the enigmatical inscription which appeared on the wall of the banqueting chamber of Belshazzar, the last King of Babylon. Following a hint given by Clermont-Ganneau, he translated the words *Mene, mene, tekel upharsin*, "There have been counted a mina, a shekel, and half minas." According to Talmudic usage, an unworthy son of a worthy father is metaphorically called a "half mina, son of a mina." In this way the author of Daniel wished to draw a parallel between Nebuchadnezzar the Father and Bel-

shazzar the Son. The mina was the largest Babylonian weight. The shekel was one-sixtieth of the mina, and would represent Belshazzar as the unworthy successor of the founder of the Babylonian Empire. The two half minas point to the division of the kingdom of Nebuchadnezzar between the Medes and Persians. One of the most interesting papers of the whole session was that of Dr. K. Kohler (New York) on "The Historical and Literary Relations of the Early Christians to the Essenes." Dr. Kohler believes that the Apocalyptic literature shows clearly that Essenism forms the connecting link between the Old Testament and the New. Dr. Kohler also finds that the so-called Apostolic teaching, the 'Didache,' and the Apostolic Constitutions, are essentially Essene in character and of pre-Christian origin. Prof. H. Hyvernat, of the Catholic University, made a valuable contribution to the history of Semitic science in a paper entitled "Historical Sketch of the Work of the Popes and of the Propaganda for the Advancement of Oriental Learning." He showed how the Popes, through their interest in the conversion of "heathen" nations, had done everything to further the study of Oriental languages in southern Europe. They had invited learned representatives of these nations to come to Rome, had established colleges, and had been among the first to assist the efforts that were made to establish printing-presses for the diffusion of Oriental texts in Europe. The Society adjourned to meet next year at the call of the Board of Directors.

—The second volume of Moltke's 'Gesammelte Schriften und Denkwürdigkeiten' (Berlin: Mittler) is entitled Miscellaneous Writings, and consists of papers chiefly of an historical character and originally printed some fifty or sixty years ago. The earliest of these literary productions appeared in book form at Berlin in 1831, and gives a sketch of the mutual relations of Holland and Belgium from their separation under Philip II. to their reunion under William I. This is followed by an exceedingly interesting and instructive delineation of the internal relations and social condition of Poland, in which the strong and weak qualities of the countrymen of Sobieski and Kosciusko are impartially portrayed, and the causes which led to the loss of their independence and to their national extinction are clearly set forth. It was first issued as a pamphlet by Fincke (Berlin) in 1832. The third paper, entitled "Die Westliche Grenzfrage," is an historical discussion of the boundary question between Germany and France, and especially of the policy of conquest arbitrarily pursued by Louis XIV. and resulting in the devastation of the Rhenish Palatinate and the annexation of Alsace and Lorraine. It was contributed in 1841 to Cotta's *Deutsche Vierteljahrsschrift*, and shows how strongly Moltke as an historian then resented the wrongs which he, as a soldier, did so much thirty years later to rectify. Of a different character is the elaborate essay on the things which ought to determine the direction of railroads. The views expressed prove that Moltke was far in advance of his contemporaries in the conceptions he had formed of the industrial, economical, and strategical importance of such lines of communication. It first appeared in the aforementioned Quarterly in 1843. The volume concludes with five shorter papers bearing on the Eastern question, which are reprinted from the Augsburg *Allgemeine Zeitung* of 1841, 1842, and 1844. They are the results of Moltke's personal observations made during his sojourn in Turkey from 1835 to 1839, and treat the subject from geographical, ethnographical, political, and military points of view. Interesting is his remark on the tendency of modern civilization to render wars less frequent, and his expression of the hope that the time may soon come when the milliards of money and the millions of men now (in 1841) devoted to preparations for war, may be turned into peaceful and productive channels. That war, as it is sometimes said, develops heroic virtues, he admits, but he thinks these qualities may be called forth more profitably to mankind by industrial enterprises of great scope than by martial exploits.

RECENT FICTION.

Tess of the D'Urbervilles. By Thomas Hardy. Harper & Bros.

The History of David Grieve. By Mrs. Humphry Ward. Macmillan & Co.

The Lesson of the Master. By Henry James. Macmillan & Co.

A First Family of Tasajara. By Bret Harte. Houghton, Mifflin & Co.

In the Vestibule Limited. By Brander Matthews. Harpers.

Muckle Jock, and Other Stories. By Malcolm M'Lennan. Macmillan & Co.

Denzil Quarrier. By George Gissing. Macmillan & Co.

THE title-page of 'Tess of the D'Urbervilles' is decorated with the supplementary phrase, "A pure woman faithfully presented." In the light of this phrase the book must be read, and with the assurance that the author's definition will be found there. A definition is found, full and explicit, doubtless directly inspired, for it bears no resemblance to the common usage of our language, but is, on the contrary, a negation if not reversal of the definition we learned at school, and of the meaning impressed on us by the practice of living.

After possessing ourselves of the circumstances which lead to and surround Tess's first misadventure or misdemeanor, the suspicion arises that Mr. Hardy, who never errs on the side of chivalrous respect for women, has only indulged in a playful gibe of questionable taste at a rigorous social canon. As the story advances, it becomes plain that his phrase is a deliberately chosen head-line for the extraordinary argument that a woman whose conduct is flagrantly impure, in the sense of unchaste, may have an enormous fund of what he calls intrinsic purity, and that moral value is to be reckoned not by achievement, but by tendency —with the corollary, most comforting to the weak, purposeless, and vicious, that the beauty or ugliness of character lies not in performance, but in aims and impulses, its true history not in things done, but in things willed. Tess's story is told with such vigor and passion that one need not be wholly unreflecting and uncritical to accept Mr. Hardy's false premises, and to fail to perceive the effrontery of his plea for pagan naturalism, which in plain English means physical deterioration and moral death. Granting him his assumption of "intrinsic purity" without any reference to conventional respectability, but with a meaning limited to a feminine instinct of self-defence, Mr. Hardy takes pains to show us that Tess is entirely deficient in that instinct. If his premise of purity is sincere, it rests on an imperfect induction, or on the fundamental error of identification of the sexual impulses of men and women. It is not in obedience to any dictate of society that most women are chaste, but in obedience to a general law of that Nature, the God of his idolatry; a power which in the beginning created them male and female, and which was not so barren of ideas as to make the feminine type a repetition or feeble imitation of the masculine.

The real explanation of Tess's first lapse from virtue lies not in the argument or the circumstances, but in another descriptive phrase, "A vessel of emotion untinctured by experience." There is no record of any resistance worth mentioning, of any violent revolt of the imagination; and the idea of a possible mental influence is particularly excluded. The vessel was filled with animal emotion to the exclusion of checks. She was unfortunate, not pure. Even the paltry excuse of inexperience cannot be offered for her subsequent exploits in the exhibition of purity. For the second time she leaves her home, feeling that the children would probably gain less good from her precepts than harm from her example. It is pertinent here to remark that the average reader of Tess's story will probably be in the same case as her brothers and sisters. But, "at last," we are told, "she had learned what to do"; yet no one who can spell out the uncertain meaning of inclinations and tendencies will, with all the charity in the world, be able to doubt that if the second man who approached her had not chanced to wish to marry her, what had happened before would have happened again. When Angel Clare, in the pasture, makes a surreptitious dash at the "desire of his eyes," she yields to his embrace "with unreflecting inevitableness." Again by his phrase is the author's argument eternally pulverized. "Unreflecting inevitableness" in such a position may be a misfortune; it is not purity. In the crises of existence what one is —one's essential being—expresses itself in action. A greater than Mr. Hardy said that conviction is worthless till it convert itself into conduct. He was not deaf to the cry of human nature, but he dared to distinguish between a genuine cry and a sentimental scream.

The remainder of Tess's career, her failure to enlighten Clare until after their marriage, her return to her first lover for reasons which a woman of common decency would have rejected as frivolous, her last mad act of vengeance—all go to show that she was a weak and supremely sensual woman, and that Mr. Hardy's book, with its titular phrase and its argument eliminated, is a powerful and artistic delineation of that sort of a person. A poetic appreciation of inanimate nature she certainly had, rather wild and tinged with superstition; she loved Clare as she had not loved D'Urberville; she cared deeply for her family—but she was quite a victim to "unreflecting inevitableness," and cannot be exonerated from a yearning for lemon-colored gowns with slippers to match, procured at no matter what price.

The people who help along this doleful tragedy manage to express their character in action. D'Urberville is a thorough-going scamp. His temporary religious fervor is a scampish aberration; it has no roots in his former life and no sequence. Angel Clare is a good man, just and not unduly severe. It is natural that he should discard his wife, not unnatural, considering her sensual attraction, that he should come back to her and not notice the lemon-colored finery. The Durbeyfield father and mother embody much humor, of which, if Tess had inherited a spark, she might have escaped many unpleasantnesses, includ-

ing the gallows. In the minutely detailed dairy life, the smell of boots is stronger than that of clover, and the Clare-adoring milkmaids (all presumably "intrinsically pure") remind one of Bunthorne's maidens gone into flesh. The scene of "The Midnight Baptism," which appeared in the *Fortnightly* for May, 1891, and also in the English edition of the novel, is omitted from the edition under review. The reason for such an omission is not clear. It is a very impressive scene, which, but for artistic restraint and proportion, would be farcical. It is irreligious, but not immoral. Still, we cannot regard this edition as deliberately expurgated out of respect to the "young person." 'Tess of the D'Urbervilles' is as profoundly immoral a book as the "young person" can easily lay her hands on.

No two novels could offer a more vivid and direct contrast than 'Tess of the D'Urbervilles' and 'David Grieve.' Mr. Hardy's argument might be cut out by paragraphs and pages, and there would remain between the covers a thrilling and gloomy tragedy. Mrs. Ward's story and argument are inseparable, and the argument is the *raison d'être*. Mr. Hardy is a novelist, and had much better stick to his last. Mrs. Ward is heart and soul in the modern "movement," an apostle of progress, a preacher of an uncertain sort of Christianity, of an excellent morality, and of a presiding, immutable *Ananké*, yclept Heredity. If it were not for the industry, patience, and ability displayed in her disquisitions—qualities which forbid even the appearance of disrespect—we should say she had better stick to her last. There may be uninstructed rustics who suppose that the beautiful lady in the hair-dresser's or milliner's window is exhibited for her own sake, and not primarily to advertise the coiffure or bonnet. So there may be people who will read 'The Story of David Grieve' for David's sake, and believe that it was written first of all to make known how one man attacked the problem of life, and what was the outcome for him. Yet these undiscriminating beings are, we think, rarer even than the ingenuous rustics; are of those who care more for "good reading" than for story and art, and are blissfully ignorant of subtle distinctions between creation and representation. Mrs. Ward's dexterous and steady management of her "movements" reminds us of a circus-rider with six horses abreast—she keeps them so cleverly in hand. She, however, never rides at a gallop or straight for the finish, but, at a decorous walk, pursuing devious ways, arrives eventually at the point she has had in view, with her team in good condition. The dulness of the performance for a person of quick perception, who is not totally ignorant of the trend of modern movements, lies, perhaps, in the fact that he commands a sight of the finish almost from the start, and therefore, by nothing short of grim determination, can keep down his pace to Mrs. Ward's. If he has just been reading 'Tess,' he may more willingly restrain himself, fully to enjoy Mrs. Ward's triumphant illustration of the influence of character on conduct.

David Grieve's conduct is shaped by his primitive instincts, expanded, modified, corrected, and directed by intelligence applied to experience. As he generally has the air of a theory in the concrete, a generalization with a name, the satisfaction derived from this part of his delineation is all the more profound. David had his moments of aberration—so have we all: in his childhood, for instance, when he tried to "get religion," and, failing, went to the inn, got gin instead, and behaved altogether very badly. Though this period of "childhood" is very long (an unusual defect in the period of childhood, for most of us all too fleeting!), and though it must be spelled out rather than read by those not privileged to have enjoyed a course of instruction in the Lancashire dialect, it is the time when David is most himself and least many others. Here are fewer explanations, not only of feelings, but of remote sources of feeling; here we are less constantly bidden to observe an advance into new plains of intelligence, and the reflex action of the mind on experience; here we are less frequently invited to consider whether his moral perceptions are ethical or æsthetic. David's second and great digression from his normal rectitude is in Paris. But this digression has its scientific reason. His maternal heredity must have its fling, just to round his character and to show that the terrible sister Louie has not monopolized the family supply of naughtiness. Mürger, born again and become a captain in the Salvation Army, might have written these Paris chapters; his wit and spontaneous deviltry being effaced by a realizing sense of how mad and bad it all was, and of his solemn duty to hold himself up as a warning for young men.

With the close of that "storm and stress" with which it is not quite possible to feel sympathetic anguish, all chance of aberration vanishes. We settle down to accompany David through a "wrestle of conscience as sensitive as profound, as tenacious as scrupulous"; we brace ourselves to see him through his theological puzzles and humanitarian experiments. He solves his spiritual problems by finding refuge and rest in the idea of God, and that idea stands on a conviction of a force in human beings which is "beyond nature, which, instead of being made by nature, is the condition of our knowing there is a nature at all." This conviction seems to satisfy David, but is not vividly illuminating to others, and suggests that, for a clever, inquiring fellow, he has been very slow. He says that his idea is not open to argument, which seems to number him with the despised dogmatists whom we have always with us.

As David represents all Mrs. Ward's specifics for the sad world's healing, so her large assemblage of persons represent nostrums at worst pernicious, at best innocuous. These persons are carefully observed—far, far too carefully for just appreciation of those who must be up and about their toiling and spinning. Each one is a variety of the species familiar either in life or in fiction, not always in both. The Parisian figures are distinctly done at second hand; so are the phenomenally insolent Lady Driffield and Col. Danby. The terrible sister, Louie, is a subject fitted for the manipulation of the great Ouida only. In few aspects does she seem a possible person, in none (let us rejoice!) a probable one, and yet the one deep note of personal passion in David sounds in his remorse for his neglect of her. He is head and shoulders above a generalization when he begs her not to do herself (her dreadful self) injustice; and his failure to save her at the last is, after all, the one signal failure in the life of the individual, David Grieve.

The reviewer who arrives at Mr. Henry James's volume entitled 'The Lesson of the Master,' may indulge in a hurrah!—he has got out of the wilderness. No more struggling with people who try to do several things at once, or with people who have no clear idea of what they want to do. Every page is, in the art of fiction, a Lesson of the Master. Every story is distinctly a story, and nothing else, an entanglement of which the unforeseen dénouement is quite the thing to have been foreseen if only one had been clever enough. There is, however, some excuse for density in the author's manner, so cultivated, leisurely, absorbing, that the mind is not impatiently prefiguring a solution—is, indeed, in no way occupied with that, except for the regret, as the end draws near, that so fine a performance should not go on indefinitely. To praise perfection is superfluous, and the reviewer who would avoid inane garrulity need say little more than a few words of reflection on what seems to him partly to account for the artistic perfection of Mr. James's latest volume.

It is indispensable that a good story-teller, even as a good judge, should preserve strict impartiality, that he should have the knack of keeping out of the quarrel. To stand apart and watch the fight (or even the small scrimmages) of life, and then to tell, neither approving nor condemning—that is the lofty and lonely function of the modern artist in fiction. To attain this height he must not become a monster incapable of emotion or sympathy, but he must feel *for* all the participants in the conflict and not *with* any. He is a spectacle of pure intellect and artistic sensibility dominating commoner if not inferior qualities. For all who enjoy this interesting and singular spectacle, Mr. James's book will be a source of pure delight. Only in one instance does he appear to discard his impenetrable mask and to speak his own mind. The "Master" seems to express the author's convictions about the tribute which literature exacts from one who has espoused the profession of letters and would be worthy of his calling. The Master's denunciation of himself as a worshipper of false gods, and of his confrères who work for money (not to live on but to riôt on), certainly has an admonishing ring. The story of "The Pupil" illustrates an impersonality proof against all temptation. The pathos of the situation is so subtle and so profound, the inducement to exclaim, "Now behold the sorrow of this! Reflect on the pity of that!" is so strong, that the author's self-restraint appears marvellous. Yet he makes no faintest deviation from his dispassionate calm, and the result is that the reader, by the aid of his own unguided beholding and reflecting, is gradually consumed with pity, and, at the catastrophe, has a moment very near to personal anguish.

There are scenes and characters in 'A First Family of Tasajara' which compare favorably with Bret Harte's early work. We have mourned over the author of 'The Luck of Roaring Camp' as one irretrievably fallen from greatness, and are only too glad to recognize signs of his rising again. The scenes are before one flood made the Harkutts' fortune, converted them into Harcourts and a "First Family," and after another flood had swept their fortune away, if not obliterated their social preëminence. The characters are Peters, Wingate, and Billings, who, in adversity as in prosperity, preserve that imperturbable calm founded on an inextinguishable sense of humor, which Bret Harte alone has known how to create or to represent in a way that carries delighted conviction. The plot (there is a good deal of plot) is ingenious, romantic, and not noticeably artificial, excepting the incident which connects John Milton Harkutt's second love, the rich and sentimental widow, with the mysterious 'Lige Curtis. Clementina Harkutt's elusiveness is a little theatrical, but she is a person to wonder at, and helps to rank the story among its author's good things.

'In the Vestibule Limited' does not rank

among Mr. Matthews's best things. Coincidence is strained, and a Miss Vernon, in life, would be more likely to fly from Miss Marlinspuyk with uncomplimentary ejaculations about meddlesome old cats than meekly to acquiesce in the outcome of her benevolent intervention. For the rest, there is sprightly dialogue and, in description, the author's known neatness of touch—qualities sufficient to make the little book an agreeable companion for half an hour in a vestibule limited.

When the volume of stories entitled 'Muckle Jock' appeared, more than twenty years ago, they doubtless deserved the encomiums lavished on them by the literary press. Then, plain stories of plain people, plainly told, were so unusual that all the world wondered when a volume of such curiosities was published and actually found interesting. Now, one has almost to apologize for writing stories about people who are not plain, almost low, in their habits, no matter how intrinsically common they are shown to be. The success of Mr. Barrie's Scotch stories may account for this new edition of Mr. M'Lennan's stories of peasant life in the North, but it does not follow that 'Muckle Jock' will prove as acceptable to the *fin de siècle* public as 'Auld Licht Idylls.' Mr. M'Lennan has neither the power of idealization nor the quick fun of Mr. Barrie, and, just now, the world is tired enough and prosy enough to give great value to those qualities in literature. The remnant of the host that adored George Eliot for her carking earnestness, will find in Mr. M'Lennan a worthy disciple of their great teacher, with equal sincerity and a comparable power in the delineation of rustics who get up and go to bed with the sun, but whose lives are otherwise sadly at odds with the sun's brilliant career. To read the stories intelligibly, it is necessary to understand pure Scotch, or, at least, to make constant reference to the glossary at the end of the book.

'Denzil Quarrier' is a clever study of a clever Englishman of the middle class. His aggressive self-reliance, which saves him from being a Philistine, is responsible for the error which makes the story. That English novelists now make no bones about the discussion of marriage versus *l'union libre* indicates a widespread modification of public opinion. The misery which they generally heap upon those who have preferred the illegal arrangement, or who have imagined themselves to be driven to it, may also be taken to indicate that they don't mean to hustle the British nation into any sort of anarchy which includes free love. Quarrier's choosing to live with another man's wife is a natural enough expression of his arrogance, but, being an astute and cautious person, his scheme for deceiving his stodgy constituents is too obviously rash. This is an assumption of idiocy, in a man otherwise reported sane, which no novelist can indulge in and hope to live.

PATRICK HENRY.—II.

Patrick Henry. Life, Correspondence, and Speeches. By William Wirt Henry. 3 volumes. Charles Scribner's Sons. 1891.

We have thus far made it plain that we find ourselves in substantial agreement with the author in the larger outlines with which the life and career of Patrick Henry are here delineated by his grandson and biographer. In some of the circumstantial details with which these larger outlines are associated, as also in some of the shades and colors with which comparative praise or blame is sometimes distributed, we are not always able to perceive the entire justice of the author's appreciations. We cannot see that Henry was wiser in opposing the adoption of the Constitution than Washington or Madison in favoring it, and it seems to us that some of the grounds on which he opposed it were drawn rather from panic fears than from real perils, as, for instance, when he predicted that under it the Mississippi River would be surrendered by the Northern States, or as when Grayson predicted that under it not a single Southern State would ever be admitted into the Union. We quite concur with the biographer in remitting to the limbo of contempt a series of letters in which an anonymous pamphleteer of the "Philo-Junius" order, writing under the pseudonym of "Decius," assailed the public and private character of Patrick Henry in 1789, at the close of the heated struggle over the Constitution. But in a single paragraph it seems to us that "Decius" struck the nail on the head, to wit, when he charged that Henry urged against the adoption of the Constitution "a thousand dreadful things which had nearly been the consequence of continuing under the Confederation." Among these "dreadful things" was "the sacrifice of the Mississippi," which in all probability would have been inevitable under the weakness of the Confederacy, but was forefended against even the treason of Wilkinson and Burr by the strength of the Union under the Constitution. Whether our civil war, and the consequences of war under the Constitution as predicted by Henry, should be ascribed to the "State-rights principle," which he advocated, and in which our war originated; or whether they should be ascribed to the Federalism which sustained the war for the Union; or whether some at least of the military consequences should not rather be ascribed to the "war powers" of international law by which the prerogatives of the Government were supplemented after the war had assumed "a territorial character," are all open questions, according to the point of view that is taken and the point of time at which our judgments are pronounced.

In any view we cannot convince ourselves that Henry was right in insisting on the adoption of his amendments—twenty in number, with a bill of rights superadded—as a condition precedent to the adoption of the Constitution by Virginia. Such a mode of procedure would have remanded the whole question of the Constitution and its ratification to the uncertainties of a void and formless future, besides being insulting and embarrassing to the States which had already ratified the instrument unconditionally. It would have been tantamount, in all probability, to an ultimate dissolution of the Union, which was then held together by "a rope of sand," and would have confirmed the suspicion of Madison in 1787—an unjust suspicion, we are sure—that Henry wished at that date "either a partition or total dissolution of the Confederacy." And we cannot perceive that Patrick Henry was discreet in the struggle he made, after the adoption of the Constitution, for its earliest possible revision by a new Federal Convention. Such a proceeding would have thrown our infant polity into the chance medley and hotch-potch of a new political battle, to be fought over a new division of the Federal assets. It seems to us that Madison reasoned well when he held that if a new convention should be called on the heels of the ratification of the Constitution, it was "little to be expected that the same spirit of compromise would prevail in it as produced an amicable result in the first"; and that in such a second convention "it would be easy for those who had latent views of disunion, to carry them on under the mask of contending for alterations popular in some but inadmissible in other parts of the United States."

We can hardly agree with the biographer in holding that, though Patrick Henry took no part in framing or adopting the Constitution, yet the American people are mainly indebted to his foresight and persistency for the important safeguards which were engrafted on that instrument, soon after its adoption, for the protection of our liberties. The claim seems to us exaggerated. We cannot forget that Patrick Henry accepted these amendments very grudgingly, because they did not go far enough, and even held that they would "tend to injure rather than serve the cause of liberty," because they would "lull suspicion" without giving security. Just as little can we see that the pressure of Henry for amendments was the *vis a tergo* which impelled Madison to the accomplishment of the task which he effected on the floor of the House of Representatives in favor of the amendments recommended by that body. Madison and his associates did not take their initiative from Henry in either the motive or the choice of these amendments. As an advocate of the Constitution, Madison was not pledged to its inerrancy. Washington was a zealous advocate of the ratification of the Constitution, though admitting, while the ink with which it was written had hardly dried, that there were some things in it which never had his approval, and "which he was persuaded never would obtain his cordial approbation." In the matter of the amendments proposed by Henry, Madison admitted on the floor of the Virginia Convention that he was ready to consider "how far they were good," but proclaimed at the same time, with outspoken frankness, that "as far as they were palpably and insuperably objectionable, they ought to be opposed." In the face of the amendments concerted by Henry and his associates, Madison declared on the floor of the Convention that the Constitution, in the form impressed on it by its framers, was "infinitely more safe than it would be after introducing into it that long train of alterations which they called amendments." This was not the language of a man who would be likely to look to Henry for the *vis a tergo* which was to direct him in the pursuit of constitutional reforms.

We are therefore not a little surprised in this same matter of the amendments to find Madison charged with having practised "an artful concealment of his views" in a letter written to George Lee Turberville, under date of November 2, 1788, and which, it is intimated, was designed by Madison to conciliate the Virginia Legislature and procure his election as Senator. In this letter Madison admitted that he was not of those who thought the Constitution "a faultless work"; that there were amendments which he wished it "to have received before it issued from the place in which it was formed"; that there were some amendments which he still thought "ought to be made according to the apparent sense of America," etc. Such a letter, considered as one "designed to be used in the Legislature," seems to the biographer "very different from other letters written by Madison in confidence" to Washington and Hamilton immediately after the amendments of Henry had been broached in the Virginia Convention. In these letters Madison had held that some of Henry's amendments were "highly objectionable." But surely there was nothing covert or confidential in such communications, when he had

openly proclaimed on the floor of the Convention that some of them "were palpably and insuperably objectionable." While these words were still ringing in the air, we cannot see that Madison practised any "artful concealments of his views," so far as can be judged from a comparison between his private and his public declarations. The public record he made for himself in open debate did not differ from the communications made to Washington and Hamilton under the sanction of private correspondence; and when, in this same Turberville letter, he declared his opposition to a new convention, the hostility of Henry and his partisans was, by that frank avowal, sufficiently assured against Madison's candidature for the Senate.

It was to be expected that the author of this biography would devote a special chapter to the history and significance of the Kentucky and Virginia "Resolutions of '98," which had such a decisive weight in precipitating the adhesion of Patrick Henry to the Federalist party. Where Madison, who wrote the Virginia series, declares that they mean one thing, and Calhoun, who adopted them as his own, declares that they mean another thing, there is obvious room for a wide oscillation of opinion concerning their real intendment. It is plain that these famous political cries were meant to scatter "ambiguous voices." Jefferson, indeed, made no concealment of their designed ambiguity when he wrote to Madison that it seemed expedient to affirm all the important principles which these "Resolutions" contained, so as to hold to the ground covered by them in the future, and yet to leave the matter in such a train that the Republicans would not be "committed absolutely to push the matter to extremities," while being left "free to push as far as events would make prudent." Such a "game of fast and loose" easily lends itself to double meanings as well as double purposes. But it hardly seems fair to expand the meaning of the Virginia manifesto in a belligerent direction by infiltrating it with the gasconade of John Randolph of Roanoke, simply because that political Thersites declared in 1817 that the Virginia Republicans looked to "violent opposition" in the passage of their solemn protest against the alien and sedition laws, and that they prepared for military resistance by building an armory in Richmond contemporaneously with their declaration. It was quite natural that the author of this biography should corroborate his views of the Virginia manifesto by citing the statement of Randolph, confirmed as it is by the authority of Mr. Henry Adams in his 'Life' of the Roanoke politician. Yet we believe the story is wholly apocryphal, and rests on nothing better than Randolphian melodrama and bravado. Certain it is that Randolph's statement at the time he made it was immediately and flatly contradicted on the floor of Congress by two of his colleagues, Mr. Pleasants and Mr. Jackson, who had been members of the Virginia Legislature when the "Resolutions of '98" were passed. And the impossibility of the story is clear enough if it be true, as we find stated in a Richmond edition of the "Resolutions," that "the Armory and Arsenal Bill," to which Randolph referred, was passed on the 23d of January, 1798, about five months before the alien and sedition laws were enacted. It would seem, therefore, that "the armory legend," as currently used to point a moral and adorn a tale at the expense of the Virginia "Resolutions of '98," is only another illustration of the "myths" which, light as thistledown and tenacious as burdock burrs, attach themselves with readiness to any epoch-marking and sensational incident in the annals of history. So true is it that the Muse of History, especially when she trails her robes along the highways of emotional politics, is sure to carry at her heels a crop of entirely plausible fictions which the *Mythus* has tacked on her train.

We should not omit, in closing these comments, to bear our cheerful tribute to the literary accuracy as well as the historical thoroughness and fidelity which Mr. William Wirt Henry has brought to the preparation of these memorial volumes. Careful reference is given on every page to the authorities which have been consulted, and the range of these authorities is wide. Typographical errors there must be, of course, in a work of more than 1,800 pages, but they are few. Slips of the pen there will be, as when, for instance, in the second volume it is written that "*Edward* Pendleton" (p. 347), instead of Edmund Pendleton, was the President of the Virginia Convention of 1788; or as when we are told by a witness, without correction, that Patrick Henry, in his latter days, was in the habit of carrying about with him "Soame Jennings's" book (p. 490) on the 'Internal Evidences of Christianity,' where reference is intended to the treatise of Soame Jenyns; but such inaccuracies are very exceptional. It remains to say that the typographical execution of the volumes calls only for commendation.

GERMAN ARCHITECTURE OF THE RENAISSANCE.

Denkmäler der deutschen Renaissance, herausgegeben von K. E. O. Fritsch. Berlin. 1882–1891. 4 vols., at 300 marks.

THE late Mr. James Fergusson, in his 'History of Modern Architecture,' says that "the Renaissance architecture of Germany may be dismissed in a very few lines, inasmuch as, during these three centuries, not a single architect was produced of whom even his compatriots are proud, or whose name is remembered in other countries; and not a single building erected the architecture of which is worthy of much study, nor one that calls forth the admiration of even the most patriotic Germans themselves."

Now no writer calling his work a history was ever more haphazard in his statements than Mr. Fergusson; but had he waited a little before publishing this one, even he might have hesitated in its utterance. The year of the appearance of the 'History of Modern Architecture' witnessed also that of Lübke's 'Geschichte der deutschen Renaissance,' Ortwein's great work was already under way, and now, ten years after its beginning, the 'Denkmäler deutscher Renaissance' of Fritsch has come to a successful ending. It is true that before Lübke the Renaissance in Germany had lacked an historian; it may also be true that the great outburst of patriotism (and bumptiousness) consequent on the Franco-German war was, in a measure, the cause of all these works, and that, though patriotism may make a people prouder of its possessions, it cannot make those possessions any better than they were before; yet it is none the less true that the Renaissance produced monuments in Germany that deserve better treatment than the cheap sneer of Mr. Fergusson.

The splendid series of plates before us afford ample means for judging the architecture of Germany during the sixteenth and part of the seventeenth centuries. They are reproductions of photographs taken directly from the buildings themselves, are large enough in size to show clearly even the minutest details, and are perfectly satisfactory in execution. As there are 300 of them, they form, especially if supplemented by the equally splendid work of Dohme, 'Barock und Rococo Architektur,' an admirable representation of the constructive art of Germany between the fifteenth and the nineteenth centuries. The text, published with the last *Lieferung*, is strictly confined to the necessary explanations regarding the plates. It would have been well had it been preceded by an essay, even a short one, on the general aspects of the Renaissance in Germany, and still more is it to be wished that the plates had been numbered, and that there was an index, to avoid the necessity of seeking for a given view through the twelve *Lieferungen*, or the four volumes into which it was intended the work should be divided.

Architecture, everywhere in the north of Europe in these three centuries, was chiefly civil—palaces and town and country houses for the nobles and for the middle classes, to answer the new social wants of the new civilization, and public buildings. The Middle Ages had left churches more than enough for centuries that already made less use of them; the change in the modes of warfare had made unnecessary nine-tenths of the military architecture which other times had demanded. The new art drew its inspiration from Italy, and, as might be expected, Germany was far behind France in its application. Feudalism lingered longer in Germany, largely for want of a splendid and powerful central court to transform the character of the nobility, and the rude Burg still subsisted when the French nobles were already building modern palaces after the manner of the Italians. Moreover, the Renaissance entered into Germany by the way of literature and painting and engraving, rather than by architecture. Its builders in the sixteenth century knew Italy only from books, drawings, etc., and the plans that they evolved, executed by stone masons whose highest effort in the way of sculpture had been in geometric tracery, were naturally but clumsy achievements.

Besides all this, Goethe's reproach to Luther, that he had retarded civilization in Germany for fifty years, was nowhere truer than in respect of architecture. We know not only that Luther was not hostile to the arts, but that, in his way, he loved them; still, his work, and that of his time, was something quite other than their promotion. As long as he lived, then, the new architecture made but little headway. He died in 1545, and shortly after Germany began to be at peace and to reap the benefits of peace in splendid works. The triumphs of modern architecture in the land, the Otto Heinrich's Bau of Heidelberg Castle, the court of the old palace at Stuttgart, and the porch of the Rathhaus at Cologne, all date from the latter half of the sixteenth century. Up to the outbreak of the Thirty Years' War, the country followed with zeal the new direction given to art. If the results are less splendid than they were in Italy or France, it is because the country was less rich, less civilized, and also because (there is no use in denying it) it was less gifted in artistic qualities.

This excellent work of Fritsch is, then, after all, one more proof, if any were needed, that the Germans have never yet been an artistic people; and this in spite of certain great achievements in each period of their history. In the epoch of Romanesque architecture, the region on both sides of the Rhine was adorned by a series of magnificent churches, that remain to this day the most splendid monuments that

the country can boast. The same style in other parts of Germany produced, as a rule, only horrors. Gothic art was introduced late, and its great successes could be counted upon the fingers of one hand. Still, the so-called *Norddeutsche Tiefländer*, in their forced use of brick, gave us a variety of Gothic which, without yielding anything of the very first rank, is original, dignified, and often impressive. So in the sixteenth and seventeenth centuries, alongside of three or four buildings that would do honor to any land, as many more that would be worthy of a second-rate position in France, and as many hundreds where some one feature—a portal, a gable, or an oriel, showing all the German love for elaborate decoration—is attached to a huge mass otherwise insignificant, there is a goodly number of more modest class that may fairly be counted among the best things the country can show.

Every traveller in Germany has noticed the huge timbered houses of old towns like Brunswick, Hildesheim, or Halberstadt. The ground floor is often built of well-squared stones, while the upper stories, usually projecting more and more beyond the lines of the foundations, are a skeleton of timbers filled in with brick or plaster. The main feature is, however, the gable, which soars majestically upwards with two, three, or even four stories of windows in its broad field. The sixteenth century found this type of house already existing, and did not dream of changing a thing so well adapted to the wants of the country. It merely modified the details. From Gothic, without altering a single fundamental disposition, the house became modern or Renaissance. The forms of everything ornamental were modelled after the classic and antique that the books were importing from Italy. Often about windows encased in mouldings of the purest late Gothic type were put Roman pilasters and an architrave. The houses of this mixed sort are among the most charming things that architecture in Germany can boast. Later, as knowledge of Italian art increased, the details became more correct, but the charm was no longer there. They were just like any other German *Nachahmungen*, spiritless and detestable. The one really exquisite work of the sixteenth century, the portico of the Rathhaus in Cologne, is a delightful combination of columns of the composite order with arches still pointed, with Gothic vaulting and roof. The houses that we admire in the old towns of the north are not to be compared to this portico, excepting as both apply the forms of a new art without slavish subserviency, and only just so far as they suit the purposes of the builder.

The gable was everywhere in Germany, and continued to be so during the whole period, the distinguishing feature of Renaissance architecture. A house with its long side towards the street, and with the rich dormer windows that play so beautiful a part in French construction of the period, is a great rarity. Instead of this, the gables are of a width and height that make them imposing, though, where ornament is abundant, it only too often detracts from rather than adds to the effect. Pinnacles, the too-pervasive scroll work—that even Lübke admits to be a weak side of German Renaissance art—and other clumsy and unmeaning devices, go far to spoil what would otherwise be noble. We have said that the sixteenth century merely took the gable as it found it, and turned it to its own uses; in Gothic art it was equally prominent and sometimes, especially in the regions towards the Baltic, filled in with pointed arch panels, it was really beautiful. Even then, however, it was not always a success; and in the Renaissance art, where the types became much more varied, there was by so much the greater chance of going wrong.

The eighteenth century did violence to all German traditions of building. The country had hitherto borrowed every style of architecture, Romanesque, Gothic, Renaissance, from some one or other of its neighbors, but had ended always by making them its own. German Gothic might be, and generally was, very bad, but there was at least no mistaking it for the Gothic of any other people; so with German Renaissance architecture—but the last century changed all that. Every German prince exhausted servility in trying to imitate Versailles and the two Trianons, and at the beginning of this century, when every little State had its Monplaisir, Monbijou, Monrepos, its Sans Souci or Ludwigslust, architecture had reached the lowest point of insignificance. Up to the war of 1870, the newer, the more pretentious streets of German towns were of an insipidity and ugliness that could hardly be matched in Europe. Not only had the gable been abandoned, but along with it every other feature that might in the least degree give character to a façade. The new Empire has, not unnaturally, gone to the other extreme. In the revived German Renaissance, the architects have too often tried to put every ornament that ever was invented upon one and the same house. Nothing is more common than to see a building possessing gables, dormers, porticoes, balconies, pinnacles, oriels, loggias, pilasters, and columns, and, if there be left room for anything else, it is somehow there. Of course there is no knowing what will remain after all this effervescence shall have subsided. We can only hope for the best. The volumes of Fritsch show abundantly that, in the epoch from which these architects draw their inspiration, there was more bad work than good. A comparison of what is done now with what was done then is, on the whole, far from discouraging.

Lübke, in the opening chapter of his 'Geschichte der deutschen Renaissance,' says:

> "While the Romance lands, Italy and France, as well as Spain, are in no position to appropriate the great results of the ecclesiastical Reformation of Germany, it is on the contrary the fortune of Germany to receive energetic influences from the artistic Renaissance of Italy, and to unfold therefrom a new art, in which the southern sentiment of beauty is united to Teutonic depth and strength."

We may pardon this because it was written not long after the Franco-German war, when the gravest Germans indulged in a good deal of buncombe; but we cannot let it go without protest. Teutonic depth and strength may have united with a feeling for beauty to create the architecture of the sixteenth and seventeenth centuries, but that feeling for beauty was not in the least Italian or southern—it was as Teutonic as the depth and strength. The imagination of these men of the north has not the turn for grace, the sentiment of balance, clearness, proportion, and symmetry of the southern imagination. There is, by way of compensation, a feeling for picturesqueness, for the play of light and shade, an expression of dignity, that, at times, is touched with melancholy and becomes poetic. These are qualities that often make us forget the uncouthness of details, the absence of the plastic and more purely architectural gifts, in the suggestion of the magic that has woven legends and ballads, rude, even coarse on occasion, and then again warm with enthusiasm for beauty, for strength and nobility. Our admirations by no means always accord with the accredited ones. With regard to many of these—too many, in fact—we can but quote the criticism of Viollet-le-Duc on Nuremberg, found in his 'Lettres écrites d'Allemagne.' Nuremberg, he remarks by the way, is "une collection plutôt qu'une ville," and among its monuments "on a peine à trouver une de ces œuvres qui laissent un souvenir durable; on est souvent étonné, jamais ému; c'est toujours le dernier objet qui frappe le plus, et qui fait oublier les autres."

Life of Benjamin Harris Brewster, with Discourses and Addresses. By Eugene Coleman Savidge. Philadelphia: J. B. Lippincott Co.

The author of this work has, so far as in him lay, faithfully complied with the maxim, *De mortuis nil nisi bonum*. Were we to accept his estimate we should find ourselves ranking Mr. Brewster with "Lincoln, Seward, Cameron, and Grant." He was "a man of letters among men of the world; dazzling scholars by his worldly position, politicians by his culture." The themes that he touched "are bestrewn with literary gems and rounded with philosophical reflection." This is not put forth as the opinion of a biographer: "it is a national tribute. The coronet unanimously accorded his work by those whose individual judgments make laws, bestow honors, or guide national opinions, must establish beyond cavil excellence in a sphere incapable of official degrees." As an orator he was "superb"; as a lawyer he was "of the noblest order"; in literature as well as law "his resources were marvellous"; his memory "was a marvel"; his conversational powers, moreover, were incomparable, his sympathy, magnanimity, and other good qualities were pre-eminent, and withal he was a very religious man. There may be found in his life "errors of judgment, mistaken impulses of a warm heart, apparent inconsistencies which are in truth but increased light and more matured reflection, and, perhaps, inconsistencies real and inexplicable. But search here is conceived to be no duty of the biographer."

With due respect to the memory of Mr. Brewster, we feel impelled to characterize the laudations of his biographer as rather extravagant. Among his contemporaries, and in his own surroundings, Mr. Brewster was a somewhat striking and picturesque figure; but he did nothing and said nothing that will cause his memory to live when the generation that knew him is gone. Nevertheless, he had some claims to distinction. He was of a good stock, being descended from Elder Brewster of the Plymouth Colony, and he showed a fine determination and courage in overcoming the obstacles that poverty and a face repulsively disfigured by burns laid in his path. Singularly enough, he invariably dressed in an old-fashioned and foppish style that made him extremely conspicuous. His head was surmounted by a white beaver hat, his feet were covered with patent-leather shoes and white gaiters, while his coat was of velvet, his trousers of some white or yellow material, his stock of a flaming color, and his shirt bosom adorned with ruffles. Similar ruffles of the finest lace took the place of cuffs, half covering his jewelled hands, and he carried his peculiar tastes into the appointments with which he surrounded himself. These affectations, however, did not lessen the charm of his conversation, which was due to his really remarkable memory and to his varied reading. He had an affectionate disposition, a kind heart, and withal a

certain stubborn honesty that gave him such distinction as he attained, while it prevented his attaining the distinction of public office to which he aspired.

In the Dangerfield slave case in 1858, Mr. Brewster attained notoriety by the unnecessary vehemence with which he advocated the return of the fugitive negro to slavery, but he lived to admit that the abolitionists were in the right. As Attorney-General of the United States under President Arthur, he had much to do with the Star-route trials, but we cannot concur with Mr. Savidge in the belief that these proceedings will compare in importance with the trial of Warren Hastings. It should be said, however, that the lame and impotent conclusion of the matter was not due to any treachery on Mr. Brewster's part. He was sincere in his attempt to secure convictions, as is proved by the hostility of the persons implicated. But to the participants in that contest history will award no laurels. Mr. Brewster undoubtedly had a certain thirst for culture and an interest in elevated themes; but his tributes to learning and religion are rather of the chromo order. The fineness of his feeling in such matters will be judged by the fact that he was an intimate friend of Simon Cameron. He was perhaps somewhat better than his friends; but that is not to attribute to him anything more than a relative excellence.

BOOKS OF THE WEEK.

Adams, C. K. Christopher Columbus. [Makers of America.] Dodd, Mead & Co. $1.
Angel's Visits to my Farm in Florida. U. S. Book Co. $1.
Atkinson, Rev. J. C. Walks, Talks, Travels and Exploits of Two Schoolboys. New ed. Macmillan. $1.25.

Whiteley, R. L. Chemical Calculations. Longmans, Green & Co. 60 cents.

JUST READY:

New Philosophical Series.

Abstracted verbatim by various scholars, from the works of the leading authors, with Introductions and Notes.

John Locke

By Prof. JOHN E. RUSSELL of Williams College. 160 pp. 12mo. Teachers' price, $1.00; by mail, $1.10.

Reid.

By Dr. E. H. SNEATH of Yale University. 367 pp. 12mo. Teachers' price, $1.50; by mail, $1.62.

Spinoza.

By Prof. GEORGE S. FULLERTON of the University of Penn. 204 pp. 12mo. Teachers' price, $1.20; by mail, $1.30.

Paganism and Christianity.

By J. A. FARRER. 12mo, $1.75.

A striking and revolutionary book, presenting a comparison of Christianity with the faiths of Greece and Rome, and demonstrating many points of correspondence and sympathy not generally realized.

"*A noteworthy book both for its matter and its style.*"—Manchester, England, Guardian.

"*Will clear away some cobwebs of historical misconception.*"—Expository Times.

£50 for a Wife.

A Novel. By A. L. GLYN. Cloth, $1.00. Paper, 50 cents.

HENRY HOLT & CO., New York

Makes
Purest Bread.

GOVERNMENT Chemist Mott:

"The Royal Baking Powder is undoubtedly the purest and most reliable baking powder offered to the public."

"*The weary brain requires some nerve sustaining element as food.*"—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y.

F. Crosby Co.

Exhaustion.

HORSFORD'S
ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good"

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Inquirers into Homœopathy

The Nation.

NEW YORK, THURSDAY, MAY 5, 1892.

The Week.

In August of last year Mr. Theodore Roosevelt, in behalf of the Civil-Service Commission, made to the President a report of the results of an investigation of the performances of Federal office-holders in some Republican primaries in Baltimore. The conclusion of that report was a recommendation for the removal of twenty-five Federal employees, the larger number of whom belonged to the Baltimore Post-office service, for violation of the Civil-Service Law. This report was sent to the President and to Secretary Foster and Postmaster-General Wanamaker. None of these members of the Administration took any action whatever upon it. A few weeks ago a Committee of Congress was instructed to ascertain what had become of the report, and what course had been pursued in regard to its recommendations. The Committee examined Mr. Wanamaker, and succeeded in getting nothing from him but evasive answers, quibbling statements about the meaning of the section of the law whose violation was charged, and more or less direct insinuations that the investigation which the Civil-Service Commission conducted was not a fair one, since the Baltimore Postmaster and other Federal officials accused were not given an opportunity properly to defend themselves. Secretary Foster was called, and he pursued much the same course. He said that he had never examined the Commission's report, though he had had it before him for nearly a year, and though his attention had been called to it afresh within a week. He quibbled as Mr. Wanamaker had done about the meaning of the law, and, when confronted with the fact that some Federal office-holders in Kentucky had been indicted, through the efforts of the Department of Justice of the Harrison Administration, for precisely similar violation, he said he had a private report which led him to believe that these officials had been wrongfully indicted.

Mr. Roosevelt took the witness-stand on Monday, and made short work of the dodging and quibbling of these two Cabinet officers. He declared, in the first place, that he stood by his Baltimore report in its entirety, and that it was impossible that his conclusions should be upset, for they were based upon the confessions of the accused persons made at the very time that the events took place. As for the meaning of the law, he said very tersely that if the terms of the statute do not cover the offence, "there will have to be a new construction of the English language." He cited the Kentucky proceeding against precisely similar offenders, saying: "In view of this action by the Department of Justice, it scarcely seems worth while to discuss whether an assessment for a primary can or cannot be called an assessment for a political purpose." He showed with painful clearness, considering the pious pretensions of the Postmaster-General, that the latter had made statements which had every aspect of deliberate untruths, and had been guilty of conduct which in a worldly man would be denominated tricky, shuffling, and inconsistent. He quoted Mr. Wanamaker's testimony to the effect that it was not the duty of the Civil-Service Commission to make a report to the head of a department, and then produced letters from Mr. Wanamaker to the Commission asking it to make such reports and advise him about removals. The letters were written in regard to the conduct of employees of Democratic officials, and betrayed an anxiety on Mr. Wanamaker's part to get these officials out of office.

Mr. Cabot Lodge's speech to the Middlesex Club on Wednesday week was an attack upon the present silver law and is much to be commended. Mr. Lodge's bill to suspend the purchase of silver bullion until an international agreement for free coinage shall have been effected was taken by Senator Teller as a challenge to mortal combat. We presume it was so intended. The bill itself is open to some objection on the score of details. It puts the coinage power in the hands of the President and Senate exclusively, by authorizing them to make a treaty with "one or more" foreign governments for the free coinage of silver at any ratio they think proper, the same to become immediately binding on the United States. The important section of the bill is the second, which provides—

> "That until a treaty has been made and ratified as provided in the preceding section, so much of the act approved July 14, 1890, as relates to the purchase of silver bullion and the issue of Treasury notes thereon shall be suspended until Congress shall otherwise direct."

This bill was referred to Mr. Bland's Committee on the 1st day of April. It will probably be kept there until the close of the present session, but it cannot be suppressed. The first sign of a return to common sense on the money question will be the passage of some bill like this to suspend the purchase of bullion.

The President, in his communication to the Senate on the subject of an international monetary conference, says that he hopes to be able to secure an enlarged use of silver even if free coinage should not be agreed upon. This suggestion recalls the proposals made by England and Germany at the Conference of 1881. The Bank of England offered to receive silver to the extent of one-fourth of its gold, as its charter authorizes, provided that other nations would adopt free coinage at an agreed ratio and actually carry it into effect. Germany offered to stop her own sales of silver for a fixed period and to suppress her five-mark gold coins and her five-mark circulating notes on the same condition. But silver has fallen more than 20 per cent. since that time. The bullion value of the silver dollar in 1881 was 88 cents. It is now rather less than 68 cents. This decline has taken place in spite of purchases by the United States Government of more than $400,000,000 worth—a fact that must have made a profound impression on the authorities of the Bank of England and of the Imperial Bank of Germany. It is by no means certain that as good terms could be obtained for an enlarged use of silver now as were offered then. On the contrary, there are many signs that the wise and responsible financiers of Europe think it best to let silver find its level, just as wheat, cotton, and pork find theirs. Moreover, they are all afraid of the great silver hoard of the United States, knowing that it can never hurt them as long as they hold none, while it may hurt them very much if they have a large stock on hand and if the whirligig of time should bring us a Congress possessing a fair degree of common sense. The United States has been trying to "corner silver" for fourteen years, and has had no better success than the French syndicate which tried to corner copper; but, being a Government, and exercising the power of taxation, it is not bankrupt—not yet.

Secretary Foster's answer to Senator Morgan's resolution on the silver operations of the Government under the act of July 14, 1890, contains some important facts. Perhaps the most important is that which gives an exact statement of the loss sustained by the Government on its silver purchases. The question and answer are as follows:

> "(10.) State the amount that the silver dollars and bullion on hand would have cost at the present prices of silver bullion? A. The amount of silver purchased under the act of July 14, 1890, to April 1, 1892, was 89,044,075 fine ounces, costing $89,611,000, valued at to-day's price of silver at $77,833,425."

The loss, therefore, would appear to be $11,777,575, if the Government could realize the present price by selling the silver. But, of course, it cannot do anything of the kind. A valuable commentary this, on the statement made by Secretary Foster himself last fall, in his letter to the American Bankers' Association at New Orleans. He then said that the advantage of the present silver law was that it put

a dollar's worth of silver "behind" every Treasury note issued. This phrase, "silver behind," had quite a run in the Republican conventions and newspapers. We pointed out that the "silver behind" would be of no use to maintain gold payments with, unless it could be sold; and also that it remained to be seen whether the price would hold firm so as to sustain Mr. Foster's flowery anticipations. The truth is now out. The "silver behind" is nearly twelve millions short already. It appears also that $11,542,921 of these new Treasury notes have come back for redemption. This sum is the net expenditure of the Government for silver under that act, all the rest having remained in circulation. The point for discreet financiers to keep watch of is the quantity of notes *in* the Treasury.

The bill to put binding-twine on the free list passed the House on Monday, under a suspension of the rules, by a vote of 183 to 47—that is, about four to one. This vote, we think, rather comes short of expressing the popular will than exceeds it. Everybody remembers that the binding-twine people went to Washington when the McKinley Bill was pending, and put in a petition asking for an increase of duty, saying that unless they got it, they should be obliged to close their works. They did not get it. On the contrary, the duty was reduced by the Senate from 1½ cent to 7-10 cent per pound. Then, when Congress adjourned, these same people formed a Trust and published a glowing advertisement setting forth the wonderful profits they had been making — all this for the purpose of getting the public to take shares in their combine, which the public did. We have always contended, and we still hold, that every article that has been made the subject of a Trust or combine ought to be put on the free list at once, without benefit of clergy.

Monday was an awful day for the friends of American industry. After the wicked Democrats had punched another hole in the tariff by the passage of the bill to put binding-twine on the free list, three Republicans from the West voting for it, the entire House, Republicans and all, proceeded to punch a hole in the shipping laws which have so long been the pride and incubus of this nation. Two foreign-built steamers, the *City of Paris* and the *City of New York*, were admitted to American registry. This was done "without opposition." Where was Boutelle? What paralyzed Dingley's tongue? Have they not told us over and over again that such a thing was unpatriotic, if not actually treasonable? Have they not made eloquent use of the "entering-wedge" argument when similar propositions were made in other years? Yet they were silent on Monday, though the auger could be heard boring a hole which is sure ultimately to scuttle the American merchant marine. The silence of the Pennsylvania Congressmen is easily understood: the bill requires the owners of the two steamships to contract to have others of a like tonnage built in American shipyards, and that means a good job for the Chester and Philadelphia ship-builders. But the Maine representatives have so often stood up valiantly for the wooden navy of our fathers, that we cannot understand their basely giving up the ship.

President Harrison could hardly have made a better appointment to the French mission than Mr. Jefferson Coolidge. There is no Republican or high-tariff man fitter for the place. He was a Democrat down to 1888, and how a man with his sense of humor, which is strong, could have become a Republican just then, or indeed at any time since 1884, passes our comprehension. But then he is connected with a great variety of protected interests, and the tariff is a strong persuader. We are quite sure, however, that he does not go so far as to believe in the existence of American tin plate. He speaks French almost like a Frenchman, has lived long in France and knows the country and the people well, and is not only a "Harvard man," with all the term connotes, but a man of wide and long business experience—indeed, a man of affairs "si jamais il en fut," as the *Tribune* would say. If the American hog is still in trouble over there, Mr. Coolidge is just the man to extricate him and set him on his legs. Mr. Reid saved the animal's honor by getting him relieved from the stigma of disease, but not before the French protectionists had made arrangements not to let him into France, whether he be sound or unsound.

Tom Platt held his State Republican Convention on Thursday, and we have no doubt that he got more good solid "chuckling" out of it than out of any of its predecessors. It is true that Warner Miller was not able to be present, that he was not equal to a fresh feat of "harmonizing" in person, but he did send a letter. Yet Platt had ample compensation for Mr. Miller's absence. He had Senator Hiscock and Mr. Depew and an entirely new recruit in the ex-Minister to France. The presence of these three eminent former political enemies, all harmonious and enthusiastic in his cause, must have given Platt huge delight, especially when he contemplated the use to which he was putting them. What he did was to use President Harrison's patronage to pack a convention, and then use the Convention to snub President Harrison. There is no doubt whatever about this. Platt put a fulsome endorsement of Harrison's Administration into his platform, and refused to allow any mention, even, of Harrison as a candidate for renomination. He was so confident about this that he openly invited an advocate of formal instruction for Harrison to propose a resolution of instruction in the Convention, just to see how quickly it would be voted down.

The financial plank in the Republican State platform this year is better than the corresponding one of last year. We put the two in parallel columns for the purpose of noting the difference:

1892.	1891.
We cordially endorse the vigorous declaration of President Harrison made in the city of Albany in favor of an honest dollar. We commend Republican members of Congress for having secured the defeat of a free-silver bill, the effect of which would have been to derange values, impair contract obligations, reduce the pay of labor, and debase the currency. The people must continue to look to the Republican party to maintain the good faith of the nation in all matters of finance, pledged, as it is, to keep any dollar bearing the stamp of the United States at par with gold, and to repel the assaults of the reckless advocates of free and unlimited coinage of silver.	The Act of July 14, 1890, provides for the purchase of the silver product of American mines and issuing of the new Treasury notes, protected by a reserve of 100 cents' worth of silver for every dollar issued. *We commend this policy* of maintaining gold and silver at a parity, the Treasury notes paid for silver to be kept at par with gold. The voice of New York is emphatic against any degradation of the currency, and demands, with President Harrison, that every dollar issued by the Government, whether paper or coin, shall be as good as every other dollar.

The marked difference between the two platforms is the omission this year of any commendation of the act of July 14, 1890. There is little room for doubt that the endorsement last year of the present Silver Act cost the party in this State thousands of votes. In this particular the Democratic platform was much more satisfactory and more consonant with the views of business men. The Democrats roundly denounced the act which calls for the purchase of seven tons of silver bullion per day, and what they said about keeping all the dollars at par with each other was quite as sound as the Republican deliverance. The Republicans have now found that they made a mistake last year. The world moves.

There is another clause in the Albany platform which calls for attention. It is this:

> "The Republican party has a right to ask the approval and support of all good citizens for the policy it has pursued in revenue legislation; for the fruits, now apparent, of the McKinley tariff, under which agriculture has been encouraged, manufactories extended, trade promoted, and labor benefited; and for the system of reciprocity which has added greatly to our commerce with other nations on terms of mutual benefit, to the extent of increasing more than 50 per cent., and in some cases doubling, our exports of the products of the factory and the farm."

We see no affirmation here that the country is enjoying prosperity in consequence of the McKinley tariff, or that it is prosperous at all. We are told that agricul-

ture has been encouraged, manufactures extended, trade promoted, and labor benefited. A visitor from a distant country might infer from this that a prosperous era had set in—such as was confidently predicted when the McKinley measure was pending. But no such broad claim is made in the platform, and if it had been, it would have been scouted by the business community. We have had splendid crops and good prices for cereals and provisions, but we have not had the condition of things known and recognized as general prosperity. The infallible sign and measure of general prosperity is the iron trade, which is in a state of extreme depression and shows no sign of improvement. We do not affirm that this anomalous condition of good crops and fair prices conjoined with unsatisfactory trade is due entirely to the McKinley tariff, although we think that that measure has been a powerful contributing cause. We note the fact that it has not brought general prosperity, and that the Republicans of this State have not had the temerity to claim that it has.

Ohio has recently had an illustration of the power of public opinion, when once aroused, hardly second to the exhibition in this city caused by the passage of the Central Park Speedway Bill. The politicians of both parties in Ohio, and especially the Republicans, have always been opposed to the Australian system which was established by the Legislature two years ago, and have wanted to get rid of it as far as possible. In March last they rushed through the Legislature, almost with the speed of lightning, a bill restricting the application of the law in local elections to municipalities having more than 3,500 population, the measure being a law before half the people knew that such a bill was pending, or at least realized its effect. Happily, the spring elections in small municipalities under the restored old system precipitated so many scandals that the people were immediately aroused to the value of the booth and official ballot which they had lost. An agitation was at once begun for a repeal of the new law, so that the Australian system might apply to all municipalities and all elections, and the Legislature was soon forced to make the desired change, which was accomplished by a vote of seventy to fourteen in the House and with no opposition whatever in the Senate.

The discussion of this matter brought out evidence that the secret ballot is needed to secure pure elections in the country quite as much as in the city. The Cincinnati *Times-Star*, a Republican newspaper, declares that bribery and intimidation are not confined to cities of over 3,500 inhabitants, but are to be found in rural communities. Proceeding from generals to particulars, it pronounces it doubtful if there were ever seen in the State political practices more disgraceful than the vote-buying witnessed on the streets of Batavia, Clermont County, at the special Senatorial election in February, 1890, which it describes as follows:

> "The law requiring all bystanders to remain at least seventy-five feet from the polls was rigidly enforced, but it did not prevent the vote-buyer from easily getting in his work and from seeing that the votes purchased were put in the ballot-box. The polling-place was in full view of an old stable, which served as the headquarters of the boodlers. The floating voter was steered to the stable, the preliminaries arranged, and he was directed to hold his ticket between the thumb and finger of his right hand as he went to the polls, and, moreover, was followed by a spy who saw that he deposited the same ticket, and then motioned him to return to the boodle-office, where he received his reward. This plan was carried out systematically. Nothing more corrupt and indecent ever scandalized the politics of Cincinnati or any other city in the State."

The *Times-Star* says that there are other towns of less than 3,500 people in Ohio, and not a few "truly rural" communities, whose politicians could give the city bosses "pointers" on fraud and corruption, in the absence of the Australian safeguards. Everybody familiar with elections in the country districts of New York, and of close New England States like New Hampshire, knows that the situation in this respect is the same there as in Ohio.

When the history of the educational and civilizing effect of the telegraph comes to be written, one chapter ought to show how it has lessened the horrors of war in South America. In other times the revolutions in that part of the world had to be fought through by means of musket and sword, but nowadays the submarine cable has become a more powerful though less bloody implement of war. Everybody remembers the terrible execution Balmaceda wrought among the Congressionalists by means of the deadly cablegram, and latterly, in Brazil and Argentina, civic quarrels have always been settled in favor of the faction that "had the wire." We all recall those solemn official despatches which Fonseca sent out to the world during his Dictatorship, lauding his own virtue and patriotism, asserting that there was universal acquiescence in his acts, and scouting the idea of any revolution. Suddenly came the news that he had been kicked from power and the telegraph office. At the present time a revolution is in progress in Venezuela, and the cable is bearing the brunt of the fight. The gravest symptom of the President's distress is the official despatches he sends almost daily to the Venezuelan legations in various parts of the world, denying that there is any trouble, asserting that the opposition to his rule comes from a mere handful of brigands, and reporting a glorious victory over an army of rebels outnumbering the Government troops two to one. This looks as if he were getting pretty hard pressed.

Banking methods in South America received fresh illustration in the course of the debate in the Uruguayan Senate on the Government bills to wind up the affairs of the wrecked National Bank. These measures practically amount to taking over the bank's business by the Government, and were violently opposed, on the ground that they were intended to cover up criminal negligence on the part of directors. It appears that the bank had made illegal or unsecured loans to the amount of $9,174,730, of which nearly $3,000,000 stood on what was called a "special account," back of which were persons as yet unknown. Mr. Edward Casey figures on the books as a debtor to the tune of $4,525,922, and no explanation of how he got the money has so far been made. Then there is an item of a million and three-quarters on the "Northern Railway account," which stands for another huge scandal. One Senator charged a good part of the blame for wrecking the bank upon "a person very highly situated, the most highly situated in the country. I will not say who." This not very obscure allusion to the President, formerly Minister of Finance, was greeted with laughter. Yet there appears to be little doubt that the Government bills will pass and the scandal be hushed up. Six out of the nineteen Senators have been directors of the bank, and are not expected to vote to uncover their own negligence or rascality. Moreover, Government bills in South America have a way of passing.

Ever since the law of 1884 gave labor unions a legal standing in France, the professional "brothers and friends of the prolétariat" have been endeavoring to secure additional legislation in order to give the unions greater power over the masters. Twice already had the Chamber passed the desired bill, only to see it defeated in the Senate. Again this year the law Bovier-Lapierre, as it is called, received the approval of the Chamber by a vote of 293 to 231. Its first article provides for a punishment of imprisonment of from six days to one month, and a fine of from 100 to 2,000 francs, to be inflicted upon any "master, contractor or foreman" who, by threats of loss of employment, or offers of employment, or by dismissal of laborers on the ground of their being members of a union, shall "prevent or hinder the establishment or free operation of trades unions." Endeavor was made to have the law reciprocal, and lay the same penalties on "all workingmen or employees who, by the same means, shall force one or more laborers or employees to join or not to join a union, or to leave a union to which they belong." But this section was voted down, 291 to 131. The labor deputies were triumphant over this, and one of their leaders said: "We know what we want. We want a law against employers who oppress workingmen. As for employees threatening masters, there is no such a thing and never has been." But it is probable that the Senate will for the third time give the bill its quietus.

THE NEW LEGISLATIVE DISTRICTS.

ONE would suppose from reading the comments of the Republican press upon the new reapportionment of the Senate and Assembly districts of this State, agreed upon by the Legislature last week, that the division of districts under which we have been choosing legislatures for the past twelve years was a model of fairness and non-partisan arrangement. As a matter of fact, that division was as partisan and unfair as Republican zeal could well make it when it was put in force in 1879, and it has been growing steadily more unfair every year since, chiefly through the increase of population in the cities of New York and Brooklyn. Evidence of this has been given in many State elections, for, no matter how large the Democratic majority on the State ticket might be, the Republicans were almost invariably able to secure a majority in the Legislature, and to secure, when the time arrived to choose him, the election of a United States Senator.

This condition of affairs would have come to an end in 1886 had Gov. Hill not prevented the fulfilment of the Constitutional requirement for the taking of a State census in the previous year. It is not surprising that the Democrats, after suffering from Republican unfairness for so many years, should, when their time arrived to reapportion the State, give their opponents as large a dose of their own medicine as circumstances would permit. They have, therefore, divided the State in the interest of the Democratic party, with as much zeal as the Republicans divided it in 1879 in the interest of the Republican party. That is the sum and substance of their proceeding. We are not defending them any more than we should defend the Republicans under similar conditions. Neither are we able to see why any one should be surprised at the outcome. The ideal apportionment, one that should be absolutely fair to all parties, has not yet been made by any legislative body, and we were certainly not looking for it from the extraordinary assemblage which has been in session at Albany this winter.

The most striking fact about the new apportionment is the greatly increased power which it gives to the cities of New York and Brooklyn in both the Senate and Assembly. In the former body the two cities will have 13 of the entire 32 members, and in the latter 48 of the entire 128 members. That is to say, they will lack only four of a majority in the Senate, and only seventeen of a majority in the Assembly. Under the old division, the two cities had ten members of the Senate and thirty-six members of the Assembly. In the increase, New York has gained one Senator and six Assemblymen, and Brooklyn two Senators and six Assemblymen. As the total number of legislators remains unchanged, the country districts have lost what the cities have gained, and it follows that the power of the cities over legislation has been greatly increased.

At first glance this might be regarded as a calamity, especially when we consider that the power of New York and Brooklyn at Albany means the power of Bosses Croker and McLaughlin. If the delegations from these two cities should be able to control the organization of the two houses, that would mean that in future, as during the session just ended, Croker and McLaughlin would in reality be the law-makers for the State of New York, deciding absolutely as to what bills should pass and as to what other bills should not be permitted to pass. A curious illustration of their "power" was furnished in the case of a lawyer of this city who went to Albany a few weeks ago to oppose a pending measure. The Tammany Chairman of the Committee in charge of the measure told him that he need not trouble himself, for as there was nothing in the bill for the bosses, "orders" had been issued against its passage; but, said he to the lawyer, "If you wish to earn your fee from the people who sent you up here, we'll get up a 'fake' hearing for you and let you talk awhile."

Legislation by this extraordinary method is not popular government in the proper sense of the term, but it is legislation of the kind which the increasing growth of our great cities is giving many other States than New York. The larger representation which New York city and Brooklyn are to have at Albany is simply an outcome of their increase in population; and whatever harmful influence may be the result, it must be accepted as the inevitable outcome of our conditions. If the city representation is, as a whole, ignorant and vicious, the fault lies with the people of the cities who do not exert themselves to secure the choice of better men. Bad as it is, it would be difficult to prove that it is really worse than much of the so-called country representation. The Plunkitts, Sullivans, Dinkelspiels, Farquhars, and Mullaneys of New York are pretty evenly matched by the Erwins, Coggeshalls, Vedders, Husteds, and Sheehans from the more rural portions of the State. The city members are often blocked by the opposition of country members in their efforts to retreat from some unfavorable position through fear of disastrous consequences to themselves at the polls in the next election. We can always hold the city members to some accounting for their acts, but the country members can raid upon the cities without fear of consequences, and hence appeals to them are useless.

Under any apportionment, legislation controlled by bad men is bad legislation, and the only remedy for it is the sending of good men to the Legislature. The standard of legislative character and fitness has been descending lower and lower in all parts of the country for the past quarter of a century, partly through the growing power of the cities, and partly through the indifference and neglect of the intelligent and moral portions of the electorate to take an active part in political affairs. Until there is a change in this respect, it will be useless to hope for much improvement in the character of our legislators, whether they come from the city or the country.

DIVORCE AS A STATE INDUSTRY.

THE practical vs. the sentimental view of the divorce question, from the standpoint of Western life, has received recent and curious illustration. The sentimental view was illustrated by a debate on divorce at the Equal-Suffrage Convention in Detroit a fortnight ago. The Detroit *Journal* thus summarizes the debate:

"A great diversity of views appeared as to the cause of the divorce evil. Mrs. Jenkins thought it was drunkenness. Dr. Mary Willard thought that one of the grand causes was that men and women marry too early. Mrs. C. Q. Murphy of Toledo thought that financial troubles was the chief cause. Mrs. McAdow attributed the evil to the fact that wife and husband are not legal equal partners. Mrs. Lucy Thurman of Jackson thought that the cause is the wasteful habits of husbands, leaving wives to support their children at the washtub. The Rev. Lee S. McCollester said he had no pet theory about the divorce evil, but looked upon education as the remedy. The Rev. Jeanette L. Olmstead of Toledo thought that woman's dependence upon man is the cause. Giles B. Stebbins regarded the importation of a large criminal and pauper class as the cause of the increase of divorce."

The practical view of divorce is set forth in a six-column letter to the Chicago *Herald* from Sioux Falls, S. D., adorned with pictures of leading divorce judges and lawyers, and of famous *divorcées*. The difference in the newspaper treatment of the two views may be called typical of the difference between a question which concerns the amount of money brought into a State, the advertising of its resources and opportunities, and the embellishment of its society, and a question which concerns only sentimental debate on a time-worn reform of morals. The one, from the standpoint of "journalism," is "live news"; the other is "a chestnut."

The practical view of divorce, as a creditable and profitable State industry, is certainly a novel one, but the Sioux Falls correspondent makes out a good case from his point of view. It is one to be commended to those who take part in future discussions of "the evil," as giving them something definite to attack—preventing them from wasting effort in beating the air while groping around for a cause whose removal will change human nature. The correspondent begins by noting the signs of prosperity of the "divorce crop" in his own town of Sioux Falls, where the local bar, he says, is confident that "the product will fully equal, if not surpass, that of any previous season." But he fears the competition of Yankton, the rival centre of the South Dakota divorce industry. It seems that in Yankton "fresh encouragement and impetus" has been given to the industry by the erection of a new hotel, designed especially to gain the patronage of divorce "colonists" while "doing time"—that is, while waiting for the expiration of the ninety days of resi-

dence which qualifies a "colonist" to obtain a South Dakota divorce. This hotel was opened with "a dedicatory supper and ball," given by the proprietor to the divorce colony. The proprietor himself opened the ball, having for his partner a "dashing" New York woman who has nearly "served her time." The proprietor has also prepared a "beautifully printed" circular, setting forth the advantages of Yankton and of his hotel, which "has been sent by the hundreds to society in New York, Boston, and Philadelphia, and replies have been received in numbers quite encouraging to the divorce trade of Yankton."

But Sioux Falls is not idle. The proprietor of its principal hotel has refurnished his house and sent out circulars, offering, among other inducements, to "guarantee parties against the intrusion of newspaper men, and in many other ways to contribute to their seclusion and avoidance of notoriety. This last," the correspondent adds, "has become almost necessary to the prosperity of South Dakota's divorce industry." Sioux Falls has still another and incomparable advantage over Yankton in being the residence of "the most learned in divorce law" of all South Dakota judges. Besides that, this judge "is only thirty-three—just that ardent and susceptible age when woman's distress appeals to man most strongly. In all the cases that Judge Aikens has heard where the fair sex has appeared in complaint, his course has been marked by the tenderest sympathy and the most delicate solicitude for their interests."

The way in which the divorce industry benefits South Dakota is discussed by the correspondent at length. He cites the case of one famous *divorcée* who spent $10,000 during her residence in Sioux Falls —"to say nothing of attorneys' fees and other legal expenses"—and who gave $1,000 to St. Augustine's cathedral and $100 to the local branch of the Young Men's Christian Association. Her "new husband"—she was married almost immediately after obtaining her divorce—also "spent money like water," both of them patronizing "home merchants." The correspondent also quotes a prominent lawyer of Sioux Falls as saying:

> "The notoriety South Dakota has got is doing us no harm. It advertises us abroad, brings thousands of dollars here, not only to pay expenses of divorce suits, but for investment as well. Some of the people who come here for divorce have been so attracted by our resources as to make valuable investments."

The correspondent acknowledges that "the farming element and the religious element outside the large towns"—where there are no cathedrals or Young Men's Christian Associations to receive checks from "colonists"—are uneasy under the disgraceful notoriety of the State. These "elements," it seems, propose to lengthen the period of residence necessary for a divorce from ninety days to six months. The correspondent adds: "If the next Legislature shall be controlled by the Farmers' Alliance, this change in the law will be inevitable." But meanwhile the sentiment in the towns benefited by the industry is quite the reverse. Says the correspondent:

> "In Sioux Falls and Yankton anybody who would seriously mention such a proposition would encounter the risk of being drummed out of town. A correspondent of a St. Paul paper recently wrote a scorching criticism of the South Dakota divorce law, and strenuously urged its amendment; at which the citizens of Sioux Falls hunted out the offender and invited him to leave town."

The sort of ethics which is preached on this subject is well illustrated by an extract from a lecture on "South Dakota Divorce Laws" delivered recently before the Unity Club of Sioux Falls by Judge Parke Davis, "an eminent lawyer." In his lecture the Judge said:

> "No scandal can justly attach, either to the laws or the courts of the State of South Dakota, with reference to the subject of divorces. The standing and demeanor of those who obtain divorces here, almost without exception, have been such as to demonstrate that they are people of culture and social position, and that the grievances for which they seek relief are real. The purpose of their coming is a lawful one —as much so as if they sought the pure air and salubrious climate of the State for the benefit of their health, or its fertile soil for agricultural purposes."

Comparing, then, the sentimental and practical views of the divorce question, it is obvious how much stronger is "the pull" of the latter. In new States, where the struggle of life is hardest, and the resulting temptation to "boom" the State in every possible way is almost irresistible —the attempt, almost successful, of the Louisiana Lottery to get a foothold in North Dakota comes forcibly to mind—moral considerations must be held cheap. The one way in which a matter like this of divorce, which concerns the whole United States, can be satisfactorily regulated, is obviously through a uniform divorce law.

THE ANARCHISTS IN PARIS.

THERE seems to be a general disposition to throw the blame of the failure of justice, in the trial of the Anarchists in Paris, on the jury; but it is hardly to be wondered at that the courage of our Chicago convictions was not exhibited. Jurymen in any country may well lack nerve enough to defy a danger from which the police are compelled to admit that they cannot protect them. It was, of course, absurd, as well as cowardly on its face, to give a man like Ravachol the benefit of "extenuating circumstances," so as to save him from the guillotine; but every juryman, in giving a verdict, being human, necessarily thinks of the effect of it on himself, his family, and his business. The valor which ignores such considerations is exceedingly rare in any class, and especially in the peaceable, cautious commercial class from which jurymen are generally taken.

But there is no use in blinking the fact that the verdict is a triumph for the Anarchists, that it will greatly encourage them, and seriously increase the difficulty of extirpating them. For most of the class from which the Anarchists are drawn, a sentence of perpetual imprisonment has no terrors, for they know well that nothing in France is perpetual. Towards any class of political malcontents in that country, however ferocious or criminal, civil justice is not implacable. Juries recoil from the infliction of capital punishment, and, in the numerous ups and downs of French politics, the day for "a general amnesty" is sure to come. Of all the villains of the Commune of 1871 who were sentenced to deportation to Cayenne for life, we do not believe one now remains in durance vile. They have all been forgiven, and so Ravachol doubtless thinks it will be with him and his confederates. The chances are, therefore, that the dynamite outrages will continue, and even that the Anarchists proper will be recruited from that large class of Parisians who, as has been so happily said, are a curious mixture of the tiger and the monkey, and rejoice in any sort of mischief which makes the well-to-do class quake and baffles the police, even if they have no special object in view.

The truth is, indeed, that "Anarchist" is simply a new name for the old "Reds," of whom a crop or generation has appeared in Paris every twenty years since the Restoration, and has to be killed off by the army before there can be peace and quiet. They rose against the Republic of 1848 in 1849, and were extirpated during the terrible three days of June in that year, after sanguinary fighting in which more than 10,000 of them were killed, and in which they inflicted a loss nearly as great on the troops under Gen. Cavaignac. In those days of cobblestones and narrow streets, they erected barricades, which had to be stormed in succession. Twenty years later the new crop took advantage of the German invasion to seize on the city of Paris, murder as many of the judges and clergy and public functionaries as they could get hold of, rob the Treasury, and burn the public buildings, and fill the lives of the whole community with a terror that surpassed even that of 1793-'94. When the army finally got possession of the city, there was but a handful of the breed left. They were slaughtered without mercy, wherever caught. Their loss, during and after the siege, was put, by moderate computation, at 20,000. They were set in rows against the most convenient walls when the fighting was over, and despatched with a celerity which the murdering villains themselves must, even under such circumstances, have secretly admired.

Twenty years have elapsed since then, and Paris is face to face with the new crop. Barricades in the streets are no longer possible, and the capture of Paris is out of the question. But dynamite has come to their aid, and they are making the same use of it which their fathers and grandfathers made of "descending into the streets," when they struck terror into the bourgeoisie of 1849 and

1871. They will probably continue it till they compel the authorities to fall back on martial law, or, as the French call it, "the state of siege," and then the punishment of the dynamiters will really begin. With a man like Gen. Gallifet, whose name is still a word of terror to all the old Communards of 1871, in command of the troops, a dynamiter caught with his explosives on or about him would not have to undergo a tedious inquiry into his history, and would have but little opportunity to address the crowd or to face a trembling jury. Five minutes and three or four files of little red-legged men with rifles would dispose of his case, and his surviving friends would begin to fly from Paris as from a plague-stricken city.

To have to purge a great capital of its dangerous classes in this way in every generation is, of course, a great national shame, but it is one of the penalties of the way in which Frenchmen reformed their government one hundred years ago. From this point of view it is one of the most instructive lessons in politics that history supplies. In public as in private life, it is still true that when the fathers eat sour grapes, the children's teeth are set on edge. The present Republic seems the most stable government France has had in a century, but it is nevertheless possessed by the old devils who converted the first Revolution into an immense tragedy.

THE LATE PROFESSOR FREEMAN.

LONDON, April 19, 1892.

THERE are in the United States so many who have read and prized the historical writings of Mr. E. A. Freeman, whose death at Alicante five weeks ago came as a sudden and painful shock to the learned world of Europe, that some account of him and his work will probably have an interest for a large section of your readers. He was not only a very industrious and prolific author, and indeed, since the deaths of Dean Milman and Mr. Grote, the first of British historians, but in other respects also a remarkable man, with a peculiar character, which, while it was often misunderstood by those who had but a slight acquaintance with him, gave for those who knew him thoroughly an additional zest to his writings.

The keynote of his character was the extraordinary warmth of his interest in the things and persons he cared for, with a scarcely less conspicuous indifference to matters lying without the range of his sympathies. While he was still an undergraduate at Oxford, and influenced, like nearly all the ablest among his contemporaries, by the Tractarian opinions and sentiments which were then in the full force and freshness of their youth, he was drawn to the study of history, and led to throw himself into it, by an incident worth mentioning, because it shows the good which may occasionally be done by those university prizes which are so often ridiculed. The subject prescribed for the Chancellor's prize for an English essay happened, when he took his degree, to be the results of the Norman Conquest of England. He competed, but without success; the prize going to Mr. Chichester Fortescue, afterwards Lord Carlingford, a clever and cultivated man, who, however, never made his mark in letters. Freeman's essay was probably a much less finished composition than that of his rival. But he was accustomed to say that this competition had been the turning-point of his life, for when he began to prepare for writing, he went straight to the original authorities, and especially to the Saxon Chronicle; and from a study of them he conceived not only the wish to make history the business of his life, but a sense of the inestimable importance of historical sources contemporary with the events described.

Marrying early, he lost his fellowship, and went to live on the borders of Wales. As he had an independent income, he did not need to enter a profession, and enjoyed abundant leisure to occupy himself as he pleased. He loved a country life, but hated the field sports which most English country gentlemen love, and had neither taste nor talent for farming. His Tractarian proclivities had, however, given him an interest in church architecture, so he began to spend his time in studying mediæval buildings, and soon acquired a wonderfully full and exact knowledge of the most remarkable churches and castles all over England, with considerable skill in sketching them. By the end of his life he had accumulated a collection of thousands of drawings made by himself of notable buildings in France, Germany, Italy, and Dalmatia, as well as in the British Isles. Architecture was always to him the prime external record and interpreter of history. But it was the only art in which he took the slightest interest. He cared nothing for pictures or statuary; never, perhaps, visited a picture gallery in the course of his numerous journeys; and did not seem to perceive the value which paintings have as revealing the thoughts and social condition of the time which produced them. The only other branch of inquiry cognate to history which he valued was comparative philology. With no great turn for the refinements of classical scholarship, and, indeed, with some contempt for the practice of Latin and Greek verse-making which used to absorb so much of the time and labor of undergraduates and their tutors at Oxford and Cambridge, he was extremely fond of tracing words through different languages so as to establish the relations of the people who spoke them, and, indeed, used to argue that all teaching of languages ought to begin with Grimm's law, and to base his advocacy of the retention of Greek as a *sine qua non* for an Arts degree on the importance of that law. But with this love for philology as an instrument in the historian's hands, he took little pleasure in languages simply as languages—that is to say, he did not care to master the grammar and idioms of a tongue, nor did he possess any aptitude for doing so. French was the only foreign language he could speak with any approach to ease, though he could read German, Italian, and modern Greek. Nor did literature simply as literature attract him. In his later years, at any rate, he seldom or never read a book in any foreign tongue except for the sake of the historical or political information it contained.

History was to him not only primarily but almost exclusively a record of political events—of events in the sphere of war and of government. He expressed this view with concise vigor in the well-known dictum, "History is past politics, and politics is present history"; and though some of his friends frequently remonstrated with him against this view as far too narrow, excluding from the sphere of history many of its highest and deepest sources of interest, he would never give way. That others should care as much (or more) for the religious or philosophical opinions of an age, or for its ethical and social phenomena, as for forms of government or the battles of kings, seemed to him strange. He did not argue against the friends who differed from him, for he was always ready to believe that there must be something true and valuable in the views of a man whom he respected; but he could not be induced to devote his own labors to the elucidation of these matters, saying that they were not in his line.

The same predominant liking for the political element in history made him indifferent to many kinds of literature. Among the writers whom he most disliked were Plato, Carlyle, and Ruskin, in none of whom could he see any merit. Neither, although very fond of the Greek and Roman classics, did he seem to enjoy any of the Greek poets except Homer and, to some extent, Pindar. He was impatient with Virgil, because, as he thought, Virgil could not or would not say a thing simply. Among English poets, his preference was for the old heroic ballads, such as the songs of Brunanburh and Maldon, and, among recent writers, for Macaulay's Lays. Macaulay was also his favorite prose author, and he was wont to say that from Macaulay he had learned never to be afraid of using the same word to describe the same thing, and that no one was a better model to follow in the choice of pure English.

Such limitations of taste are not very uncommon among eminent men. What was really uncommon in him was the perfect frankness with which he avowed them, and the entire absence of any pretence at caring for things which he did not really care for. He was in this, as in all other matters, a singularly simple and truthful man, never seeking to appear other than as he was, and finding it hard to understand why other people should not be equally simple and direct. This directness made him express himself with an absence of reserve which sometimes gave offence; and the restriction of his interest to a few topics—wide ones, to be sure—seemed to increase the intensity of his devotion to those few. Never did a worker more heartily enjoy his work. He did not work at high pressure, nor let himself be hurried even over things which had to be done by a given time. But he was never idle, and was so methodical that he could carry on three different literary enterprises at the same time, and calculate exactly the rate at which each would advance. Although never strong physically, and in poor health during his later years, his industry did not flag, nor did he appear to need any relaxation beyond that of a country stroll or now and then the reading of a novel.

The two chief practical interests he had in life both connected themselves with his conception of history. One was the discharge of his duties as a magistrate in the local government of his county. The other was the politics of the time—foreign not less, perhaps even more, than domestic. He was all his life a strong Liberal, throwing himself warmly into every question which bore on the Constitution, either in State or in Church, for (as has been said) topics of the social or economic kind lay rather out of his sphere. When Mr. Gladstone launched his home-rule scheme in 1886, he espoused it warmly, and praised it especially for the very point which drew most censure even from Liberals—the removal of the Irish members from Parliament. He was intensely English and Teutonic, and wished the Celts to be left to settle their own affairs in their own island, as they had done centuries ago. Even the idea of separating Ireland altogether from

the English Crown would not have alarmed him; while, on the other hand, the plan of turning the United Kingdom into a federation, giving to England, Scotland, Ireland, and Wales each a Parliament of its own, revolted all his historical instincts. In the case of his strongest political passion—hostility to the Turk—historical sentiment was united to his detestation of cruelty. Ever since the days of the Crimean war, he had been opposed to the traditional English policy of supporting the Sultan, and when Disraeli seemed on the point of carrying Britain into a war with Russia in defence of the Turks, no voice was louder or bolder than his in denouncing the policy then popular with the upper classes in England. On this occasion he gave substantial proof of his earnestness by breaking off his connection with the *Saturday Review* because it had espoused the Turkish cause. This cost him £600 a year—a sum which he could ill spare—and deprived him of opportunities he had greatly valued of expressing himself in what was then an important organ upon all sorts of current questions. But his sense of duty would not permit him to help a journal which lent itself to the support of a misguided policy and an unscrupulous Prime Minister.

At the election of 1868 he was a candidate for representative in Parliament of one of the divisions of Somerset, the county he lived in, and showed in his platform speeches a remarkable gift of eloquence, and occasionally, also, of humor, coupled with a want of those petty arts which usually contribute more than eloquence does to political success. He was a warm advocate of Disestablishment in Ireland, because he thought the Roman Catholic Church was of right the national church there; but no less decidedly opposed to it in England, where so radical a change would have shocked his historical feelings, and rooted out much that was entwined with the ideas and events of the Middle Ages. The strong view of historical sentiment that ran through all his opinions was one cause of his fondness for the United States, in which he delighted to trace the perpetuation not only of so many old English institutions, but of so much of the English political spirit. He enjoyed intensely the months he spent there in 1881, and was always hoping to return again.

He was endeared to his friends, of whom he had a very large circle, chiefly by three things. One was his singular truthfulness. Another was his hearty hatred of every form of oppression and cruelty, and his readiness at any moment to go forth and do battle against it. The third was his capacity for affection. Once he had admitted any one among those whom he reckoned as friends, his kindness was unfailing, and he was prepared not only to take the part of his friend and put the most favorable view on his conduct, but even to receive with good temper trenchant criticisms from him. Seldom has a hard-working literary man kept up so large a correspondence—a correspondence not of business, but of pure friendship; for he wrote because he felt the constant need of interchanging his thoughts with those whom he cared for. Such a keen sense of what friendship implies and demands is rare in our modern life, and wins a corresponding attachment from those who are its objects.

I have still some remarks to make on his work as an historian and teacher of history, but must reserve them for another letter.

O. D.

TALLEYRAND'S MEMOIRS CONCLUDED.

PARIS, April 14, 1892.

"HABENT sua fata libelli." These famous Memoirs of Talleyrand, which have been expected with a morbid curiosity for half a century, have appeared, and truth obliges me to state that they have been received coldly by our modern public—our public "fin de siècle," accustomed to the spicy dishes of our present literature. There are many reasons for it: our reading public has been saturated with politics, and the Memoirs of Talleyrand are chiefly, almost entirely, political. Talleyrand deals with a Europe which exists no more, with a political equilibrium which is come to an end. Talleyrand goes very rapidly over the only events which now would excite our curiosity; we care more (I speak of the majority of readers) for the part which he played in the affair of the Duc d'Enghein than for the part which he played in the constitution of the Belgian kingdom. People expected revelations about Napoleon and his family, about many important personages of the Empire and of the Restoration; they find diplomatic despatches and political essays, extremely clever, very profound at times, but we no longer plume ourselves on our appreciation of such documents. Our political sagacity has been so often baffled that we are reduced to a state of indifference in political matters.

It is a curious phenomenon to observe: a novel by Pierre Loti, a book by Zola, a clever vaudeville, a music-hall song, have become our subjects of conversation and of interest; the time is soon approaching when we shall read nothing but short newspaper articles. We have a class of writers who excel in picking the plums out of every pudding, and who give us only the plums. The serious *Revue des Deux Mondes* had not long ago an article of four pages only; it was a sign of the times. We live fast and we read fast.

This fifth and last volume of the Memoirs of Talleyrand has 600 pages. Few, I am afraid, will go through it carefully; it will remain on the shelves of good libraries as a document for some future historian, for the time will come, perhaps, when we shall appear more interesting to others than we are at present to ourselves. The Duc de Broglie has written an introduction to this fifth volume; he says in it that he will fulfil his pledge to give to our National Library the manuscript volumes which he has edited, without any change or retrenchment. It is true that this manuscript is not an autograph of Prince Talleyrand, but it is a copy certified by the executors of the Prince. The discussion which took place on the subject of the first volumes of the Memoirs leaves no doubt as to their authenticity. The most competent judges have pronounced on the subject, and I may say that anybody having the slightest knowledge of the world and of literary matters could not hesitate to affirm the Memoirs to be the work of Talleyrand himself, and that they have nothing in common with those apocryphal compositions which unfortunately abound in our literature, and which are historical novels rather than real historical documents. That the original text has been changed seems improbable to whoever knows anything about style; but I confess that I would not swear that many suppressions have not been made—the Memoirs glide at times too rapidly over very important events. But suppression is only a negative sin: we may have lost something of Talleyrand; what we have kept is really his.

"I know well," says the Duc de Broglie, "that people had generally formed of the Memoirs an idea very different from what a complete knowledge of them has now revealed. In consequence of the precautions, perhaps excessive, taken by his executors in order to prevent a premature publication, they had imagined that the secret could have been kept so long only because it bore on facts of a delicate and mysterious nature; and that, once the veil uplifted, there would appear curious revelations, satirical portraits, wicked anecdotes, perhaps even confidences on the facilities which the relaxation of manners allowed to the worldly clergy of the old régime."

These expectations have been baffled, and Talleyrand has treated only serious subjects in a serious manner. The fifth volume begins with the second part of the "Revolution of 1830," in the years 1832, 1833. On his return to Paris after the death of Casimir Périer, he found the Cabinet much weakened. "Intrigues of all sorts crossed each other around the ministerial portfolio; the ambition of a few was less troublesome than the presumption of all. Such is the consequence of revolutions, which put everything out of joint." (Might not these lines apply to our situation now and to our weak and changing Cabinets?) Talleyrand, not caring much for such a spectacle, left for the Baths. He was pressed to return to London, but he remained quietly at Bourbon-l'Archambault.

"I resented the arrogance of the Belgians, who did not deserve that our Government should compromise itself for them, and I asked that they should be forced to give up what was reasonable. My advice was not much followed on this point, and they hurried, on the contrary—wrongly, in my opinion—to conclude the marriage of the Princess Louise of Orleans with King Leopold, which took place at Compiègne on the 9th of August. It was very evident that the precipitation with which this marriage was concluded could only embarrass our affairs, by increasing the demands of the French and Belgian revolutionists. The King of Holland fortunately came to our help by the bad faith which he brought to the negotiations of the London Conference."

I have given this passage, as it shows very well the temper of Talleyrand: he was willing to create a Belgium, but he wished it to be a modest Belgium, to have it subordinate to the great Powers, and especially to France. He was a liberal, he disliked the revolutionists; he meant to employ any and all means to give to French diplomacy a preponderating part in Europe; and he was conscious that he could, better than anybody else, assure and maintain it in this preponderance. He wished to establish a solid constitutional government in France, though he had a secret contempt for parliamentary discussions and for the new political personnel of the Revolution of 1830.

Just after the fall of the citadel of Antwerp, which a French army had besieged, Talleyrand lost a personal friend in the person of the Princesse de Vaudémont (who belonged to the house of Lorraine), his confidential correspondent. She died on January 1, 1833.

"I lost in her a friend of fifty years. I had known her at the house of her mother-in-law, the Comtesse de Brionne, where I had spent the most agreeable years of my youth; our relations had never suffered any change, and I could not console myself for the loss of such a faithful friend. She rendered me a service, even after her death, her heirs having sent back to me the letters which I had addressed to her; and from these letters I have taken many details which have helped me to write my Memoirs, and which would probably have gone out of my memory."

After the Belgian question the Eastern question became the chief preoccupation of Talleyrand in London. The rivalry of the Sultan Mahmud and of the Pasha of Egypt, Mehemet

Ali, was the origin of it. Mehemet Ali, a soldier of Albania, had become Vice-King of Egypt, and had succeeded in creating an army and a navy; he had extended his power over Nubia and a part of Arabia. His embassy in London was the last episode in the political career of Prince Talleyrand; he resigned in 1834. Some of the letters which he wrote at that time are very fine; there is one to Louis Philippe which is very remarkable: "I have, thanks to you, Sire, obtained for the Revolution of July the *droit de cité* [freedom of the city] in Europe. My task is accomplished, and I insist now on retiring, as I need rest." The Cabinet of Lord Melbourne had just retired. The Duke of Wellington had been charged with the formation of an administration in the absence of Sir Robert Peel.

"Whatever," continues Talleyrand, "may be my respect for the character, the strength, and the prudence of the Duke of Wellington, I could not withdraw my resignation merely because he returns to power, without becoming instantly a party man in both countries, and consequently less able to serve the King. I have never been the man of a party; I have never wished to be, and this has been my strength. When, four years ago, I started for England, I was, in the eyes of France—of France which is so severe in its national susceptibilities—what I always wished to be, the man of France. To-day, I should be, for her, the man of the Duke of Wellington. The King forgets too often, in his indulgent kindness, my great age; he forgets that it is not allowed an octogenarian to be wanting in prudence, for what makes the faults of old age so sad is, that they are irreparable."

Talleyrand spent the years of his retreat either on his fine estate at Valençay or in Paris in his hôtel on the Rue Saint-Florentin (now owned and occupied by Alphonse de Rothschild). He lived only four years more, and died in Paris on May 17, 1838. On the morning of his last day he signed a retraction of the errors of his life which had been censured by the Church, and this was sent to Pope Gregory XVI.

In an appendix to this fifth and last volume of the Memoirs, there is a sort of historical essay written by Talleyrand on the Duc de Choiseul and his administration. It was among the papers which were entitled "Memoirs," but was written several years before the Memoirs were begun. The Duc de Broglie, however, thought it important enough to publish it; it was perhaps because he is himself very much interested in the period in which the Duc de Choiseul lived. The essay begins in this airy manner: "The Duc de Choiseul had much natural wit, little education, a great deal of assurance; a good name with a slight foreign veneer which classed him equally among the grand seigneurs of France and of Germany. The branch of Choiseuls to which he belonged was in the service of the Dukes of Lorraine." The portraits of Madame du Barry and of Madame de Pompadour are very striking; they are not written with indulgence. Talleyrand remarks, for instance, that, different as these two ladies were in almost every respect, they resembled each other completely in one point—in the feminine art of lying. His final judgment on Choiseul is not more indulgent: "Here ends this brilliant career, more remarkable for social successes than signalized in history by characteristic marks of real merit. . . . M. de Choiseul will remain in history only as a man who governed France for eleven years by the despotism of fashion; his name recalls no battles won, no glorious treaties."

Correspondence.

THE OTHER SIDE.

To the Editor of The Nation:

Sir: In an address before the Massachusetts Society for Promoting Good Citizenship, Mr. Theodore Roosevelt makes some remarks which, as they go to the root and basis of our politics, are worth discussion.

"Undoubtedly it would be well for our Congressmen to pay more heed to the writings of those who have studied our political questions from an outside standpoint; but beyond doubt these outsiders have more to learn from the practical politicians in Congress than the latter have to learn from them, and it would be the greatest misfortune possible to have some of the favorite theories of these outside reformers actually reduced to practice."

The main propcsition relied upon to support this statement seems to be unfortunately selected:

"During the last three years the methods of Congressional procedure at Washington have been immensely changed for the better. Long strides have been taken in the direction of making Congress a really effective and responsible legislative body, both by rendering mere factious obstruction comparatively easy to suppress (and mere factious obstruction can never be pardonable) and also by lodging in a given committee, which adequately represents the majority of the House, power to single out of the immense mass of legislation proposed those measures which deserve especial attention, and to put them on their passage."

What this really means is that the Speaker, as the blind instrument of a party majority, has assumed the power, by counting quorums, and recognizing some speakers and refusing to recognize others at his pleasure, of forcing through legislation in the interest of the majority; and, further, that a committee, also representing the party majority, and of which the Speaker is a member, shall determine in secret conclave what measures shall be taken up by the House and forced through under gag rules without effective debate. Could there be a more potent instrument for subjecting all legislation to the influence of the lobby, which already rules Congress with an iron hand? It must have been a desperate condition of things upon which that was an improvement.

Mr. Roosevelt refers with triumph to the Copyright Act. Not understanding it myself, I believe that experts regard it as a lame and half-hearted instalment of a simple act of justice, which is much less remarkable for its passage than for the disgraceful neglect which has so long stained our statute books.

"For instance, as my friend, the Honorable Andrew D. White, remarked to me the other day, one of the prime, cardinal merits of our Constitution, one of the reasons why it works so well, is the fact that we do not have what in England is called responsible government."

The abolition of slavery was not effected by Congress, but by sheer force of the popular will, in tacit submission to four years of military despotism. Setting that apart, if Mr. Roosevelt will point to one single act of Congress which has ever contributed to the direct and permanent welfare of the great mass of the people, to a degree in any way bearing comparison with the results obtained under an executive ministry in England by the Parliamentary Reform Act of 1832, the repeal of the Corn Laws, the gradual reform of the tariff, the Civil-Service Rules of 1853, the transfer of contested-election questions to the courts, the measures for the suppression of bribery, the disestablishment of the Irish Church, the measures for the Government of India, I will give up the contest, at least as far as he is concerned.

I will not yield to any man living in love for our country or its institutions. My enthusiasm for this magnificent people, which carried through the civil war, and, without a shadow of revengeful feeling, launched the Union on a fresh career of power and prosperity, amounts almost to idolatry. My aversion to the social, and in most respects the political, conditions of Europe is such that I never desire to set foot on her shores again. And yet I say that government by Congress and the State Legislatures, under present conditions and without official leaders, is a ramshackle machinery which suppresses instead of expressing the will of the people, and hands over the welfare of the nation to unscrupulous adventurers and gigantic combinations of local and private interests in a way which is slowly but stea ily conducting us to another civil war.

Nobody that I know of proposes a Ministry responsible to Congress as the English Ministry is to Parliament. Happily our Executive is not created by Congress but by the people, and our fixed terms provide for an appeal to the people quite as often as is done in practice under the English system. And when Mr. Roosevelt sneers at "the very estimable gentlemen who flatter themselves that they have looked intelligently at public questions," he forgets, though he cannot cancel, the fact that in 1881 eight Senators of both parties unanimously and urgently recommended a plan which covers in every particular all that I, for one, have ever asked for or desired.

Mr. Roosevelt's address will carry all the weight which belongs to his high personal character and his position as Civil-Service Commissioner; but if he expects to prevail by force of argument, it seems to me that he will need to strengthen his logic a little. G. B.

Boston, April 29, 1892.

THE STUDY OF ENGLISH LITERATURE.

To the Editor of The Nation:

Sir: I wish to inform Mr. Matthews that the Agricultural College of Iowa acknowledges "that the teaching of the English language and the teaching of English literature are equally important, and wholly unrelated one to the other, and recognizes this truth by the establishment of two [full and] independent professorships, one of the English language and one of English literature." I am obliged to cut out the word "full," because our resources are so limited that the Professor of English Literature is obliged also to give instruction in History; but that shows that the professor is overworked, not that the work is slighted; and it is not an important fact to one who is investigating the principles which control the instruction in literature and in language. At any rate, "these two equal professorships exist side by side" in this college. The two departments are in charge of different professors; and English literature is studied as a literature, not as a source of illustrations of grammar or philology. A. C. Barrows.

Ames, Iowa, April 27, 1892.

"DOG GONE IT."

To the Editor of The Nation:

Sir: Your correspondent under this head, in your issue of April 21, starts a curious question. In my boyhood, I was familiar wth the

use to which he refers, among the Virginia youngsters of that day, although I should have said that the participle "dog-goned" was common, while he thinks it was unknown. The origin or etymology of the use is certainly obscure. I am not satisfied with his theory that it means, or originally meant, dogging, in the sense of being chased or worried by a dog. Vulgar uses of words tend downwards, not upwards (*e. g.*, "gossip," "good-bye," "maudlin"): and that the figure of being worried by a dog should come to express the high though bad sentiment involved in swearing, would be a case of etymological tendency upwards, so far as concerns the matter of the dignity (worthiness) of language. I should rather think it to be a case of *soft swearing*, like "durn" or "darn," instead of the common Anglo-Saxon imprecation. I should think so, but for the fact that I find Barrie, in 'The Little Minister,' using it as vulgar Scotch. Thus, Rob Dow says, "*Dagon* religion, it spoils a' things"; and in the delightful chapter where the minister unexpectedly gave out his text from Ezra, "Ezra, *dagont*, it looked as if Ezra had jumped clean out of the Bible." The identity of the Scotch with the Virginia use is plain. It is not likely that it was ever an importation into Scotland from Virginia, for the Scotch, when they swear at all, do so without dodging or affectation. Did the Virginians get it from the Scotch, and how? There seems to be here a question of word-kinship worth determining. Mr. Lowell, alas! could have answered it. Who else can?

C. B.

Boston, April 26, 1892.

Notes.

Charles Scribner's Sons announce a new edition in three volumes of Lord Chesterfield's Letters, edited by Dr. Broadhurst, and retaining also Lord Mahon's notes, and with six portraits; and 'From the Arctic Ocean to the Yellow Sea,' a Siberian journey by Julius M. Price.

James Russell Lowell's Lowell Institute lectures on the English Dramatists will be published by Houghton, Mifflin & Co. in the fall.

The fifth volume of the English translation of Talleyrand's Memoirs will shortly be brought out by G. P. Putnam's Sons, together with 'The Story of the Byzantine Empire,' by C. W. C. Oman.

Misses Searle & Girton, Chicago, will publish a volume of blank verse by Blanche Fearing, entitled 'In the City by the Lake.'

The sixth volume of the New Cambridge Shakespeare (Macmillan) includes "Troilus and Cressida," "Coriolanus," "Titus Andronicus," and "Romeo and Juliet." The notes show to an attentive eye the thoroughness with which whatever was appropriate to this edition of the text has been incorporated. In point of authority, as well as of convenience and cheapness, it is the best library edition, and the near completion of the set makes it the more available.

The reissue of Peacock's novels (London: J. M. Dent & Co.; New York: Macmillan) is continued with 'Crotchet Castle,' the work which is on all accounts the most successful of the whole set, because it represents its author at the moment when he had sufficiently aged to be tolerant of what he laughed at, was prosperous enough to be genial, and had not yet stocked his mind with crotchets of his own, as he came to do. Dr. Garnett's introduction, like all he has furnished, is a model of point and brevity and good nature in criticism. He singles out the character of Dr. Folliott as the only "type" which Peacock contributed to the English world of books, and he especially praises the ballad of "The Pool of the Diving Friar" as unrivalled in the language in its kind. We observe, apropos of "crotchets," that he says, upon his own account, that "the ideal of improvement has been lowered" since the forces of the time of George IV. spent themselves.

Swan Sonnenschein & Co. publish in their Social Science Series (which is imported by Charles Scribner's Sons) a volume by F. Engels entitled 'The Condition of the Working Class in England in 1844.' As this work was written in 1845, it may have a certain interest as showing that the representations as to the status of this class made by the Socialists are very much the same now as then. But the evidential value of these representations is of the slightest, and time spent over this book would be wasted by any one who sincerely desired to inform himself concerning its nominal subject.

The second part of Palgrave's 'Dictionary of Political Economy' (Beeke-Chamberlayne), is now delivered by the publishers, Macmillan & Co. The character of this publication was sufficiently described by us on the appearance of the first part, and we merely note that the list of contributors contains the names of several American professors—Ashley, Dunbar, Dewey, Richmond Smith, and Taussig.

Mr. Traill Taylor's 'Optics of Photography and Photographic Lenses' (Macmillan & Co.) is not in any proper sense a scientific treatise, though a certain amount of scientific explanation and even demonstration is introduced. The subject of photographic lenses is discussed at length, and the different forms of lens are very clearly shown by sections. There is perhaps not enough in the way of statement as to the precise advantages and disadvantages of the lenses of different makers. Still, the book is good and useful.

The autobiographic character of Mr. Joel Chandler Harris's 'On the Plantation' (D. Appleton & Co.) invests it with a peculiar interest. The sub-title calls it "a story of a Georgia boy's adventures during the war," and it is really a valuable, if modest, contribution to the history of the civil war within the Confederate lines, particularly on the eve of the catastrophe. While Mr. Harris in his preface professes to have lost the power to distinguish between what is true and what is imaginative in his episodical narrative, the reader readily finds the clue, and it is instructive to notice how "Uncle Remus's" humor is robbed of its contagiousness when the tale is about a funny incident in his own experience, which he is too conscientious to embellish. Two or three new animal fables are introduced with effect; but the history of the plantation, the printing-office, the black runaways and white deserters of whom the impending break-up made the community tolerant, the coon and fox-hunting, forms the serious purpose of the book, and holds the reader's interest from beginning to end. Like 'Daddy Jake,' this is a good anti-slavery tract in disguise, and does credit to Mr. Harris's humanity. There are amusing illustrations by E. W. Kemble. It is a pity the publishers could not have spent a little more money in procuring a better portrait of "Uncle Remus" himself than the poor process cut which serves as a frontispiece.

We welcome the 'Coöperative Index to Periodicals,' for 1891, edited as heretofore by Mr. W. I. Fletcher of the Amherst Library and a corps of volunteers from the American Library Association. The alphabetical list of topics generally has the writer's name accompanying his article; and these writers are in turn alphabetized, and their several articles ranged beside them, in the second part of the volume. Good indexing could no further go.

Pacini of Pescia, an early Florentine printer, issued at least four editions of the 'Trionfi' of Petrarch, which attained great popularity and have become excessively rare, so that all of them except the third are now represented by a single known copy, and none can be found outside of the cities of Rome, Florence, Perugia, and Trieste. The first of these, of 1499, is unique, and is preserved in the Victor Emanuel Library at Rome. This highly interesting specimen of early printing has lately been reproduced in facsimile (Rome: Genua & Strizzi) by the photo-zincographic process, and now the humblest library in the world may in this particular place itself on a par with the depository of the original publication, for all purposes of study and use. Such world-wide distribution of single perishable books and manuscripts ought to enter into the scheme of every great library. The Bodleian provides for photographic reduplications in certain lines, to order, at a reasonable rate. The 'Trionfi' of 1499–1891 (12mo, pp. 70) costs 20 lire, or $4. At $1, with due advertisement, it might have found much more than four times the sale, one would suppose. The illustrations, typography, orthography, peculiar readings, marginal annotations, and biographical sketch, of the edition are curious in a high degree.

Of all the French critics of our generation, no one has so strong a liking for Boileau as M. Brunetière; and it was therefore with an obvious sense of fitness that he was announced as the writer to whom the study of Boileau had been confided by M. Jusserand in his excellent series "Les Grand Écrivains Français." The volume on Boileau has now appeared, and it is not by M. Brunetière, but by M. Gustave Lanson, to whom we owe an admirable biographical criticism of Nivelle de la Chaussée. It is no dispraise of M. Lanson to say that his criticism has not the weight of M. Brunetière's, or that he does not project Boileau's figure quite as boldly as we may hope M. Brunetière would have done. But none the less his book is most acceptable, and it will help to restore Boileau to his rightful place as one of the very best of French critics. M. Lanson has no difficulty in showing that Boileau was very far from being the narrow-minded bigot that the Romanticists generally represented him to be.

Grillparzer's 'Ansichten über Litteratur, Bühne und Leben' (Stuttgart: Goeschen) is the record of conversations with the distinguished Austrian poet, held at intervals between 1839 and 1871 by Adolph Foglar, himself a son of the Muses and an ardent admirer of the author of 'Die Ahnfrau.' Grillparzer has the reputation of a thorough pessimist and misanthrope, and although this brochure shows him in a more amiable light, it must be confessed that most of his utterances, however true, are tinged with cynicism. He had an intense dislike of the Czechs, and would not admit that they could excel in anything. "The whole nation fiddles and fifes, but has never yet produced a single great musician." Herr Foglar intimates that he has still much material in manuscript, which he hesitates to print lest it should excite odium, and we can readily believe him. His book is interesting reading, and will serve to supplement the biographies of the poet already published, and prove a valu-

able source of information to those yet to be written.

A work of similar character and issued by the same publishing house is 'Vischer: Erinnerungen, Äusserungen und Worte,' by Ilse Frapan. In 1883 Miss Frapan of Hamburg, following a custom only too common with young ladies of literary aspirations, sent some verses to the well-known professor of æsthetics, Friedrich Theodor Vischer, with the request that he would deign to pass judgment upon them. This rather ungrateful task he performed with conscientiousness tempered by good humor, which led to further correspondence, and finally to personal acquaintance at Stuttgart, where the young poetess attended the Professor's lectures and became one of his most enthusiastic disciples. Her volume is divided into three sections, which treat respectively of Vischer as orator and teacher, his domestic and social life, with an account of the celebration of his eightieth birthday in 1887, and his death in the same year. The book is excellent as a revelation of Vischer's character, although the publication of some of his sharp and often harsh utterances about living authors may be more entertaining to the general public than to the persons criticised.

In response to the request of the New York Commandery of the Loyal Legion, Gen. Wager Swayne has printed his interesting address upon the "Ordinance of 1787 and the War of 1861," recently delivered before it. He traces the history of the Ordinance, with many apt quotations from contemporaneous letters and documents, from its origin in the petition of the two hundred and eighty-five Revolutionary officers, mostly New England men, in June, 1783, for a grant of land in the Northwest Territory, to its adoption by the moribund Continental Congress on July 13, 1787. The pregnant words, "neither slavery nor involuntary servitude," in Article VI. and repeated in the Thirteenth Amendment to the Constitution, he shows to have been first used by Thomas Jefferson in the draft of a similar ordinance submitted to Congress in April, 1784. This clause was rejected, however, at that time, and was inserted only at the last moment in the latter document, in all probability through the influence of Dr. Manasseh Cutler, the agent of the Ohio Company. Following a brief account of the settlement of Marietta is a sketch of the anti-slavery movement as connected with the States which the orator aptly terms the "children of the Ordinance." Portraits are given of Dr. Cutler and of Gen. Rufus Putnam, the leader of the pioneers, and pictures of the Massachusetts home of the latter and of Federal Hall in Wall Street, together with a map of the "Old Northwest."

The April number of the *Pennsylvania Magazine of History and Biography* is noticeable for its papers relating to Washington. His account-books are put to good use by Dr. J. M. Toner, who constructs from them a real character of Washington the man—in dress, books, pictures, amusements, gaming and betting, charity and public spirit, care of his slaves, etc.

Capt. F. E. Younghusband's striking account of his two recent journeys in the Pamir is published in the April Proceedings of the Royal Geographical Society. The most interesting part is the description of the vast glaciers on the Mustagh Range, overhung by "ice peaks broken into every fantastic shape, with great fringes of drooping icicles hanging from their sides." On one of them the snow was of a beautiful pale transparent blue. Signs of former cultivation were to be found in almost all the mountain valleys, but the Khirgiz have been driven away by the raids of the Kanjutis of Hunza, a mountain tribe whose chiefs claim descent from Alexander the Great. At one point there were the remains of smelting-furnaces, with evidences of the existence of iron, copper, and gold in the surrounding hills. The great height of this region, which Capt. Younghusband calls the "upper storey" of the world, in reference to the flat-roofed houses of Turkistan, may be learned from the fact that "the bottoms of these Pamir valleys are level with the higher summits of the Alps."

In *Natura ed Arte* for April 15 (Milan: F. Vallardi), we find a statement of the growth of the collection of editions of the 'Divine Comedy' in the National Central Library at Florence. Since 1888 a special effort has been made to perfect this collection, and its Italian series now numbers 307. A negligible hundred or so still remain to be acquired, besides four or five extremely rare editions. The translations number 124, apart from 11 in Italian dialects. Of these France shows 39, Germany 38, and England 20.

We spoke, while they were in course of publication in *Garden and Forest*, of Mr. J. B. Harrison's remarkable series of letters from the Massachusetts shore, revealing the extent to which the people of that State had forfeited access to the sea and parted with their public commons. The whole correspondence is now reprinted in connection with the first annual report of the new Massachusetts Trustees of Public Reservations, of whom Mr. Charles Eliot, No. 50 State Street, Boston, is the secretary. The pamphlet ought to have the widest possible distribution in every State in the Union, for it points the way to an efficient combination of legislative action with public spirit for the purposes in view. The Corporation has been authorized to hold as trustees and to maintain for the public benefit "beautiful and historical places and tracts of land" within the State, to the extent of a million dollars; and these reservations will be exempt from taxation. Already one gift has been made and a fund for maintenance partly raised. The donor was a woman, and women have been significant contributors to the expenses of the Trustees thus far. Gifts of landscape *in memoriam* are also contemplated. An appendix contains the text of Massachusetts statutes pertinent to the subject.

An effort is making to establish an American Jewish Historical Society, and an early meeting for organization in Washington is contemplated. Dr. Cyrus Adler of Johns Hopkins University may be addressed in regard to it.

The American Library Association will hold its fourteenth annual conference at the Laurel House, Lakewood, N. J., on May 16-19, at Baltimore May 20, and Washington May 21. An excursion into Virginia will follow the Washington session.

The Catalogue of English Prose Fiction which we noticed the other day as coming to us from St. Louis, should have been credited to the Mercantile Library of that city.

We must also rectify our notice of the Summer School of Pedagogy and Psychology to be held at Clark University, so far as to characterize Dr. Wm. H. Burnham as Dean of the School and not of the University.

—The May *Atlantic* is distinguished by the publication of the Emerson-Thoreau correspondence, of which, however, there is more to come. The present lot consists of sixteen letters, seven being from Emerson, written during the *Dial* period, and concerned for the most part with personal or editorial affairs. At first Thoreau, who was an inmate of the Emerson household, writes to Emerson in New York, and later the correspondents exchange places. The most interesting matter is the glimpse of Thoreau's impression of New York in 1843, and next to that the home-feeling of the two men. The tone is curiously far off, and belongs to a very small community. The second portion of the correspondence will contain the letters written during Emerson's English visit in 1847, when Thoreau went back to his friend's house. In the paper upon "Private Life in Ancient Rome," Mrs. Preston makes a welcome return to the scenes of classical interest which she presents with so much vividness, and in so entertaining a fashion as to make her work an example to those whose business it is to give instruction in this field, as well as a treasure to all students. In the remainder of the number David Dodge's account of the scenes about a North Carolina homestead at the close of the war is the most attractive article, full of reality, humor, and good feeling; the extracts from Severn's Roman diary, especially those dealing with the occupation of the city by the Italians, have the best qualities of contemporary history of that sort; and the discussion of the requirements for admission to Harvard College, by Prof. Greenough, puts a rather complicated matter in a plain way so as to show the underlying logic of it. The political writer of the magazine attacks the gerrymander with vigor, and urges the quota system as a practicable and sufficient remedy. The number ends with a quantity of reviews.

—Mr. Jacob A. Riis's paper, in *Scribner's*, upon "The Children of the Poor," is a model of what such writing should be—explicit, straightforward, full of plain facts and personal impressions, and entirely free from sentimentality, violence, or preaching of any sort. The story, as a picture of child life merely, without any reference to philanthropy or reform, is admirably told, and holds the attention of the reader either by its realism in the grosser and darker parts, or by its natural comedy and picturesque scenes in the brighter portions. The most striking quality shown by the writer is his invincible hopefulness about the future of these children under our institutions; he sustains the mood apparently without effort; and when his close acquaintance with the conditions of the problem and the nature of these children of all races is remembered, the cheerfulness he displays is the best encouragement to maintain and multiply the various means of aid which seem so beneficent in their results. Mr. Thomas Curtis Clarke opens a discussion of the rapid-transit problem with a comparative description of the systems of the great European and American cities, with maps, and shows the lines of their common experience; he postpones his solution of the question to the next number. The "Linden," in the Great Streets Series, is described by Paul Lindau in a way to show its national and historical spirit and expression. Prof. Shaler contributes a paper of a characteristic sort upon the action of the sea on the shore; Mr. Apthorpe concludes his elaborate account of the Paris theatres with a criticism of the critics, and particularly of M. Sarcey; and the "Historic Moment" of the month is the "First News Message by Telegraph."

—Mr. Howells signalizes the beginning of his editorship of the *Cosmopolitan* by a number strong in variety and notable in the list of contributors. Mr. Lowell's poem, "The Nobler Lover," is much marred by the unfortunate way in which it is obscured in the

printing, and by the incongruous design which overloads the page and spares only the crowded corner to the verse, to such a degree as to make one question whether Mr. Walter Crane did not think that the poem was meant to illustrate his figures. This is a fault both of artistic taste and of dignity, for the verses, apart from their being Lowell's last, are worth reams of such decorative work. In the body of the magazine Miss Jewett and Frank Stockton are the veteran story-tellers, and Henry James, T. W. Higginson, and E. E. Hale the veteran essayists. Mr. James pays the tribute of friendship to Wolcott Balestier, and the other two write in their accustomed way of their accustomed topics. Mr. Higginson's remarks on libraries, especially as regards intrusting the public with larger privileges in using them, are most practical, and should be looked at by those librarians and trustees whose instinct is still to lock up instead of to scatter. Dr. Garner explains his theory of "simian speech," and relates his experience in detecting and using it. Mr. Roosevelt argues with unabated force and pungency the plea of civil-service reform. Mr. Brander Matthews is the critic of the magazine. Prof. Boyesen contributes the most entertaining paper—a slight travel-sketch among the Lapps. Mr. Howells confines himself to farce. The variety of short papers and the absence of serials are the striking traits of the number.

—"Japanese Characteristics" is the subject of a charming paper by Prof. C. G. Knott, in the *Scottish Geographical Magazine* for April. It is derived from the experiences of an eight years' residence in Japan, and corrects some of the false impressions of the people given by chance travellers. The ordinary globe-trotter rarely sees anything but the out-door life of the middle or lower classes. "He may never meet a real lady of Japan at all," or a gentleman in private life. In reference to the charge frequently made that the present generation are essentially imitators, he says that in all their imitations there is a subtle Japanese flavor, even though it be a spurious label for Bass's ale, which differentiates it from the thing imitated. Nor have they a trivial, butterfly nature, as many suppose. Though they enter heartily and with a childlike zest into any amusement, yet it is only a momentary throwing aside of care, for the nation itself is "terribly in earnest." A failure to get at principles, and the lack of an all-round intellectual vigor, mark the cultured classes. "Only in one direction, that of pure and applied science, have they made any real progress." As regards their moral condition, Prof. Knott believes that the average is no lower than that of Europe or America. There is no morality of the high spiritual type which Christianity produces, but there is rarely to be found that low, brutal type which, unfortunately, also characterizes our Western civilization. The condition of the women, in the upper classes at least, is passing "from a condition of virtual bondage to one of comparative liberty," and whether in the change they will retain the qualities which are their special charm, is a question difficult to answer. In some circumstances old customs are curiously enforced. "For example, when dressed in native costume, the husband will precede the wife; but when decked out in Western robes, the wife will be graciously permitted to enter a room in front of her husband." It is significant, too, that "no woman can be present as a spectator in either House of Parliament when the Diet is in session." But perhaps the sign of the greatest progress in the direction of the emancipation of the women is the fact that Japanese ladies are beginning to take upon themselves the duties of entertainers, in place of the professional singing and dancing-girls who were till recently the necessary accompaniment of every convivial gathering. With all the changes of the past thirty years, however, and the adoption of many European customs, one thing is still certain: "Into the inner heart of this sunny people, the foreign eye has never penetrated. . . . The deep springs of Japanese family life are hid from his view."

—The *Revue Encyclopédique* is published fortnightly by the Librairie Larousse as a sort of running supplement to the great 'Dictionnaire Universel': it is a veritable treasure-house of useful and interesting things, and is as "modern" as yesterday. In the number for April 1 we note what appears to be the discovery of Mérimée's "Inconnue." A note is quoted from a writer who signs himself "A. H.," who asserts that he put into the post in Paris, in the month of October, 1831, the first of the letters of the "Inconnue" to Mérimée. Her name was Jennie Dacquin; she was the daughter of a notary of Boulogne-sur-Mer, where she was born. She died in Paris in 1887 or 1888. It appears that she had read the 'Chronique de Charles IX.' with great enthusiasm, and was eager to get Mérimée's autograph. To this end she addressed him in a letter written in English, and signed "Lady Algernon Seymour." Mérimée replied to Lady Algernon, and so began the correspondence which lasted till his death in 1870. Curious readers who are also hardened sceptics may desire some definite information about "A. H." None is given; but he seems to possess the confidence of the editors of Larousse, who say of his note, "Le voile semble levé aujourd'hui."

—Prof. A. Soetbeer's 'Litteraturnachweis über Geld- und Münzwesen' (Berlin: Puttkammer) adds another to the exhaustive compilations which this indefatigable worker has contributed to the literature of bimetallism. While its nominal object is to give a bibliography of the discussions on bimetallism in the years 1871-'91, it covers in effect the whole period from the discovery of America to the present time. Four chapters, embracing respectively the periods 1492-1620, 1621-1810, 1811-1850, and 1851-'70, give brief accounts of the coinage legislation of important countries, summary statements of the production of gold and silver, and bibliographies of important publications on monetary questions. These first chapters are brief, and not the less valuable to the student on that account. The fifth chapter, which deals with the twenty years 1871-1891, occupies two-thirds of the volume, and is detailed and exhaustive. The history of the bimetallist agitation is narrated with care, the various official commissions and conferences are noted, every legislative act is stated and the more important are described in detail, while the bibliography covers a hundred-odd pages. At the close, Prof. Soetbeer considers the present silver situation, the conditions of price and production, and emphasizes the commanding importance of the legislation of the United States. Altogether, the volume is invaluable for reference purposes, and will be welcomed by all students of the monetary situation.

BIBLIOMANIA.

A Monograph on Privately Illustrated Books. A Plea for Bibliomania. By Daniel M. Tredwell, Lincoln Road, Flatbush, Long Island. Privately printed. 1892.

Four Private Libraries of New York. A Contribution to the History of Bibliophilism in America. First series. Preface by Octave Uzanne. By Henri Pène du Bois. New York: Duprat & Co. 1892.

Round and About the Book-stalls. A Guide for the Book-hunter. By J. Herbert Slater. London: L. Upcott Gill. 1891.

Mr. Tredwell's stately octavo from the De Vinne Press, which appears to be on sale despite its imprint, is noteworthy for being the most extensive work upon its subject. A small volume, originating in a lecture before the Brooklyn Rembrandt Club, was issued in 1881; the present has the same title, but treble the matter. After explaining "extending," "inlaying," and other mysteries of the craft, the author describes the work of more than a hundred collectors, scattered throughout the United States. New York has the most, but Boston, with due regard to population, ranks first in this phase of bibliomania. More than $13,000,000 are invested in privately illustrated books in and about New York. If the figures fail to show the extent of the practice, glance at a few items. The Menzies 'Dibdin' numbered 53 volumes. Dr. Stauffer's 'History of Philadelphia' contains 8,000 inlaid illustrations and 1,000 pen-and-ink sketches. Mr. Augustin Daly has an Ireland's 'Recollections of the New York Stage' (published in two quartos) in 33 folio volumes, with 10,500 plates; Dr. Emmet's 'Biographies of the Signers of the Declaration of Independence' fills 39 folios. One New York enthusiast has illustrated more than 300 volumes, and inlaid 50,000 plates.

In the lack of a proper philosophy and ethic of collecting, it is difficult to grade the different varieties. Mr. Tredwell is not the champion of bibliomania, as he fancies, but of the collection and utilization of engravings, autographs, and the like literary bric-à-brac—a subordinate branch of bibliomania, and one which we are not inclined, at least when not in sight of some masterpiece of the art, to estimate very highly. We grant that valuable material is in this way got together and given a chance to find a permanent home in some public library, that the practice is productive of a not ignoble pleasure, that it leads to familiarity with the work of artists, engravers, and writers, and even, under certain conditions, to knowledge of literature and art. Nor is it just to dwell exclusively upon extravagances like Bagford's depredations, or the Gibbs Bible with its 30,000 plates, or upon the misdirected zeal of that collector—surely a relative of Mr. Dick of Dover—who could not be satisfied with less than 731 portraits of Charles I., or that other, who culled 600 plates to illustrate four or five verses of the first chapter of Genesis. There are those, like our author, who scorn such raven-like work, who neither extend the text nor smother it with plates, but are governed by good taste and common sense. The product of such is a delight to mind and eye. The common Grangerite—perversion of an honorable name!—to whom quantity is all in all, is, nevertheless, beyond the pale of our sympathy. His is a vampire art, maiming where it does not murder, and incapable of rising beyond cannibalism. Between him and the bibliophile there is war. What book-lover, from Dr. Ferriar to Mr. Blades, has had for him aught but satire and abuse? "They are book-ghouls, and brood, like the obscene demons of Arabian superstition, over the fragments of the mighty dead," writes Mr. Andrew Lang, to whom tolerance has been imputed for unrighteousness. By those who have charge over books, the print-collector is deeply sus-

pected; endured or embraced for the profit that may be in him as buyer or donor, in private he is regarded as an adept with the wetted string, a primitive communist, living under

> "the good old rule,
> the simple plan,
> That they should take who have the power,
> And they should keep who can."

Is an extra-illustrator ever wholly without guile? Even Mr. Tredwell confesses to having once collected title-pages from first editions of famous novels.

We have found so much of interest in these pages that we regret our inability to praise without reserve, but in truth the book as a whole is formless, having the faults without the virtues of a catalogue, while of the style we can, for cogent reasons, say nothing. It is disfigured, too, by numbers of those errors which the reviewer can commonly ascribe to either printer or author, as best suits his turn, but between Mr. Tredwell and Mr. DeVinne one may well hesitate. Who is responsible for "Roxburg" (p. 28), "Roxburgh" (p. 303), "Hammerton" (p. 16), "Madame Reidesel" (p. 81), "Manilius, Petronius, and Arbiter" (p. 19), "Oedipus, Tyrannus the alchemist, and Tom Jones" (p. 314)? What shall we say of "Count Benjamin Thompson Rumford" (p. 59), "François William Guizot" (p. 156), "The Bradford Croakers' (Club copy)" (p. 379)? De Bry's 'Voyages' Mr. Tredwell thinks excessively rare in a perfect state. We should think so! They are almost absolutely unique, to use his own emphatic phraseology. "Unique" is nearly as great a favorite with Mr. Tredwell as "gotten," and he knows it in all gradations from "almost" to entirely. In twice speaking of Mr. Henry Morley as the biographer of Voltaire, he seems "as ignorant" (if we may plagiarize his own account of a similar correction) "that there are two Mr. Morleys as that this is the wrong one." The indexes can be praised only on the principle of the half-loaf. The absence of a reference does not prove a similar lack in the text, nor will an entry lead always to the most important passage. In the index of illustrated books the searcher should look under author and title—first word, most important word, least important word—nor despair if he fail to recognize the object of his search; it may be neatly concealed after the manner of "Campaign and St. Leger's Expedition, Stone," for Stone's "Campaign of Lieut.-Gen. Burgoyne, etc."

The second book on our list is charming, in type, page, paper, its silk cover of mandarin red, its illustrations, and its contents. It is the sublimation of bibliography, a bibliopegic ecstasy, book-madness raised to the *n*th power; but it is founded on an idea, and written with the earnestness characteristic of French bibliographers, to whom the necessity of apologizing for their art has not suggested itself. Indeed, the locality of the libraries is almost the only American feature of the book, for either they chiefly consist of French literature, or the French portion is most strongly presented. The libraries are those of Mr. C. Jolly-Bavoillot, "the library of the Romanticists"; of Mr. Samuel P. Avery, also described in part by Mr. Tredwell; of Mr. George Beach de Forest, Elzevir-man and vignettist; and a fourth which is anonymous.

Although we are indulged in frequent quotations, and even in a hitherto unpublished "Conte Arabe" of Alfred de Vigny, and some verses by Dobson, Browning, and others, extracted from Mr. Avery's 'Knickerbocker' (these Mr. Tredwell also gives), the aim of the book is an artistic development of a new cult of book-binding. Grolier, De Thou, Brinley, we are told, knew not the art of book-binding. They approved certain patterns of ornamentation, but they cared not upon which book each should be displayed. Not so the "art of the decade," a phrase that runs a trifle too freely from the author's pen: binding is the last thing to be done to a book, it is the final rite, the apotheosis. Before it is adventured, the book must not only have been read, it must have been absorbed, perfected. Then, from the mind stored with full knowledge, tranquil, reflective, as from the quiet depths of the milk-pan silently the cream rises, is projected the idea of the Perfect Binding. Thus only is a Library formed. We confess that Mr. Pène du Bois sometimes annoys us. His rhapsodies, his stained-glass attitudes, arouse the Philistine within us. If book lore has had its Froissart, here, one might say, is its Lyly, but that at times there is in him more of Sir Piercie Shafton than of Euphues. "A truce to unique copies, and the binding of the decade," we cry; "tell us of a library where all the masters are, but all in morning dress; 'where not one of the Graces tight-laces!'" However, to enthusiasm much may be forgiven, and we part from the author with gratitude for his closing words on extra-illustrating: "Of one hundred books extended by the insertion of prints which were not made for them, ninety-nine are ruined. . . . Yet prints may be inserted in books." The illustrations are unusually successful in their rendering of bindings. There is no index.

Mr. Slater's little book, which might be still smaller without loss, since there is much repetition in its 119 pages, takes us to a different field. It is a book-broker's manual, a guide to the Wall Street of old books. It distinguishes the various classes of second-hand books, and traces their rise and fall in the market for a century back; from these observations a prognosis of values for ten years in advance is attempted. The great depreciation of philological works and editions of the classics is thought to offer a chance for large profits in the near future, but this we doubt. The author attributes the change too entirely to decline in scholarship; it is in great part due to a change in the character of scholarship. Philology has become a science, and is subject to the general rule for scientific books, that only the very new or the very old have value. The novice must beware of art books; they are the mining stocks of the book exchange. First editions of Scott, Byron, Shelley, Tennyson, and Browning Mr. Slater thinks excellent purchases at present quotations. He means those works which now have the minor value of a pound or two. There is little profit to be expected for some time to come in an 'Adonais' at $70. The modern poets, like Swinburne and William Morris, offer a good chance. Of course Mr. Slater writes for the English market, but his principles apply here, where literature is not too young to have first editions of respectable values. Librarians will find it worth their while to read this book carefully. Certain publishers will not be pleased at the advice to buy subscription books, second-hand, a month or so after publication. In closing, we ought to say that Mr. Slater is the editor of *Book Prices Current*, a periodical published by Mr. Stock, and simply invaluable in a library; his theory of book prices is therefore based on a wide experience.

MRS. PIOZZI IN ITALY.

Glimpses of Italian Society in the Eighteenth Century, from the Journey of Mrs. Piozzi. With an Introduction by the Countess Evelyn Martinengo-Cesaresco. Charles Scribner's Sons.

THE world moves on apace; modern inventions and progress tend to efface distinctions of race and country, so that we turn with interest to a faithful description of travel in Italy a hundred years ago, and are surprised to find that, all things considered, there are many observations which might be dated yesterday. The Countess Martinengo, in her preface to Mrs. Piozzi's book, gives us briefly the facts of her second marriage and the account of the general disapproval it elicited among her English friends. Mr. Piozzi was regarded as an inferior person by Mrs. Thrales's acquaintance, because he was a music-master as well as an Italian; his nationality and the profession being equally disreputable in the eyes of the middle-class, well-to-do people who formed her circle. It was therefore to escape "from the poisoned arrows of private malignity," as Mrs. Piozzi puts it, that the journey to Italy was undertaken. Mr. Piozzi urged that they should remain there until his wife's debts were paid. This, owing to his economical management, was soon accomplished. Mrs. Piozzi wrote this record of her journey so that her friends should know and understand how well her husband was received among his own people, and how they were welcomed by persons of every rank. On her return to England, she related, with evident satisfaction, how Italians were surprised at her being a lady when they heard her first husband was a brewer. The Countess Martinengo quotes a parallel of our own day in the case of an English wine-merchant who would not willingly accept a Neapolitan of noble rank as a son-in-law because he was a master of music, to show that the prejudice against Mr. Piozzi's profession still exists among certain classes.

The Italians, punctilious enough as to rank and class among themselves, seem in the eighteenth century to have waived these distinctions in favor of foreign visitors, so that Mrs. Piozzi had the advantage of observing and studying at her leisure the manners and morals of all classes. The Piozzis travelled from place to place conveniently in their own carriage, staying with their friends or at inns, visiting monuments, theatres, hearing the best music, and mixing in society everywhere. Thus they passed through Turin, Genoa, Milan, Mantua, Verona, Padua, Venice, Ferrara, Bologna, Florence, Rome, and Naples. Mrs. Piozzi was a keen observer. She appreciated the beauties of natural scenery very keenly, and describes them with a grace and appropriateness of epithet which strike one as singularly cultivated. The art treasures of the cities she passed through do not seem to have attracted her—she rarely mentions pictures or frescoes; and in this nineteenth century, in which we are surfeited with every uncultured traveller's impressions on art, it is refreshing to read a book which does not touch on these matters. Mrs. Piozzi naturally turned her attention to Italian women, and was much impressed with the ignorance of household affairs displayed by Italian ladies in whose houses she visited. Neither weekly bills nor accounts of any kind came under their supervision. All these affairs were under the husband's jurisdiction, as also the servants, who, in households where eight were kept, would number six men to two women. The custom of keeping open house and having guests to dinner daily, husband and wife never by any chance remaining *en tête-à-tête* at meals, struck her as remarkable, as also the departure at night of the large retinue of

servants, each one to his home. She describes it as "the comicallest sight in the world to see them all go gravely home, and you may die in the night for want of help, though surrounded by showy attendants all day." This custom would account for the want of provision for servants' sleeping-rooms in ancient palaces. The familiarity of the servants with their masters, their habit of joining in the conversation when they chose, would naturally astonish this English lady, and she is equally shocked at their genuflexions and the humility of their hand-kissings, etc., on certain other occasions.

Mrs. Piozzi seems to have been anxious to ascertain, for the enlightenment of her readers, the exact position of the *cavalier servente*. She inquired, therefore, of a beautiful young Milanese lady, who told her that it was a custom which proved useful to people as poor as herself, as her *cavalier servente* paid the bills; he was otherwise a bore, but could not be dispensed with without her husband incurring the suspicion of being jealous of her. The Countess Martinengo, however, in her introduction, explains how in those days no woman, however old, or however long she had been married, could go anywhere by herself, excepting to church; therefore, as it was impossible for the husband to be always at the wife's orders as an escort, a cavalier was appointed, often an humble relative, who was always ready to tender his services to accompany the lady to the family box at the theatre, or to wait on her in the street. The continual presence of this person really interfered with any possible lover; and although in some cases the continual intimacy resulted in mutual love, this was exceptional rather than the rule.

Mrs. Piozzi was surprised at the way the children were kept in the background, rarely seen at all in great houses save for a short time after dinner, and also at the immense reverence and attention displayed by sons and daughters to their parents when the latter were infirm and disabled. Of Italian gentlemen Mrs. Piozzi writes:

"The politeness of a man of fashion here is true politeness, free from all affectation, and honestly expressive of what he really feels—a true value for the person spoken to, without the smallest desire of shining himself, equally removed from foppery on one side or indifference on the other. The manners of the men here are certainly pleasing to a very eminent degree, and in their conversation there is a mixture—not unfrequent—of classical allusions which strike one with a sort of literary pleasure I cannot easily describe."

Also, the great attentions and courtesy to women delighted her: she narrates that in any serious dispute between husband and wife public opinion always espoused the cause of the latter.

All foreigners remark the insensibility to cold with which Italians are endowed. This quality has not decreased since Mrs. Piozzi's day, and then as now they avoid sitting near a fire even if it be only a blaze of lighted faggots, throwing out little heat. The *scaldino*, a brass box perforated with holes, was much used in those days and is still. Mrs. Piozzi considers this means of warmth detrimental to a fresh complexion. She mentions the foot-muffs used in theatres and churches by the great ladies, and the little pipkins with lighted charcoal the poor women hang on their arms as they rush about on their errands in the street in cold weather.

The impressions Rome made on our traveller seem to have been less pleasant than those received from the more northern cities:

"This is the first town in Italy I have arrived at yet where the ladies fairly drive up and down a long street by way of showing their dress, equipages, etc., without even a pretence of taking fresh air. At Turin the view from the place destined to this amusement would tempt one out merely for its own sake, and at Milan they drive along a planted walk at least a stone's throw beyond the gates. Bologna calls its serious inhabitants to a little rising ground whence the prospect is luxuriantly verdant and smiling. The Lucca bastions are beyond all in a peculiar style of miniature beauty; and even Florentines, though lazy enough, creep out to Porta San Gallo. But here at Rome, *la Santa*, the street is all our Corso—a fine one, doubtless, and called the Strada del Popolo with infinite propriety, for except in that strada there is little populousness enough, God knows. Twelve men to a woman even there, and as many ecclesiastics to a layman."

Like travellers of our own day, Mrs. Piozzi was struck with the combination of grandeur and squalor on every side in the Eternal City—magnificent palaces with rags hanging out to dry at the windows; regal staircases and vestibules made use of by common passengers for every nauseous purpose; stinking mud heaps to be waded through before being able to approach a monument; the crowd of beggars and their persistence in making capital out of the deformities they display. She complains that the taste for good music was less prevalent than in the north of Italy, and is surprised that, considering the bad smells which one has to encounter on every side, the Roman ladies of quality should have been so squeamish of perfumes. We quote Mrs. Piozzi's account of an incident which prevented her mixing in Roman society:

"I went but once among them, when Memmo, the Venetian ambassador, did me the honor to introduce me somewhere; but the conversation was soon over—not so my shame, when I perceived all the company shrink from me very oddly, and stop their noses with rue, which a servant brought to their assistance on open salvers. I was by this time more like to faint away than they, from confusion and distress; my kind protector informed me of the cause, said I had some grains of maréchale powder in my hair perhaps, and led me out of the assembly, to which no entreaties could prevail on me ever to return, or make further attempts to associate with a delicacy so very susceptible of offence."

Mrs. Piozzi wrote wittily, describing scenes vividly, relating anecdotes with humor and point, never allowing her English prejudices to interfere with her judgment or to spoil her enjoyment of the scenes so new to her. Her knowledge of Italian must have been very thorough, she detected so readily the slightest differences in the dialect of each of the cities she visited. Her book remains a most valuable record of Italian society in the eighteenth century. It is delightfully written, and leaves an impression of extreme accuracy. It still remains for our nineteenth century to produce a book which will read as well a hundred years hence. To the Countess Martinengo all thanks are due for having so ably reëdited this journey and presented it to us in so pleasing a form.

BASTIEN-LEPAGE.

Jules Bastien-Lepage and His Art. A Memoir. By André Theuriet. Jules Bastien-Lepage as Artist, by George Clausen, A.R.W.S. Modern Realism in Painting, by Walter Sickert, N.E.A.C. And A Study of Marie Bashkirtseff, by Mathilde Blind. Illustrated with reproductions of Bastien-Lepage's and Marie Bashkirtseff's works. London: T. Fisher Unwin; New York: Macmillan & Co. 1892. 8vo, pp. 190.

THIS is a singularly composite volume. That M. Theuriet's Memoir should be followed by Mr. Clausen's appreciation of Bastien's art from the point of view of a more or less avowed disciple of that painter, is natural enough. That the *advocatus diaboli*, in the person of Mr. Sickert, should be allowed to speak is comprehensible. But why a "study" of that particularly unpleasant young person, Marie Bashkirtseff, should be inflicted upon us passes all understanding.

All that there is to tell of the life of Bastien-Lepage M. Theuriet tells gracefully, in a style warmed by personal friendship, and with many quotations from Bastien's own private letters. The artist was born of a peasant family in moderate circumstances at Damvilliers, Meuse, on November 1, 1848. He early showed a talent for drawing, which was encouraged by his father, who used every evening to set him tasks in representing simple objects. His family wished him to enter the public service, and gave him, at some sacrifice, a good school education, but he early determined to be a painter. After his graduation from the College of Verdun, he obtained a position in the post-office, and set out for Paris about the end of 1867, with the intention of dividing his time between his service and the study of art. A short experience, however, convinced him that this was impossible, and at the end of six months he gave up his position, and thenceforth, with the aid of a pension of 600 francs granted him by his department, and of such sums as his family could send him, struggled on. He served in the war of 1870 and was wounded. He failed twice of the Prix de Rome, but had the suffrage of his fellow-students if not of the Institute, and was made a hero of by many of the younger artists. His pictures at the Salon soon attracted much attention, and his "Les Foins" (Hay), in the Salon of 1878, made him a veritable *chef d'école*. Many an artist who was then studying in Paris will remember the enthusiasm of the ateliers for this work—an enthusiasm which the masters hardly shared. This picture was followed by the "Potato Gatherers" in 1879, by the "Jeanne d'Arc" in 1880, and by a series of less universally known pictures. He had received a second-class medal and the Legion of Honor, was famous and successful; but his health, which had long been bad, gave way entirely, and he died at the age of thirty-six, on the 10th of December, 1884.

After the life comes the discussion. What is the place in the history of art which Bastien will finally occupy, and what is the meaning and value of that "modern realism" of which he is almost the patron saint? These are the questions which Mr. Clausen and Mr. Sickert discuss; Mr. Clausen with a hearty, though not unlimited, admiration for Bastien's work, and Mr. Sickert with strong disapproval of the school and the tendency, rather than of particular pictures. On these questions we will try to express our own views as clearly as may be.

In the first place, Bastien was not a man of great intellectual or emotional power. His character seems to have been essentially commonplace. The grasp and force of the great minds in painting—the deep impressiveness or the poetic charm of the world's masterpieces—are not his. Neither had he much feeling for what one may call the purely artistic part of art. Rhythmic arrangement of line and splendor or subtlety of color appealed but little to him. He was master of a sound and useful technique, but for technical charm—for pure beauty of handling—he apparently cared nothing. But his very limitations in these directions were probably part of his influence on the younger men who were studying painting

in Paris. He was himself a sort of glorified art-student and a typical hero for the worship of art-students. The young men of the ateliers —the students of art—have nothing to do with power or sentiment or poetry, with glory of color or grace of line; their time and efforts are spent in a desperate struggle with fact. As a rule, they care little for art as such; they are striving to acquire the bare power of representation. Here was a man who represented facts with a power and precision that was a revelation to them, and they worshipped him. Here was a man who had done what they were striving to do, and they applauded.

Almost every picture that Bastien painted, and almost every letter that he wrote, shows us the typical art student. It is ever the determination to represent the actual thing as it is—to conquer nature in detail—to take the canvas into the fields and paint the very flowers and leaves and grass as they really are —to catch the actual texture of a face in the actual light of open day. Much must be sacrificed. If we are to abandon convention, we must give up all that can be suggested only by conventional means. If we are to paint always direct from nature, we must make no attempt to record those fleeting and beautiful effects which can be painted only from memory. We must confine ourselves to figures in repose, for action is too evanescent, and we must paint in the steady light of a cloudy day, when effect changes little. Such sacrifices Bastien made, probably without feeling them. Within the limits he set for himself, or which his nature set for him, the result was, however, superb. Take "Les Foins," for an example, or the figure of Joan in the "Jeanne d'Arc" (of the rest of the picture we will speak later), examine it carefully, and confess that such exact rendition of fact was never seen before. The modelling of firm and solid flesh without an apparent shadow, the gray bloom of daylight on warm skin, the mottling of cheek, the moisture of eye, the texture of sun-faded hair and rough gown, are given with a perfection that is little short of marvellous. The enthusiasm of Bastien's young admirers was as well justified as was the doubt of his masters. This has been an age rather of investigation than creation, and among the investigators of the aspects of nature, Bastien-Lepage has an honorable place.

He died young. If he had lived, would he have outgrown the student phase and have become a creator? Mr. Clausen thinks so, and says:

"I feel convinced that realism was not the end with Bastien-Lepage. I believe that his contribution to art, great as it was, and covering as it does an amount of work which might well represent a whole life's work instead of the work of a few short years, was but the promise of his full power; and that, had he lived, his work would have shown a wider range of nature than that of any other artist, except perhaps Rembrandt."

We cannot think that there is any evidence that Bastien was travelling in this direction. The "Jeanne d'Arc" was an effort to combine the conventionalisms of the older forms of art with the painter's own realistic treatment of nature, and it was not a success. The realists complained of the presence of the visions; the idealists complained of the undue importance of insignificant details. The picture has great merit: the conception of Joan is truly fine and dramatic, and the bodily presence of the "voices" is a necessary concession to the limitations of painting. But the picture is neither decorative nor realistic nor ideal: it is a compromise, and not a successful compromise. From the time of its appearance and failure, the ideal element disappears almost absolutely from Bastien's work. "Le Mendiant" and "Père Jacques" are even less pictures—are more frankly big studies—than any of his earlier work. They are the sort of thing that is admirable discipline for a young man just out of school, but as the work of a *chef d'école* in the height of his power they are almost inexcusable. One may set one's self the problem of painting an old beggar, the size of life, in the open air, with absolute fidelity as the aim and with no charm even of handling to relieve the ugliness of the subject; but when it is done, it can be no more than a revelation of one's ability, and the public has no interest in it. And, what is more unfortunate, these later studies of Bastien's are not even as good, as studies, as "Les Foins."

There is, however, one branch of art for which Bastien's nature—his limitations almost as much as his powers—peculiarly fitted him, and that branch is portraiture. His lack of bias or strong personal feeling, his comparative carelessness of color or composition or even beauty, his disinterested delight in the accurate rendering of absolute fact, all mark him for a painter of portraits. They are the qualities of a Holbein, and have occasionally raised Bastien nearly to Holbein's level. He could never paint anything but a portrait even when he thought he was painting a picture, and his best work was put into avowed portraiture. Many of his portraits are wonderful and delightful, but the best of them all is the portrait of his mother, which those who saw it at the Paris Exposition of 1889 might be pardoned for proclaiming the greatest portrait of our day. Certainly it is one of the greatest, and on it and a few others we believe his reputation will most surely rest. His glory will be that of having been one of the really great portrait-painters of the world, and it is glory enough for any man.

Du Niger au Golfe de Guinée par le pays de Kong et le Mossi. Par le capitaine Binger. [1887–1889.] Paris: Librairie Hachette & Cie. 1892. 2 vols. 8vo.

THERE has been so great interest of late in the development of eastern and equatorial Africa that we are in danger of losing sight of the fact that there are other parts of the continent still little known, but full of promise to the explorer. These are the chain of Sudanese States to the south of the Sahara, and the region lying between the great bend of the Niger and the negro kingdoms of the Guinea Coast. Explorers of different nationalities are now endeavoring from various directions to reach the former, with what success remains to be seen. The latter has been recently traversed from north to south by a French officer going, in the double character of a commercial traveller and a political agent, to introduce French manufactures and to negotiate treaties. With this peaceful end in view, he travelled without an armed escort, having only men and animals sufficient to carry the goods intended for sale and for presents. He left Bammako, a French post on the upper Niger, in June, 1887, and in March, 1889, reached Grand Bassam on the French Gold Coast. The commercial results of his mission are of course not yet apparent, but through the treaties which he induced the chiefs of the regions passed through to sign, he is able to say that "one can go to-day from Cape Blanc to the Gulf of Guinea, and from Cape Verd to Say [on the lower Niger] without leaving territory under French rule."

Capt. Binger's account of his journey, though rather dry and lacking in entertaining incidents, is evidently a painstaking and faithful description of a not very interesting country or people. It is difficult, indeed, to form a distinct conception of any place visited with the single exception of Kong. This is the principal city of a kingdom bearing the same name, inhabited by about 15,000 Mohammedans of a singularly intelligent and tolerant type. They are divided into three classes, the educated, the illiterate, and the drinkers of *dolo*, or millet-beer. Their chief occupation is weaving and dyeing a cotton cloth in great demand throughout the western Sudan, and trading in salt and the cola-nut. Although having a marked disinclination for war, they are rapidly extending their rule over the neighboring tribes in a somewhat novel manner. One or two Kong families settle in a pagan village, establish a school to which they invite the village children, and gradually gain the confidence of the chief, who finally puts himself and his people under the protection of their king. In this way two things are gained: their surplus population is provided for and their trade-routes are made secure. Among the things most frequently asked for of Capt. Binger, who was, if we are not mistaken, the first European to visit the city, were "sacred books, Korans, Gospels, Pentateuchs, and law treatises." They recognize three principal religions, which they call the "Ways of Moses, Jesus, and Mahomet." In conversation "many of them declared that these three religions were identical because they led to one and the same God." So also, in obedience to the command of the Koran—"When a slave shall demand from thee his liberty *in writing*, thou shalt give it to him with some of the goods which God has bestowed upon thee"—some of them have freed those of their slaves who had received religious instruction and could read. The ordinary currency, not only of Kong but of nearly the whole region traversed, was the cowry, of which 500 equal a franc, though both gold and a few European silver coins are used. The gold is both in nuggets and in dust, but the latter is apparently the only form in which it is used as money. The smallest amount current weighs as much as a grain and a half of unhusked rice, and is valued at a little over two cents.

From this place it was Capt. Binger's intention to go through the Mossi country to Say, the limit of the French influence on the lower Niger according to the recent treaty with Great Britain. He succeeded in reaching the town of the ruling chief, who received him hospitably, but would not permit him to proceed farther. Accordingly he returned by a different route to Kong, from whence he made his way with little difficulty to the coast.

Although he tells very little of the way in which he carried out the political ends of his mission, he gives much information in regard to the agricultural and commercial resources of the country explored by him. The part adjacent to the French Sudan has been reduced recently almost to an uninhabited wilderness, partly through the wars of two rival chiefs, and partly through slave-raids. There are large, thickly populated districts, however, to the south and east of these States, which, on the opening of communication, will doubtless prove valuable markets for foreign goods. He does not appear to have made any special investigation of the extent or richness of the gold-bearing region, but the quantity of gold dust and small nuggets to be found in every village, taken in connection with the fact that it is surface gold merely from the banks of the streams,

would seem to indicate the existence of valuable deposits. The natives, throughout his whole journey, seem to have been peaceably inclined to the white traveller, though in some instances they refused to permit him to enter their villages. Nor does he appear to have suffered much from their dishonesty, though he travelled without an escort. At one place he found "five or six sheds filled with merchandise, barrels of powder, boxes of gin, bags of salt. No one is there to guard them; in this region they do not trouble themselves about thieves. . . . The people, though fond of drink, never touch the gin, nor anything which does not belong to them." In this same district all the people of a village are held responsible for the crime of any one of them against an inhabitant of another village. This was most frequently adultery, which with the wife of a chief cost a man all his possessions; with an ordinary woman, from two to six ounces of gold. If he has nothing with which to pay, he is held as a slave, and his children and fellow-villagers inherit the debt. This custom often made it difficult to get transportation from one village to another, the men fearing to be held as slaves in payment of an old debt.

Capt. Binger gives two of the stories current among the Mandingoes, which are interesting from their striking resemblance in form and humor to those of "Uncle Remus." In both the rabbit victimizes, in the first the hyena, in the second all the animals, whose burial-fund he has appropriated. In order to test him, the elephant pretends to die and the rabbit is summoned to bury him. Taking his pickaxe, he goes to the place where all the animals are assembled, first telling his three children to come to him at intervals of fifteen minutes. Shortly after beginning his work one of the young rabbits runs up with a message that he is wanted at home. The old rabbit refuses to go, because he is busy digging the elephant's grave. Soon another rabbit appears with the same message, and this time the lion orders the rabbit to go home and see what is wanted. He obeys, but returns in a short time and sets silently to work. After repeated questions, he says, with feigned reluctance, that three strangers have arrived, one in search of elephants, another of lions and panthers, the third of hyenas. On hearing this they all take to flight and leave the rabbit to enjoy the burial-fund at his ease.

The book is well illustrated; the pictures of the mosques, whose peculiar architecture Capt. Binger does not fully describe, being especially interesting. There is an admirable map, on which, it may be noted, the mountains of Kong, which figure so largely on even the most recent maps, do not appear. According to this latest explorer, they exist only in the imagination of the geographers.

The Formal Garden in England. By Reginald Blomfield and F. Inigo Thomas. Macmillan & Co. 1892.

THIS is an awakening book. Its plea is for design in the surroundings of houses. It insists that the house and the ground around the house should be arranged in relation to each other. It maintains the irrefutable proposition that really satisfying beauty in the immediate surroundings of men's lives upon this earth must spring, not from any imitated likeness to wild nature, nor yet from any impracticable conformity to the ideals of landscape-painters, but simply from the harmonious adaptation of land and buildings to the uses and enjoyments of real life.

It seems strange that an obvious truth, now universally accepted as respects buildings, should still need to be preached in its application to the ground surrounding buildings. Ground near a house must generally be devoted to purposes of use and enjoyment quite like the purposes which the house itself is designed to serve. If the house has its hall, its drawing-room, its billiard-room, and its laundry, the ground near the house must have its approach-road, its garden, its tennis-court, and its drying-yard. These are all artificial things, demanding formal lines and the subjugation of nature as emphatically as a building. They ought to be planned so as to make with the building one design and composition.

In the book before us these ideas are deduced and illustrated from a study of the old gardens of England. The writer and the draughtsman, who are the joint authors of the book, have evidently travelled widely in search of good examples of the ancient style of house-grounds, and they have been rewarded for their pains by the discovery of many charming places, possessing fore-courts, house-courts, base-courts, terraces, bowling-greens, and walled gardens composed of "knots," parterres, pleaching, arbors, "palisades," and hedges. In these gardens grow gillyflowers, columbines, sweet-williams, hollyhocks, and marigolds, lady-slippers, London pride, bachelor's-buttons, love-in-a-mist, and apple-of-love; peacocks parade their ivied walls, and daisies stud their velvet lawns. The seclusion, the repose, the mingling light and shade, the blending colors, the sweet odors, and, above all, the perfect fitness of these old gardens, conspire to make them lovable and delectable beyond compare. They are well described and happily illustrated in this book, so that the reader can but sympathize with the righteous wrath which the authors vent upon the men who destroyed hundreds of such places in the last years of the last century.

What was the origin of the mood or fashion which occasioned this lamentable destruction, and gave birth to the pseudo-naturalistic style of treating ground about houses that is even yet in vogue? Our authors do not attempt a philosophical answer to this question, but they give us an instructive sketch of the history of garden design from the days of the mediæval 'Romance of the Rose,' through the fresh and simple style of the English Renascence, to the elaborate extravagances of the Restoration and the consequent reaction which assisted in the establishment of the self-styled "art of landscape gardening."

The prophets and practitioners of the naturalistic school, from Whately, Uvedale Price, and Repton of the last century, to Messrs. Robinson and Milner of the present day, are here handled without gloves. They are, indeed, too sweepingly assailed; for beyond the vicinity of the house and garden lies a broad field in which only naturalistic treatment is appropriate. Yet, as respects gardens, what follows is true enough:

"Presumably, Mr. Robinson's dictum that 'walks should be concealed as much as possible and reduced to the most modest dimensions,' is based on the state of a virgin forest; the argument perhaps running thus: Because in a virgin forest there are no paths at all, let us in our acre and a half of garden make as little of the paths as possible." "But it is not easy to state the landscape gardener's principles, for his system consists in the absence of any, and most modern writers lead off with hearty abuse of formal gardening, after which they incontinently drop the question of design and go off at a tangent on horticulture; and yet it is evident that to plan out a garden the knowledge necessary is that of design, not that of growing a gigantic gooseberry."

Even the latest books on landscape gardening, the English Milner's and the American Parsons's, treat of trees, shrubs, herbs, and other things, rather than of design in the surroundings of houses. Our private and public gardens also, with their necessarily unnatural and yet studiously informal arrangements, betray the same lack of feeling for design. Our time is certainly out of joint as respects this art, and for this reason this straightforward book is peculiarly valuable and welcome.

Concerning All of Us. By Thomas Wentworth Higginson. Harper & Bros.

THE fraternal and democratic implication of the title of this small volume of essays is faithfully carried out by the tone of their contents. They touch in passing upon topics as miscellaneous in character as the headings of a newspaper column, but without anywhere drifting away from the main current of ideas. These are of a quality that will easily win acceptance with the generality of readers, who find a personal satisfaction in being continually reminded of the value of the average man, and of the preponderating importance of the rank and file of "plain people" over the exceptionally endowed few.

The advantages of local independence in social matters are also dwelt on in detail, and the impossibility, in this country, of a metropolis—a city, that is, with the prerogative of dictating the laws of good manners to other cities. However obvious some of its drawbacks may be, there can at least be no doubt that such social autonomy leaves freer scope for the exercise of what Mr. Higginson calls the "new national temperament." English criticisms upon some of the manifestations of this temperament are dealt with in more than one of the essays, and Mr. Higginson is always ready to parry them by counter-criticism. His foils, it must be said, are always provided with their buttons, for good humor marks every page of the volume. He never, however, omits the retort courteous, and although it is an open question whether the habit of constant self-defence is as likely in the long run as Mr. Arnold's habit of self-criticism to touch the spirit to fine issues, it is impossible not to applaud such vigilant fencing.

By no means second in interest are the opinions here set down in regard to women. They are thoroughly sane and practical, and deserve a sympathetic reading. The time, however, is rapidly passing when they can be read as other than agreeably expressed truisms. The advance in the educational status of women, in the Old World and the New, which has been so marked of late, is merely the index of the change of front which the body of conservative people, apart from educators, are making in regard to the "woman question." In some remote New England town or on retired plantations in the far South, where it is still considered a perilous adventure for a girl to embark on the study of algebra, there may probably linger for a time the need for some one to assert that "women have ceased to be mere dependents and appendages, and there is nothing left for them but to go on and be individuals"; but this can hardly be the case much longer in localities within reach of the current of progress.

There is so much amiable optimism contained in these papers that they are well calculated to produce a cheerful frame of mind in their readers. The busy men and women who have from time to time perused them in the periodicals in which they first appeared, have no doubt felt themselves stimulated to a more

careful and more logical observation of social phenomena. Their reasonableness is their merit, and they are distinguished by a ripeness of reflection and temperateness of judgment that are fortunately within reach of every average man and woman who will consistently apply the rule laid down in one of the papers, of "judging all things constantly in the light of first principles and fresh minds."

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773-1783. Vols. XI. and XII. Nos. 1059-1300. London: B. F. Stevens.

THE eleventh and twelfth volumes of this collection return to a subject already treated in the first and fourth volumes, viz., the Commission sent out to America in 1778 with the conciliatory proposals of the British Government. This time we have the official correspondence of the Commission, and a few reports and private letters of Sir Henry Clinton and others. The whole story is one of disappointment on the civil side, and inefficiency of the military department. To the latter, however, there are two exceptions: the successful retreat of the British army across New Jersey in the summer of 1778, and the capture of Savannah on the 29th of December of the same year. This latter service was well performed by Lieut.-Col. Archibald Campbell, a gallant soldier who could write as well as act, and who was not afraid of blowing his own trumpet on occasion. "I need not inform your Lordship," says he in his report, "how much I prize the hope of being the first British Officer to rent a Stripe and Star from the rebel flag of Congress: In that event it will rest with my Sovereign and your Lordship, to decide its merit and consequence" (1248). Shortly after his capture of Savannah, Lieut.-Col. Campbell was joined by reinforcements from Saint Augustine, a fact which he mentions in a private letter as follows: "Gen. Prevost has at last reached this town from the Southward with 900 rag, tag, and Bobtails" (1252). The men thus disrespectfully described had, however, made a much more favorable impression on the general who had actually commanded them. He speaks highly of their conduct and their sufferings, "and the chearfulness with which for days together under the most severe fatigues, they lived only on Oysters" (1251).

Few parts of this collection are so interesting as the military letters. The facts which they relate are generally known, at least in outline, but the soldiers tell their story well and may at any time give us new particulars. It is to be hoped that Mr. Stevens has many more such reports in reserve.

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good"

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y. *F. Crosby Co.*

The Nation.

NEW YORK, THURSDAY, MAY 12, 1892.

The Week.

THE passage by Congress, with scarcely any opposition, of the bill to admit the Inman steamers *City of Paris* and *City of New York* to American registry is a notable event, and must be considered the beginning of a great reform in our shipping laws and in our commercial policy. The mere fact that the Inman Company is required to build additional ships of the same aggregate tonnage in American shipyards, is a very small price to pay for such a concession. It will be impossible henceforth to resist the petition of other American citizens who own foreign-built ships to have them put under the flag of their own country. It will be impossible long to resist the petition of other American citizens to be put on a footing of equality with foreigners in respect of the ocean carrying trade. What an anomaly and injustice it is which allows British, Norwegian, Chinese, Hawaiian, and all other ships to come to our ports and fetch and carry all kinds of goods for such freight money as they can get, but denies to our own people the right to own these very ships *unless* they are sailed under a foreign flag. You may own a British-built ship and sail it under the flag of San Domingo as long as you please, carrying American products out and foreign products back, but you cannot get the protection of your own country for your property. The negroes of San Domingo can come here with British-built ships and enter into competition with our people in the ocean carrying trade without the slightest restraint, but our own people cannot buy a British ship and get an American registry for it on any terms. The glaring injustice of this discrimination against our citizens must make itself felt ere long, now that Congress has taken *one* step in the right direction. It is said that the admission of the two Inman steamers was due to the galling discovery, at the time of the Chilian difficulty, that we had no swift transports capable of being armed. If this is the true explanation, it is the only good thing that the Chilian difficulty has brought us.

No party seems to be proof against the temptations of the River and Harbor Bill, with its almost innumerable slices of "pork." Ten years ago a Republican Congress passed what was the largest grab of the sort then ever known, and passed it again over President Arthur's veto. The following autumn the party was buried beneath a "tidal wave," which was largely swollen by the popular indignation at this piece of extravagance. Two years ago another Republican Congress passed a river and harbor bill far worse than that which Arthur vetoed, and the next November the party was buried even deeper than it had been in the days when Keifer was Speaker. The Democrats came into power pledged to economy in all appropriations, and yet on Monday 122 Democrats voted for, and only 58 against, a river and harbor bill which carries appropriations immediately available amounting to nearly $22,000,000, and fixes a liability upon the Government for future appropriations of almost $27,000,000, This, too, not only in violation of party pledges, but in face of the fact that the revenues of the Government are not now sufficient to meet the ordinary expenditures, and that new taxes will have to be imposed to pay for this debauch! As all but four of the sixty-three Republicans voting supported the bill, there is no reason to doubt that the Republican Senate will pass it, very likely after adding a good deal to its total. In that case we hope President Harrison will follow the example of his Republican predecessor and send in a veto.

Senator Sherman fought to the end against the barbarous spirit manifested by the majority of both branches of Congress in regard to the Chinese question. He refused to sign the report of the Committee of Conference, explaining that he fully sympathized with the popular feeling against the free introduction of Chinese laborers, but that he regarded the provision requiring every Chinaman now legally here to take out a certificate, under penalty of removal from the country, as in plain violation of the existing treaty with China. Representative Hitt was equally outspoken against the report of the Conference Committee in the House. But, of course, arguments were without avail, for the majority of both parties seem to believe that it is right to "trample upon a treaty," so long as it is a treaty with Chinamen. Two-thirds of the Senate voted to sustain the report of the Conference Committee, and the House concurred by the overwhelming vote of 185 yeas to 28 nays. And we are sending missionaries to convert the Chinese to such Christianity as this!

The passage and signing of the Chinese Exclusion Bill came in very pat with the missionary meeting of the Methodist General Conference at Omaha on Friday, and the occasion was not lost for addressing some very plain words to the politicians who passed the law and the President who approved it. And it is to be remembered that the Methodist speakers simply expressed the sentiments of all the religious bodies in the country. The others will no doubt be equally outspoken on the subject when they come to pass upon it officially. The assertion made at Omaha that "our mission in China is gravely impeded by this law" is just as true of Presbyterian and Congregationalist and Baptist missions as it is of Methodist. This sect may have been a little more impetuous and unparliamentary than Mr. Harrison's own denomination will be in referring to the matter, yet there are thousands of Presbyterians who will agree with the utterance of Dr. Edwards: "This is a sop to the steerages of the vessels that are being unloaded at the Battery. It is a political question, and that is why our noble Senators and our most unimpeachable President complete the iniquitous proceedings." When a Senator, Mr. Harrison spoke and voted on the Chinese question like a civilized man. As candidate for the Presidency, he had to repudiate the most honorable part of his record. As candidate for renomination, he has to put his name to a law which is in flagrant violation of a treaty, which was properly described by an excited Methodist at the Conference as "an outrage on civilization," and which, moreover, will subject hundreds of Americans in China to the gravest perils.

A bill, which was prepared by the American Institute of Architects, is pending in Congress, and ought to be made a law. It provides for a radical change in the methods at present followed in regard to the designs for Government buildings, by authorizing the Secretary of the Treasury to obtain plans, drawings, specifications, and local supervision for such buildings by the system of competitive examination among private architects. Not less than five architects shall be asked to compete for the designs for one building, and the one whose plans are approved may be asked to superintend the construction. The Supervising Architect of the Treasury is to remain the representative of the Government in all matters connected with the work of erecting public buildings, being the supervising power over all proposals, material, and contracts, and also over the plans and specifications of local architects. His powers will remain as they are at present, with the exception that he will not prepare the drawings and specifications. He will be made, in fact, the kind of official which his title designates—a supervisor of the architecture of Government buildings, not the architect of them.

What the bill does, is to call to the service of the Government the architectural talent of the whole country, in order that the best of that ability may be used in giving the United States public buildings which will be, in every way, artistically and economically, a credit to us as a nation. Everybody knows that this is not the

case at present. That it is not so is not the fault of the Supervising Architect. He has a task entirely beyond human capacity to perform. In a report favoring the proposed bill, Mr. Tarsney, Chairman of the Committee on Public Buildings and Grounds, says very truly that "it need not be urged that it is physically impossible for one man to devote sufficient thought and time to the proper designing and preparation of plans and specifications for fifty or sixty buildings each year which in their artistic expression shall be creditable to the nation, to the age, and to the architectural genius of the country, and that, in the economy of construction, shall do justice to those from whom the cost of such construction is drawn." He reports that the Committee has been furnished with trustworthy data showing that the cost of public buildings in this country ranges from fifty cents to a dollar per cubic foot, against from thirty-eight to fifty cents in foreign countries, and adds :

"Another very serious evil is the length of time required to construct and complete one of these buildings. A building which, if the property of a private citizen, would be constructed in months, when erected by the Government requires years for its completion. This necessarily results in great wastefulness and loss of money to the Government by the payment of unnecessary salaries of superintendents and other agents, by the expense of watching and caring for the materials and structure, and by the loss, waste, and deterioration of such material, besides the inconvenience to the citizens resulting from such delayed construction. As an illustration of the extent to which this evil may extend under present methods, your Committee would call your attention to the last annual report of the Supervising Architect in relation to the public building at Detroit, Mich., where the construction was authorized eleven years ago, and $1,300,000 therefor has been appropriated by Congress years since, and the foundation walls are not yet completed."

The truth of all this is notorious. Combined with extravagant and poor construction, we have almost invariably a style of architecture which is a libel on the artistic intelligence of the country, and a type of building which nine times out of ten is totally unfitted for the uses to which it is put. It is high time that the present system was changed. The country outgrew it years ago, and nobody whose opinion is worth considering favors its retention.

If there has ever been a disposition in the Eastern States to sneer at the West as a region destitute of culture and absorbed in purely material interests, the platform adopted last week by the Democrats of Wisconsin gives notice to the world that the day for such sneers is past. It may be emphatically said that any community which frames and accepts a platform of this character has reached a high state of political development, and sound political development is the best proof of true progress in civilization. In this platform we have as clear and strong a declaration of those principles which are, after all, fundamental to the Democratic party as language is capable of expressing. There is no buncombe or verbiage about it, no hypocrisy or evasion. There is no doubt what it means. It is as explicit in its statement of what it condemns as in its statement of what it approves. It is generally supposed that a platform is of very little consequence, and most platforms are of such a character as to justify this belief. The Wisconsin platform, however, is such a bugle-blast for sound government as may well be worth ten thousand men.

The most important planks are of course those relating to silver. The denunciation of the disgraceful law of 1890 is like a blow delivered straight from the shoulder and striking squarely between the eyes. That act, it is declared, is a cowardly makeshift, and an inexcusable waste of the national resources in the purchase and storage of tons of bullion per day, and is a menace to the maintenance of a sound and stable currency. Not only is its repeal demanded, but the position is unequivocally taken that if we are to have bimetallism, the silver dollar must have the same commercial value as the gold dollar. This is the only honest kind of bimetallism possible, and it marks a great advance in political courage when this doctrine is frankly avowed. On this subject the Wisconsin Democrats have certainly "nailed their colors to the mast." The money which they demand in the interest of the people is to be "composed of or based on and redeemable in gold and silver coin *of equal intrinsic value.*" Any disregard of this principle is justly declared to be "undemocratic, dishonest, and specially hurtful to the farmers and laboring classes, the first and most defenceless victims of unstable money and a fluctuating currency." The principle that there should be no tariff taxation except for revenue is affirmed with the same unmistakable clearness. There is nothing of that wretched makeshift, "incidental protection," nor any of the usual cant about "conserving the interests of American labor." In short, this declaration of political principles comes very near to being the truth, and nothing but the truth. If the party acts up to this platform, it will give the country good government; and where so much sincerity is shown in framing a platform, there is every reason to expect that the party will act up to it.

Three deliverances on the silver question came from Republican State conventions in the West during the past week which it is interesting to contrast. The Wisconsin brethren declare that, "while we favor the use of both gold and silver as money metals under conditions which shall guarantee their circulation at a continuing and substantial parity with each other, under existing circumstances and conditions we are unalterably opposed to the free and unlimited coinage of silver"; and they further declare that "we favor an amendment of the Silver Act of 1890 which shall vest in the President, whenever in his judgment the public interest shall demand it, power to suspend or diminish until the further action of Congress the purchase of silver bullion under said act." The Kansas Republicans, on the other hand, "urge the passage of such laws as will increase the coinage of silver, looking to the coinage of the production of our own mines, as soon as it can be done without injury to the business interests of the country." The Idaho Convention went much further, and instructed its delegates to the National Convention to "use their utmost endeavors to secure a plank in the Republican platform unequivocally pledging the party to the free and unlimited coinage of silver," and also instructed the delegates to vote for no person for President or Vice-President who is not in favor of free coinage. Evidently the Democratic party is not the only one which is divided on the silver issue.

The Republicans of Illinois and Wisconsin made last week a formal and complete surrender of the position which they took two years ago on the question of compulsory education. In 1890 the Illinois Republicans adopted a resolution saying that "we declare in favor of a compulsory-education law," while now they have adopted a resolution that "we pledge ourselves to repeal the present Compulsory School Act." In 1890 the Wisconsin Republicans declared their "belief that the compulsory-education law passed by the last Legislature is wise and humane in all its essential purposes, and we are opposed to its repeal." Having been beaten on this issue, and the "wise and humane law" having been repealed, they have now adopted a resolution that "we regard the educational issue of 1890 as permanently settled in this State, not to be revived in any of its phases by the Republican party." A more abject surrender has not been witnessed in our politics for a good many years.

Whatever explanation may be offered of the renewal of gold exports, the fact itself could not, under the circumstances, fail to cause anxiety. In spite of our abundant harvests, which should normally have resulted in a general buoyancy in the business world, a great deal of distrust and caution has been manifested, while the spirit of speculation has been absent. There is but one sufficient explanation of this state of affairs—the condition of the currency. With the law of 1890 in force, the only question to be asked is whether the increase in the population and business of the country will be sufficient to absorb $54,000,000 yearly of additional Government notes. If it will be sufficient, we are safe; for we may now feel reasonably confident that no new legislation will be worse than the present act. But if it will

not be sufficient, then our condition is so precarious as to justify all the caution and suspicion that exist. For if the Government is issuing more notes than are needed as money, those that are superfluous will certainly be presented for payment, and payment will be demanded in gold and not silver. Moreover, the Government must pay in gold; for if it should for a moment hesitate to do so, a panic would at once ensue.

In commenting upon the loss by the United States Treasury of nearly $6,000,000 gold during the month of April, the *Financial Chronicle* observes that this loss is doubtless chiefly due to the payment of the interest on the 4 per cent. bonds. It is true that the quarterly interest on these bonds which fell due on the 1st of April very nearly coincided in amount with the reduction in the gold reserve, but the reason is not apparent why the payment of this interest should have been demanded in gold. Of course the bondholders did not as a class want gold; they probably deposited their coupons or checks as usual, and the banks must have, for some reason, obtained gold from the Treasury upon these or other obligations. It would seem as if there must have been a demand for gold for export, or else to strengthen the bank reserves, and the real nature of this demand deserves a careful investigation. Unless it appears that the payment of the interest upon these bonds is regularly attended with a corresponding reduction of gold in the Treasury, the recent reduction must be explained by reference to some other cause.

The London *Economist* discusses at some length the project for a new international monetary conference, with special reference to the participation of England and India therein. It maintains first that Great Britain, before accepting an invitation to join in the conference, should make known distinctly how far she is willing to go, if any distance at all, so that other nations may not be deceived or led to indulge false expectations. The utmost that Mr. Goschen has hinted, up to this time, is that the Bank of England should be "advised" by the Government to take into her reserves a sum of silver equal to one-fourth of her gold, thus making the whole reserve consist of one part silver and four parts gold; this on condition that other nations shall throw open their mints to free coinage of both metals at a common ratio. But the *Economist* points out that the Bank of England, being a private corporation, is under no obligation to accept the Government's advice on this point, or, having once accepted it, to follow it for ever. It is important, the *Economist* thinks, that other nations should be made to understand these things. As to India, the suggestion is that that country shall agree to keep her mint open to silver for a certain term of years, on the same condition that the Bank of England requires for doing what she does. But what does that mean? Does it mean that if no international agreement is made, India will adopt the gold standard? Not at all, thinks the *Economist*, because the task is far too great for her. It is not to be thought of. So the participation of England and India would be of no more real consequence or significance than their participation in the Conference of 1881.

The women of Wyoming appear to maintain their interest in the suffrage. They not only vote regularly in a proportion which seems to approach that among men who are entitled to the ballot, but they take an active part in the caucuses and conventions which nominate candidates. A good many of the sex attended the recent Republican State Convention for the choice of delegates to the National Convention, and the male majority "recognized" them to the extent of giving them two places as alternates. This is somewhat after the system adopted by the Republican managers in a good many States regarding the negroes—of giving all the places as delegates to whites, and allowing the blacks only the "leavings" in the shape of election as alternates, who are not expected to serve; but, nevertheless, it must be regarded as "the entering wedge," and by 1896 the women of Wyoming may compel a "recognition" which will be of more value.

It appears from President Reynolds's report to the stockholders of the Mexican Central Railroad that the McKinley tariff has really led to the establishment of some new industries; but, unfortunately, the industries are in Mexico. It was thought by the officers of this railroad that the increase of the duty on lead ores would injure its business by making it unprofitable to import them. Apparently the smelters who were using these ores in the United States did find it unprofitable to import them after the tariff went into effect, for they transferred their works to Mexico. The railroad thus suffered some loss of freight upon ores carried to the frontier; but as it now hauls them to smelting works on its own line at better rates, and has in addition the bullion traffic and that in coal and all other supplies for the smelters, it finds that it has gained much more than it has lost. The advantage to American labor of this mode of establishing "hundreds of new industries," as the *Tribune* says, is not very apparent; but it can at least find satisfaction in the abstract principle, sustained by President Reynolds's evidence, that the McKinley tariff can produce the establishment of new industries somewhere.

It is the invariable tendency of theological controversies to push opposing views to extremes, and it is not, therefore, surprising that the present dissensions in the Presbyterian Church have driven the Princeton conservatives into a hyper-orthodoxy unknown to their fathers. The correspondence relating to the withdrawal of Prof. Van Dyke from Princeton Seminary shows that the lines are now more rigidly drawn in that institution than in the days of the Hodges themselves. It ought to give a seminary pause, we should think, to find that its zeal for sharpening distinctions of doctrine and making them tests of loyalty, results in the loss of one of its own sons and successful teachers, who maintains his entire fidelity to the creed of his Church and the old traditions of the seminary, but who refuses to ally himself with those who are endeavoring to make the institution more orthodox than the Pope. Princeton has already had the mortification of seeing several of her sons go over to the radical, or at least the liberal, party in the Church. There is nothing unprecedented about that: the most ardent innovators are usually those who have revolted from a surfeit of traditional teaching. Yet this fact does not prevent the zealots of every generation from following the example of the gods of Greece and devouring their own children.

The ministerial crisis in Italy is interpreted to mean that the country can no longer bear the expense attendant upon being a military and naval Power of the first class, and ready at all times to come to the assistance of Germany or Austria if either of them is attacked. This is what the Dreibund means. It demands of Italy pecuniary sacrifices of crushing weight, and yet there is no conclusive evidence that the country will not stagger along under the burden for some considerable time, rather than resign the place which national pride claims for her. Whatever may be the outcome of the crisis, it will be the expression of the national will, for there is not in Europe a more democratic country in fact. The forms of royalty and nobility which still exist are in strict subordination to parliamentary government. The civic instinct and patriotic pride which distinguished the Italian republics in the old times have never ceased to burn, although often seemingly quenched in blood and foreign domination. Whatever money Italy spends on fleets and armies she will spend because the taxpayers will it; not because the King and a few great families impose the charge upon them. It is to be hoped that they will abate something of the strain they have put upon themselves during the past fifteen years. It would be a great gain even for one country to make the experiment of reducing her armament, since it would enable the others to take the policy of reduction into consideration. It would open new channels of thought on the Continent of Europe, and might lead to better ideas concerning the chief end of man, which now means fighting or preparing to fight.

THE PRESIDENTIAL OUTLOOK.

ALL the 900 delegates who are to compose the National Republican Convention which will meet at Minneapolis on June 7, have been elected. Of the same number who are to compose the National Democratic Convention, which will meet at Chicago on June 21, only about 400 have been chosen. There is much speculation in public by the professional politicians as to the probable action of each convention, and there are many pretences, emanating chiefly from Washington, that there is much doubt as to the candidates who will be nominated. In reality, however, there is very little doubt as to the outcome of either convention. The Republican candidate is almost certain to be President Harrison, and the Democratic candidate is equally certain to be Mr. Cleveland. Both nominations are written in the book of political destiny, and the persons who are so voluble in doubt as to the writing are either manœuvring for position, or are blindly struggling against the inevitable.

A careful table of the delegates to the Republican Convention is published by the Philadelphia *Press*, with the preferences for various candidates divided as follows: Instructed for Harrison 328, not instructed, but favorable to Harrison 312; for Blaine 50, for Alger 24, unknown 186. This estimate, as it stands, would nominate Harrison on the first ballot, for a majority is sufficient, and he is credited with more than two-thirds. But the *Press*, which has always been a devoted Blaine organ, says that the "fifty delegates placed in the Blaine column will probably find reason before this Convention meets for ranging themselves in the Harrison column, where the Alger and unknown delegates will doubtless be found also after the first ballot." This is a frank admission from an unquestioned Blaine source that there is nothing serious in the most recent effort of Platt, Quay, and the other Harrison "strikers" to revive the Blaine boom. Those political adventurers may possibly deceive themselves into thinking that they can prevent Harrison's renomination, but we doubt if they deceive anybody else, least of all the President.

On the Democratic side, the most careful estimate that we have seen of the delegates thus far chosen to the National Convention is made by the Boston *Herald*, which gives Mr. Cleveland 300 out of a total of 378. "This is, on its face," says the *Herald*, "a showing for Cleveland fully equal to what his most sanguine supporter has claimed," and "is considerably more than the necessary two-thirds proportion for him." The *Herald* adds that according to present indications there "will be not much more than a scattering opposition to Cleveland's nomination in the Convention." All the opposition that there has ever been to Cleveland's nomination had its beginning and ending in David B. Hill. If he had not used his machine to misrepresent New York sentiment in regard to Cleveland, there would not have been at any time a question as to Cleveland's nomination by acclamation. The only obstacle to such nomination which exists to-day is that which Hill's "snap" delegation presents; and the only doubt which exists in anybody's mind about the wisdom of that nomination is that which is based upon a fear that Hill treachery will prevent success at the polls. This reduces the Democratic Convention's work to a very simple question. It must decide whether or not it will allow "Dave" Hill to dictate its action. What he says is very plain. It is simply: "If you dare to nominate Grover Cleveland, I will knife him at the polls. You must either take me or some man who represents my kind of politics." There is no escape for the Convention from a decision on this point. It must take Cleveland and reject Hill and all his kind, or take Hill and reject Cleveland and all that he stands for in politics and government. Mr. Hill has forced the fighting on this issue, and has made dodging of any kind impossible.

It is for this reason that Mr. Cleveland's nomination has for many weeks seemed to us to be a certainty. For the party to refuse to nominate him would be to make public confession that it had neither principles nor character, but was hopelessly in the power of a gang of political brigands who regarded its sole mission to be the pursuit of spoils and public plunder. It is a great mistake to say that the Mugwumps are "dictating" Cleveland's nomination. They have had no hand in the present controversy, but have viewed it with more or less indifference from the outset. All the "dictating" has come from the Hillites, who have taken the party by the throat and have threatened to strangle it if it persists in trying to be honest and decent and worthy the support of intelligent and public-spirited men. The Mugwumps have regarded this struggle as a family matter, and have been awaiting the outcome philosophically. If the Democratic party thinks it can get along without the aid of independent votes, it can be certain of ridding itself of them by allowing the Hill brigands to control its councils.

The position of New York politicians towards the probable nominees of both parties is curious and instructive. Hill and his followers are threatening to knife Cleveland if he is nominated, and Platt and Miller are threatening to withdraw from politics and let somebody else run the Republican campaign if Harrison is renominated. If both parties could be rid for ever of the politicians who make these threats, it would be a good thing for them and an immense gain for the cause of good government in this State. Hill on one side and Platt on the other have reduced New York politics to a mere scramble for spoils and plunder, and have driven from the councils and leadership of both parties all men of first-rate ability and high principle. It is fitting that, so far as Presidential nominations are concerned, the New York delegation of either party should have little or no influence in determining the choice.

REPUBLICAN FINANCIAL MANAGEMENT.

THE platform of the New York Republicans this year asserts that "the people must continue to look to the Republican party to maintain the good faith of the nation in all matters of finance." This is but a faint echo of those vigorous warnings against Democratic financiering which used to appear in Republican platforms ten or fifteen years ago. Yet, after four years of actual Democratic control of the finances, the only charge against it which the Republicans could make in 1888 was that it had made "efforts to demonetize silver." This policy the national Republican platform of that year "condemned," though it is probable that the complaint of the same party this year will be that the Democrats want to remonetize silver. But, leaving that question of consistency one side, it is desirable, in view of the claim of the Republicans of this State cited above, to pass in review the financial management of the present Republican Administration, especially as contrasted with the record of the Democratic Administration preceding it.

Taking up first the question of economy in public expenditures and resultant ease in the situation of the Treasury, the comparison is far from bearing out the Republican boast. During President Cleveland's term the revenues exceeded expenditures by an average of nearly $100,000,000 per year. In President Harrison's first year the excess of revenue was $85,000,000, last year it fell to $26,000,000, and this year it will be considerably less than nothing. This difference is due not to declining revenues, but to swollen expenditures. The total revenue in the first year of Republican control was $16,000,000 greater than in any year of the Democratic Administration, and was $5,000,000 greater last year. The total expenditures tell the story, having been $19,000,000 greater in Harrison's first year than in any one of Cleveland's, and no less than $66,000,000 in his second. In place of the overflowing Treasury which Secretary Fairchild left behind him, Mr. Foster can show a net cash balance at the end of April, 1892, of only $31,000,000, and nearly half of that is made up of subsidiary coin which is practically an unavailable asset. And, as is well known and he virtually admits, even that narrow surplus would have been wiped out had he not held back payment of millions of appropriations made by a Congress Republican in both its branches. On the basis of this dispassionate comparison it certainly takes a good degree of effrontery for the Republicans to go on claiming a monopoly of the talent for financial administration.

Passing to the matter of actual interference with the currency—a subject which bears most directly upon that "good faith of the nation" to which the Republicans now refer—we find the fact to be that the Democratic Administration bent all its efforts to the repeal of the Bland Bill of 1878, and was so openly hostile to any extension of the silver coinage that the free-silver question was practically lifeless during the whole of Cleveland's term. But no sooner did the Republicans come into power than they began to display their superior genius for finance by coquetting and compromising with the silver-men. They fell into the immense mistake of supposing that a few chunks of meat thrown to the pack would satisfy them, instead of simply whetting their appetite and bringing them back the next day hungrier and fiercer than ever. The vaunted act of July 14, 1890, was accepted by the silver champions merely as a payment on account, and as an augury of final success in getting their whole bill paid. Not only did it thus inflame the madness which it was intended to allay, but in itself it has proved a most embarrassing measure to the Treasury. It appears from Secretary Foster's answer to the Morgan resolutions that the Treasury is already a loser to the extent of $12,000,000 under the provisions of this brilliant stroke of Republican finance. More than that, so threatening has that law become to the business interests of the country that chambers of commerce are demanding that it be rescinded, and a leading Republican Congressman has introduced a bill for its repeal. What is this but a confession that the law was a blunder from the start, and that three years of a Republican Administration have brought the finances of the country into a more embarrassed and even critical condition than has been known since the resumption of specie payments?

The personnel of the Treasury Department furnishes another basis for a comparison of the two Administrations, no more favorable to the Republican claim than the others. If Manning was known mainly as a politician before becoming Secretary, his ability and effectiveness as a financier were immediately demonstrated in his official papers and decisions. His successor was in all respects a safe and accurate Secretary. Of Mr. Windom's high character there can be no question, yet his ability, which was great, was too often displayed as ingenuity and audacity in playing with fire. His untimely death saved him from the mortification of seeing how futile his silver measure was in restraining the frenzy of the silver-men, and how heavy a load it has become to the Treasury. It is a great falling off to come to his successor, of whom it is the simple truth to say that he was fitted by previous training to discharge only the political part of the Secretary's duties, and that he has given his strength to that part. As manager of the nation's finances he has shown a vacillation without precedent, has made estimates absurdly wide of the mark, has allowed subordinates to be guilty of the most scandalous indiscretion, and in general has followed a fatuous "after-us-the-deluge" policy. He has been the weakest financier that the Treasury has seen in years, precisely when the exigencies of the situation called for the highest talent and the firmest character.

The comparison we have made is not vitiated by the undoubted fact that the Democratic party as a whole is not so sound on finance as is the Republican party as a whole. The point is, that the Democrats did, in fact, elect a President who was sound, and who gave the country a sound and able financial administration, while the Republicans elected leaders who have plunged the national finances into serious difficulties. The comparison that business men will make is just the one that we have made—a comparison of the actual records of the last two Administrations. In face of the showing thus arrived at, for the Republicans to claim that the finances of the country are safe in their hands alone, is not only to lay themselves open to the charge of untruthfulness and hypocrisy, but, what is far more dangerous in a political campaign, is also to expose themselves to ridicule.

THE DUTY ON OLD BOOKS.

THE abominableness of a duty on literature is an old story, but the "crazy-quilt" patch-workers who evolved the McKinley Bill have succeeded in producing in this particular, as elsewhere in that bill, fresh confusion, fresh restrictions, more unreasonableness, and more injustice. The paragraph of the McKinley Act free list which allows the importation of old books reads as follows: "Books, engravings, photographs, bound or unbound etchings, maps, and charts, which shall have been printed and bound or manufactured more than twenty years at the date of importation." This badly worded clause is a good example of the results of the tinkering method of producing legislation, as will be more clearly seen if we go back to previous tariff laws to trace the evolution of it. The paragraph appeared in the Tariff Act of July 14, 1870, where it read simply, "Books which have been printed and manufactured more than twenty years," and it was repeated in the Revised Statutes (1873) as section 2505, with slightly elaborated language, as follows: "Books which shall have been printed and manufactured more than twenty years at the date of importation." Here, of course, the stipulation "printed and manufactured" applies directly to the article books, but in the Tariff Act of 1883 the wording of the clause was changed, by the insertion of the words in italics, to read: "Books, *engravings, bound or unbound, etchings, maps, and charts,* which shall have been printed and manufactured more than twenty years at the date of importation"; and here the requirement "printed and manufactured more than twenty years" would apply not only to books, but also to the new articles enumerated, and of the latter, engravings might be bound or unbound. In the McKinley Act there was a further interpolation of the word "photographs" directly after the word "engravings," and the qualifying words "bound or unbound" were pushed along, and, by the removal of the comma, were made to apply (intentionally or unintentionally) to etchings instead of to engravings; while the confusion was made complete by the addition of the words "and bound" to the clause, which must be construed to apply equally to all the articles enumerated.

The question arises as to the effect of this awkward introduction of the words "and bound" into section 512 of the free list. The Treasury Department rulings under the Revised Statutes and the Tariff Act of 1883 held that unbound printed sheets were not "books printed and manufactured" within the meaning of that clause; but doubt was thrown upon this interpretation by the opinion of the Attorney-General of September 16, 1886, to the effect that works imported in printed sheets in unbound condition were none the less books, and, if printed more than twenty years, were entitled to free entry. The words in question might, therefore, have been added to the law in order to support the Treasury Department's construction of the paragraph as requiring books to be completely manufactured, *i. e.*, printed, folded, sewed, and bound, in order to be entitled to free entry.

The question of the assessment of duty on old books newly bound or rebound had been decided by the Treasury Department in the negative on March 5, 1872, and this decision was followed as a precedent as late as March 2, 1891, when it was held to apply on the ground that section 512 of the new Tariff Law did not differ materially from section 658 of the Act of March 3, 1883. But the Board of General Appraisers thought otherwise when the question came before them in relation to the importation of a lot of old books recently rebound, and argued that the word "bound" was new matter added by the Act of October 1, 1890, to previous legislation, and that no effect could be given to this additional language unless it was found that Congress meant to embrace by it the entire condition in which books should be admitted to free entry; moreover, no provision exists for the payment of duty on the cost of rebinding. The Board held, therefore (March 16, 1891), "that books entitled to free entry must be both printed and bound more than twenty years prior to importation, and that such binding includes rebinding when the same is entire."

As no appeal was taken from this decision within the thirty days allowed by section 15 of the Administrative Customs Act for applying to the Circuit Court of

the United States for a review of any decision of the Board, it has been followed in all subsequent similar cases of importation, and has resulted in great loss to the importers of books, and most serious inconvenience and uncertainty. It is not the custom to date book-bindings, and the most expert knowledge will not enable one to be sure of the age of any piece of binding, for books bound forty or fifty years ago, if kept in cases excluding heat and dust, will look fresher than others whose bindings of but five or ten years have been exposed to the action of light, dust, and gas. How, then, is the poor appraiser to decide equitably when his blind decision as to the date of a binding, costing perhaps two or three dollars, involves the payment or non-payment of 25 per cent. duty upon as many hundred dollars, the value of the book itself? When a book-buyer orders from foreign catalogues, he cannot know whether the books, despite their dates, may not be held dutiable by our Custom-house on the ground of the fresh appearance of their bindings; and he cannot be sure how to make out his invoices for the same reason. Nobody is helped by these vexatious hindrances. Our irrational attitude towards book-importation will not bring about a change in the manner of doing business abroad, nor will a single volume the less be bound over there, or a single volume the more be bound on this side of the ocean; so that American binders will certainly not reap any benefit. The single result is to discourage the importation of old books—a result that is chiefly harmful to the intellectual advancement of our own people. Clearly, the spirit of section 512 is to allow the free importation of all literature after a lapse of twenty years, but the Board of Appraisers make a farce of it by ruling that such literature must not be embodied in unbound books, neither must it come to American scholars in books too freshly bound, but can only be encased in bindings that have the appearance of an age of twenty years or more.

RAILWAY HOURS AND SERVICE.

A MONTH ago three directors of the Cambrian Railway, one of whom was a member of Parliament, were called before the bar of the House of Commons and publicly censured for the discharge of a railway employee who had given public testimony against that company before the Parliamentary Committee on the hours of labor of railway servants. The printed reports of the conclusions of the Committee and of the testimony make up an interesting story. There had been an investigation into the question of long hours for railway men for some time past. It was shown that certain classes of railway servants were often on duty so many consecutive hours as to imperil the public safety. This investigation led to no action on the part of Parliament, because it was felt by railway managers that any interference with their authority would relax the discipline of the employees, on which so much depended. Nevertheless, the evil and danger of overwork on the part of train and signal-men, and others holding responsible positions, were conceded, the practical result being an improvement in the arrangement of details of working hours, because of the strong public opinion aroused by the testimony taken.

Of course this testimony reflected upon the management of the railways to a greater or less extent, and the directors of the companies thus maligned (as they claimed) were indignant, all the more because their own men had furnished the damaging evidence of their requirement of exhausting service. Soon the Secretary of the Railway Servants' Society notified Parliament that four men who had testified had been discharged in consequence. The Committee called all the persons concerned before it, and reported as to three of the men that good cause existed for their dismissal. These employees were such as we are familiar with in the United States—men who neglect their duties and give their real attention and time to stirring up strikes. But as to the fourth man, named Hood, the Committee found that the discharge "was mainly in consequence of charges arising out of the evidence given by him before your Committee, and was in a manner calculated to deter other railway servants from giving evidence before your Committee." This was strictly true—the real offence of Hood was in saying anything at all about the long hours worked by servants on the Cambrian Railway; but the technical offence was falsifying the pay-sheets at his station. This he did in order to shield the company, because otherwise the sheets would have disclosed that an employee under Hood had been obliged to be on duty, at least nominally, for forty-four consecutive hours. A dismissal under such circumstances was not accepted by the House of Commons; so the offending directors were called before the bar and publicly reprimanded, after a debate which threatened at first to impose a more severe penalty.

The incident is worthy of note because it shows the fairness of the House in protecting laboring men against employing corporations when unjust treatment is shown, and also because it vindicated the right of the House and the public to freedom of testimony and of discussion in matters concerning the public welfare. It should also be noted that these supplementary examinations were made by the House Committee on the appeal of the Railway Men's Trade Union, which alleged unfair treatment to four of its members.

The subject-matter of the investigations, viz., the extra hours of railway servants, is important wherever railroads are run. A cast-iron ten hours' law we certainly ought not to have: it would work confusion rather than relief; but it is nevertheless true that many accidents might be traced back to the exhaustion and lack of vigilance displayed by railway men who had been on duty too long. The proper remedy is the holding of the corporations to a strict accountability for mishaps so arising, and the education of public opinion to the wrong and danger of excessively long, continuous service where such is the rule.

This accountability to the public is strengthened in Great Britain by an excellent system of examination into all accidents by an officer of the Royal Engineers under the direction of the semi-official Board of Trade. The reports are made to Parliament for general use and are non-political. The latest of these reports is that of Maj. Marindin on the killing of a trainman last October while switching. After asserting that the accident was due to the trainman's own negligence, the report continues: "The reason is not far to seek, for it appears that Choules had at the time been upon duty for a period of no less than 22 hours 18 minutes consecutively. It is impossible to believe that a man who had been on duty for this length of time was fit to take proper care of himself or of his train. I attribute the accident to the terribly long hours for which this man had been called upon to work."

A system of impartial investigation into all accidents in the United States would do much towards finding causes and effecting cures. But political investigators are worse than useless. Take, for example, the New York Railroad Commissioners. They have just dismissed Thomas W. Spencer, who has for nine years been the expert employed in inspecting bridges and track. His successor (after July 1st) is described as "utterly incompetent" and without experience in railroad work. Of what use would his investigation of an accident be? His only qualification for the office is that he supports Hill and is a "heeler" of Railroad Commissioner Beardsley, who was himself appointed solely to help along the political aspirations of our late Governor and present Senator. Reports by such a Board, either upon accidents or hours of labor, must be valueless.

Meanwhile, railroad managers are more and more recognizing that long hours "do not pay," even in dollars and cents; but it cannot be doubted that further progress can still be made in the line of restricting to reasonable hours the work of those railway men who are immediately responsible for life and property.

THE IRISH TRAGEDY.

LONDON, April 21, 1892.

THE general election, upon which the hopes of the Irish people have for so many long years been fixed, cannot be far off. It may come upon us any day. Meanwhile, there is no likelihood that the present posture of Irish affairs will materially change. It may therefore be opportune to consider our prospects regarding that election. Hope never beat higher than before Mr. Parnell's fall; a great change was wrought by that catastrophe. All

that has occurred since November, 1890, has more than justified sinister anticipations respecting what was likely to result from a split. But nothing has occurred to alter the conviction that a split was inevitable from the moment of the revelation of Mr. Parnell's treachery to his country, in preferring to her welfare the gratification of his guilty passion—in bartering for the devil's gains a place beside the Washingtons. Had the party endeavored permanently to stand by him through thick and thin, as it did for some days, the power of past cohesion might have held it together for a while, but sooner or later the distrust and antipathy engendered in the minds of most by the divorce proceedings would have led to disintegration. It would be as reasonable to attribute present troubles to the action of those who deposed the leader as it would be to attribute to a crew themselves the difficulties consequent upon realizing the insanity of their captain and taking from him the command. The discouragement really lies not in the number of the representatives who stand by Mr. Parnell's manes, but in the extent to which they find support in Ireland.

When the division came, many thought that Mr. Parnell could not hold out for a month. He held out, with apparently undiminished support, until his death nearly a year afterwards. From his grave sprang a feeling more bitter and irreconcilable than any that had shown itself during his lifetime. Whence the Parnellite funds come is a problem; but hitherto they appear sufficient, whether for elections, newspapers, or the sustenance of Parliamentary members. The Waterford election proved how mistaken were anticipations that Parnellism, without Mr. Parnell, would have no continued vitality. The Irish representation stands at present fifty-three Nationalists, thirty-one Parnellites, eighteen Conservatives. The forecast of the *Times* election commissioner seems to me tolerably well grounded, that there will be returned in the new Parliament (supposing there is no want of funds on one side or the other) seventy Nationalists, ten Parnellites, twenty-two Conservatives. If he errs, it is perhaps in underestimating the possible number of Conservatives. It is easy to point out that no people are ever united upon any question, and that, after all, seventy as against thirty-two would give a large majority in favor of a reasonable measure of home rule. It is easy to point out that the probably increased number of Conservatives will result, not from a diminution in the number of those who desire home rule, but in the better preparedness of those who oppose it. It is easy to point out that present differences among Nationalists are a guarantee that a homogeneous Protestant party in an Irish Parliament would be likely to hold the balance of power. But in the balancing of British opinion and in the consideration of such an important question as that of home rule, a change from a united party of eighty-four, fully prepared to make the best of whatever measure was agreed to, to one of seventy, leaving ten possibly in bitterest opposition, must seriously influence the British electorate.

Most unfortunate, too, will be the impression produced by Ulster (as appears probable) having a majority of members against home rule. No one, Irish or English, has altered his opinion who seven years ago fully gauged the necessity of the measure, both for the elevation and regeneration of Ireland and for disencumbering the Imperial Parliament. A philosophic conviction does not always prevent discouragement, at times almost amounting to hopelessness, as under recent developments. And how many held to their opinions more through sympathy, fashion, or feeling, than from deep conviction? The fact alone that English deputations are no longer sure of the enthusiastic receptions they met in Ireland from 1885 until Mr. Parnell's declarations regarding "English wolves" (indeed, no deputation since those utterances has thought it safe to make the experiment), has a most deterrent influence. Ireland is not the fashion as she was, and English social questions are pressing more and more to the front. Patriots engaged in belittling each other are by no means the objects of sympathy and interest they were when heroically enduring the amenities of Mr. Balfour's constabulary and jailers. There is less apparent hearty support of home rule among Irish Protestants than there was five years ago. Ascendancy in Ireland, for many years utterly demoralized by the shock of the land agitation, has been of late steadily reorganizing its forces; and so great is the strength of social influence, dominated by the official classes, and so remorselessly and surely has the power of boycott and ostracism been employed against persons suspected of Nationalist sympathies, that we fear it would now be difficult to procure those Irish Protestant declarations in favor of the change which were, during the Aberdeen régime, cheerfully accorded. The war of parties has been too severe a strain to be borne by thousands of tender souls. The tendency of those who nominally cease to take an interest in politics is to pass over to the Conservatives. Thousands who formerly read Nationalist papers have, from personalities and bitterness latterly shown in them, sought quiet in the columns of the Conservative press.

The apparent strength of opposition would doubtless disappear upon the establishment of home rule. For the present it seems like iron. Most Nationalists feel anxious and discouraged, especially, perhaps, those upon whom would be likely to devolve some of the burthen of the government of Ireland under a new régime. It is to be feared that a love of disaffection has become almost chronic in some sections of Irish society—as if people could not be happy unless in opposition to powers that be. Ireland is being more and more demoralized by Treasury grants, public works, loans, relief works. It is said that upon an adjustment of financial affairs between the countries, she would be the gainer. However this may be, the fact remains that there is apparently no limit to the financial concessions of John Bull, if only to silence "those beggarly Irish"; and that an Irish exchequer would soon be exhausted, and then all the socialistic and opposition forces throughout the country, expressed, it might be, at first, by only 10 per cent. of the representation, would come fully into play, demanding the realization of the golden prosperity so thoughtlessly prophesied by some as an immediate result of home rule. The present movement has found its strength partly in descending to a lower and more prosaic level than that of the Irish nationalism of former years. Nothing must now be done to diminish the expenditure of British money in Ireland. Where formerly the erection of new barracks and jails would have been held up to odium, they are now favored as leading to that expenditure of the "hard money" of which the country is so much in want. The Irish Nationalist members of both parties are, however, happily free from suspicion of desiring individual aggrandizement for themselves or their friends. The Conservative party have more and more made it a portion of their policy in all parts of the United Kingdom to minister to local needs through the dispensation of imperial grants.

The abusive language, the suspicion, the impugning of motives, the reciprocal libelling on both sides in this contest have done much to weaken public confidence. Nothing said by opponents during the darkest passages of the Pigott forgeries was much worse than what is now freely bandied between men who are believed to have known each other intimately. Other peoples can, without doubt, indulge in such amenities without danger to their liberties. Ireland cannot afford them. Few indeed are the Nationalist leaders whose prestige has not in some measure suffered. It has been too much forgotten that, bad as Parnellism is, Nationalism itself can by contest be dragged down to the same level. And yet, with the most thoughtful of those who believe they understand the combatants, the uppermost feeling is intense compassion. Knowing what the men really are, what at bottom are their desires and capacities, how unselfishly they have worked, how freely they have sacrificed, how patiently they have suffered, surely we may believe most of them are still capable of rising above present misunderstandings and complications, and again uniting for the common good. They appear now as if acting under some hideous nightmare or hallucination. The struggle of these long years (the continuation of the bitter contests of centuries) has been so severe, the sickness of hope deferred has been so real, as to have, as it were, temporarily thrown many noble natures off their balance. It was almost enough to shatter any cause to have so long to battle with such overwhelming force, to have borne such trials, and to have suffered such betrayal by a leader. Should the present movement, by any chance, end in disaster, "the classes" in Ireland will yet realize the mistake they are now making in opposing a steady *non possumus* to a movement capable of forming a basis for the orderly settlement of the country.

Bewildered as the British Liberals doubtless now are by recent developments of the struggle, they appear to me well enough inclined, with clear-sighted honesty and determination to support the convictions of their leaders. The British masses are perhaps somewhat thick-headed and difficult to move; but, once convinced, it is not their nature to go back. As the degradation wrought by slavery was, by the interested and thoughtless, used as the most powerful argument for the retention of the system, and by the clear-sighted for its destruction, so is it with the present difficulties in Ireland. No other nation in modern times has presented such a spectacle as she does in the steady decrease of her population within half-a-century, from 8,250,000 to 4,750,000, in its continuing decrease, in her constant unrest, in the patent source of weakness she is to the Empire of which she forms a part, in her inferiority to the sister island in all save natural features, the capabilities of her people, and their high morality. Present woes have been wrought under a system of external rule of a class and a religion, for a class and a religion, by a class and a religion. Sooner or later this system must end. If at the coming election, so much the better. But it now appears improbable that this change will bring immediate peace and contentment. We shall not garner in sunshine the harvest for which we have labored.

D. B.

PROSPECTS OF THE FRENCH CABINET.

PARIS, April 25, 1892.

BOTH Chambers have adjourned for the Easter vacation, and politics are at a standstill. The moment, therefore, is a favorable one to sum up the situation, and to try and fix the real meaning and tendency of the incidents which have just taken place. Naturally enough, *the* event of the session just closed has been the fall of the Freycinet Ministry and the formation of a Cabinet by M. Loubet. Scarcely yet six weeks old, the new Ministry has already passed through a series of determined attacks, and these, by somewhat forcing the Government's hand, have made it sufficiently clear, at least to the old parliamentarian, what are the peculiar dangers to which M. Loubet and his fellow-Ministers are exposed, what line of conduct they propose to take, and what future is reserved for them.

The crisis which, at the end of February, led to the fall of the Freycinet Cabinet was in no sense the outcome of a systematic opposition supported by convincing argument, nor yet of a genuine want of harmony between the Government and the majority of the Chamber. Unhappily, in France much less will suffice to overturn the Government coach. As we have here no great political parties strongly organized, with a clearly defined programme, and led by universally recognized chiefs; as, on the contrary, Parliament is broken up into a great number of distinct groups, allied only temporarily and almost at random; as, in fine, individual interests and rivalries often enough outweigh the public good in political conflicts, a ministry will frequently come to grief over a chance debate, beaten by a chance majority which no longer exists on the morrow. It must, however, be conceded that the Freycinet Ministry, during its last days, hung but loosely together. Personal ambitions interfered to complicate the situation, whence came, first, dissensions, and afterwards strained relations among members of what ought to have been a "happy family." No wonder, therefore, that a common understanding on political questions of vital interest became almost an impossibility. Complications of all kinds were not long in following. For instance, at the moment when an important law was to have been drafted, which needed the coöperation of two ministerial departments, the heads of these two departments would no longer consent to speak to each other. More than this, M. Constans, Minister of the Interior, had, in the Chamber, come to be the butt of the most virulent criticisms—criticisms, indeed, which were directed rather against the man than the politician, but which contributed none the less to enfeeble the Government more and more.

One may grant, then, that the catastrophe was not difficult to foresee. What no one was prepared for was the way in which it came about. Nothing, perhaps, more incoherent and incongruous had ever been witnessed in parliamentary annals than the debate that preceded the final defeat. The vote of confidence asked for on the Government's religious policy, eminently simple as it was, gave rise to a series of propositions and counter propositions wherein the Ministers entangled themselves as in a maze; and when at length they got out, it was to find that they were—in a minority. The humor of the situation was that the majority should have assaulted its own ramparts. On the point at issue the Cabinet and the bulk of those who conspired against it held but one opinion. The concluding incidents of the sitting and the events of the following weeks proved conclusively that such was the case.

A crisis of this nature, lacking as it did sufficient *raison d'être*, did not give much indication as to how a new Cabinet would be formed. Many thought that the situation called for a dissolution; that the existing Parliament, by its recent conduct, had shown that it did not know its own mind; and that no future Government depending upon the same support could at any time be sure of a majority that would enable it to carry on the work of legislation. Consequently, the President and the Senate ought to use their constitutional right, dismiss the existing Chamber, and appeal to the electors. M. Carnot, however, preferred to dispense with this drastic remedy; and, after a lengthened period of hesitation, M. Loubet was brought forth from the Senate, where he had played a comparatively minor rôle. To call the Loubet Cabinet a new Ministry would be obviously incorrect. It contains far more of the old element than of the new. Most of the Freycinet Ministers keep their portfolios, including M. de Freycinet himself; and most of them hold the same offices now that they did before the change. Those who have disappeared are either the nonentities, or else those who had excited animosities that rendered their return for the time being impossible. With but this slight alteration in the fresh Cabinet's composition, it was not to be expected that any great change of policy would follow. M. Loubet's advent to power, and indeed the new Prime Minister's manifesto, might have been signed *in toto* by his predecessor and fellow-Ministers. This method of patching up a ministry, taken in conjunction with the fantastical vote mentioned above, amply exemplifies, I think, what I said at the beginning as to the manner in which French cabinets are often constituted and fall to pieces.

The first days of the newly constituted Government were marked, it will be remembered, by a number of Anarchist outrages. Attempts were made to blow up in succession some military barracks and three private houses. As may be imagined, these explosions caused a profound emotion in Paris—an emotion which foreign newspapers exaggerated into mad panic and affright. Paris was not panic-stricken, but certainly rendered uneasy; and when at first the police seemed to hesitate and to take no energetic action, recriminations made themselves heard, while some newspapers profited by the occasion to sing the praises of the "departed" Minister of the Interior, and to declare that if only M. Constans had been at the helm of affairs, his watchful activity would have prevented any such deeds from taking place. These murmurings, however, in no wise damaged the Cabinet. In general, the people thought that at such a time the executive power ought not to have its hands weakened. Further, the two Chambers, feeling that the existing law did not give adequate authority to criminal courts for dealing with dynamite offences, voted without opposition the extra demands that the Government at once came forward to make.

The Anarchist difficulty dealt with, there remained still the religious question, which, as it had already been the occasion of the late Ministry's fall, threatened equal embarrassment to the present rulers of the country. M. Loubet, in his religious policy, made it clear that he intended to maintain the attitude taken by his predecessors. It is true, he did not express this in so many words. In order to put himself on constitutional ground, he declared that he would base his action in the matter on the Concordat of 1801, which still regulates the relations of Church and State in France. At the same time he endeavored to render both sides of the Chamber favorable to his policy. Hoping to catch the support of the section to whom the clergy is a *bête noire*, and who as a body favor a policy of repression, he announced that the Government was determined sternly to repress all clerical interference in political affairs. On the other hand, as a bait for the Moderates, he insinuated that he and his colleagues sincerely desired peace and reconciliation between Church and State, and that for his part he would scrupulously observe all engagements to which the civil power had lent its sanction. Amid these ambiguities of language, fresh circumstances arose which very soon brought to light the Ministry's real preferences.

A certain number of ecclesiastics had begun during Lent to tackle the engrossing subject of Socialism, either by treatment in the ordinary sermon, or by a kind of contradictory lecture from the pulpit, during which the part of the opposition was played by a priest previously prepared with certain objections. Neither the one nor the other method pleased the Socialists. The ordinary sermon was only a one-sided argument; and the contradictory lecture, where everything had been cut-and-dried, seemed little better than a sham. Serious disorders followed. A certain number of Socialists and of the extreme Radicals went to the churches in crowds, interrupted the speakers, and, when the church authorities intervened, broke into open riot. As a rule the police refused to interfere, on the ground that their duty was confined to maintaining order in the streets. The affair had then to be fought out between the church officials and the rioters, and the upshot was that more than once the furniture and images, etc., of the buildings were wrecked. About the same time several of the bishops thought fit to hold language which might be interpreted against the Government. For instance, the Bishop of Mende prepared to publish certain instructions to old and young of his diocese, in outward form spiritual enough, but between the lines containing criticism of certain acts of the civil power. Add to this that the faithful were admonished to vote only for the "ardent Catholic," and it is not to be wondered at that the Government should seize the incriminated copies, while still in the press, in order to pursue the delinquent.

These incidents naturally came up for discussion before the Chamber. At once the Conservatives, reminding the Government of its promises, called upon the Minister of Public Worship to take measures for insuring liberty and order in the churches. The Radicals, on their side, were not behindhand in demanding to know what course the Ministry was going to follow in presence of the "underhand manœuvres of the clergy." The two questions were really quite distinct; and, this being the case, separate replies should have been given. But, instead of disentangling the two issues, the Government preferred to join them together. As a matter of fact, both in equity and in law, the claim of the Conservatives was perfectly justified. The law itself is clearly laid down. The Government is obliged in any case to see that freedom of worship is assured. If disturbances arise, its duty is to put a stop to them, and to prosecute and punish the instigators. But the Ministry feared that, by giving a pledge to the Conservatives and promising to prevent the recurrence of the disorders complained of, it would discontent the Radical party. It therefore limited itself to a few vague protestations, try-

ing at the same time to attenuate what had happened and to throw the responsibility of it on the clergy. Then, attacking in its turn, it took upon its own shoulders the burden of the Radicals' complaint, condemned the attitude of divers of the clergy; declared that the Government would never tolerate criticism of its acts by bishops serving under it and figuring on the budget; and, finally, announced that it intended to prosecute the Bishop of Mende and to deprive him for a time of his stipend. These tactics had the desired success. The Republican party, always ready to repeat the famous epigram of Gambetta, "Le cléricalisme, voilà l'ennemi," accorded a vote of confidence to the Ministry with the utmost unanimity, and no more was heard of doing justice to the legitimate complaints of the Conservatives. Henceforth it was easy to understand in what sense was to be interpreted the previously vague language of the Government to both parties. The Moderates were to content themselves with fair words, while the positive pledges fell to the share of the Radicals.

If the debate on the religious policy of the Government ended in a complete victory for the Ministerialists, another which took place a few days later came very near to ending in a defeat. This time the colonial policy was in question. Though possessing a sufficiently large number of colonies and continually making efforts to extend her influence and rule over great and numerous territories, France cannot yet be said to have a colonial policy. With all due appreciation of what has been done during the last few years, it must be confessed that the efforts of our countrymen have never thus far corresponded to any general idea, nor have they ever been made on a clearly conceived plan, the realization of which might be slowly and surely pursued. The ministries that have successively come into power have always proceeded by small and isolated expeditions. Protesting always that their ambition was not great, that they simply wished to chastise a few rebels or avenge an insult to the flag, they asked at first for a small grant wherewith to send a small body of troops, and invariably finished by spending more money and losing more troops than if they had made a definite conquest once for all. Even the principle of colonial extension is far from being universally admitted. Therefore each time that a question of colonial policy is brought before the Chambers, the debates are long and animated, for not only is a point made of discussing the Government proposals, but the maintenance of certain colonies, as indeed the expansion of France itself, forms the subject of serious argument.

This was what happened on the present occasion. The Government asked for a supplementary grant, destined to reinforce the troops that were operating in the Sudan towards the "Hinterland" of the colony of Senegal, and to despatch an additional force to the coast of Guinea. The Dahomans, who had hitherto enjoyed the protectorate of France, had suddenly revolted and were menacing the French ports. Scarcely had this demand been made in the Chamber, when the Ministry was attacked on all sides, and, together with the Government debate on the grant, came the inevitable private motion and discussion on colonial policy. While some members protested against any sending of troops whatsoever for the new expedition, others proposed, on the contrary, to augment the grant asked for by the Government, on the ground that it was manifestly insufficient. These latter added that it was high time to break with the shilly-shally policy that had so far been pursued, and to resolve to act with decision and vigor. Curiously enough, it was the members of the Right—those who previously had been accustomed to protest against all colonial expeditions—who now came forward to advocate the bolder measures.

The attitude of the Government on this occasion was singularly inconsequent. Faithful to the traditions of its predecessors, it would make no definite engagement of any kind, declaring simply that it desired only the grant it had asked for, in order to meet the present necessity, and that it wished in no way to prejudge the future. One member of the Cabinet went so far as to say that he had no plan. After all said and done, the Ministry finished by obtaining what it wanted; nevertheless it was not able to congratulate itself on having gained a victory. It carried no vote of confidence, and it was by a majority of only thirty-eight that it avoided a vote of censure. If, then, the question put to the Government on its religious policy had helped to strengthen the Cabinet, that addressed to it on its colonial policy had done much to seriously undermine it.

To sum up, it may be said that the situation of the Loubet Ministry is at the present moment almost the same as that of the Freycinet Ministry at the moment of its fall—a state of things, indeed, natural enough, seeing that it represents the same policy, is composed of nearly the same elements, and is at the head of the same Chamber. It is unable to rely on a solid and uniform majority. Obliged to reckon continually with the diverse factions of the Republican majority of the Chamber, it can live only from day to day, and that without any clearly defined political line of conduct. With a little skill and complaisance it may be able, indeed, barring unforeseen accidents, to prolong its existence for several months; but it may also fall to-morrow on some trifling question, without there being any formal opposition on the part of the Chamber, and consequently without there being necessarily any change, as a result of its fall, in the total policy of the country. Outside this general statement—unsatisfactory enough—it is possible, by studying the parliamentary incidents which have characterized the Government's accession to power, to point out the dangers it is fated to encounter. Whatever may happen in the colonies, and whatever may be the success of the expeditions which are to be undertaken, the hesitating attitude it has assumed in the matter of colonial policy is sure to induce hesitations in the after settlement of the States it may be called upon to administer. On the other hand, in spite of the brief success which it has procured for itself by the recent exposition of its religious policy, it has really and permanently satisfied no one. Its fault has been a primary want of frankness, which will ultimately become a formidable weapon of indictment in the hands of the Opposition, and serious embarrassment, to say the least, will in the long run result from it.

Truth to tell, it is not from the ministerial and parliamentary standpoint alone that the religious and colonial questions have such importance. They are incontestably, though without its being always clearly understood, the two questions which at the present time outweigh all others in France. S.

FREEMAN AS AN HISTORIAN.

LONDON, April 23, 1892.

IN a preceding letter I have said something regarding the personal qualities of the distinguished writer whom England has just lost; in this one I will make a few observations on his gifts as an historian.

Every one knows the old maxim, "*Pectus facit theologum.*" Not less aptly may it be said that the merits of a great historian are far from lying wholly in his intellectual powers. One of the highest of such merits, a merit which the professional student has even more reason to appreciate than the general reader, is a moral quality—the love of truth, and the willingness to undertake, in the search for it, a toil by which no credit will ever be gained. This sort of conscientious industry was possessed by Freeman in a very high measure. Though he talked less about facts and verities than Carlyle did, Carlyle was not so assiduous and so minutely careful in sifting every statement before he admitted it into his pages. That he was never betrayed by sentiment into a sort of partisanship it would be too much to say. His Scotch critics used to accuse him of having been led by his English patriotism to over-estimate the claims of the English Crown to suzerainty over Scotland. Mr. J. R. Green and Mr. C. H. Pearson thought that the same cause disposed him to overlook the weak points in the character of Harold, son of Godwin, one of his favorite heroes. But there have been very few writers who have so seldom erred in this way; few who have striven so earnestly to do full justice to every cause and every person. The characters he has drawn of Lucius Cornelius Sulla, William the Conqueror, and Thomas of Canterbury are models of the fairness which historical portraiture requires. Though disposed to be positive in his opinions, he was always willing to reconsider a point when any new evidence was discovered or any new argument brought to his notice, and not unfrequently modified his view in the light of such evidence or arguments. It was this passion for accuracy and for that lucidity of statement which is the necessary adjunct of real accuracy, that made him deal so sternly with confused thinkers and careless writers. Carelessness seemed to him, as indeed it ought to be regarded, a moral fault, because a fault which true conscientiousness excludes. So also clearness of conception and exact precision in the use of words were so natural to him, and appeared so essential to good work, that he was apt to set down the want of them rather to indolence than to incapacity, and to apply to them a proportionately severe censure. Never touching any subject which he had not mastered, he thought it his duty as a critic to expose pretenders, and rendered in this way, during the years when he wrote for the *Saturday Review*, services to English scholarship second only to those which were embodied in his own treatises.

The habits of accuracy which he had formed were well illustrated by his attitude towards branches of history he had not explored. With a profound and minute knowledge of English history down to the time of King Edward the Second, a less full but very sound knowledge down to Elizabeth, and with a thorough knowledge of pretty nearly all ancient history, and of foreign mediæval history till about the time of Charles the Fifth, his familiarity with modern European history since the sixteenth century, and with the history of such outlying regions as India or the United States, was only that of the average well-educated man. But when he had occasion to refer to those periods or countries, he hardly ever made a mistake. If he did not know, he did not refer; if he referred, he had seized, as if by instinct, some-

thing which was really important and serviceable for his purpose. The same remark applied to Gibbon and to Macaulay. I am not sure that it holds equally good of Mommsen, admirably exact as he is in his own wide dominions.

Industry came naturally to Freeman, because he was so fond of his own study. None of his work was task work; all was done because he loved doing it. This joy in reading and writing of the past came from the intensity with which he realized it. In some directions he did not show much imagination: he had, for instance, no pleasure in books of travel and very little in poetry. But he loved to dwell in the past, and seemed to see and feel and make himself a part of the events he described. Next to their worth as statements of carefully investigated facts, the chief merit of his books lies in the sense of reality which fills them. The politics of Syracuse, the contest of William the Red with St. Anselm, interested him as keenly as a general election in which he was himself a candidate. Looking upon all current events with an historian's eye, he was fond of illustrating features of Roman history from incidents he had witnessed in taking part in local government as a magistrate, and has, in his account of the relations of Hermocrates and Athenagoras at Syracuse, some reflections suggested by his experience as a member of the Hebdomadal Council at Oxford. This power of realizing the politics of ancient or mediæval times was especially useful to him as a writer, because without it his books might have run the risk of being dull, seeing that he cared exclusively for the political part of history and scarcely ever touched upon social or religious phenomena—subjects from which such writers as his friend and disciple J. R. Green drew much of what gives a charm to their narratives. This was one of the points in which he rose superior to most of those German students with whom it is natural to compare him. Many of them have equalled him in industry and diligence; some have perhaps even surpassed him in the ingenuity which they bring to bear upon obscure problems; but very few of them have the same gift for understanding what the political life of remote times really was like. Like Gibbon, Freeman was not a mere student, but also a man of affairs, accustomed to take a part in the world's work, which enabled him to know how things happen in a way which the mere student seldom can. If he had less ingenuity than some of the Germans, he had far more common sense, and brought it to bear about their conjectures in a thoroughly useful and practical way. And he was wholly free from that craving which seems to possess so many of them to have at all hazards something new to advance, be it a trivial fact or an unsupported guess. He was accustomed of late years to complain that German scholarship seemed to be suffering from the passion for "Etwas Neues," and the disposition to disparage work which did not abound with novelties, however empty and transient such novelties might be.

The mention of the Germans suggests a reference to the enormous quantity of work he produced. Besides the five thick volumes devoted to the Norman Conquest and William Rufus, the three thick volumes to Sicily, four large volumes of collected essays, and nine or ten smaller volumes on architectural subjects, on the English Constitution, on the United States, on the Slavs and the Turks, he wrote an even greater quantity of matter which appeared in the *Saturday Review* for the twenty years from 1856 to 1876. This immense facility of production was due to his power of concentration. He always knew what he meant an article to contain before he sat down to his desk; and in his historical researches he made each step so certain that he seldom required to reinvestigate a point or to change, in revising for the press, the substance of what he had said. He was by no means what would be called a man of business—leaving the management of his property, for instance, chiefly to those nearest to him; but in his literary habits he was singularly methodical and precise. It is often observed that the extent to which all who write are drawn into journalism, and forced to write quickly, hastily, and profusely, must tend to injure literature both in matter and in manner. In point of matter, Freeman, though for the best part of his life a very prolific journalist, writing two long articles a week during twenty years, did not seem to suffer. He was as exact, clear, and thorough at the end as he had been at the beginning. On his style, however, the results were not wholly fortunate. It retained its force and its point, but it became diffuse—not that each given sentence was weak, or vague, or wordy, but that what was substantially the same idea was too apt to be reiterated, with slight differences of phrase, in several successive sentences. This tendency to repetition caused some of his books, and particularly the Norman Conquest and William Rufus, to swell to dimensions unfavorable to their popularity. That work would certainly be more widely read if it had been, as with more effort at compression it might have been, reduced from seven volumes to four. For this reason his manner is perhaps at its best in some of the smaller books, such as the sketches of towns and the collected essays. It must, however, be added that the prolixity we sometimes regret was partly due to his anxiety to be scrupulously accurate; and that the tendency to repeat the same word too frequently was due to his preference for words of Teutonic origin. He prided himself on this purity of English; but some of his friends thought he sacrificed too much to it. Nor must one forget to express a regret that he did not more frequently enliven his pages by indulging in the humor so natural to him. His letters sparkled with wit and fun, but it is only in the notes to his histories, and seldom even there, that he allows one of the most characteristic features of his mind to appear.

So far I have spoken only of his books. He was, however, also a Regius professor of history during the last ten years of his life, and the head of the historical faculty in his own University, which he loved so dearly. That he was less brilliant as a teacher than as a writer may be partly ascribed to his having come too late to a new kind of work, and one which eminently demands the freshness of comparative youth; partly also to the cramping conditions under which history has to be taught at Oxford, where everything is governed by a system of competitive examinations which Freeman was never tired of denouncing as ruinous to true study. His friends were, however, inclined to doubt whether the natural bent of his mind was towards oral teaching. It was a very peculiar mind, which ran in a deep channel of its own, and could not easily, if the metaphor be permissible, be drawn off to irrigate the adjoining fields. He was always better at putting his own views in a clear and telling way than at laying his intellect alongside of yours, apprehending your point of view, and setting himself to meet it. Or, to put the same thing differently, you learned more by listening to him than by conversing with him. He had not the sort of quick intellectual sympathy and effusion which feels its way to the heart of an audience, and indeed derives inspiration from the sight of an audience. Oddly enough, each of his three distinguished predecessors in the chair of Modern History at Oxford has been, though not for quite the same reasons, far more eminent as a writer than as a teacher. Each of them, and especially Mr. Goldwin Smith and Dr. Stubbs, adorned the post and stimulated historical study by his mere presence in Oxford, accessible to students and influencing the intellectual movements of the place. So Freeman's residence there, where he delighted to surround himself with all the ablest and most studious of the young workers, and his giving to them the fullest measure of encouragement and generous recognition, and setting a splendid example of loyalty to truth and love of freedom, conferred on the University a benefit the loss of which is being more than ever felt now that a cynical Prime Minister has appointed as his successor a brilliant literary man, Mr. J. A. Froude, from whom loyalty to historical truth and the love of freedom are conspicuously absent. In this way his value to Oxford can hardly be overrated. But it is after all by his books that he will be known. Some of them have already done their work in influencing the opinion or enlarging the views of his contemporaries. But others will live into a yet distant future, because the patient and thorough work and the vigorous sense which have been put into them will not permit them to be superseded, but will make them as essential to the next generation or two of students as they are now to ourselves. O. D.

Correspondence.

A MANUSCRIPT OF PRESIDENT LINCOLN.

To the Editor of The Nation:

Sir: Mrs. Helen Clark of Millfield, near Street, Somersetshire, has a brief but very interesting manuscript of President Lincoln, which I have not seen in print. It is a preamble and resolution suggested by the President for adoption by meetings in England, and transmitted to John Bright (Mrs. Clark's father) by the Hon. Charles Sumner. The Senator's letter, enclosing President Lincoln's manuscript, is dated April 17, 1863. In it he says:

"Two days ago the President sent for me to come to him at once. When I arrived he said that he had been thinking of a matter on which we had often spoken—the way in which English opinion should be directed; and that he had drawn up a resolution embodying the ideas which he should hope to see adopted by public meetings in England.

"I enclose the resolution, in his autograph, as he gave it to me. He thought it might serve to suggest the point which he regarded as important."

PRESIDENT LINCOLN'S MANUSCRIPT.

"Whereas, While *heretofore* States and Nations have tolerated slavery, *recently*, for the first [*sic*] in the world, an attempt has been made to construct a new Nation, upon the basis of, and with the primary and fundamental object to maintain, enlarge, and perpetuate human slavery; therefore,

"Resolved, That no such embryo State should ever be recognized by, or admitted into, the family of Christian and civilised nations, and that all Christian and civilised men everywhere should, by all lawful means, resist to the utmost such recognition or admission."

The above manuscript, and Charles Sumner's letter, are kept in a frame on the wall at Millfield. Moncure D. Conway.

New York, May 2, 1892.

HARRISON AND GRANT.

To the Editor of The Nation:

Sir: The editor of the *Nation* (April 21) writes as follows:

"It seems to be one of the peculiarities of President Harrison that he has no further use for a faithful friend who allows himself to be caught and exposed. He dropped Dudley after . . . and dropped Quay after . . . Now he is preparing to drop Wanamaker."

The above reminds one of the fable of the Wolf and the Lamb. The said editor used to ridicule President Grant for standing by his friends who happened to come "under fire"; now he blames Harrison for taking the opposite course of "dropping" his friends under like circumstance. Some people are never satisfied!

Strict Constructionist.

Prairie du Chien, May 1, 1892.

[Our "Constructionist" is not so "strict" as he imagines. We in nowise reprobated President Harrison's course in dropping the unscrupulous henchmen to whom he owed his election by bribery and corruption. Nor is Wanamaker the "friend" of Harrison in any sense but that of being, as we said in the article quoted from, "the first man [in the history of our Government] who was known to have bought his portfolio with cash." The "friends" of Grant, on the other hand, whom he stood by under fire were social acquaintances, boon companions, members of his official family, and the like, to whom he owed nothing, but who owed everything to him, and who shamefully abused his trust in them by making their relations to him a vantage ground for public plunder and a shield against detection and punishment.—Ed. Nation.]

DRED SCOTT'S BACKER.

To the Editor of The Nation:

Sir: A correspondent, in the *Nation* of April 28, calls up the Dred Scott case, and inquires who furnished the means of bringing forward and maintaining that case of dread. The case was instituted in the United States Circuit Court for Missouri. To the declaration there was a demurrer, which was overruled, and the defendant, John F. A. Sandford of New York, was required to plead over, and on his pleas trial was had, and verdict and judgment for him. The plaintiff, by writ of error, removed the case into the Supreme Court of the United States.

As stated, the slave Dred and his wife were held in Missouri. Dred had been carried to Rock Island, Ill., and thence to Ft. Snelling, where he was married. He claimed that this carrying him by his owner into territory where slavery was prohibited made him free. The Court, six concurring, held (1) that, being of African descent, Dred could not become a citizen, even if free, and therefore could not maintain a suit in the United States courts; (2) that he could not become free by being carried into territory where slavery had been prohibited only by act of Congress, because Congress had no power under the Constitution to prohibit slavery in the territory of the United States.

Montgomery Blair was at the time a resident of St. Louis, a distinguished lawyer of that bar; afterwards a resident of Washington and Mr. Lincoln's Postmaster-General. I had more than one conversation with him about this case, which he instituted and carried through for Dred. I always understood that he advanced means to carry it forward. It was like him to have done so; and such things have several times been done by lawyers within my personal knowledge. A. G. R.

Washington, May 6, 1892.

NON-NATURALIZED CITIZENS.

To the Editor of The Nation:

Sir: I have read with much interest your article upon "New England's Dumb Vote." As one of the "British immigrants" who "have obstinately clung to their old nationality," I should be much obliged if you would allow me to bring forward the reason which has in my own case, and I do not doubt in that of many of my countrymen, been the chief obstacle to the "assumption of the duties of citizenship." This is, the renunciation clause in the oath of allegiance. There may be some difference of opinion as to the meaning of the word *allegiance*, but to my mind it covers every duty which a patriotic man undertakes for his country to secure her honor and safety. To renounce this duty would, with many of us, be simple perjury. It lies in our bones and cannot be sworn away even if we would.

It may, of course, be claimed that one cannot truly carry out one's duty towards both the land of birth and that of adoption. This I most emphatically deny. The most trustworthy citizen is certainly not he who can, immediately on landing here, renounce all bonds that tie him to his native country.

Does a woman, for fear of future quarrels with her mother-in-law, call upon the man she marries to renounce all duty towards his mother before he vows to be true to herself? Would he comply with such a request if she made it? Would he be worth having if he did?

Do not complain of us who are debarred from the franchise by your own decree. Think of us rather as those who, with the desire and capacity to become good citizens, have not the right to take a hand in the management of even the districts in which we live. In your hands lies the remedy, not ours.

Yours truly, P. Shepherd.

Washington, D. C., May 4, 1892.

PUBLIC FINANCE.

To the Editor of The Nation:

Sir: The annual English budget has been laid before Parliament, and, at the risk of exciting a howl of patriotic indignation, I will venture to give expression to the admiration it excites.

The first thing is its simplicity. Instead of long columns of figures which no outsider can understand, and which only obscure the totals, the summing up is as concise as that of a lady's pocket money after a day's shopping:

Revenue	£90,995,000
Expenditure	89,928,000
Surplus	£1,067,000

The estimate of a year ago gave a surplus of £166,000, so that the variation in actual results is less than 1 per cent. of the revenue. The estimates for the year 1892–'93 are:

Revenue	£90,477,000
Expenditure	90,253,000
Surplus	£224,000

—less than ¼ of 1 per cent. of the estimated revenue.

Compare this with the finance which one year has a surplus of one hundred millions and the next year is in arrear in the pay of workmen. And this year is only a sample of a history. About 1840, with a tangle of some 1,200 customs duties, the revenue showed a deficit. When the income tax was resorted to, and, in spite of the relief of several large items of taxation, showed a surplus of revenue, instead of a mad rush to pay off the debt as fast as possible, that surplus was used for further relief from taxation, binding the people together by fresh ties of loyalty and gratitude. It is perhaps not too much to say that by postponing the payment of its debt, the British nation has saved the full equivalent of the amount in its reduced proportion to the national wealth; and yet there has been going on a steady liquidation, till the amount of the debt has been reduced from £885,000,000 in 1816 to £685,000,000 at the present time. What nation in Europe can point to such a record?

Again, while nearly all the nations of the world seem to be engaged in a frantic emulation as to which, under the euphemism of "protection," shall injure its own people most in the hope of injuring foreigners, Great Britain alone stands upon her basis of free trade as on a rock, and every proposal to depart from it is met with a shout of laughter.

Why is it that the English national finance is beyond question the first in the world? Certainly it is not because of the superior wisdom of Englishmen. For one, I believe that the average of financial knowledge and of general intelligence in our Congress is fully equal to that of the British House of Commons. Nor is it that Englishmen are better financiers. We have an abundance of men as able to deal with the intricacies of finance as any Englishman who ever stepped. For example, there is compressed into four pages of the May *Forum*, and signed Michael D. Harter, a statement of the evils of our silver coinage and of the course which ought to be pursued, of which for sound finance and manly courage no English Chancellor of the Exchequer would need to be ashamed. But Mr. Harter is only one of 325 members of Congress, each of whom has as good a right as himself or anybody else to a voice in the matter. The real success of English finance lies in the fact that it is placed in the hands of one man. Parliament never proposes an expenditure or a tax. It has simply a veto upon the proposals of the Chancellor of the Exchequer. Yet it does not follow that he has it all his own way. He is exposed to an ordeal of criticism so severe that only a man of the highest abilities and (still more) purity of purpose can stand it. It is this process which has produced a list of names like those of Sir Robert Peel, Mr. Gladstone, and Mr. Goschen.

It must be confessed that for the present we are limited to merely speculative inquiry. Imagine the outcry in Congress which would meet a proposal not merely to give to the Secretary of the Treasury a seat in Congress, but to clothe him with the functions of the Committees both of Ways and Means and of Appropriations. Yet that is only a concrete statement of the much larger question whether this Government is to be carried on in the interest of the nation, or of the private interests which largely make members of Congress and control them after they are made: a question which, unless some peaceful solution in the former direction can be found, will ultimately bring on an appeal to arms. G. B.

Boston, May 5, 1892.

Notes.

HARPER & BROTHERS have under way 'Stories and Interludes,' by Barry Pain; 'An Edelweiss of the Sierras,' by Mrs. Burton Harrison; a 'Life of the Earl of Derby,' by George Saintsbury; and George William Curtis's address on Lowell before the Brooklyn Institute, illustrated with several portraits.

D. Appleton & Co. will publish immediately 'The Last Words of Thomas Carlyle,' containing his "Excursion (Futile Enough) to Paris," and his solitary novel, "Wotton Reinfred." The book will be the first of Carlyle's to receive an American copyright.

Lee & Shepard will have ready during the present month 'The Spirit of the New Education,' by Mrs. Louisa Parsons Hopkins; and 'Talks on Graphology: the Art of Knowing Character through Handwriting.'

The thirtieth volume of the 'Dictionary of National Biography' (Macmillan) is exceptionally rich in good reading, as may be judged from the fact that it embraces Dr. Johnson, Inigo Jones, Ben Jonson, Joule, the Keans, the Kembles, and Keats. Dr. Johnson has fallen to Leslie Stephen, and is admirably chronicled in sixteen compact pages. One of the great lexicographer's "emphysematous lungs," we are told, is shown in a plate in Baillie's 'Morbid Anatomy.' The American contingent is also larger than usual, and includes John Paul Jones; John Josselyn, author of 'New England's Rarities'; Edward Johnson, author of the 'Wonder-Working Providence'; Isaac (husband of Arbella) Johnson, who came over with Winthrop; Sir Wm. Johnson, who comforted himself with German, Dutch, and Indian wives or mistresses; and George Keith, who, while still a Quaker and in Pennsylvania, put forth the earliest protest of his sect against slavery (October 13, 1693). We might also instance the actress, Avonia Jones, daughter of the once barratrous George, Count Joannes; and George Johnstone, in the notice of whom is to be remarked a reference to Mr. Stevens's 'Facsimiles of MSS. relating to America.'

The eighth volume of the new 'Chambers's Encyclopædia' extends from Peasant to Rumelia. It has hardly any feature that distinguishes it from the preceding volumes, and but one that invites comment, viz., the copyrighted article on Protection, by W. Draper Lewis. The editor has surrendered this topic entirely to its American friends, perhaps from the mistaken notion that he will thus recommend his work to the American public at large. A certain timeliness attaches to this infantile argument for shoddy and against free wool: "The protectionist believes that Government can aid in the unconscious adaptation of the individual citizen to his environment. . . . The climate of England is much damper than that of the United States. Wet cotton fibre is a better conductor of heat than wet woollen fibre. . . . Cotton being more easily obtained than wool, it is a waste of energy to use the latter where the former can be employed without danger to health. The dry climate of the greater part of the United States renders it possible for the people to employ with safety a larger proportion of cotton in their clothing than is advisable in England. . . . Thus the tariff on wool and woollens, besides being defended on the ground of the protection it affords to the sheep-raisers, is also," etc., etc. Not all the articles in the present volume have been intrusted to such powerful minds as Mr. Lewis's. Mr. Clements Markham, Mr. A. H. Keane, Prof. Andrew Seth, Mr. Edmund Gosse, Mr. Holman Hunt, Mr. Hamerton, Mr. Walter Besant, Mr. Austin Dobson, and Canon Taylor, are, however, if intellectually inferior to Mr. Lewis, safer guides. This volume has the usual colored maps of the States of the Union and of other countries.

Dr. J. B. Hague's rhymed translation of the 'Odes and Epodes of Horace' (G. P. Putnam's Sons) represents, on his part, the loving work of many years. It is accompanied by the Latin text as it was received thirty or forty years ago, and by an introduction and notes intended for the general reader. The versions, although very free, contain the same number of lines as the originals; the notes consist chiefly of those views of Horace, his works, and the history of his times which formerly met with general acceptance.

A new translation of the entertaining 'Memoirs of Marguerite de Valois, Queen of Navarre,' has been brought out (London: Nimmo; New York: Charles Scribner's Sons). Henry IV.'s Queen is famous in literature and romance. Both her literary merits and her romantic adventures may be enjoyed by English readers in this excellent translation by Mrs. Singleton (Violet Fane), who has caught the spirit of the original and rendered it successfully, barring some few misapprehensions here and there. The picture of the times given by a princess whose charms were celebrated, whose rank brought her into contact with all the leading men and women of a most stirring epoch, is a brilliant one. Marguerite writes well almost always—remarkably well at times. Her native talent was helped by the scenes she witnessed and reported. The troublous years of the close of the dynasty of Valois live in her pages; the pitiable Charles IX., the contemptible Henry III., the bold Henry of Navarre, the intriguing Catherine de Médicis, are portraits touched with a master hand. As for the description of the massacre of St. Bartholomew—of so much of it, at least, as the Queen saw—it is so well known to every student of sixteenth-century history and literature that it needs only a bare mention. For the rest, Court gossip mingles with historical material; pictures of state ceremonies with accounts of family jars; political disquisitions with indignant refutations of slanders. In short, the Memoirs are full of the savor, the piquancy, the quaintness and interest of the stirring age when Huguenot strove against Catholic, and the three Henrys were in the field against each other. The work is beautifully printed on thick paper, and illustrated with excellent portraits of the chief personages.

The Clarendon Press sends out a carefully prepared edition of the old French poem contained in MS. 596, in the Lambeth Library. Mr. G. H. Orpen is the editor, and he not only has collated the text of Francisque Michel's edition of 1837 with the original MS., but has added a literal translation, abundant and well-digested notes, a map of that part of Ireland, Midhe and Laighin, in which lay the scene of the war described in the poem, full indexes of places and names, a glossary, and a title, 'The Song of Dermot and the Earl.' The MS. has been consulted by historians of Ireland, notably by Stokes, but the text has never yet been presented in so useful and handy a form as in Mr. Orpen's valuable edition. The translation, which is printed on the right-hand pages, the text occupying the left, claims no merit of literary beauty, but it has the far more important one, in this case, of faithfulness and accuracy.

Every mathematician who proposes to carry his studies beyond the college curriculum will be glad to learn that Prof. F. N. Cole has published a translation of Netto's well-known 'Theory of Substitutions,' which can be obtained by enclosing three dollars to the Register Publishing Company, Ann Arbor, Mich. If not a great classic, it is a standard treatise; and the student who is not thoroughly familiar with its contents (which can nowhere else be so conveniently mastered) will find himself put to serious inconvenience in reading many a recent German memoir. The present edition has been extensively revised and altered by the author, so that it is better than the German original—not to speak of the comfort of reading mathematics in our clear and concise language.

We may also call attention to the second edition of Joseph Edwards' 'Elementary Treatise on the Differential Calculus' (Macmillan), a sensible and useful treatise, including everything necessary, and excluding subtilties not called for. The examples are specially copious and well chosen, and in general the treatise has the best qualities of the English text-books, without their worst defects. Still, we cannot help thinking that the examination of such Continental treatises as those of Schlömilch and of Jordan would have led to some improvements. However, the student will find the presentation easy, interesting, and tolerably full.

M. Max Leclerc has reprinted in handy form from the *Revue Bleue* his address to pupils and alumni of the École Libre des Sciences Politiques on University Extension ('Le Rôle Social des Universités.' Paris: Armand Colin & Cie.). It is a clear presentation of the English movement of which America is now just feeling the contagion. M. Leclerc does not advocate a servile imitation of methods, but would have his countrymen catch the spirit of this effort to make the university a centre for the diffusion of sweetness and light in the community at large.

The choice for a thesis of such a subject as 'The Palatal Consonants in English,' by Mr. Benjamin Duryea Woodward of Columbia, is noteworthy as indicating a commendable turning to more critical work in English philology. Unfortunately, however, the thesis itself can hardly receive the highest praise. Mr. Woodward has brought together all the examples of words in which palatal consonants occur, but he seems to be too poorly equipped on the side of phonetics to carry on such an investigation successfully. A greater blunder was to base everything upon the etymologies in Skeat's Dictionary, many of which are inaccurate and have been already corrected by Kluge, whose 'Etymologisches Wörterbuch' is not mentioned by the writer. Take, for instance, the words with initial *sh* and those with the *sk* sound. The majority of the former are derived from Old English words with initial *sc*, while the majority of the latter come from the Old French or the Scandinavian. Exceptions to rules of such uniformity ought to be explained, but Skeat makes no attempt to explain them, and Mr. Woodward follows him in this.

A commendable 'Catalogue, with Descriptive Notices, of the Portraits, Busts, etc., belonging to Yale University,' has just been published by the Corporation, under the painstaking editorship of Mr. Franklin B. Dexter. The Trumbull portraits (including a full-length, life-size Washington) and miniatures cut a large figure in the collection, and the Trumbull family itself is well pictured. The list embraces a great number of colonial worthies, as well as of the leading men of the Revolution and the first half-century of the

Republic, along with latter-day governors, professors, benefactors, etc., and some Old World personages, mostly of doubtful ascription and authenticity, as Mr. Dexter intimates. One of the most interesting portraits is that of Eli Whitney by S. F. B. Morse. Mr. Dexter provides an index of artists, and one would have expected also a list of subjects, by no means rendered superfluous by the alphabetical arrangement of the descriptive notices.

The significance of the recent action of the Yale Faculty in admitting women to the degree of Ph.D. is defined by Prof. Hadley in the *Educational Review* for May. It was, he says, merely giving "official recognition as members of the University" to women, who had for many years past availed themselves, by the courtesy of instructors, of the courses of graduate instruction. Such recognition "seemed only fair," and hence was voted almost unanimously. Prof. Hadley argues that this step does not involve co-education in the College, which has been conservative, while the University existing side by side with it has been progressive, and makes in this instance no breach of tradition.

An appeal for the equipment of the Soldiers' Field, Harvard's new athletic ground beside the Charles River, has been put forth by a committee with Mr. Alexander Agassiz at its head, and Mr. William Hooper, No. 87 Milk Street, Boston, for its treasurer. Plans accompany the statement of needs, and call for the sum of fifty thousand dollars.

The "Quarter-yearly Review of the Liberal Arts called the *Knight Errant*," which emanates from Boston (Elzevir Press, 106 Pearl Street), has a well-devised cover design, and indulges in bold print on heavy paper with generous margins. The typography, viewed narrowly, is not first-rate. The articles are, mostly, vague echoes of Ruskin, Rossetti, and William Morris, and can hardly pass for bugle notes in the "war against the Paynims of realism in art, . . . the dragon of materialism, and the fierce dragon of mammonism," "for the succour of forlorn hopes and the restoration of forgotten ideals." The poetry of the number is equally ineffective. It would be hard to characterize the mélange, which includes part of an address by Prof. Norton, an allegory by Brander Matthews, a tale or picture by Bliss Carmen. In the main, the *Knight Errant* would seem to be not "a magazine of appreciation," but of depreciation. The one incontestable document is a photogravure of the lovely "Columbine" of Bernardino Luini.

One of the most beautiful maps ever issued by the house of Dietrich Reimer, Berlin, is the second edition of the "Carte Générale des Provinces Européennes et Asiatiques de l'Empire Ottoman" of Dr. Henry Kiepert. It might not inaptly be styled a map of the Eastern question. Its sweep is from the meridian of Rome to that of Shiraz, and from the parallel of Munich, Vienna, Kharkov, to that of Cairo and Suez. Within these limits, Arabia alone, of the members of the Ottoman Empire, is neglected. The whole of Hungary, Austria, Greece, the major part of Italy, are shown; the whole of the Black and Caspian Seas. The scale, 1:3,000,000, is sufficiently large to make of the four sheets conjoined a serviceable wall-map. They come to us conveniently folded as a folio, with tapes for hanging, and accompanied by an alphabetic index of places in octavo. The lettering is very clear and the coloring delicate.

Leach, Shewell & Sanborn send us the tenth edition of Dr. Kiepert's Ancient Atlas in twelve maps, and this, too, is provided with an index.

The death of Mr. Roswell Smith will cause no practical change in the policy or management of the Century Company. His place as President will be taken by Mr. Frank H. Scott, who has been connected with the company from the start, and has hitherto acted as Treasurer.

The reputation which the Bodleian Library enjoys for its collection of Cotton Mather's works has recently been put in peril by one of the subordinates of that famous institution, who stole these books. They were valued at £80. It is satisfactory, however, to learn that the whole of the Mather tracts have been recovered. The offender was sent to prison for a month with hard labor. Who tempted him?

"W. M. G." writes to us: "Permit me to call your attention to the fact that the identification of Mérimée's 'Inconnue' with 'Jennie Dacquin' is not a *new* discovery, as you will find by consulting the *Athenæum* of January 23, 1874. 'Dacquin' does not look French, and does look like a Frenchman's attempt to spell an English name which he has only heard, not seen. Sixteen years ago, it seems, the lady's name was spelled 'Jenny Dakin.'"

The article on the present requirements for admission to Harvard College in the current *Atlantic* is from the pen of Mr. James J. Greenough, and not (as we were led into saying) by his father, Prof. Greenough.

—We do not know whether any other class at Harvard has passed in its effects, but this has happened in the case of the class of 1828, owing to the death of its secretary, the late Dr. Henry I. Bowditch, and the near extinction of the class, there being but six survivors. The most famous of these is Mr. Robert C. Winthrop; but the Rev. Charles F. Barnard, Thomas B. Fox, George S. Hillard, and Francis George Shaw were also men of usefulness and distinction, and there were, as in every class, men of promise who were cut off in their prime, such as Charles Chauncey Emerson, the brother of the poet. A brief biography of the members, with a bibliography, is given in No. 46 of the Bibliographical Contributions of the Library of Harvard University. Dr. Bowditch was his own bibliographer, in no vain sense, and his notes on the several pieces in his list are perfectly characteristic of this warm-hearted and delightful man. His abolition attitude and activity, as in the Garrison mob, the Latimer case, the "Anti-Man-Hunting League" of Fugitive-Slave Law times, the war of the rebellion, are indicated with joyful recollection. The plan of the League was "to run off the slave-agent in case he declined to give up his victim after we had made reasonable propositions to him to that effect." By a regular drill "we learned how to speedily lay a man down and to carry him, in spite of his utmost efforts, out of the room without injuring him," after which he was, not lynched, in Southern fashion, but "concealed at one of our country lodges" till the fugitive was set free. "We had 24 lodges in as many towns, and 469 members," oath bound. The memorials of this organization are preserved. Also noteworthy is correspondence in manuscript concerning the inquiry, "Did Ralph Waldo Emerson sympathize with the Abolitionists?"—Dr. Bowditch holding that he never cared for them, and "was not with us in hard times." In short, these archives of a physician must not be overlooked by the historian of the anti-slavery struggle. At the close of the long list of Mr. Winthrop's writings, we are told that a patriotic hymn written by him and printed anonymously during the civil war obtained a wide circulation, and that it was not a solitary effort in verse on his part.

—The appearance of a new and extensively revised edition of Max Müller's 'Lectures on the Science of Language' has reawakened Prof. W. D. Whitney's old-time interest in that book. This interest expresses itself now in a distinct publication, a pamphlet of seventy-nine pages, entitled 'Max Müller and the Science of Language: A Criticism.' That it has been rightly named a criticism, we think the reader will be convinced. It might, however, be also called an investigation—an investigation into the scientific progress of Prof. Müller during the past thirty years. Of the first edition, representing lectures delivered in 1861 and 1863, Prof. Whitney gave a spirited account in the *North American Review* for April, 1865. His estimate of the advance made by the present edition is frankly summarized in the pamphlet before us (p. 3):

"As to these questions [the great questions which underlie the study], our author's views seem to remain what they were thirty years ago; he has gained no new light upon them from the criticisms that have been made upon his work, nor from studying the discordant views of others, nor from his own review and comparison and coördination of his old opinions. . . . It might seem as if, having written with such popular effusion and miscellaneousness about so many matters bearing upon language, he would have gladly seized the opportunity of a final revision to ponder and recombine it all, establishing in his own mind a certain connected and clearly held body of opinions which should yield one another mutual support. . . . Of course it was for him to decide what he would and what he would not undertake to do; it is not for his readers to prescribe the scope and limits of his task. But it is ours, now that the work is done, to criticise it."

The critic proceeds hereupon to apply his tests upon the author's attitude to fundamental questions; *e. g.*, the relation of thought and language, origin of language, the study of language a physical or an historical science, the individual's power over language, language as a barrier between man and the brutes, the relation of dialects to languages, the nature of phonetic change and phonetic law, etc.

—The result of our critic's patient and, on the whole, candid inquiry will be, we think, for every one who follows it the conviction that Prof. Müller has not and never did have any clear or self-consistent views whatsoever upon any of these questions. The most charitable judgment of Müller's work can only adopt the statement of Whitney (p. 75): "The book is not science, but literature. Taken as literature, it is of high rank, as the admiration of the public sufficiently testifies; its author has a special gift for interesting statement and illustration, for lending a charm to the subjects he discusses; and he carries captive the judgment of his hearers and many of his readers." We cannot refrain from noticing that the *Nation*, by a note of July 16, 1891, giving in general the same estimate of this new edition, has delivered itself from the reproof of Whitney's opening sentence, which announces the appearance of the book "followed by the usual array of commendatory notices." Whitney's pamphlet can certainly be recommended as good reading; it is incisive, clear, and sometimes sharp, and is everywhere marked by that priceless good sense which characterizes all the products of his pen.

—On May 5, with public ceremony and official courtesy, the Trustees of the University of Pennsylvania formally declared its graduate department open to women. The exercises were conducted in the large Library Hall, which was filled with men and women interested in the higher education of that sex. The Dean of Bryn Mawr College, herself a Ph.D. of the University of Zurich, delivered the chief address, and Dr. McAllister, President of the Drexel Institute, urged less niggardly public support of girls' preparatory schools in a country where nearly 90 per cent. of the school-teachers are women; but the interest of the occasion centred around Provost Pepper's remarks. College women and their friends were assured "that co-education may be safely and effectually conducted," but that as each institution must be guided by its own organization, the Trustees of the University of Pennsylvania considered it inexpedient to admit women except to its post-graduate courses leading to the degree of Ph.D., for while undergraduate instruction can be procured at many places, "the facilities for advanced work are only adequately developed in a few great universities." Experience proves that this advanced work must be endowed even more fully than undergraduate work. When, therefore, women wished to share this instruction, special funds were required. In 1890 Col. Bennett offered the University two houses adjoining its property, to be used as a hall of residence for women graduate students. The Trustees accepted this gift of about $30,000, arranged for the Graduate Department of women, and ordered its formal opening so soon as eight fellowships were assured. Dr. Pepper announced that the requisite number of fellowships, each of an annual value of $375, and tenable for two years, are now offered in this department, and that he had just received from Col. Bennett $15,000 as his contribution to the endowment fund. The total amount of endowment required to develop this new department and to extend freely its advantages will be not less than $100,000. "The University of Pennsylvania leads the way in a new field of educational work of the highest importance and significance. It marks an epoch in the history of the higher education of women; it has already incited to similar action in other quarters; and it will enable us to feel that no longer can the reproach be made that the splendid facilities for original research and for advanced study in this great university—many of which are due to the generosity of women—are reserved exclusively for men." A student in this graduate department for women must pursue graduate studies for at least two years, and must present herself for examination in three of the twenty-one courses of the Department of Philosophy. The woman's school will be governed by a mixed Board of Managers, consisting of the Provost as President *ex-officio* and some twenty ladies and gentlemen. It is encouraging to know that practically the only limit to women enjoying all the advantages of a great university is the capacity to pay for them *en gros*. Indeed, the Trustees state, through the Provost, that they are willing to provide a separate *college* for women, provided the means can be found.

—On April 11, the Rev. A. C. Headlam of All Souls' College, Oxford, read before the Hellenic Society an account of the monastery and church at Koja Kalessi in the Byzantine province of Isauria, a part of Cilicia Trachea. Laborde visited the site in 1826, but the account of it in his 'Voyage en Orient,' under the name of Aladja Khan, is that of an artist rather than an archæologist. Messrs. Headlam, Ramsay, and Hogarth have therefore been the first to discover its unique archæological importance. At first sight it might appear to be a basilica of the older type, but it has a central tower and has not a continuous row of equal columns. It is not less removed from the later type of Byzantine church, and apparently represents a transition from the older oblong basilica to the later church with a central dome—the church of Justinian's day. It has no dome and no external apse; chambers are built on either side of the sanctuary. An earlier date than the fifth century B. C. would require the altar to be at the west end, as in the case of old St. Peter's at Rome and in San Paolo fuori le Mura, and would not agree with the Byzantine design and workmanship of its capitals. But it must have been built early in the fifth century, for there is an entire absence of distinctively Christian symbolism in its ornamentation, and the design of its doorways almost suggests that they were taken from a pagan temple. The date, 461 A. D., on an epitaph of the site may give some clue. The second paper was by Mr. Louis Dyer, on "The Intervention of Athena in Heroic Affairs." A sufficiently clear and consistent account of Athena might, he contended, be derived from the poets. Therefore the need of new light from investigations of ritual was not so pressing as in dealing with Zeus, Dionysus, or Artemis. The earliest Athena of various local cults had grown into the universal goddess of skill and quick resource before the era of the Homeric poems. She showed men how to be themselves—for good, if good was in them, but sometimes also for evil. Skill of all kinds was in her gift, and in the Homeric poems she both gives and guides the mind of war and adventure. In the first two books of the 'Odyssey' we have the *Lehrjahre*, in the third and fourth the *Wanderjahre*, of Telemachus. The Athena who guides him throughout is a spiritualized counterpart of Athena Kourotrophos as worshipped on the Athenian Acropolis. Her help in war is of the same purely spiritual quality, and when (as in the 22d 'Odyssey') this is incompatible with a congruous dramatic situation, the poet does not flinch from the truth. There Athena-Mentor summons Odysseus to stand by her and see what she can do, and then, unaccountably as some say, she disappears. It is only by grace of Athena that Odysseus is his own clever self. This is shown by the sorry figure which he cuts without her. From the moment of his departure from Troy to his shipwreck on Scheria, he has recourse to her only once, when he escapes from Polyphemus. Elsewhere he invariably falls far short of himself, showing bad generalship, bad seamanship, and finally incurring the just displeasure of Æolus as one under the ban of heaven. The battles of the 'Iliad' and the Labors of Heracles are full of the intervention of Athena, who is the voice of wisdom in practical affairs. Hence Eustathius identifies her with the virtue of φρόνησις, Practical Wisdom.

GARDINER'S HISTORY OF THE GREAT CIVIL WAR.—I.

History of the Great Civil War, 1642–1649. By Samuel R. Gardiner. Vol. III., 1647–1649. Longmans, Green & Co. 1891.

Mr. Gardiner has completed his annals of the Great Civil War; he has reached the third stage in his monumental history of the age of the Stuarts. The moment is opportune for forming an estimate of his position among investigators of the past. It is the more natural to do so because Mr. Gardiner, in his last volume, pronounces a verdict on the character of Cromwell; and the extent to which we accept Mr. Gardiner's conclusions on a most intricate question of fact and of ethics must depend on our opinion of our author's capacity for the discharge of an historian's judicial functions.

Two qualities preëminently fit him for filling the judgment-seat of history: they are thoroughness and impartiality. Of the thoroughness of Mr. Gardiner's work it is impossible to speak too highly. We have all heard the story of the historian who refused to read new documents because his history was written and his opinions made up. This anecdote, which is told of many writers, may after all be true of none. It certainly would lack not only truth but plausibility if told of Mr. Gardiner. A critic would be dull or malignant indeed who could read his pages without perceiving that his life had been one of continuous, laborious, thorough-going research. That any man should know everything that may ultimately be known about a great era is an impossibility. But it would hardly be rash to assume that our author has, up to the point at which he has arrived, collected as much information about the years in the annals of England of which he treats as the undaunted industry of one man could bring together. He is not a great narrator; he does not display that power, which seems in England to have died out with Macaulay, of marshalling together masses of facts in clear and orderly narrative so as to tell their own tale and of themselves impress on the reader their own natural and inevitable moral. He has nothing like the brilliancy as a painter of particular scenes displayed by Froude, and occasionally by Motley. He does not exhibit the analytical penetration of Tocqueville. But his very shortcomings as a writer, and even, if one may say so with the deepest respect, as a thinker, make the more visible his thoroughness as an inquirer. He does not possess the art of concealing his method of work. Hence any observant critic can perceive his conscientiousness as a workman.

Nor is it disrespectful to add a remark with which, we strongly suspect, Mr. Gardiner would himself agree, that since the day—now, we believe, at least thirty years distant—when he began his great historical work, both his knowledge and his powers have immensely increased. His method of treating his subject is the method, to a great extent, of an annalist. He goes calmly on from year to year from the beginning to now nearly the middle of the seventeenth century. Each year his research makes greater discoveries, both because of the use he can make of his immense accumulative knowledge, and because habits of observation strengthen his capacity to observe. The book produced becomes, in short, almost a perfect and complete chronicle of a past age. We can read in Mr. Gardiner's pages the annual register of the reigns of James I. and Charles I.

Mr. Gardiner's thoroughness is, if possible, surpassed by his impartiality. If it were in accordance with modern taste to appropriate particular epithets to particular authors, he would be referred to as the "impartial Gardiner," just as the author of the 'Ecclesiastical Polity' is designated as the judicious Hooker. For Mr. Gardiner's impartiality is a virtue, or a quality, different not only in degree but in kind from the fairness of any honest writer. A narrator is generally counted fair if he takes due pains to ascertain his facts; if he sets down nothing in reference to men or

events which he does not, on good, solid, rational ground, believe to be true; if he suppresses no fact, whether it tell for or against his views or opinions, which has a material bearing on the matter with which he is concerned, and if he does not attempt, by rhetoric or other means, to bias the minds of his readers—that is, to lead them to conclusions beyond the inferences which the evidence, when fairly stated, supports. A writer, further, who pretends to real fairness will, especially in estimating the moral character of men's actions, try to distinguish between inferences which seem to him to possess moral certainty, and conclusions which at best are only probable. Few indeed are the historians who attain to this degree of fairness, but Mr. Gardiner seeks to reach, and often does reach, a higher, certainly a different, kind of impartiality. He wishes, where he judges at all, to pronounce a sympathetic, and therefore, in most cases, a lenient judgment on the men of past ages. He will not hand them over to the penalties of posthumous blame without bringing before the tribunal of opinion all the possible considerations which may turn, or sway, or lighten our judgment.

The kind of difference which marks off Mr. Gardiner from every historian with whom we are acquainted may be seen if we set side by side with his history Dr. Arnold's 'History of Rome.' No one but a fool or a fanatic ever accused Dr. Arnold of unfairness. A certain stern sense of justice was a marked trait of a character which, even in his writings, appears more admirable than amiable. That he never made a statement which he believed or suspected to be false, or suppressed a statement which he believed to be true, may be taken as certain. But though Arnold acted and wrote with the utmost fairness, no sagacious critic will ever maintain that Dr. Arnold's judgments were invariably fair. Still less are they marked by intellectual impartiality. Certain types of character excited his distaste no less than his moral reprobation; he viewed them in the light of a censor, and the sternness of censure is inconsistent with the indifference of criticism. To a man, for example, of the priestly type, it was hardly possible for Arnold to do complete justice; it would have been impossible for him to weigh in the same scales the feelings of Laud and of Baxter. With Mr. Gardiner it is otherwise. It is his conscientious endeavor (and often the attempt is successful) to look at the politicians or theologians of the past as they might, he conceives, have looked at themselves—to urge, for example, in mitigation of any harsh judgment on Charles or on Cromwell, all that the King or the Protector might by possibility have pleaded on his own behalf. Mr. Gardiner also exercises a kind of charity in judging the acts of his fellow-men, which, when applied to the conduct either of contemporaries or of the actors in the history of the past, is, to say the least, rare. He considers, in effect, what is the most favorable interpretation which can by possibility be placed upon their words or actions; and this interpretation is practically the explanation of their career which he adopts.

That this gift of impartiality, this capacity for preserving the attitude of a lenient judge, is a very singular and in many respects admirable endowment for an historian, is past dispute. The possession thereof, combined, of course, with the habit of studious research, enables Mr. Gardiner in many cases to place the character of individuals in a new and favorable light. We are inclined to think that, speaking generally, nothing but good results from this talent for impartiality as regards Mr. Gardiner's treatment of the secondary characters of the age with which he deals. We have not the least doubt that, on the whole, we get from him a fairer and truer view of English High Churchmen who lived during the reign of James and of Charles than is obtainable from any other writer, whether Whig or Tory. He puts in a strong light the liberal side of Anglicanism; he makes his readers perceive that Laud, for example, may have appeared to his friends no less than to himself the opponent of Calvinistic intolerance; and though we may perhaps suspect that a combination of churchmanship and liberality is the form of religion which preëminently commends itself to Mr. Gardiner's own sympathies, it would be the highest injustice to hint or imply that he did not embrace in his intellectual charity teachers of a class for whom churchmen have not much tolerance. From one of the accidents of history, Hugh Peters is the traditional representative of vulgar and truculent Puritanism. Mr. Gardiner happily shows that the received picture of Peters is a mere caricature. He seems to have been exactly what would now be called a man of genial nature.

"His letters show him," writes Gardiner, "as he really was, fond of a jest, much concerned in the price of corn and butter, and taking the opportunity of a sermon to recommend the settlers [in New England] to raise a stock for fishing, but anxious withal for the righteousness as well as for the material prosperity of the colony. . . . Peters's love of liberty was not a high intellectual persuasion like that of Vane. . . . It sprang from the kindliness of a man of genial temper, to whom minute theological study was repulsive, and who, without disguising his own opinions, preferred goodness of heart to rigidity of doctrine."

In his description of Hugh Peters Mr. Gardiner is at his best. He understands his man and makes his reader understand him too. He shows us both the virtues and defects of the Puritan minister, and also explains how it happened that comparatively superficial faults have concealed from Hugh Peters's adversaries, as they have concealed from posterity, the sterling excellence of a teacher who in some ways was in advance of his age. The admirable results of our author's sympathetic equity are never more apparent than when he deals with classes. The attitude of Cavaliers, of Puritans, of lawyers, of soldiers, of statesmen, and of zealots during the most critical period of English history, becomes, as we read his pages, thoroughly intelligible. We see that England was divided into hostile camps because there was real cause for division. We are led not to think that there was nothing to choose between Roundheads and Cavaliers, but to perceive that when the Civil War broke out, it was a difficult thing enough for a man of sense and honor to decide whether he would stand by the Parliament or by the Crown. Mr. Gardiner puts an end for ever to the delusion that a man could not be a Parliamentarian unless he were a fanatic, or a Royalist unless he were a courtier.

Is it, however, the case that Mr. Gardiner's knowledge and fairness make him a thoroughly satisfactory critic of character and conduct? We cannot answer this question with an unhesitating affirmative. Leniency and charitableness keep a judge from committing one class of mistakes, but they do not of themselves supply insight into human nature, or bestow the faculty for forcing truth out of the mouths of mendacious witnesses. Mr. Gardiner fails sometimes to realize the possibilities of human vice or wickedness. He has devoted much thought and trouble to the study of James the First. We have the advantage in this particular instance of possessing, in the 'Dictionary of National Biography,' our author's final estimate of the first of the Stuarts who reigned over England. It is on the whole a very favorable one, compared with the judgment which is passed on the King by men who look mainly at his weaknesses and his vices. Mr. Gardiner perceives that James was endowed with more than average intellectual power, and keeps constantly before the minds of his readers the consideration that James's difficulties arose in part from the King being in some points in advance of his age. James desired and planned the union of Scotland and England. He wished to maintain a policy, if not of toleration, yet of ecclesiastical moderation. He perceived the gigantic evils of foreign war; he was, in an age of warfare, a man of peace. In spite of his weaknesses, he achieved in Scotland considerable political success, and in England, after all, avoided the errors which led his son to ruin. He was, in short, a monarch whom from one point of view it was possible, if not to respect, yet to admire; and Mr. Gardiner, if he does nothing more, explains to us how a man like Casaubon or Bacon might flatter James without conscious hypocrisy or servility.

What Mr. Gardiner does not bring into view is the possibility—or the probability—that James's life was disgraced by sins which more than justified popular distrust. The darker side of the transactions which led to the trial and imprisonment of Somerset hardly arrests Mr. Gardiner's attention. The interpretation which he places on James's fear lest Somerset should reveal some dangerous secret is possibly the right one; it is not, we think, the explanation which most naturally commends itself to any one who reflects upon the strangeness of James's conduct, and the high probability of his holding and carrying into practice the doctrine that kings were not tied by the moral rules which ought to govern ordinary men. Whatever be the true solution of the King's conduct—and at least two or three are possible—there is something singularly feeble in the conclusion that James's anxiety arose from the knowledge that Somerset knew more about the King's dealings with Spain than James cared to have openly known. Yet this is, in effect, Mr. Gardiner's final judgment on the whole matter.

Why is it that a writer so judicious comes to so impotent a conclusion? The question suggests to us the real defects in Mr. Gardiner's mode of judging men. The first is, that he brings to the task of historical judgment very little of what we may call worldly knowledge. There never was an historian of sense and ability who was less of a man of the world. It is quite impossible that either Gibbon or Hallam or Macaulay—writers as different from one another as well can be found—could have passed so lightly as has Mr. Gardiner over the effect on our judgment of James of his admitted faults and weaknesses, such as his cowardice, his grossness, and his tolerance for grossness and viciousness in others. Mr. Gardiner's second defect—and it is a far deeper and subtler fault than want of worldly knowledge—is that he has formed a false conception of the kind of impartiality that should be practised by an historian. An inquirer into the history of the past is neither a moralist nor a judge. The distinction between their respective duties is of the highest importance. A moralist man rightly, as a precept for the conduct

of life, enjoin upon others, and himself practise, the virtue of charity. He may tell us, and with truth, that we best avoid the risk of injustice and unkindness to our neighbors by forming a charitable judgment of their conduct—that is to say, by putting on the acts of our fellow-men the very best construction of which they by any possibility admit. The duty of a judge is not the discovery of truth, but the determination of the question whether a given person is proved to be guilty of crime. A judge, therefore, wisely acts on the principle that no man is to be found guilty of an offence if his innocence is even a possibility. But the whole aim of an historian is the discovery and the statement of truth. With the charity which thinks no evil, with the judicial principle that it is more important that ten criminals escape punishment than that one innocent man be unjustly punished, he has no concern whatever. He must constantly deal not with certainties, but with probabilities. Undue leniency in judging men's actions is in him as distinct a vice as undue severity. This is a truth which Mr. Gardiner forgets. The impartiality of the judgment-seat is not the impartiality needed for the discharge of an historian's judicial functions. His aim is knowledge; he should practise not only the open-mindedness, but also the severity, of the scientific inquirer.

MORE NOVELS.

The Deluge. By Henryk Sienkiewicz. Translated from the Polish by Jeremiah Curtin. Boston: Little, Brown & Co.

Roweny in Boston. By Maria Louise Pool. Harper & Bros.

A Member of the Third House. By Hamlin Garland. Chicago: F. J. Schulte & Co.

The Governor, and Other Stories. By George A. Hibbard. Charles Scribner's Sons.

'THE DELUGE,' a booklet of 1,258 pages, is a sequel to the 800 pages of 'Fire and Sword,' so that we are now in a position to know all about it, provided Mr. Sienkiewicz and Mr. Curtin have dealt honestly by us as to truths of history and of translation, and we cannot entertain a doubt on either point. The adventures which are set forth in these narrow limits are not only enacted upon the page, but related and re-related to different characters in the book, until the reader finds himself in the position of the musical critic at Bayreuth who wondered that Wagner had not spared himself the trouble of repeated explanations on the stage, by allowing the persons of the drama to go out between the acts and purchase a book of the play. Condensation in the present case would have been easy, and would have lessened the impending danger that the readers of this novel will be limited to the patient reviewers and to Mr. Charles A. Dana, to whom the translation is dedicated. But there is no cloud without its silver lining: it is hardly possible that the editor of the *Sun* should have time in one season to read 'The Deluge' and to elect his candidate, and we may therefore reasonably hope that in *reading* history he will be precluded from making it.

The rising of Cossacks and Tartars in 1648 against the commonwealth of Poland, Lithuania, and Russia, having been disposed of in 'Fire and Sword,' there follows in 'The Deluge' the history of the wars of the commonwealth a few years later against the Swedes, under Charles Gustavus, when Poland enlisted on her side the terrible Tartars, and never knew from day to day if her sister States would stand by her or join the invading Swedes. The heads of the confederate principalities desired more or less to be true to the commonwealth, and desired as well to keep in sight the elective office of King of Poland. This portion of Poland's history, while hardly less bloody than the preceding period, is varied by the stories of a hundred treasons, plots, and stratagems, and, though only a little later in date, comes nearer to the modern idea than the history of a war with barbarians. Kmita, the hero of 'The Deluge,' is a wild flaming firebrand, who thinks to serve his country by fighting under the banner of the Lithuanian Prince Radziwill. Soon convinced that though Radziwill may have one eye on his country, he certainly has both upon the crown of Poland, Kmita, in flaming wrath, turns his back upon the traitor, and hews his way, through countless perils, to his King, John Casimir. Naturally suspected by all patriots, and especially by his lady-love, Kmita has a bitter experience of the difficulty of getting rid of a bad name. He flings himself into the cause of his church and his country, endures peril and torment, saves, by unheard-of daring, the fortified Convent of Czenstochowa, abducts a prince of the house of Radziwill, rescues the King from deadly danger, and then, gathering and training a horde of Tartars, blazes through the land in a hundred frightful battles, and so to days of peace for the commonwealth and to his own reward. His friends are our old ones of 'Fire and Sword'—the little game-cock, Wolodiowski, twitching his moustaches, sputtering gallantry and patriotism, supreme with the sabre; Zagloba, still shirking, scheming, bragging, guzzling, and beloved; Skszetuski and his beautiful Helena, whose fortunes made the love story of the earlier book, and who have now subsided into a seemly wedded unimportance. Kmita and his Minerva-like Alexandra take their places as lovers, and never had lovers more storm and stress to separate them. The book closes with the dearly-bought peace that at last followed the deluge of war, thanks mainly to the sword of the great general, Czarnietcki. Radziwill and the other interlopers being balked of their election, the crown remains upon the head of the rightful owner, and the subsequent abdication of John Casimir is probably postponed to the next novel.

There are scenes of thrilling interest in the history of this war. Most impressive, perhaps, is the siege of Czenstochowa, already referred to, where the friars defended their convent against the daily attacks of the godless foe, smiling at the pangs of famine, and singing hymns nightly upon their beleaguered walls. At last a great gun takes effect, making a breach too great to be filled, and ruin is only a question of time. Says Kmita to the prior: "Beloved father, there is a great heart in you, heroic and holy, but you do not understand cannon." Whereupon, by a dashing expedient, he blows up the gun, the convent is saved, and the country is thrilled from torpor into a united resistance against the foe who had dared threaten a sacred retreat. Kmita is, throughout, a figure to appeal to the coldest imagination, with his rages, his hates, his furies of vengeance and of loyalty, while his submission to all that separates him from his happiness, and makes him worthy of it in the end, is full of pathos. The austere figure of Alexandra has for foil that of Anusia, as modern a little flirt as can be found in fiction. The many kings, princes, and hetmans are remarkably well differentiated, considering their number; with a like modifying clause, the same may be said of the battles, the sieges, the forays, the tortures, and the ingenuities of brutality of a brutal age; but this does not save them from the charge of an intemperate overplus of being, which in art is a misdemeanor unless it be a crime.

Once, in speaking on the art of fiction, Mr. Walter Besant advised the young novelist to remember that in story-telling, as in almsgiving, a cheerful countenance works wonders. Consciously or not, the author of 'Roweny in Boston' has carried out this advice to the letter. From the first page to the last the story is told with a smile—though it must be confessed that, as regards the too recurrent terrier Marmaduke, the smile grows a trifle stereotyped. The heroine, it is true, mingles some nostalgic tears with her "light-housekeeping" in the attic-room on Hudson Street; the art student's inevitable moments of despair are hers, and she knows the craven thought, "I can go home. If I can't get a school, I can do slop-work." But she is really too clever and charming a maiden—a sort of *fin de siècle* cousin to Phœbe Pyncheon—not to win her way at the "Hub," and not to find that romance can send up some healthy shoots through the crevices left by psychical research, Christian science, theosophy, and the Browning Club.

Like Rowena at her brush, Miss Pool may be said to have the "touch." By a few lively strokes of her pen, her characters are made clear in outline, and are then left to explain themselves by their own words and actions. This they do with sufficient definiteness to prove that neither a talent for psychological analysis nor a gift of word-painting is essential to success as a novelist. Miss Pool has evidently had her eyes about her in more than one corner of Boston, but it is nevertheless her provincials that she understands to the ground. In these days, when realism, as applied to American fiction, is too nearly a synonymous term for vulgarity, it is refreshing to come across an author who is realistic without commonness and humorous without vulgarity. Rowena never blushed for her kith and kin in Middle Village, nor need the reader.

Those who insist on extracting a moral from every story will find one here made to their hand. If slight in fibre, it is at least a new motive in fiction, and has perhaps the merit of timeliness. It is that when a fascinating woman and a man are each contending for the first place in the affections of any young woman, it is always in the end, no matter what the first fancy of the young woman may be, "the masculine element which prevails." Beside this moral, there is an explicit lesson in charity. It is this: though a young man wear a monocle, have difficulty in pronouncing the letter *r*, and belong to "the very best set in Boston," he may yet, if very much in earnest, behave like a good fellow. The improvement in construction of this book upon the author's last, 'Dally,' warrants the hope that she can accomplish still better things.

Mr. Garland's latest venture in holding up the mirror to his compatriots is charged with high moral indignation. A righteous effort to bring to judgment the political trickster and all his works is so laudable, whatsoever its form, that the pity is all the greater when a story with this purpose in view turns the sharp edge of its weapons against itself. The cause, here, of this mischance, is not that the society revolving around "the Capitol" in an unnamed city and State is drawn as hopelessly vulgar. It would be wide of the mark to insist that the average member of a "House"—

whether second or first—at ease with himself and the rest of the world, in the ornamental bar-room of his favorite hotel, should be held up as a spectacle edifying to gods and men; neither is an "Iron Duke," his confidential secretary, who is at the same time a "King of the lobby," nor even his only daughter (though the American girl is proverbially quick to learn), of necessity a model of good breeding and a well of English undefiled. But even where the dramatis personæ are such as these, there are certain points of style and manner which the writer of realistic fiction must bear in mind if, when he is picturing common people, his book is not to be on a level with his people.

In addition, for instance, to the vocabulary he must use in furnishing forth the speech of his characters, he needs also to have at command, on his own proper behalf, a vocabulary and diction conformable to the requirements of polite English. By some means or other, moreover, he must succeed in creating the impression that between himself and his reader there exists a clear, though tacit, understanding in regard to a standard of mind and manners separate and apart from that of his underbred personages. Otherwise vulgarity will stamp not alone his characters, but also his story. Every story, according to a clever critic of to-day, must consist of an idea and a picture. To the idea of 'A Member of the Third House' there are few or no objections to be raised. Its author, if he means to produce pictures instead of travesties of American manners, has still to learn to paint, not with the brush that furnishes the glaring figures of the advertiser, but with the touch and tone of the artist.

Mr. Hibbard's sins against the canons of fiction are so many that it would be difficult to enumerate them briefly. To sum them up in a general confession, not one of the six stories reprinted under the title of the first in order, "The Governor," succeeds in carrying conviction to the mind of the reader. The air of reality, which is, after all, the supreme merit of a story, and which should be complete enough wholly to conceal the shifts and contrivances of the story-teller at work, is wanting, not less in the sensational attempt at portraying the emotions of a self-supposed murderer, who is rescued by an easy device from the consequences of a "mad, bad" hour, than in the highly unpsychological study of the interior transformation of a worldly old gentleman at the sight of his old home, his old rival, and his old love. Mr. Hibbard makes spirited dashes at difficult motives for short stories, and his failures are all in the line of ambition. He has fortunately—although he still leaves much to be desired in simplicity of expression—already emerged head and shoulders from the inept verbiage of a recent volume; and where there are so many signs of promise as in these latest stories, the hopeful reader is justified in expecting good things yet to come.

ROBERT TOOMBS.

Robert Toombs: Statesman, Speaker, Soldier, Sage. His Career in Congress and on the Hustings—His Work in the Courts—His Record with the Army—His Life at Home. By Pleasant A. Stovall. Cassell Publishing Co. 1892.

THE old-fashioned title-page of Mr. Stovall's book is like an old-time feast—everything is spread out at once. Of the four items of its sibillant alliteration, however, "Statesman, Speaker, Soldier, Sage," only two are made fairly good in the subsequent delineation. The attempt to represent Toombs as a statesman fails conspicuously, and there is no attempt to represent him as a sage—which is well, for such an attempt could have been only ridiculous. Whatever the virtues of the man (and virtues were not wanting), and whatever the defects (and they were many and have not been disguised), no man was ever less a sage.

When we consider the prominence that Toombs enjoyed in the great debate which led up to the Civil War, in the proximate circumstances of secession, and in the following strife, it cannot be charged upon our author that he has unduly magnified his task. His book has only 396 pages, and there is little on a page, the margins are so generous and the type is so big. As little can it be charged that he has written his biography with any desire to prolong the animosities of a most miserable and hateful time. He is undisguisedly in sympathy with Toombs, and generally speaks of him in an exaggerated tone, but he has no recriminations for the North and no disparagement of the Union party. Indeed, there is something pathetic in his imperfect characterization of Lincoln, the intention is so manifestly kind. It prophesies a time when the name of Lincoln will be, with that of Washington, a bond of sympathy between all parts of the country which he loved with undivided heart. Mr. Stovall has chosen one of Toombs's most conciliatory sentences for the motto of his title-page, and a passage of like import for a fuller motto following the dedication.

The most obvious defect of the book is its superficiality. It is no memoir to serve the uses of the historian, so little does it give us of the "true inwardness" of Toombs and others in their correspondence antecedent to the war. It may be said that Toombs had nothing to conceal. He was a man who always wore his heart upon his sleeve; whose sword was never in its sheath. Nevertheless he passed from one position to another, and his letters must, it would seem, have indicated the steps by which he did so. They are not indicated here. The lack is particularly noticeable in the years corresponding to his passage from the Whig party to the Democratic, for he was not "a life-long Democrat," as one of the most copious reviewers of this book has represented him, with astonishing inattention to its representations, which on this head are as clear as possible. He was a Whig until the campaign of 1852; an independent, bolting Whig in that campaign, refusing to vote for Gen. Scott, and supporting Webster heartily and hopelessly; and, Webster dying just before the election, Toombs swept his Georgia contingent into the Democratic ranks. In 1844, advocating the claims of Henry Clay, he made one of the first speeches that brought him into general recognition. It was delivered in New York. It was sharply critical of Calhoun's protection for slave labor as the *summum bonum*. If any discrimination was made, he declared that it should be made in favor of free labor. Paradoxical as it may seem, "Mr. Toombs was actually charged in this campaign with being an abolitionist," and was obliged to defend himself. He opposed the acquisition of Texas, preferring "the Union without Texas to Texas without the Union," and describing the Mexican war in terms hardly more flattering than those of Hosea Biglow.

But Toombs was not a strong, self-centred man. He was an ardent demagogue, and, as such, extremely sensitive to the influence of popular opinion. As this tended more and more, midway of the century, to make slavery the great Diana of the Ephesians, he grovelled with the rest, and, in the memorable contest for the Speakership in 1849, demanding from the Northern Whigs that there should be no restriction of slavery in the Territories, and, failing to obtain the concession, he split the caucus and led off the Southern faction to the support of Howell Cobb, a Georgia Democrat. Threats of disunion foamed upon his lips, and were from that time on his first resort whenever he sought to force the North to do the bidding of the South, though it was as a warm Unionist that he went back to his constituents after the compromise measures of 1850 had been passed. That he was again suspected of "unsoundness on the slavery question" only shows that in some minds slavery without disunion already seemed impossible.

Entering the Senate in 1853, Toombs's most interesting aspect there is in the fascination which Stephen A. Douglas exercised upon his mind. The picture of his face at this time is full of glowing sensuousness and arrogant self-confidence—a handsome face, in striking contrast with the frontispiece, which shows the ravages of age and evil habits. In the Kansas-Nebraska controversy he was for the most vigorous and rigorous application of the pro-slavery doctrines at every stage. If Frémont was elected, he would "call upon his countrymen to take that to which they would be driven—the sword." The attraction of Douglas for him was more personal than political. He acknowledged "but one greater, and he the Apostle Paul"; but Douglas's squatter sovereignty did not meet with his approval, and he declared that if he had not been called away from Washington in 1856, Douglas would never have "gone off on that tangent." He was not in Charleston at the Convention of 1860, but he approved the action of Yancey and the seceding minority, and, when the anti-Douglas Convention at Baltimore nominated Breckinridge, Toombs gave him his unqualified support. In Georgia he did not secure for him a majority of the popular vote. When Toombs became a Democrat, it was not in any half-way fashion. He opposed internal improvements at the national expense, and went so far as to preach the doctrine of Herbert Spencer, that the postal service should not be a Government affair.

After Lincoln's election, Toombs bent all his energies toward hastening secession, while in his last speech in the Senate, January 7, 1861, he named impossible concessions to the South which would keep her in the Union. Mr. Stovall contends that it was the ghost of Toombs's Whiggery that lost him the Presidency of the Confederacy; but he allows that there is another explanation—his conduct at a convivial party on the eve of the election in Montgomery. There is nothing in his previous or subsequent history to suggest that he would have made a better President than Davis. Their temperaments were antipodal. Davis had that coldness which the politicians never like. Toombs was far enough from this unpardonable sin: he was nothing if not aflame. Made Secretary of State, he soon came into collision with Davis, whom previous encounters had prepared him to dislike. He opposed the attack on Fort Sumter with clear prescience of its effect upon the North. In a few months his relations with Davis were so much strained that he left the Cabinet and took a commission as brigadier-general. That he was never advanced to a higher rank galled his proud spirit, and in

March, 1863, he resigned his command. His later contributions to the war were made as an adjutant and inspector-general of Georgia militia. It is agreed that to command soldiers one must first learn obedience—for Toombs, an impossible acquisition. The "instinct of personal freedom" was too strong in him. He was incapable of discipline or subordination. Moreover, his drinking habits were fatal to his advancement. It is not often that a biographer, especially one so eulogistic as Mr. Stovall, is so frank in his disclosures of his hero's weakness. He has a chapter named "His Great Fault," which, though it gives few particulars, makes it plain enough that Toombs's intemperance was very gross; that it increased during his army life, and excited constant apprehension; that in the last years of his life it quite overmastered him. His personal integrity and purity were in remarkable and happy contrast with his darling sin.

How complete the alienation between Toombs and Davis was at last is shown by the fact that in Washington, Ga., where Davis, fleeing from Richmond, and his Cabinet had their last meeting, though Toombs's own house was close at hand, and he sent a message to Davis, offering help if needed, the two men did not meet. Shortly they were united, together with Alexander Stephens, in Stanton's order for their arrest, and the dullest pages of Mr. Stovall's book are those detailing Toombs's remarkable escape—truly miraculous, he hung about so long and exposed himself so frequently. He remained abroad from November, 1865, until the spring of 1867. Returning to his native State, he resumed the practice of the law with great material success. He remained wholly unreconstructed to the last. The new South had for him no charms; his days were wholly with the dead. Taking a hand in framing the new Constitution of Georgia, he opposed the provision against duelling, in a manner consonant with the uncivilized habit of his life. All of his instincts were those of the barbarian or the semi-civilized man. He would have had no restrictions against bearing arms. Late in life he joined the Methodist Church. But he had nothing to repent of in so doing; with his last breath he said, "I would not blot out a single act of my life."

There are some interesting anecdotes, but not so many as we should expect a life so fashioned and so circumstanced to afford. Toombs met Lincoln when they were both in Congress, and Lincoln objected to sitting at a table of thirteen. Toombs told him he would rather die than be so superstitious. Daniel Webster's readiness to pay the national debt finds a companion story in Toombs's "Georgia shall pay her debts; if she does not, I will pay them for her!" And on two occasions he brought his private purse to the rescue of the public credit. When a Federal officer said to him, "We whipped you, anyhow," he answered, "No; we just wore ourselves out whipping you." His rhetoric was extremely florid, and his biographer's is of the same quality. There is a suggestion of throwing dirt in his metaphor describing Toombs: "He grasped only the great hillocks of thought, and left the intervening ground to be filled by the listener." And, in truth, he had a great gift for throwing dirt; he was a master of vituperation. Thinking with his prejudices and speaking with his passions, he is a capital example of the turbulent, irrational, immoral temper which hurried the South into the Civil War against the judgment of her saner part.

There are some mistakes in the book which the author would do well to correct before it fairly enters on the course of popularity it is likely to enjoy, especially in the Southern States. It should be Dr. Eliphalet Nott on page 13, not "Dr. Eliphalet Knott." On page 309, the date of Mrs. Toombs's joining her husband in Paris should be 1866, not 1865. On the same page Mr. Stovall's valor in comparing Toombs to Mirabeau gets the better of his discretion. The crime which made Toombs a fugitive was treason, and not gross personal immorality.

Latest Literary Essays and Addresses. By James Russell Lowell. Boston: Houghton, Mifflin & Co. 1892.

THE volume in which Lowell's last essays are garnered is almost exclusively of literary interest. To an unusual degree it is a students' book. The occasion of several of the essays, meant as prefatory to other matter, limited their scope and kept the discursive habit of the critic somewhat in check. Lowell required a large field to give him the natural freedom of movement that secured the best results. He was not analytic in method, but intuitive: he illuminates the subject, but does not organize knowledge about it; and consequently the brief monograph, which most demands self-restraint, afforded poor facilities for his genius. The meagreness of some of these pages, in contrast to the common abundant overflow of his mind in discourse, is thus accounted for. The essay upon "Richard III.," for instance, took up the single question of the authorship of the play, and while the topic permitted the author to write of Shakspere's general characteristics, he wrote fluently and delightfully, with equal penetration of thought and breadth of treatment; but there he stopped, and, having stated the point of view and suggested a general argument by naming the tests of authenticity, he leaves the main question at loose ends. For completeness, for conviction, it was neces ary to develop the argument and apply the tests in detail, but to do this was not consonant with his habit of mind. The result is, that one learns Lowell's doubt whether Shakspere wrote the play, but has no opportunity to judge the merits of the case without private study.

The essay on Landor, in the same way, is hardly more than a sketch and a reminiscence. He had written on the main subject before. His immediate task was to furnish an introduction to certain letters of Landor published in a magazine. The slightness of the occasion explains the character of the paper, which was of a temporary interest. The essay upon Milton's 'Areopagitica' was similarly a preface to a reprint of that work, and the one upon "The World's Progress" served a like purpose. Interesting as each is—one for the characterization of Milton as a man alien from his age even in dealing with contemporary politics, the other for the view it gives of what impression science made on Lowell's mind—neither of them is written or conceived in the large manner which we associate with their author's ordinary prose. All these papers reflect the lettered ease of a mind no longer strenuous except on great occasion; they show the scholar among his books, handling his thoughts with a certain unconcernment, content to let them go as they come.

In the three remaining essays there is a more marked engagement of the mind with the subject. Walton is treated with the touch that one gives only to a favorite author. The old angler's personality, his times and friends, interested Lowell, and what we had almost called the unliterary charm of Walton's phrase and moods, his freshness, felicity that seems unsought, his generous share of "nature," stimulated the pleased senses of the critic and drew out his sympathies; so that, in this instance, though the essay was also originally a preface, it takes a place of its own with the other studies in literature which make up the body of Lowell's work.

Gray, however, is the author of whom the best essay is made in this collection. The poet, both in his personality and his fame, gave "ample room and verge enough" for Lowell's distinctive powers. As is so often the case in the long-familiar essays on the older poets, the critic cannot confine himself in any definite limits. He must make his entry through a large portal and discuss the whole century before he has time to remember the particular poet he is to meet at the bar of criticism. Gray is out of sight at the opening, and remains recluse for a considerable waiting-spell. Meanwhile the eighteenth century is surveyed, its great names recalled, its traits singled out with much regretful contrast of past and present humorously thought, and from paragraph to paragraph the page is studded with those brilliant *sententiæ*, compact condensations of taste and judgment, which give to Lowell's best prose its air of world-wisdom. A more just characterization of the century which is the puzzle of our own, and which, by our ineptitude to understand its ways, almost convicts us of that illiberality we most zealously shun, is not to be found; it is worth chapters of literary history as such history is written when that period is treated of. It is brief, but complete and exact, though broad. Of course the figure of Dryden is large on the page, since Lowell never resisted the desire he had to speak of him, just as he always brings in Ben Jonson on the least provocation; but when Gray is finally reached, the special study of his life and genius is conducted with the acuteness, the light revealing touch, the disinterested self-possession, which inevitably force the spirit, whoever he may be, to render up the tale of what he was.

Gray needs to be treated with considerateness, with excellent breeding, for otherwise the most personal phases of his aristocratic and retiring nature would fail of their effect. Lowell's literary manner on this occasion is as perfect as an actor's. He illustrates Gray's character by the way he behaves towards him. We do not undertake to say that this is conscious art; it is probably only literary instinct. But the issue is most happy. We learn the truth about Gray, and our poet is not discomposed by the inquisition. There was a kind of felicity in this that Lowell was master of in all his subtler work, but the secret of it was constitutional, or, as we now say, temperamental.

Akin to this, so well illustrated in the paper on Gray, is the indefinable quality that escapes definition but not perception in the address on the Study of the Modern Languages, by virtue of which, while defending his thesis loyally and better than a more partisan supporter could have done, Lowell yet conveys the impression that he has half the truth in his other hand, and even playfully lets you see it from time to time. The modern languages have the field, it is true, but if courtesy stands in the foreground, honesty looks out behind, and will have to be reckoned with, amicably, of course, but justly. The orator turns the silver side of the shield, and makes it glitter in the light, but his hand is on the dark gold behind, and

he can't quite keep his eyes off it; or, to drop metaphor, let us say that here, too, Lowell makes his attitude of mind express a large part of his story. In this address, next to the essay on Gray, is the largest portion of that thought, now practical, now profound, which especially distinguishes his last words; and if the entire volume is less rich in this value than preceding ones, it is their light that casts the shade.

European Reminiscences, Musical and Otherwise. By Louis C. Elson. Chicago: Manual Publishing Co. Pp. 301.

MR. ELSON, who is already favorably known to readers of musical literature by his 'History of German Song,' 'Curiosities of Music,' and 'Theory of Music,' has added to his list a new work which combines travel sketches with a narrative of musical encounters—a perfectly "concordant" combination, inasmuch as music is the most peripatetic of all professions. In the course of several visits to Europe Mr. Elson made it a point to arm himself with letters of introduction, hunt up famous musicians, and have a brief chat with them. He was always hospitably received, and consequently has a good deal to report about the appearance and opinions of famous French and German composers, which appeals to the present taste for personal information and includes some details of biographic value.

Among the composers he met were Hiller, Reinecke, Jadassohn, Gade, Svendsen, Lachner, Rheinberger, Massenet, and A. Thomas. Robert Franz Mr. Elson did not meet personally, but received several valuable æsthetic letters from him, which are printed both in the original and in an English version.

Mr. Elson found that Dr. F. Hiller of Cologne "was not acquainted with the works of any of our American composers," but this was hardly a cause for surprise, as that narrow-minded person never even discovered that Germany had produced great composers after Mendelssohn and Schumann. Rheinberger, in Munich, on the other hand, was found "full of interest in American musical matters, and thoroughly conversant with what is going on among us." He and others spoke in the highest terms of their American pupils. In Munich Mr. Elson also met old Lachner, who spoke to him of his *contemporaries*, Beethoven and Schubert. "It was like turning back the hands of the clock half a century or more, to converse with this man. He had been an orchestral leader in Vienna when Schubert was alive! He had composed songs in friendly rivalry with him." Alas and alack! it was not a case of survival of the fittest. One more year added to Schubert's thirty-one would have been infinitely more valuable to the musical world than a hundred years added to Lachner's life.

All these old German musicians naturally proved to be very conservative in their opinions. Thus, Reinecke of Leipzig expressed his fears for new countries and their musical life: "The chief trouble is that they inherit too soon the wealth of the older countries. They receive at once the most highly-spiced and richly developed music of the modern masters, instead of growing up to them as we had to do." But there is another side to this question. There are a good many cobwebs in the brains of those who were thus brought up in Germany on the "old masters"—cobwebs which it is often impossible to dislodge to make room for new impressions. Americans have no cobwebs to brush away, and new composers are appreciated here sooner than in Germany, as our programmes and current criticisms demonstrate. The Germans, of course, consider this a mistake, as their idea is that no man has a right to any appreciation before he is dead.

At Copenhagen Mr. Elson met Gade, who had "fairly outlived those who used to call him 'Mrs. Mendelssohn.'" "He was old and portly, and his appearance would not give a clue to the genius within. Short of stature, round eyes, ruddy face, and bushy gray hair, with a manner in which joviality and impetuosity were combined, Gade impressed one as a professor of the old school, wrapped up entirely in his work and his art."

In a chapter on French music and musicians, Mr. Elson pleads for the introduction in America of certain French laws relating to amusements, especially the law which relates to the payment of a *tantième* to composers, thus protecting them against grasping publishers and managers. In another place he shows how American example has benefited Europeans: "It is no longer a combination of poverty and honor for the musicians in Germany. Mozart's day of suffering is past. An eminent professor at Leipzig told me that the high prices paid in America are having their influence in Germany. The great institutions find that if they wish to keep the musicians from starting for the New World, they must give pecuniary inducements to stay in the Old."

A very graphic account is given in one chapter of a Bayreuth Festival, in which the social side is especially emphasized; in another there is the only description (in a book) that we know of, of Wagner's early opera, "The Fairies," as brought out in Munich. The letters by Franz in chapter xvi. should be read and pondered by all who are lovers of lyric song. Franz, ignored at present, will be honored in the next century as the greatest of all song-writers, with the exception of Schubert.

The greater part of Mr. Elson's book is devoted to rapid sketches of travel in all European countries except Spain and Russia. He finds something new and entertaining to say about every city, and if some of the jokes and anecdotes are rather journalistic than literary, they are readily forgiven because they are so American. In general, Mr. Elson is an unusually optimistic traveller; and even when he has ground for complaint, as in regard to table-d'hôte dinners and German beds, he chooses the humorous form of exaggerated invective. He had the good (or bad) luck to be in Naples at the time of the great earthquake in Ischia, which is graphically described in chapter xi. The absence of an index to these 'Reminiscences' is to be regretted.

The Hell of Dante Alighieri. Edited, with translation and notes by Arthur John Butler. Macmillan. 1892. Pp. xvi., 435.

RECENTLY, in reviewing Prof. Norton's translation of 'Purgatory,' we had occasion to speak of Mr. Butler's work, which, we said, is the only serious competitor of Prof. Norton's. But we pointed out that, despite a certain virile and straightforward style and, frequently, apt renderings of particular passages, Mr. Butler is, in the long run, inferior to Prof. Norton. This conclusion is confirmed by a comparison of his just-issued translation of 'Hell' with Prof. Norton's translation. Mr. Butler states in his preface that he would not have undertaken to make a version of 'Hell' but for the fact that Dr. Carlyle's work is still in copyright. His purpose, as he remarked in an earlier preface, has been not to make his translation an addition to English literature, but a "crib" whereby English readers can get acquainted with the masterpiece of Italian literature. And in this he has succeeded more than fairly well. His edition is eminently one to be recommended to those who are beginning the study of Dante; for, on the same page, they will find translation, text, and notes.

Of the translation, we may say, in brief, that it has the same qualities which distinguish its predecessors—clearness, straightforwardness, and generally a very literal following of the original. Here and there, we are surprised, however, to see Mr. Butler strain at remote interpretations. Thus, at the very start, he translates *mi ritrovai* (i, 2), "I came to myself," justifying this version by the emphatic prefix *ri*. But surely there is nothing to indicate that Dante had lost consciousness just before the opening of the 'Divine Comedy'; the simplest meaning, "I found myself," is doubtless the best, since in colloquial Italian to-day *mi ritrovai* means just that, and not "I came out of a swoon." So he translates *chiavar l'uscio* (xxxiii, 46), "nail up the door," though the first meaning, "lock the door," is sufficient. Certainly, when Count Ugolino and his sons heard the outer entrance of their dungeon locked, and the jailers go away, they had a sufficiently horrible premonition of the doom awaiting them. There is absolutely no reason for nailing up a prisoner's door which has already been strongly locked and bolted. We cite these two instances merely to show how Mr. Butler, like almost all Dante students, occasionally goes afield for a recondite interpretation where it would be wiser to stick to the letter of the original; for no poet more often than Dante uses words in their primal sense. But in the main this translation is trustworthy, and it cannot fail to be of great service to those who read it side by side with the text. For more intimate and felicitous renderings, and for a more thoroughly Dantesque spirit, we recommend them, after they have mastered this, to turn to Mr. Norton's version.

The text has been carefully collated, and in those cases where there are important variations, they are given in a foot-note. The notes themselves are quite copious enough, without going into the intricacies in which so many Dante commentators have lost themselves and their readers. Mr. Butler gives sufficient attention to the historical allusions, and quotes liberally from the earlier glosses, especially from that of Benvenuto da Imola. He says wisely, in his preface, that students will do well to eschew all commentators between 1400 and 1800. Indeed, the time has come when a scholar who should produce a *variorum* edition of the 'Divine Comedy' similar to that which Mr. H. H. Furness is producing for Shakspere's plays, would earn the permanent gratitude of other scholars throughout the world. The notes to Mr. Butler's volume show that he has taste and common sense, qualities which are too often undeveloped in the German and Italian students of Dante. In a glossary at the end, he furnishes philological information concerning the more important words of the text. In conclusion, we repeat that beginners will find Mr. Butler's edition the best in English for prosecuting the study of Dante up to that point when no translation satisfies, because the original has become sufficiently familiar to require none.

The House Comfortable. By Agnes Bailey Ormsbee. Harper & Bros.

IT is a somewhat thankless task to attempt to teach the rudiments of common sense and to

give an acceptable outline of the details of domestic economy in the same breath. Those who have the former will be disposed to resent as superfluous many of the directions in 'The House Comfortable,' while those who unfortunately have it not, will not be likely to imbibe it from the printed page, but will in all probability have to work out their own salvation by actual experience with "the butcher, the baker, the candlestick-maker." There are, however, no doubt, a number of housekeepers who take their vocation seriously enough to make it worth their while to pick out the plums of information from the homely mixture of things that need to be said and things that go without saying, offered in these pages. They give a fair share of attention to the ornamentation of the home as well as to the equipment of cellar, kitchen, nursery, and sewing-room. The love of ornamentation and a certain amount of skill in it are not what the average young woman of the present generation is most apt to lack. What she lacks to a serious and almost alarming degree is the opportunity, or the ability, or both, to provide herself with suitable and permanent domestic service. Any advice that would help her to solve the problem of getting her home kept in order without the risk of nervous prostration, or the necessity for querulous complaints of cooks and housemaids, ought to be hailed as a boon. The preparations for making a home, manifold as Mrs. Ormsbee shows them to be, are but a skirmish compared with the steady engagement that is to follow. Until the question of responsible service for the housekeeper of moderate means has moved a stage or two nearer solution, the literature that treats of the acquirement of cut glass and decorated porcelain must have an ironical as well as melancholy side.

'The House Comfortable' is, however, on the whole, a creditable contribution towards a right theory of the disbursement of the family means. It treats of already copiously expounded themes, but it is simple and direct in expression and thoroughly honest in tone. Its author has no sympathy with shams or pretensions. A novice in household ways may with advantage keep it on her shelf to consult from time to time as she does those other friends and philosophers, the cook-book and the family journal.

Regards Historiques et Littéraires. Par Vte. E. Melchior de Vogüé. Paris: Armand Colin & Cie.

THE most interesting and successful of the critical papers, reprinted from periodical publications, in this volume are those which concern Russia. M. de Vogüé's special talent lies in happy insight, in felicitous characterization. These are well illustrated in the studies on the poets Neskrasof and Tutchef, and those entitled "Socialist Poetry in Russia" and "Idealist Poetry in Russia." Of the latter poet, who is little known outside his native country, several specimens, in French prose translation, are given. The study upon "Idealist Poetry in France," as represented by Alfred de Vigny, forms the proper complement to this delicately appreciative sketch of Tutchef. The writer also renders the justice of almost unqualified praise to M. Anatole Leroy-Beaulieu's great work, 'L'Empire des Tsars et les Russes.' The most vitally important article relating to France which the volume contains, however, is the opening address, originally written as a New Year's article for January 1, 1892. It displays M. de Vogüé in a field where he is coming to be acknowledged as an authority—the difficult field of adequately describing the great moral and intellectual tendencies of modern France, both in the present and (tentatively) in the future. In "To Those who are Twenty Years of Age," the author sets forth the difference between the Frenchmen of 1870 and those who, called to present themselves for military service in 1890, were lying in their cradles during the last war. "They accept their country as they find it," he says of the rising generation, "taking their place in it without enthusiasm, without impatience, as we inhabit in the most natural manner the city where fate has given us a shelter. The idea of razing it to the earth in order to reconstruct it on a new plan—an idea which constituted the delight of every intelligent Frenchman in former days—has lost ground to an infinite extent in the rising generation." If this be true, and if his other statement be true, that a schcol-boy is no longer thumped and thrashed by his fellows for "being nothing at all," and not holding set political convictions at a very tender age, the political future of France is not without some guarantee of stability, which will enable the young men to devote themselves with profit to their new passion for studying social problems.

Reviews of French books of travel, history, and social subjects fill up the volume: 'Au Pays du Rein,' by that clever observer, M. J.-J. Weiss; 'Lettres Athéniennes,' by the Comte de Moüy; M. Gabriel Bonvalot's famous 'Les Français au Pamir'; 'Dans l'Inde,' by M. André Chevrillon; 'L'Europe et la Révolution Française,' by M. Albert Sorel; 'Un Regard sur Notre Temps,' by M. le Duc d'Harcourt; 'Essais sur l'Allemagne Impériale,' by M. Ernest Lavisse; 'L'Empire Byzantin,' by Gustave Schlumberger; 'Le Roi Mithridate,' by Théodore Reinach; 'Napoléon et Alexandre Ier,' by M. Albert Vandal, and in another form by the Russian, Sergius Tatishef; 'Le Prince Talleyrand.' 'The Holy Roman Empire,' by Mr. James Bryce, also finds a place. These studies and two sketches, "Au Couvent de Resnoïe" and "Devant 'l'Été' [of M. Puvis de Chavannes]" range in date from 1886 to 1891, and furnish an unequal but, on the whole, a fair example of M. de Vogüé's capacity as a critic of serious books.

Mathematical Recreations, and Problems of Past and Present Times. By W. W. Rouse Ball. Macmillan. 1892.

MR. BALL, whose sketch of the history of mathematics has been noticed in these columns, now selects a subject in which a flimsy treatment is excusable and almost expected; and as his book is decidedly entertaining, perhaps no fault ought to be found with it. On page 33 he gives an amusing example of a fallacy in geometry. The reasoning is of precisely the same nature as that of Euclid i. 16, and of several other theorems which are found in most of the elementary treatises. The only difference is that those propositions are true, or very nearly so, while this amounts to saying that any one line has the same length as any other. If the reasoning were thrown into the form of a *reductio ad absurdum*, it would appear somewhat more deceptive.

The expression "mathematical recreation" has acquired a pretty definite meaning. It signifies a puzzle amusing to any person of average capacity, and involving a mathematical question that does not readily yield to well-known methods. Such, for example, are Solitaire, the Knight's Tour, the arrangement of dominoes so that each number occurs in squares of four. A tolerably complete and accurate account of all such problems hitherto proposed is a desideratum; but the want is hardly filled by a work in which the author ingenuously says of one of his chief topics, "I know nothing of recent Continental works on the subject." This remark, extended to other subjects and other works, would very well describe the method of Mr. Ball's exposition.

Having disposed of mathematical recreations, in 149 pages, Mr. Ball ekes out his volume with five chapters upon miscellaneous subjects, treated in the same scrappy manner, to which copious and obvious references in footnotes impart an air of erudition. There is a chapter upon astrology in which the 'Tetrabiblon' is said to be "ascribed" to Ptolemy. This is not accurate, since the 'Tetrabiblon' *purports* to be by Ptolemy, and is addressed to his brother Syrus, like genuine productions of his pen. There is a chapter upon hyper-space, in which perhaps as good a notion of a fourth dimension is given as could be acquired without serious study; but the sketch of the non-Euclidian geometry is not good, and the results of the "Continental" Klein and Riemann are misstated. There is a chapter upon time and its measurement in which we are informed that the earliest pendulum clock was made by Harris of Covent Garden, some "Continental work" being overlooked. The book concludes with a brief account of some theories, mostly British, of the constitution of matter.

Relation des Missions Scientifiques de MM. H. Hyvernat et P. Müller-Simonis (1888–1889) du Caucase au Golfe Persique à travers l'Arménie, le Kurdistan, et la Mésopotamie. Par P. Müller-Simonis, suivie de notices sur la géographie et l'histoire ancienne de l'Arménie et les inscriptions cunéiformes du bassin de Van par H. Hyvernat. Washington, D. C.: Université Catholique d'Amérique; New York: B. Westermann & Co. 1892.

OUR travellers left Constantinople about the middle of August, 1888, by steamer for Batum. Thence, after being hurried through the Caucasus as soon as their priestly character was discovered, they traversed a small corner of Persia, and entered Turkish territory, involuntarily lingering for a month at Van. Oddly enough, these gentlemen, who had just been expelled from Russia, found it wise to have themselves placed under Russian protection at Van. The English consuls in Armenia M. Simonis characterizes as mere valets of the Turkish authorities. Journeying around Lake Van, they visited Bitlis, Sert, and Mosul, dropping down the Tigris by *kellek* to Bagdad. From here they made a flying trip to the ruins of Babylon, and then, in the latter part of January, 1889, took ship for India on their way back to Europe.

The scientific part of the mission seems to have consisted in the attempt to find and copy more of the ancient Vannic cuneiform inscriptions, of which sixty-eight had already been published. They found a few, which Prof. Hyvernat succeeded in copying, and saw and heard of a number of others, thirty in all, several of which had been reported before. Neither texts nor contents of these inscriptions are published in this volume, but only two lists of the edited and inedited inscriptions respectively. Besides these lists, M. Hyvernat furnishes a brief résumé of the history of ancient Armenia as ascertained from the Assyrian and Vannic inscriptions. A memoir which he prepared

on the ancient geography of Armenia, and which is announced on the title-page as among the contents of the volume, was lost in transmission through the mails.

The remaining contents of the 628 pages are a narrative of the journey, with occasional historical allusions, a review of the condition of the Roman Catholic missions in the region visited, and reflections on the social and political conditions. M. Simonis was obliged to depend entirely on Roman Catholic missionaries and converts for his information, and hence naturally writes from the point of view of those missions. Otherwise he seems to be fair-minded and impartial. He is rather bitter against the American Presbyterian missionaries in Persia, regarding their religious influence as very bad, and insinuating that in the past, at least, they have intrigued against the Roman Catholics; but their philanthropic labors he estimates highly, especially the reform they have wrought in the drinking habits of the people about Urumia. The English mission to the Nestorians he appears to regard as Roman in all but the name.

From the political point of view Russia is his *bête noire*, for Russian conquest would mean death to Roman Catholic missions. He draws a comparison between Russian administration of the Caucasus and English administration of India, altogether in favor of the latter. But, on the other hand, he frankly shows that Russian rule is to be preferred to either Turkish or Persian. Again, his sympathies are with the Russian methods of handling the Turks, and he strongly condemns the present English policy. The travellers experienced more than the ordinary difficulties with the Turkish officials at Van, and much of the narrative is a recital of those difficulties, and the stupidity, rascality, and corruption of Turkish administration. Of the life of the people they could, of course, obtain but a cursory glimpse. M. Simonis never feels himself bound by obligations of hospitality, and relates all he sees and hears among the European residents. Somewhat inconsequentially he reproaches the English consulate at Bagdad with smuggling antiquities out of the country, and relates a rather improbable story of the use of the English gunboat in that service; and then almost in the same breath he narrates how his party secured and smuggled out antiquities by the help of the French Consul. He is occasionally careless about names, and not sufficiently careful about his sources; but in general, making allowance for the bias referred to above, he is accurate and trustworthy.

M. Simonis furnishes a good map of their route through Caucasus, Persia, and Armenia, being Kiepert's map with a few corrections from their own observations. The map of the lower part of the Euphrates and Tigris valleys, however, had better never have been published. It is an inaccurate and poor copy of earlier maps, with no corrections. Some of the most important ruin sites of the country, rendered famous by recent English, French, and German excavations, such as Abu Habbah, Deir, Tello, Zerghul, Hibbah, and Abu Shahrein, are not indicated, while mythical or unimportant sites, like Serasovbli and Khirfan, are prominent. The ancient Assyrian Stagnum by Nejef, which was drained some years since, is represented here as a great lake. Nasriyeh, one of the most important towns of the whole country, is omitted altogether; so is Shatra, another town of consequence, while Samawa, following former errors, is located on Shatt 'Ateshan, instead of on the Euphrates. These are but a few errors out of many.

The volume is a quarto, printed in large, very loosely spaced type, with beautiful margins. It bears the mark of the Imprimerie Alsacienne, Strassburg. It is profusely illustrated; and many of the cuts and phototypes representing Armenian architecture and racial types are of permanent value. The full-page phototypes were executed from M. Müller-Simonis's photographs by Obernetter of Munich. One of these, representing Ctesiphon, has been reversed, so that the façade is represented on the right instead of on the left side of the great arch. Any book about Armenia and the Caucasus is timely at the present moment, and not least this present work; but, while edifying and instructive, the text scarcely justifies the size and magnificence of the volume.

Histoire des États-Unis de l'Amérique du Nord depuis la Découverte du Nouveau Continent jusqu'à nos jours. Par Auguste Moireau. I. La Période Coloniale, pp. 584. II. Les États-Unis de 1776 à 1800, pp. 504. Paris: Hachette & Co. 1892.

M. Moireau's history of the United States is laid out on an ample scale: the two volumes so far published come down only to the election of Thomas Jefferson, and it is to be expected that the complete work will fill at least eight volumes of more than 500 large octavo pages each. This is even more voluminous than the work of M. Carlier, which we reviewed last year, and which is not primarily historical, but rather expository and descriptive, like Prof. Bryce's book.

The only foreign work concerning our country which can compare in bulk with the one before us is Von Holst's History, but that does not undertake to cover the whole ground, as Moireau has set out to do. Although the French historian makes no pretence of having gone to original sources, but seems to have consulted only the printed authorities accessible to everybody, it by no means follows that his work is one of supererogation, or that there is no field for it to occupy. It will not only form a convenient and attractive manual for French readers, who can nowhere else find so full and accurate an account, but may even prove valuable to Americans inasmuch as, strange to say, we have no work by a single author covering our whole history. In history, as in all science, the prevailing tendency is to specialism: each writer devotes himself to a special period or to a special aspect of history, such as constitutional development, and the like. The recent work of Mr. Henry Adams is a case in point; its great value has been universally recognized, but if the whole history of the United States were to be developed on the scale laid down by Bancroft and by Adams, very few of us could hope to become acquainted with it in the course of a lifetime, even without attempting the history of any European country. What we still lack is a continuous history of our country from the beginning to the present day, written in a readable style, observing a due proportion in the relative space accorded to the various periods, not too bulky to warn away the general reader, but not so condensed as to crowd the incidents or the actors in them, and forming a harmonious whole such as can be expected only in a work emanating from a single mind devoted to its subject and saturated with it. Such a book we may never get, but, in the meantime, we must be glad to put up with what M. Moireau offers us. He would seem to have had some such ideal aim before him as is hinted at above, and he is certainly entitled to all the encouragement Americans can give him.

He has undoubtedly made a diligent study of everything that has appeared in print concerning the United States; he has his reading well in hand, and presents the results of it in a smooth and attractive style. He not only describes effectively the military and political incidents, but gives us sketches of character and chapters on social and literary conditions such as Macaulay used with such striking effect. It is true that he does not bring out anything new; but that is not to be expected after the microscopic survey to which the various detached portions of the field have been subjected by our specialists. He has taken pains, however, to keep himself informed of the most recent researches even concerning minor points, as, for instance, the controversy in regard to the authorship of the Kentucky Resolutions. One reproach to which he is open is that he does not always manage very skilfully the difficult task of synchronous narration. He will bring one part of the story down to a certain year in one chapter, and in the next will hark back ten or fifteen years to take up another thread and carry that forward. This is more particularly noticeable in the accounts of the separate colonies, which could perhaps have been arranged somewhat differently and less confusingly. The real test of his ability as an historian will have to be applied to the later volumes, when he will be relegated to the conflicting contemporaneous accounts to be found only in partisan newspapers, and will have to be guided in his selection of facts by the intuitive insight which is as necessary an outfit for the great historian as it is for the poet. What he has done so far warrants the expectation that he will acquit himself at least creditably of the task he has undertaken.

BOOKS OF THE WEEK.

Acland, A. H. D., and Smith, H. L. Studies in Secondary Education. Macmillan. $1.75.
Barrie, J. M. A Window in Thrums. Cassell. 25 cents.
Bayfield, M. A. The Medea of Euripides. Macmillan. 40 cents.
Bernard, H. M. The Apodidæ: A Morphological Study. Macmillan. $2.
Bowen, C. W. The Centennial of Washington's Inauguration. Appletons.
Crawford, F. M. A Tale of a Lonely Parish. Macmillan. $1.
Dawes, Miss A. L. Charles Sumner. [Makers of America.] Dodd, Mead & Co. $1.
Dickens, Charles. Oliver Twist. Macmillan. $1.
Du Bois, Constance G. Columbus and Beatriz. Chicago: A. C. McClurg & Co. $1.
Du Bose, Prof. W. P. The Soteriology of the New Testament. Macmillan. $1.50.
Earle, Alice M. China Collecting in America. Scribners. $3.
Edwards, Joseph. An Elementary Treatise on the Differential Calculus. 2d ed. Macmillan. $3.50.
Evans, Taliesin. American Citizenship; and the Right of Suffrage in the United States. Oakland, Cal.: *Tribune* Print.
Fisher, Prof. G. P. The Colonial Era. Scribners. $1.25.
Freeman, Prof. E. A. The History of Sicily. Vol. III. Oxford: Clarendon Press; New York: Macmillan. $6.
Froude, J. A. The Spanish Story of the Armada, and Other Essays. Scribners. $1.50.
Fullerton, Prof. G. S. The Philosophy of Spinoza. Henry Holt & Co. $1.20.
Gardener, Helen H. Pushed by Unseen Hands. Commonwealth Co. $1.
Gauthérot, A. A Rational French Method. W. R. Jenkins.
Gell, Mrs. Lyttelton. The Cloud of Witness. Oxford: University Press; New York: Macmillan. $1.25.
Glyn, A. L. Fifty Pounds for a Wife. Henry Holt & Co. $1.
Greswell, Rev. W. P. Geography of Africa South of the Zambesi. Oxford: Clarendon Press; New York: Macmillan. $2.
Grey, Earl. The Commercial Policy of the British Colonies and the McKinley Tariff. Macmillan. 30 cents.
Güntter, Prof. Otto. Walther von der Vogelweide. Stuttgart: G. J. Göschen; New York: International News Co.
Haggard, H. Rider. Nada the Lily. Longmans, Green & Co. $1.

Hale, Rev. E. E., and Lucretia P. The New Harry and Lucy. Boston: Roberts Bros. $1.25.
Halévy, Ludovic. Karikari, etc. Paris: Calmann Lévy; New York: Westermann.
Hall, Prof. J. L. Beowulf: An Anglo-Saxon Epic Poem. Boston: D. C. Heath & Co.
Harrison, Mrs. Burton. A Daughter of the South, and Shorter Stories. Cassell. $1.
Harvard Studies in Classical Philology. Vol. III. Boston: Ginn & Co. $1.50.
Hatch, Edwin, and Redpath, H. A. A Concordance to the Septuagint, etc. Part I. A—ΒΩΡΙΘ. Oxford: Clarendon Press; New York: Macmillan. $5.
Hazlitt, William. Lectures on the English Poets. Dodd, Mead & Co. $1.25.
Heimburg, W. A Poor Girl. Worthington Co.
Henley, W. E. The Song of the Sword, and Other Verses. Scribners. $1.
Hibbard, George A. The Governor, and Other Stories. Scribners. $1.
Hill, G. B. Letters of Dr. Samuel Johnson. 2 vols. Harpers.
Hughes, Rev. Thomas. Loyola, and the Educational System of the Jesuits. [The Great Educators.] Scribners. $1.
Hunt, Prof. T. W. Ethical Teachings in Old English Literature. Funk & Wagnalls Co. $1.25.
Hurst, G. H. Silk Dyeing, Printing, and Finishing. London: George Bell & Sons; New York: Macmillan. $2.
Hutton, A. W. Cardinal Manning. London: Methuen & Co.
Johns, Rev. B. G. Among the Butterflies: A Book for Young Collectors. Thomas Whittaker. $1.
Johnson, E. G. The Best Letters of Charles Lamb. Chicago: A. C. McClurg & Co. $1.

"*An original and striking novel.*"

£50 for a Wife.

By A. L. GLYN.

"A curious story, perhaps most interesting from the novelty of its plot. The characters are well drawn."—*Boston Times.*

Cloth, $1; paper, 50 cents, postpaid.

Paganism and Christianity

By J. A. FARRAR. 12mo.

A striking and revolutionary book, presenting a comparison of Christianity with the faiths of Greece and Rome, and demonstrating many points of correspondence and sympathy not generally realized.

HENRY HOLT & CO., N. Y.

A Guide to Homœopathic Practice

Designed for the use of families and private individuals. By J. D. JOHNSON, M.D. 494 pages. 8vo. Cloth, $2.00.

A most reliable and useful book to have in the house.

BOERICKE & TAFEL,

Homœopathic Publishers and Pharmacists,

1011 Arch Street, Philadelphia, Pa.

Business established in 1835.

FOR ADVANCED CLASSES ONLY, or for all desirous of keeping up their French, L'ECHO LITTERAIRE, a school and home French European Magazine. Romance, poetry, plays, sketches, exercises, etc. Twice a month. Nearly 800 pages, postpaid, at $1.25 per annum.

E. ROTH, 337 South Broad St., Phila.

5 cents a single number.

Make Two Hundred

CAKES with Royal Baking Powder and every one will be whiter, sweeter, lighter, finer flavored, more delicious and wholesome than cakes made with any other baking powder.

The last spoonful in a can of Royal Baking Powder will be found as good as the first, and the last cake will be as light as the first, because the Royal has keeping qualities which all others lack.

A spoonful of Royal will go further than a spoonful of any other powder because it is the purest.

"*The weary brain requires some nerve sustaining element as food.*"—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y. *F. Crosby Co.*

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

BACK NUMBERS, VOLUMES, OR sets of leading and scarce magazines, etc., for sale by H. WILLIAMS, 195 West 10th St., N. Y.

BACK NUMBERS OF MAGAZINES and Reviews, early and recent. Correspondence solicited. A. H. ROFFE & Co., Boston, Mass.

The Nation.

NEW YORK, THURSDAY, MAY 19, 1892.

The Week.

THE House Committee on Civil-Service Reform has agreed, with only the dissenting vote of one Republican among all its members of both parties, to report a bill designed to exclude political influence from the 61,000 fourth-class post-offices of the country. The bill provides that the country shall be divided into postal districts, and that, when vacancies occur, open competition shall be announced by Post-office inspectors, who shall recommend the best man to the Postmaster-General, after receiving the applications and examining the facts. In the 27,000 offices where the compensation exceeds $100 a year, inspectors are to make personal visits before reporting, except in cases where there is only one applicant, when the inspector may, if he thinks best, recommend the applicant for appointment, without visiting the locality. The bill forbids Congressmen and other Federal officers to make recommendations or interfere in any way with appointments, and prohibits appointments or removals upon political grounds. These latter provisions, of course, apply equally to the 34,000 offices exempt from personal visits by the inspectors in choosing postmasters, the reasonable expectation being that, if politics is excluded from the more important places, there will be little attempt to evade the law in filling the smaller ones. The Committee estimate that the extreme cost of the proposed system would be only $60,000, and that probably the present force of inspectors would need but a slight increase in numbers to carry out the provisions of the bill in connection with their other duties.

Secretary Blaine's method of getting rid of Mr. Frederic Bancroft, the Librarian of the Sta e Department, in order to secure his place for a personal follower, is eminently characteristic. Mr. Bancroft's abilities and capacity being beyond question, and his conduct of his office having been such as to make his removal on charges of any kind impossible, Mr. Blaine does by trick what he does not venture to do directly. Without consulting Mr. Bancroft's wishes or inclinations—in fact, without consulting him at all—he sends his name to the Senate as a nominee for United States Consul at Brunswick, Germany, knowing perfectly well that he will not consent to accept the place, but knowing also that the nomination will practically dismiss Mr. Bancroft from the service, and at the same time trick him into silence about the manner in which his dismissal was accomplished. While this performance, so glaringly unjust to a faithful and efficient public servant, may not be a violation of the letter of the Civil-Service Law, it is a plain violation of its spirit. If Mr. Blaine, as the head of the State Department, is capable of such treatment of a subordinate in one instance, it is more than likely that he has been guilty of similar conduct in other instances; and we trust that Congress, taking the Bancroft case as a starting-point, will institute a thorough inquiry into the methods which have been pursued in the Department during Mr. Blaine's incumbency.

A new Corrupt Practices Act has been reported from the Committee on Election Laws of the Massachusetts Senate, and its advocates are sanguine of its passage by both houses. It has been drawn by the same group of reformers who gave the State its Civil-Service Reform and Ballot-Reform Laws, and is somewhat similar to its predecessors which failed of passage through the Legislatures of 1889 and 1891. The measure requires sworn publication after election, by both candidates and committees, of detailed accounts of all money received and expended. Any person other than a candidate or committee-treasurer, who, acting under authority from a committee, receives or expends money or its equivalent, must also file similar sworn accounts. In addition to giving the amount received, the name of the person or committee from whom it is received, and the name of the person or committee to whom the disbursement is made, the sworn returns must "give the date and amount of every existing unfulfilled promise or liability, both to and from such committee remaining uncancelled and in force at the time the statement is made, with the name of the person or committee to or from whom the unfulfilled promise or liability exists, and clearly state the purpose for which the liability was made or incurred." Voluntary contributions from candidates are permitted, but committees are forbidden to demand or solicit them, and candidates are permitted to defray travelling expenses and other personal expenditures without including the money so expended in their sworn returns. The courts are given full equity powers to compel the filing of statements after election, or the correction of defective returns, on petition of a candidate or of five qualified voters. Violation of the provisions of the act which forbid a candidate to offer money in return for a nomination or a vote, and which forbid the soliciting or demanding of contributions, is punishable with a fine of $1,000, and failure to file statements is punishable with a fine of not less than $1,000, or imprisonment for not more than one year, or both fine and imprisonment. The bill is novel in some respects, but on the whole seems to us to be a less stringent measure than its predecessors.

Prof. McCook, in his talk on tramps in the Hartford Board of Trade rooms, took up the venal vote of Connecticut. Taking for thorough investigation fourteen representative towns, he stated these as his conclusions:

> "The average percentage of venal voters is 16.1, taking the first four towns at their minimum figure. The range in prices is from $2 to $20, and higher figures are commanded here and there in exceptional cases. These towns are in two counties. None of them is very small, none very large. Their average population is within twenty-eight of the average of the towns in the State outside our four largest cities. In short, I know not why they may not be said to be fairly representative in every respect. On which account I am convinced that if any one were to say that 25,000 of our 166,000 Connecticut voters are purchasable, he would not be very far from the truth, whi e 12 per cent., or 20,000, would probably be a conservative estimate, and 17,000, or 10 per cent., a very safe one. There are towns in which more than 50 per cent. of the voters have been for sale."

Prof. McCook denied that all these venal voters are "either drunkards, or reprobates, or foreigners." In some sections he found that the purchasable vote "is of pure Connecticut stock, though of that stoop-shouldered, shambling, seedy, shiftless stratum which seems to be the outcome of constant intermarriage for generations, together with addiction to hard cider, or worse." In fact, Prof. McCook found reason to believe that corruption is worse in some of the decayed country towns than it is in the cities. This is a conclusion which the observation of others more than bears out. "Practical politicians" of Connecticut—of both parties—have more than once confessed that when it was the purpose to "buy up" the State, the greater part of the money was "placed" in the back-country towns. Prof. McCook states that where there is "small appeal to enterprise or ambition, where the soul is hardest, money most rare, cities most remote," there the percentage of corruption "seems to be the highest." While a part of this venal element is composed of persons "otherwise respectable and even exemplary," it is principally drawn from the "hoodlum" class—the same class which furnishes a large proportion of tramps.

Prof. McCook's remedy is a radical one—more radical than any scheme of ballot reform, however perfect. It is the disfranchisement of the criminal class. He added that he did not want to know which political party would be the more benefited, for "it would relieve them both." He thought it "barbarous" to allow physical disease to spread by allowing contaminated tramps to roam at large; yet the nation could stand that. But it could not continue to prosper "if we allow the balance of political power to repose permanently in

the hands of the degraded and unhappy beings who now hold it." Those who think that Democrats are invariably in favor of giving the ballot to the degraded will be interested to learn that no one present more strongly approved Prof. McCook's position than did A. E. Burr, editor of the Hartford *Times*. He declared that he had been advocating for twenty years the disfranchisement of the buyer and seller of votes. Mr. Burr has long been one of the most prominent Democratic leaders in Connecticut.

The Bellamy party in Massachusetts have been petitioning the Legislature to allow municipalities to establish coal-yards and sell fuel at cost. The Legislature referred the question of its constitutional power to grant such permission to the Supreme Court, and that tribunal, by a vote of five to two, decides against the scheme. The decision says that the fundamental question is whether the carrying on of such a business can be regarded as "a public service," and holds that there is no necessity for municipalities to undertake this form of business any more than many others which have always been conducted by private enterprise. "If," the opinion concludes, "there be any advantage to the inhabitants in buying and selling coal and wood for fuel at the risk of the community, on a large sale, and on what has been called the coöperative plan, we are of the opinion that the Constitution does not contemplate this as one of the ends for which the Government was established, or as a public service for which cities and towns may be authorized to tax their inhabitants." Under this decision the Bellamyites must turn their attention to securing an amendment of the Constitution, which is a good deal slower and harder than getting a bill through the Legislature.

A Mexican citizen was on Monday arrested in San Antonio, Texas, for having entered this country. The reason was that he was a "Chinese person or person of Chinese descent." Under the terms of our latest Chinese Exclusion Law, such persons, even when they are "subjects or citizens of some other country" than China, are at once to be removed from our sacred soil of liberty. They are to be deported to their adopted country, "Provided, that in any case where such other country of which such Chinese person shall claim to be a citizen or subject, shall demand any tax as a condition of the removal of such person to that country, he or she shall be removed to China." When this enlightened measure was debated in Congress, much was said about its being in violation of our treaties with China, as it undoubtedly is. This case shows how it also may involve us in violation of treaties with other countries. We have a treaty with Mexico guaranteeing Mexican citizens the same protection in this country as that given our own. Yet we proceed to arrest a Mexican citizen upon no ground but the fact that we do not like his ancestry. Suppose Mexico were to pass a law putting a like stigma upon an Irish person or person of Irish descent, and ignore the fact that he might be an American citizen nevertheless. We fancy there would be a good deal of foaming at Washington. The Mexican Government has been appealed to by the Mexican Consul at San Antonio, and we should think it might have something forcible to say.

The refusal of the English Government to allow Newfoundland, apart from Canada, to negotiate a trade convention with the United States is but an added embarrassment in what was already a complicated and difficult question. That the Canadian Government is in a perplexing situation is shown by the attempts it has made to extricate itself. Some form of commercial understanding with our country it undoubtedly desires, but its road seems blocked at all points. Unrestricted reciprocity would be impossible unless the Canadian tariff as against all other countries were to be made the same as ours, and that is out of the question. The Canadian proposals for a limited reciprocity have been very coldly received at Washington, and promise no present relief. As little hope lies in the direction of the resolution adopted by the Canadian House of Commons the last week in April, by a vote of 98 to 64, that whenever "the products of the Dominion are admitted to British markets on more favorable terms than those of foreign countries, Canada will be prepared to grant corresponding advantages in the shape of reductions of duties upon British goods." The London *Economist* makes a destructive analysis of this proposition. Canadian goods are already free of duty in England, so that the proposal is for Great Britain to tax the corresponding imports from other nations. In 1890 England took £10,305,900 of the chief articles of Canadian export, but in the same year imported £78,756,600 of the same classes of goods from other countries. Thus the proposition is that England tax her subjects on seven-eighths of their purchases of the goods in question, for the sake of getting a reduction on British exports to Canada. But the latter, all told, were under £7,000,000 in 1890, and to put a tax on £78,000,000 of goods bought in order to get rid of a tax on £7,000,000 of goods sold is a losing business. Moreover, as the *Economist* points out, for England to levy such discriminating duties would be infallibly to provoke retaliatory legislation in other countries where the resulting losses of British trade would several times outweigh all that could be gained in Canada. Unless, therefore, John Bull loses his business sense, this "message of good will to the mother land," as Minister Foster called it, will not meet with the desired response.

The "no-thoroughfare" which thus confronts the Canadians in every direction in which they have tried to go, may induce them to give more attention than they otherwise would to the advice which Earl Grey offers them in his lately published pamphlet on the 'Commercial Policy of the British Colonies and the McKinley Tariff.' The veteran statesman maintains that the same arguments which induced England to adopt the policy of free trade in 1846 ought to lead Canada to adopt the same policy now. He reasons that such a step would be the very finest stroke of retaliation for the McKinley Bill. It would so reduce the cost of living and of production in Canada that it would greatly increase the power of Canadians to compete with Americans. Indeed, the theory of the latter is, of course, that the Canadians are already too strong for us and must be shut out of our markets. Earl Grey would have due notice given of such a change of fiscal policy, so that the protected manufacturers might have time to adjust their business to the new conditions. He also argues that the presence of a large body of English-speaking people just across the American border, able to obtain all the necessaries of life at a greatly reduced cost, would be so powerful an object-lesson to the American people that it would contribute mightily to the movement for a reform of the American tariff.

Nothing shows more plainly the drift of opinion in the Democratic party on the silver question than the resolution adopted by the Democrats of Missouri on Wednesday week. We put it in parallel columns with their platform of two years ago:

MISSOURI, 1890.	MISSOURI, 1892.
We are in favor of the free and unrestricted coinage of silver and the increase of currency to meet the legitimate demands of trade; and we believe that the power to issue and control the volume of such circulation should be assumed by the Government.	We hold that it is the duty of the Government to *readjust the coinage ratio* and keep its mints open for the free coinage of both metals, instead of discontinuing the coinage of either for the derangement of commodity values and the contraction of the currency below the natural basis of supply.

To "readjust the coinage ratio" evidently means to make the silver dollar equal to the gold dollar in intrinsic value, for the time being at all events; because if we are to break loose from the dollar of the fathers (16 to 1), it would be mere child's play to adopt any other than the true commercial ratio. We do not know what Mr. Bland may think about this resolution, but it strikes us that it makes the ground rather shaky under his feet. There is some improvement in the Iowa Democratic platform, but not much. Last year the Iowa Democrats not only demanded the free coinage of silver, but also a law forbidding the making of gold contracts. They have dropped

the latter out of their collection of curiosities, and they have adopted the phrase "free bimetallic coinage" in place of "free coinage of silver," which they used last year. There is supposed to be a difference between free bimetallic coinage and free coinage of silver, but David B. Hill is the only man who knows what it is, and he will not tell.

The Western Democrats are practically solid in favor of Cleveland, and it is already evident that the Southern Democrats will be about as nearly unanimous. There are only two States in which the Bourbon element has ever seemed likely to show much strength—Virginia and Georgia—and in both of them it has now collapsed. Richmond was the stronghold of the reactionaries, and the primaries in Richmond on Thursday resulted in the choice of sixty-three Cleveland delegates out of ninety-eight. In Georgia the Atlanta *Constitution*, which has made an unseemly spectacle of itself most of the time since Grady's death, set out to carry the Democratic State Convention for Hill; but enough delegates have now been elected to show that Cleveland will have two-thirds of the Convention, and the *Constitution* people are trying to compromise on an "uninstructed" delegation. In both of these States the opposition to Mr. Cleveland has represented the spoils-seeking and commercial element in the party, whose hostility to him everywhere is one of the chief ingredients in his popularity.

The fine of $5,000 imposed by the English court upon the London correspondent of a New York paper, for sending a scandalous and false "special cable despatch" to this country about an actress, is likely to have a depressing effect upon a flourishing international newspaper industry. During the past five or six years there has been a fierce competition in progress among the "bright, brainy, breezy" newspapers for "exclusive" accounts of European scandals. The American people have been deluged with this filth from all quarters of the Old World in which it could be gathered, and the correspondents who have supplied it have not been at all particular about the truth of their recitals. In the case which the London court passed upon, the correspondent was unable to sustain his accusations, and hence his employers will have to pay the penalty. In passing judgment, Lord Chief Justice Coleridge used some very plain language, saying that the defendant evidently received a salary for the purpose of collecting private slander and bringing before the eyes of the public the misconduct of people more or less known; that he left it to his hearers to say whether there were not more desirable occupations than this; that in the present case there was no doubt about the offence, since it was the most outrageously cruel slander he had ever heard of. The fine is likely to have more effect in suppressing the industry of "collecting private slander" by cable than the scorching words of the Lord Chief Justice, for the libel laws of Great Britain are much more strict than those of America, and all victims of such publication hereafter will be certain to go to court in the hope of obtaining handsome damages.

Mr. Giffen's report to the English Board of Trade upon emigration and immigration in 1891 is marked with the clearness usual in his statistical work. It is especially instructive for this country, because the figures with which we are furnished relate almost exclusively to immigration. Much is said about the necessity of regulating this movement; and what is said is made to seem impressive by the great number of immigrants. But no one says anything about the outflow of population, which is unquestionably large, and which also results, in an unknown number of cases, in counting the same person as an immigrant more than once. The different impression made by gross and by net figures is forcibly shown by Mr. Giffen's tables. There arrived from Continental ports in the United Kingdom in 1891 some 504,000 persons. But there departed for the Continent during the same year 418,000 persons, so that the net increase of population from this source was only 86,000. But during the same period there were 112,000 foreigners leaving the United Kingdom for trans-oceanic ports, while the number arriving was 47,000. There would seem, therefore, to be an excess of foreigners remaining in the country of some 21,000. But this figure is to be still further reduced, for allowance must be made for seamen who arrive as passengers and go away as members of crews. Making deduction for these, it would seem that the population of England receives a net addition from foreign sources of not more than 10,000 or 12,000 a year. The influx of Russo-Polish Jews seems to have been limited to London, their numbers being 9,676, of whom four-fifths were expected to remain, and some of these were known to be not without capital.

The official announcement is made that England assents to a new international monetary conference and will take part in it, reserving control of her own monetary system. Mr. Goschen said to a deputation on May 11 that "Great Britain had received an invitation on Monday last from the United States to send delegates to a conference for the purpose of examining into what measures can be taken to *increase the use of silver in the currency systems of the nations.* It would be seen that in accepting the invitation the Government would not commit itself in any way to any actual principle. The United States Government had doubtless framed the invitation in a manner that would make it easy for the various countries invited to take part in the conference to accept." This corresponds with what President Harrison said in his recent communication to the Senate, namely, that, if nothing more could be done, he hoped that means might be found to enlarge the use of silver. It is scarcely possible that anybody expects an international agreement for unrestricted coinage of both metals to grow out of the conference, yet we are glad that the conference is to be held, if for no other purpose than to demonstrate for the third time the impossibility of such a step. Whether the second part of the programme is feasible is also extremely doubtful, since the using of silver depends mainly upon the inclinations of private persons. The taking of a certain amount of silver into the vaults of the Bank of England would dispose of a fixed quantity, and a not very large quantity. It would not be a continuous demand meeting a continuous supply. The scheme looks like an attempt to create an artificial demand for silver—a practice which has many votaries in this country, but few elsewhere, and fewer in England (we had supposed) than in any other country. But on this point Mr. Goschen always was a little soft.

At the election held in Denmark last month for members of the Folkething the Radicals suffered a defeat so signal as to give promise of a speedy return to a regular finance law. The whole character of the last session indicated such a change. Never in eight years had Estrup's Ministry received such cordial support. Among the significant bills passed may be mentioned the reduction of the duty on sugar and petroleum, and the substitution of a tax on beer; an improved poor law; many important regulations with regard to the school system, in which both parties made concessions that had been demanded in vain for many years; an entire revision of the maritime law. Other minor acts contributed to show a changed feeling on the part of the Liberal majority in the lower house towards the minority, the upper house, and the Ministry. The treatment of the proposal to grant a pension to the Radical critic, George Brandes, which was made last winter for the second time, is also suggestive. While the bill passed the lower house at the previous session by a small majority, it was this year badly defeated. The recently received official results of the April election show a gain of seven votes and a loss of one for the Conservatives—the largest gain in many years. Of the 103 members elected to the new House, 31 are Conservatives and 42 are Moderate Liberals, who thus together form almost two-thirds of the whole body. The Radical losses have been entirely in the country districts, which also show a loss of one Socialist. Even the acknowledged leader, Hörup, has been defeated, but the resignation of a colleague in his favor insures him a seat in the next Parliament.

THE LATEST CHILIAN REVELATIONS.

THE documents published on Sunday and Monday, in relation to the conduct of our diplomatic and naval representatives in Chili during the civil war in that country, are made public in the best way to secure the attention which their importance calls for. They were sent by a Chilian, of honored American ancestry, and character amply vouched for, to two of the most eminent of the members of the House of Representatives. These gentlemen have sent copies to the State Department, given others to the press, and undertaken to secure an investigation of the whole matter by the House. Mr. Blaine, on his part, declares that "a thorough investigation of the charges, as they affect his department, shall be made at once." The affair is thus at once put on its proper basis as a thing that affects the national honor, and is seen in all its gravity as it could not have been had it been made public through a newspaper. We may say that we have been for some time in possession of every particle of the evidence now published, as very likely others may have been, but we preferred to leave it for consideration at Washington in the way that is now proposed.

The first point to notice is that the fiction which Admiral Brown and Secretary Tracy have so sedulously maintained in regard to the absolute neutrality of our naval officers in Chili, is shattered to pieces. It was plainly an afterthought in the beginning. Admiral Brown never has made anything but a shuffling answer to the evidence already published. A Valparaiso newspaper came out with flaring head-lines announcing the news of the landing of the Congressionalists, and said that the fact had been learned through "the American man-of-war *San Francisco.*" The Admiral at first denied that anything of the kind had ever been published, and then, when he found the fact to be undeniable, fell back on the assertion that "no one from the ship gave information." He was afterwards forced to admit, on the evidence of a telegram published in Chili, that he was with the Intendente of Valparaiso early the next morning after the landing, giving his opinion as to the intentions of the insurgents. Secretary Tracy, in an interview with the Washington correspondent of the *Evening Post*, also admitted this, but seemed to think it of no importance. What will he and the President say when they read the cablegram sent by one of Admiral Brown's officers to a New York newspaper on the afternoon of the landing at Quinteros? It reads as follows:

"Insurgents landed morning Quinteros, eight transports, three tugs, four warships. About eight thousand. Government sent forces. Battle imminent. Admiral Brown saw landing. Flagship *San Francisco*, *Baltimore*, Valparaiso. *Esmeralda* off harbor. Quiet here."

The importance of this despatch did not lie in the information given by it to the *Herald*—in which esteemed contemporary it was padded out into nearly a column of eloquent matter—but in the information given to Intendente Viel, who viséed the cablegram. He reads English perfectly, as Lieut. Dyer must have known. It is not strange that the Government organ should have so confidently said the next morning:

"From trustworthy news brought by the United States war-ship *San Francisco*, . . . we know for a fact that the revolutionists have disembarked about 8,000 men in the vicinity of Concon and Quinteros."

In President Harrison's "just-in-time" message, he said of the charge that information had been given by Admiral Brown to Balmaceda about the movements of the Congressionalists, that it was "too base to gain credence." He also refused to discuss that charge on the ground that it had not been made the "subject of official complaint." Of course, the publication of the incriminating telegrams could never have taken place had not the Chilian Government forced the telegraph company to give them up. It is clear, therefore, that the subject has now substantially been made one of "official complaint," and we hope the President will not consider it beneath his notice.

Against Consul McCreery the most damaging evidence thus far produced is that which shows his continuous speculations in the stock market on an enormous scale. Such business operations are always indelicate in a consul, if not flatly in violation of the rules laid down for his guidance by the State Department; and in such circumstances as those under which our Consul in Valparaiso was engaging in them, they are doubly open to suspicion and worthy of severe condemnation. He was dealing in foreign exchange which was quick to fluctuate with every changing aspect of the war and of the imbroglio with the United States, and the temptation to use his offi cial information to enrich himself was one to which the Consul should never have exposed himself. If he did not yield to it, it is in the face of probabilities and circumstantial evidence of the strongest kind.

We can but hope that the House will now appoint an able committee to probe the entire affair to the bottom. The Democrats in Congress have been timid as hares in this whole business. They seemed to be afraid that a great deal of national glory was going to be gained somehow in the Chilian intrigue, and they wanted to come in for their share of it. Congressman Breckinridge was manly enough to lift up his voice in behalf of the bullied Chilians at the time of the President's message, but he was almost alone. The incredible meanness and folly of our warlike attitude having been made fully apparent by the lapse of time, we hope that enough others will now join Mr. Breckinridge to insure a thorough investigation of the question in all its relations. As partisans they will find it rich in political ammunition, and as patriots they can use it as an opportunity to clear the national honor of a shameful stain.

THE IMPORTATION OF ALIEN CLERGYMEN.

THE opinion of the United States Supreme Court in the case of the United States against Holy Trinity Church is now reported at length, and contains some reasoning that deserves attention. It will be recollected that Holy Trinity Church made a contract with an English clergyman by which he was to come to this country and enter its service as rector and pastor. Under this contract the alien clergyman was duly imported, but, the attention of the United States Attorney being drawn to the circumstances, he felt it his duty to take proceedings against the church for violating the statute in such case made and provided. That statute declared it unlawful for any one to assist or encourage the importation or migration of an alien under contract to perform labor or service *of any kind* in the United States. From the provisions of the act singers, artists, actors, lecturers, and domestic servants were specifically exempted. It is scarcely a matter for surprise that the Circuit Court held that the contract made by Holy Trinity Church broke this law, as no exception was made in favor of clergymen.

In order to reverse the judgment below, it was clearly necessary for the Supreme Court to establish the proposition that the words "labor or service of any kind" meant only labor or service of certain particular kinds. It might not have been difficult to construe the troublesome words as referring only to manual labor, had it not been for the exception of actors, singers, and lecturers. It was argued that if the statute referred only to manual laborers, it was of course not necessary to except these classes; and the fact that they were excepted proved that the statute could not refer to manual laborers alone. "The exception proved the rule." This argument, therefore, Justice Brewer, who delivered the opinion of the court, devoted himself to overthrowing.

In the first place, he demonstrated, with perhaps needless care, that courts had repeatedly disregarded the letter of the law when a literal construction of it would lead to an absurd result. He then asserted that the title of the act, "To prohibit the importation and migration of foreigners and aliens under contract or agreement to perform labor," could only be understood to mean manual labor. It seems unfortunate for this contention that the Committee of the Senate expressed regret that the words "manual labor" or "manual service" should not have been used in the bill in place of "labor and service," but hoped that, as it was too late to induce the House to make the change, the substitution would be considered as made. The argument, however, was strengthened by the fact that the Committee of the House, in

reporting the bill, used language that referred to immigrants of "the lowest social stratum," living upon "the coarsest food and in hovels of a character before unknown to American workmen." Since Congress was evidently thinking of this debased class of immigrants when the act was passed, and had petitions before it describing their degraded condition, Justice Brewer concluded that, whatever its language, the scope of the act did not include "brain-toilers." If there was a "surplus" of these laborers—and it may humbly be submitted that the competition among educated men for employment is probably the cruellest of all—the attention of Congress or of the people, says Justice Brewer, was not directed to it, and therefore the act did not apply to other than manual labor.

Up to this point the opinion, whether its argument be regarded as conclusive or not, follows unquestioned legal precedents, and appeals to acknowledged aids in statutory interpretation. The remainder of Justice Brewer's observations are of a different and somewhat remarkable character. "No purpose of action against religion," he says, "can be imputed to any *legislation*, State or national, because this is a religious people. This is historically true." The historic basis for this truth he finds in the fact that the commission to Christopher Columbus recited that Ferdinand and Isabella were King and Queen "by the grace of God," and that it was hoped that "by God's assistance" some discoveries would be made. Further evidence is furnished by the grant to Raleigh, which recited that Elizabeth also ruled "by the grace of God," and authorized Raleigh to enact statutes "not against the true Christian faith now professed in the Church of England." Additional proof is derived from language acknowledging the existence of God used in other charters, in the Declaration of Independence, and in the constitutions of the several States. And, finally, the Constitution of the United States is cited in support of this proposition, because it forbids Congress to make any law respecting an establishment of religion, or prohibiting the free exercise thereof, and, further, because it excepts Sunday from the computation of days allowed the President to exercise the right of veto.

The relevancy of all this to the construction of the statute is not very apparent. In fact, we are led by it to entertain the suspicion that Justice Brewer has failed—like many other men of learning and ability—to comprehend the American system of protection. He seems to labor under the impression that the Contract Labor Law was intended to discourage industry and not to foster it. In its external manifestations religion cannot be put in a class outside of intellectual and moral and æsthetical activities. We protect the American author and the American artist, and why discriminate against the American minister? If it is a sign of sympathy for literature and art to levy duties upon imported books and paintings, why is it a sign of hostility to religion to exclude foreign clergymen? May we not, indeed, go so far as to say that as we hear of demands for an "American" philosophy, so our national development requires an "American" religion? Would it not be the wisest statesmanship to shut out the distorted growths of European superstition, and encourage religious feeling to manifest itself in a distinctively American form?

Justice Brewer assumes that our own clergy cannot supply the demand for religious instruction without the aid of foreign countries; but this is so far from being the case that American missionaries have long been exported to China; and in view of our legislation concerning the Chinese, it would be most unfortunate should anything be done to lessen their supply of religious teachers. Yet, with the law as now established by the Supreme Court, it is difficult to see how our theological seminaries are to maintain themselves against foreign competition. Complaint is sometimes heard of the quality of the sermons delivered by American ministers; but if it is to be the policy of our Government to hinder the building up of a "home market," so to speak, for their productions, what inducement is offered to our clergy to improve? It is undoubtedly true, as Justice Brewer declares, that we are a religious people; but the inference to be drawn from that is, that we have produced and can produce all the religion, or religious teaching, that we require without importing cheap foreign clergymen.

THE GOVERNOR AND THE BILLS.

THE Constitution of New York contains these explicit provisions declaring the duty of the Governor:

"Every bill which shall have passed the Senate and Assembly shall, before it becomes a law, be presented to the Governor; *if he approve, he shall sign it;* but *if not, he shall return it* with his objections to the house in which it shall have originated."—*Art. IV., Sec. 9.*

Let it be observed that the clause quoted covers every possible case of a bill presented to the Governor. If the second alternative had read, "If he *disapprove*," room would have been left for the evasion of a timid or slippery official, who might say: "I neither approve nor disapprove, and in this case no duty is laid upon me." But the clause was drawn so as to exhaust possibilities. The Governor *does* approve or does *not*. Yet the Constitution, distinctly as it has declared the Governor's duty, has provided for his possible neglect, refusal, or evasion of it:

"If any bill shall *not* be returned by the Governor within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law in like manner as if he had signed it, unless the Legislature shall by their adjournment prevent its return, in which case it shall not become a law without the approval of the Governor."—*Ibid.*

The present Constitution took effect on the 1st of January, 1847; and while the Constitution which preceded it contained a similar clause, we have made no examination in regard to its operation in earlier years. Since that date, however, some curious facts appear. Perhaps the facts of which we speak may not be without a certain significance. At any rate, they seem worth recording.

The thirteen years 1847–1859 include the full terms of Govs. Young, Fish, Hunt, Seymour, Clark, and King, and the first year of Gov. Morgan. In this period, according to the Session Laws, 6,245 bills became laws (an annual average of 480), *every one of which* received the Governor's approval, except two which were passed over his veto. It was Gov. Morgan in his second year who first omitted, in two instances, his constitutional duty of approving the bill or returning it without approval; and in his fourth year (1862) three examples of like omission appear. But these five examples in the three years are found in a total of 1,365 statutes. After that the fidelity with which successive Governors discharged or violated this constitutional duty may be observed in the following table. The operation of the beneficial sections 17 to 25 of Art. 3 of the Constitution, adopted at the end of 1874, is disclosed in the sudden falling off in the number of statutes:

Year.	Governor.	No. of statutes.	Number becoming laws without approval.
1863.....	Seymour.	516	1
1864.....	Seymour.	587	2
1865.....	Fenton.	777	0
1866.....	Fenton.	911	0
1867.....	Fenton.	974	0
1868.....	Fenton.	881	7
1869.....	Hoffman.	923	0
1870.....	Hoffman.	812	0
1871.....	Hoffman.	950	5
1872.....	Hoffman.	888	14
1873.....	Dix.	874	0
1874.....	Dix.	653	0
1875.....	Tilden.	634	4
1876.....	Tilden.	447	4
1877.....	Robinson.	475	0
1878.....	Robinson.	418	1
1879.....	Robinson.	542	2
1880.....	Cornell.	600	8
1881.....	Cornell.	713	22
1882.....	Cornell.	409	18

Not until the three years last cited does the possible utility of this method of dodging a constitutional duty seem fairly to have unfolded itself to the official mind. Since then, before the present year, we have had but two Governors. Before continuing our table, it is proper to explain that the *one* bill becoming a law in 1883 by virtue of this provision is chapter 329 of the laws of that year, and that with it there was filed in the office of the Secretary of State the following memorandum,

which sufficiently precludes the suspicion of either neglect or violation of duty:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
ALBANY, April 27, 1883.

I am not willing to approve Senate bill No. 234 entitled "An act to provide for organizing in the Supreme Court five general terms thereof, and for the election of justices of that court in addition to the justices now in office," for the reason that I do not believe the number of additional judges provided for in said bill are necessary, and because I am satisfied that the increase of taxation which it involves is not justified.

But I think an increase of judges in some of the districts of the State is necessary and proper; and in view of the fact that there is a question as to whether the constitutional amendment can be acted on by the Legislature, except at its present session, and the further fact that there seems to be no prospect that any other measure on the subject can be passed at this time, I have concluded to allow the bill to become a law, by the lapse of ten days from its presentation to me, pursuant to the provision of the Constitution. GROVER CLEVELAND.

So this completes our table:

1883.....	Cleveland.	523	1
1884.....	Cleveland.	555	0
1885.....	Hill.	560	10
1886.....	Hill.	681	59
1887.....	Hill.	724	287
1888.....	Hill.	586	135
1889.....	Hill.	570	141
1890.....	Hill.	569	175
1891.....	Hill.	389	175

In other words, Hill's predecessors, in thirty-eight years, out of 22,652 bills which became laws, allowed 94, or less than half of one per cent., to become laws without action. In *seven* years Hill, out of 4,079, evaded his duty in regard to 982, or more than 24 per cent.

Of course some of us know well enough what our latest Governor was doing when, during seven sessions of the Legislature, he was unable to make up his mind upon the merits of so many as 982 separate bills. There were other interests he was caring for than those the Constitution charged him with. And considering how sadly overworked he must have been if he had added to them the duties belonging to his office, is it not well for him and for the State that he has been relieved?

A VICTORY FOR LIBERAL CATHOLICISM.

IT may well be that future historians of the Catholic Church in the United States will regard the Pope's approval of Archbishop Ireland's plan of union between public and parochial schools as an epochal event. However cautiously that approval has been given, and notwithstanding the attempts which Archbishop Corrigan and other conservative Catholics may make to show that it really amounts to nothing, the fact remains that the action of the Holy See leaves Catholics free to extend the experiment in other parts of the country. In so far the decrees of the Baltimore Council are modified, and Catholics are relieved from the dilemma which has heretofore confronted them of either sending their children to the public schools in disregard of the Church's commands, or patronizing the parochial schools, which are confessedly inferior as a rule, and which in any case make Catholics pay twice over for the education of their children. They are now at liberty to work for such a solution of the difficulty as Archbishop Ireland has devised. In him the liberal Catholics of the country have won a great victory.

To speak of a liberal or any other party in the Catholic Church may seem an absurdity in referring to an organization which asserts of itself the famous *semper, ubique et ab omnibus.* Yet the idea of development in Catholic doctrine and practice has been made familiar, as regards the past, by Cardinal Newman's writings; and the existence of progressive, side by side with reactionary, elements in the Church to-day is a matter which may be easily verified. To mention Bishop Spalding and the Rector of the new Catholic University in Washington is enough to show that the Catholic Church contains men whose spirits are hospitable to the new learning. Archbishop Ireland is not only in sympathy with such men, having been one of the most active promoters of the project for the establishment of a Catholic University on broad lines, but is conspicuously a man whose liberalism takes the form of an ardent Americanism—in the best sense of that much-abused word. No citizen of the Northwest stands higher in public estimation, and his active coöperation in all patriotic and public-spirited movements—from the time he served as chaplain to the Fifth Minnesota Regiment in the war to his latest appearance as an advocate of municipal reform—has made his name a tower of strength.

Especially has he been committed to every movement which would free his church from the appearance of owing an undue allegiance to any foreign Power. The late effort to establish a separate hierarchy for the various nationalities represented in the Catholic Church in this country, thereby perpetuating distinctions which ought rather to be made to disappear as speedily as possible, had no more outspoken and vehement an opponent than he. It was undoubtedly a like patriotic impulse which moved him in uniting his parochial schools with the public schools in Faribault. His experiment went much further than the "Poughkeepsie plan," where the amalgamation was only in seeming. Under his plan the Board of Education came into absolute control of the parochial school. The understanding was, to be sure, that competent Catholic teachers should be retained, and that the right to hold religious services outside the school hours should be given them; but we do not see how the fairness of such an arrangement can be questioned, or why this is not as adequate a recognition of the principle of separation of Church and State in educational matters as is made by the majority of Protestants.

Of course, Archbishop Ireland's method satisfies extremists in neither church. The rabid Protestant, who is never truly happy except when describing the horrors of an impending Catholic war, joins Archbishop Corrigan in denouncing the Faribault plan as a dangerous makeshift. This is really an excellent recommendation of it. What the New York *Observer* and Archbishop Corrigan agree in condemning must have a great deal of good sense and fairness about it. And it is the first step which costs in such matters. The Roman Curia knows this as well as anybody, and must be perfectly aware that, in giving official toleration to the beginnings of the scheme of union, it is practically inviting a wide extension of it. It is as what may prove to be the origin of a widespread and momentous change in Catholic policy regarding our public schools that we think the triumph of Archbishop Ireland should be welcomed. If it finally leads Protestants as well as Catholics to abandon their too numerous practices in violation of the American principle of absolute separation between Church and State, it will be a means of great public good.

It is easy to exaggerate the importance of such a new departure, but it is also easy to underestimate it. Many of the turning-points in history pass unperceived by contemporaries. One thing at least is clear, that the Holy See is making precedents in favor of liberal and popular institutions which it will be very hard to reverse in the future. The decision in the matter of the schools at Faribault may be set alongside the recent papal letter to the French bishops enjoining upon them hearty acquiescence in the republic. On some points—such as the temporal power and pontifical privileges—the Bishop of Rome still fumes and frets like a mediæval Pope; but in many important respects Leo shows himself a man of the nineteenth century, aware that the Church, like government, must rest upon the consent of the governed.

CHARLES EDWARD FLOWER.

NEW YORK, May 8, 1892.

ON the 3d of May I received a copy of the Stratford-upon-Avon *Herald* of April 22, with an editorial beginning: "Stratford celebrates Shakspere's birthday in a befitting manner. Thanks to the generosity of its leading citizen, it possesses a theatre which in completeness has few rivals, and which in richness and variety of scenery can vie with the leading temples of the drama in this Shakspere-loving country of ours." In another part of the paper there are reports of the dramatic week which opened April 18. Eminent actors had brought out "A Midsummer Night's Dream," "Twelfth Night," "Julius Cæsar," and the festival was to close on Shakspere's birthday with "Timon of Athens." But amid these reports my eye fell on an ominous paragraph: "It is to all Shaksperians a matter of something more than personal regret that Mr. Charles Flower has not been able to attend all the performances this week, as his wont and delight were in past years. Better fortune, in that respect at least,

to the dramatic week of 1893." Across this paragraph a lady's hand had pencilled the words, "Not true." But, alas! on the very day that these words came, May 3, Charles Flower died.

It is not easy to measure such an event. It not only is the heaviest bereavement that could befall the town to which the literary world looks as its Mecca, but will be a personal grief to many men of letters in America, Germany, Holland, France, as well as in England, who have found at Avonbank something more than the hospitalities of a beautiful mansion. For Charles Flower and his wife (she is one of the Martineau family) have given to literary pilgrims intellectual entertainment, enriching them with such treasures of local knowledge as well as of Shaksperian culture that Avonbank has come to be regarded as a kind of university in such matters. Although Charles Flower was only in his sixty-third year, he has for twenty-five years been a leading citizen of Stratford, as his father was before him.

The Flower family has enjoyed honorable distinction throughout this century. During the long struggle in England for liberty of the press, when many publishers of the 'Rights of Man' and the 'Age of Reason' were imprisoned, valiant service was done by Benjamin Flower, whose paper, the Cambridge *Independent*, remains the best record of those times that tried men's souls. The daughters of Benjamin (Sarah and Eliza) were by his will confided to the guardianship of William Johnson Fox, M.P., the Corn Law orator, who also founded South Place Chapel, which became to London what at a later day Parker's Music Hall was to Boston. Eliza Flower, friend of Robert Browning, who told me he considered her a woman of real musical genius, composed the music sung at South Place, while her sister (who afterwards married Mr. Adams) wrote hymns—among others, "Nearer, My God, to Thee," which was sung at South Place by a generation of Liberals before it was heard of in the outside world. The grandfather of Charles Flower, Benjamin's brother, was a strong reformer, and a friend of Robert Owen, with whom he and his family migrated to Indiana (1825) and shared the fortunes of New Harmony. His son, the late Edward Fordham Flower, was sent back to England for education, and was for a time under the care of George Combe. He married a lady in Warwickshire and fixed his abode at Stratford, of which he was seven times elected Mayor. His home, "The Hill," became the seat of a noble hospitality, and Americans were especially welcomed there, among others Hawthorne and Emerson. It was there that Emerson made the acquaintance of Marian Evans (George Eliot), who, while yet unknown to the world, was well appreciated at "The Hill." During the great Tercentenary festival I was a guest at "The Hill," and from that time have enjoyed some intimacy with Charles and his younger brother, Edgar, who now resides at the old homestead, whose traditions of hospitality are kept up. Another brother is Prof. Flower, F.R.S., director of the Natural History Department of the British Museum. The father afterwards removed to London, where he began his agitation for the abolition of the cruel bearing-rein by which horses were then tortured. His pamphlets were republished in New York by the Society for the Prevention of Cruelty to Animals. An old fox-hunter, he had wide influence with the gentry, and was able to do great service as the horse's friend.

Charles became Mayor of Stratford in 1878, and has since held important offices both in the borough and county. It was while attending the County Council at Warwick (ill as he was) that he was paralyzed, and fell dead. He was returning at the moment to the Shire Hall, leaning on the arm of his friend, the Marquis of Hertford. His popularity was unbounded. He might have gone to Parliament, but his absorbing interest was to make Stratford a fit and complete monument of Shakspere. His project of a Memorial Theatre was started after the Tercentenary celebration, during which the performances were in a large tent. To that he gave more than £30,000, while his donations to other public institutions have been large and constant. Besides its theatre, the edifice contains a room well filled with Shaksperian relics, and a unique library. By a gift of a thousand pounds the library was begun, its aim being to collect plays and books relating to the stage from all parts of the world. It now possesses complete editions of Shakspere in German, French, Dutch, Russian, Hungarian, Italian, and Spanish. Of separate plays it has one ("Othello") in Hebrew, five in Icelandic, five in Swedish, seventeen in Greek, two in Latin, one in Finnic, two in ancient Welsh, two in Georgian; and in the various Hindu languages no fewer than forty-five were collected by Lord Dufferin for this library. I was sorry to find, when I visited the library in 1890, that it has received but few donations from America. Of nearly 150 American editions of Shakspere there are only 16 in the Memorial Theatre.

The hospitality of Charles Flower to Americans, many of whom—as Dr. Holmes and Mark Twain—have in him lost a very dear friend, was so large that he was kind even to our "cranks." He and others of the family watched day and night over poor Delia Bacon, to keep her from suicide when she found that the London *Times* did not intend to review her book. It is said that Ignatius Donnelly anticipated martyrdom at Stratford, and was seriously disappointed on finding himself invited to dinner at Avonbank. The "Baconian" notion was not mentioned until Donnelly said, when leaving: "You do not seem to think much of my book." The genial answer was: "We smile at that." The only American who seems to have given Charles Flower serious trouble was Barnum, who actually bought the Shakspere House with the intention of exhibiting it in America. Barnum held out obstinately, but at length yielded to the argument that if he should commit such sacrilege, Tom Thumb would surely prove a failure in England. Barnum's project benefited Stratford. There had not been much public pride in the place. There was an annual dinner of a few gentlemen on Shakspere's birthday, but Charles Flower met with a rebuff from one of the Lucy family, by no means representative of its present sentiment, when he suggested that he should come to the dinner and even send them a buck. "Do you think I would countenance a man who stole deer from my ancestor?" The American showman's purchase of the house made Stratford blush for its neglect, and the work of improvement began. Ann Hathaway's cottage was also about to be sold recently, and Charles Flower rendered another service by securing it to the control of the Birthplace Committee at Stratford, becoming with Sir Arthur Hodgson responsible for the purchase money.

Charles Flower's memory was stored with reminiscences, and it is to be hoped that among his papers may be found some record of them. I believe that nothing but a singular humility prevented his achieving a wider literary reputation. His mother once gave me to read some letters of his written while travelling in America; they were written in the style of Hiawatha, then engaging public attention, and nothing could be more witty and sparkling than his account of America and of his adventures. He was almost hypercritical in his Shaksperian culture, and a student of the plays will recognize the touches of a master in the Memorial Theatre Edition. In this edition the passages that may be, and usually are, omitted in acting are printed in smaller type. The plays are separately bound for the convenience of playgoers and also of family circles, and though they are by no means "bowdlerized," a very few words and expressions are altered for the sake of the circles in which they are read aloud. Charles Flower has read various excellent papers before the Shakspere Society. Two of these—"Shakespeare on Horseback" and "Shakespeare no Dog Fancier"—were passing through the press at the time of his death.

Happily for Stratford and for the literary world, the Flower family is still well represented there. During the Tercentenary Mr. *Punch* printed a humorous poem about them, beginning, if I remember rightly:

"On Avon's banks, where Flowers eternal bloom."

It would be a sad day for authors and actors should the prophecy fail, or Stratford know no more the race which for fifty years has been foremost in preserving the town of Shakspere, in promoting its culture and beauty, in making it throughout a memorial of the poet, and in enabling the literary world to share its happiness in being the birthplace of the greatest Englishman. MONCURE D. CONWAY.

THE PARTY MUDDLE IN GERMANY.

BERLIN, April 21, 1892.

THE refusal of the King of Prussia, who is, of course, German Emperor *ex officio*, to allow the passage of the Elementary Schools Bill in the face of united opposition by the several so-called liberal parties, seems likely to have more important political consequences for all Germany than was at the outset generally realized. It is comparatively immaterial whether Count Eulenburg or Count Caprivi holds the office of Imperial Chancellor next fall. The military as well as the economic policy of the German Empire in foreign affairs is fully determined for a number of years by the Triple Alliance and the commercial treaties. Even the Emperor, great as his resources in the unexpected are, would find difficulty in changing it. This elementary fact is beginning to dawn on the German political world, recently obscured by cloudy speculations about the future Chancellor, and to illuminate an interesting political situation.

There are many Liberals in Germany, but for a number of years there has been no recognized Liberal party. The name "National Liberal" is, to be sure, retained by an important faction, but it includes on the one side men more conservative than the "Free Conservatives," and, on the other, men more radical than the "Fortschrittspartei." The latter, the remnant of a once great party, represents the fullest measure of individual liberty in the English sense. These two parties, together with the Free Conservatives and with the Socialists, who have no representation in the Prussian Diet, were opposed to the Schools Bill. On the other hand, the Centre and the Conservatives were generally in favor of it. As the latter parties had a majority in the

Diet and 16 out of 28 votes in committee, there is an apparent justification for their complaint that Count Eulenburg, by withdrawing the Schools Bill, ostensibly because he could not secure an agreement for it, violated "the parliamentary principle." To be sure, the "parliamentary principle" forms no part of Prussian constitutional law; and no one has been more ready to brandish that fact in the face of parliamentary liberalism than Count Ballestrem, the leader of the Centre, who now complains that the principle has been violated. But the Catholic Centre were never distinguished for their consistency. Immediately after the withdrawal of the Schools Bill they voted, out of spite, against the same naval appropriation for *Courvette K* which they had approved upon the previous reading of the budget. More recently, at a meeting in Breslau, Count Ballestrem, in the name of his party, declared open war upon the Government for violating the same parliamentary principle whose non-existence he has often emphasized.

Unsatisfactory as the political position of the Centre is, however, that of the Conservatives is far worse. Years ago Bismarck declared that this party, the representative of titled loyalty and landed property, counted for nothing save when it supported the Government. To be sure, even he was forced, in order to cement the cartel through which he governed in the eighties, to make important concessions to the Conservatives as well as to the Centre. They supported him because he followed a policy of protection, especially for agriculture, and because he carried other laws very advantageous to their class interests, *e. g.*, the "clausula Frankenstein" in the Empire and the "lex Heune" in Prussia. The Caprivi Government had already offended the Conservatives by withdrawing some of these concessions, and it threatens to withdraw others. It had lowered many duties, especially those on grain, and Miquel's highly successful reform of the Prussian income tax is increasing revenues and opening the way to the repeal of the "lex Heune," which distributes Prussia's share of the imperial customs receipts among the communes in such a way as to lighten disproportionately the taxation of the large agriculturists. But the Conservatives, being above all "loyal," cannot follow the Centre into an open fight on the present Government, since it is acting, as is well known, under the specific orders of their sovereign. They have consequently revenged themselves by expelling Herr von Helldorff, a prominent Conservative member of the Prussian upper house and an opponent of the Schools Bill, from the party caucus, and by adopting an address of condolence to the deposed Minister of Education.

Unfortunately for the Conservatives, it turned out that Herr von Helldorff had a considerable following, and it became a political necessity to recover, if possible, the lost strength. Ex-Court Chaplain Stöcker, who has become a Conservative politician more noisy than important, proposed that the Conservatives, as the characteristically "Christian" party, insert an anti-Semitic plank in their platform. Political anti-Semiticism, feeding on justifiable indignation against overspeculation, spiced with recent sensational banking failures in Berlin, has grown rapidly to considerable proportions in several parts of Germany. Accordingly, the Conservatives, alarmed by the extent of the Von Helldorff split, were about to follow the advice of Stöcker, seconded by Von Hammerstein, the new editor of the *Kreuzzeitung*, when the *North German Gazette*, the acknowledged organ of the Government, in the politically important Easter review which it is the custom of the German newspapers to publish, warned the Conservatives that the demands of the anti-Semitic party, which amount to the expulsion of all Jews from Germany, were no more achievable in a constitutional way than the demands of the Socialists, and that the inclusion of anti-Semiticism in the Conservative programme must cause a definite breach between that party and the Government. In other words, the Government party par excellence has been weakened by a serious split, and the Government will not assent to the only practicable plan for restoring the party's former strength. The question, therefore, arises, How is the Government to secure the necessary support? Its economic policy directs it already towards the liberal elements. But if it should make the attempt to govern by their assistance, can the formation of a united Liberal party of inconveniently large proportions be avoided? Nevertheless, there can be little doubt that the unification of the liberal elements into a powerful party would have a healthful influence upon German political life. It would raise a liberally inclined Government above the necessity of that trading and truckling to get together a majority to which Bismarck constantly descended in his domestic policy, and would give Prussia and the Empire what they have scarcely ever known—genuine party government.

H.

THE REVOLT OF CONDÉ.—I.

PARIS, April 26, 1892.

THE sixth volume of the 'Histoire des Princes de Condé,' by the Duc d'Aumale, is more than worthy of the preceding volumes; it even marks a progress in the historian, in his method, in his manner of treating a subject in all its aspects, and, shall I say also? in his style, which seems to become more nervous and condensed, more picturesque, also, and descriptive.

This new volume is the history of the rebellion of Condé. When he entered the prison to which Mazarin consigned him, he was, he said afterwards, the most innocent of men. He added: "I came out of it the most guilty of men." The captivity of the Prince de Condé and his brother was very strict; many attempts were made to deliver them, but to no purpose. The resistance against Mazarin was organized by Condé's sister, the famous Madame de Longueville, and, curiously enough, by Turenne, who was destined afterwards to make war on Condé for many years, when Condé had become the ally of the Spaniards. Turenne was timidly in love with Madame de Longueville—great heroes are often timid; Madame de Longueville amused herself with his passion, and took him to Stenay, which was one of Condé's fortresses. The wife of Condé, Madame la Princesse, as she was called, fled from Chantilly, and, though Condé was the most unfaithful of husbands, and had never concealed his aversion for the woman whom he had married by the King's order, she threw herself into the Fronde, and became the head of the malcontents in Bordeaux and in the South.

The invasion of France by the northern frontier was arrested by the defence of Guise and the defeat of the Archduke and Turenne in Champagne. In the south, Mazarin had taken affairs in hand himself. The "Fronde de Bordeaux" is one of the most confused chapters of our history; it was very bloodless—a mere succession of intrigues and of popular movements. Mazarin did not derive much advantage from the defeat of Turenne at Rethel. In vain did he send Condé from Vincennes to the prison at Havre. The Princess Palatine, who was a great friend of Condé's, treated with the Frondeurs as well as with the Queen. It all ended, as is often the case in civil wars, in a settlement. Condé was delivered and Mazarin went to Havre himself to announce that he was free. It was on his forced journey from Vincennes to Havre that Condé composed the famous verses on the man who was at the head of the escort:

"Cet homme gros et court,
Si fameux dans l'histoire,
Ce grand Comte d'Harcourt,
Tout rayonnant de gloire,
Qui secourut Casal et qui reprit Turin,
Est maintenant recors de Jules Mazarin."

Boileau used to say that he did not know a better epigram.

The Duc d'Aumale is a great admirer of Anne de Gonzague, the Princess Palatine, who negotiated the deliverance of Condé, and he gives interesting details respecting her negotiation. Mazarin was sacrificed, or sacrificed himself; Condé came back triumphant to Paris, and the Cardinal took the road to exile. When the Queen received Condé, she could hardly control her tears.

"What a spectacle! Mazarin hurled from power at the very moment when he seemed to have strengthened his authority by victory; imploring humbly the support, the protection of the man whom he had kept in close captivity for thirteen months; the Coadjutor [Retz], Beaufort, all those who had not ceased to conspire the destruction of Condé, offering themselves and taking their places behind him; the Court, the Fronde at the feet of this man so often denounced, carried the day before from fortress to fortress as if there could not be for him any prison sure enough, hard enough; Paris lighting for his return the bonfires which, a year before, illuminated the doors of his prison—is it not fitting to say with the author of the 'Maxims' [La Rochefoucauld], 'Everything happens in France'?"

Mazarin had his revenge. He left a strong ally behind him—the Queen, who loved him; he left also germs of division, of envy, of hatred, which nobody knew better than himself. The difficulties which arose between Condé and the Court are so petty that they can hardly be understood: exchanges of governments, of provinces, marriages—everything became a subject of quarrel. Condé's haughtiness meets in every direction with a stubborn resistance. When the King's majority is proclaimed, he is so irritated that he does not take his place in the "lit de justice."

"As Louis XIV. is on his way to the palace surrounded by his family, by the peers of France, by the officers of the Crown, Armand de Bourbon approaches, and hands his Majesty a letter from his brother; it is a respectful account of the motives which kept Condé away from the place to which he was called by his duty and his birth. The King takes the letter, and, without opening it, gives it to his old Governor, the Duc de Villeroy. Without a word, without a gesture, he goes on his way to the *lit de justice*.

"The die is cast; the solemn hour has struck, and Condé has not heard it. There is no longer any Spanish regentess, no foreign minister. Never mind the legal fiction—the pretended minority of fact after the minority of right—never mind! It is the King, the King of France who governs. All those who preserve in their hearts the old national tradition think they see the sky clearer. They wait for the era of calm, of quietude, which is to come after the chaos, after the odious conflict of ambitions. Woe to those who wish to prolong the war and the sufferings of the country! And the sword which had thrown a crop of laurels in the cradle of a king four years old, the sword of Rocroy, does not shine near the sceptre which the king of thirteen already holds with a firm hand."

I cite this passage in order to show that the historian of Condé is not blind to the faults of his hero. Condé hesitated before he again

rebelled against the boy who was now really the King; his sister Longueville vanquished his last scruples. "You force me to draw the sword? Well, remember that I shall be the last to put it back in its scabbard." Condé drew up the plan of the campaign of 1651: the operations were to be conducted on two separate theatres—in the south, between the Loire and the Pyrenees; in the north, on the frontier of the Low Countries. Condé made his treaty with the Spaniards (treaty of Madrid, November 6, 1651); in the month of January he made a treaty with the Duke of Orleans. Nothing of great importance happened in the south. Condé had to deal with the demagogy of Bordeaux, with what was called L'Ormée, a club which had its meetings under the old elms. His adversary in the south was D'Harcourt. Mazarin had returned from exile; Condé's conduct was his triumphant justification. Condé had hoped at first to enlist Turenne among his allies, but Turenne was thoroughly disgusted with the alliance with the Spaniards; he had been defeated with them at Rethel. He was naturally loyal; he had been offended by the pride of Condé, who recognized his military merit, but did not sufficiently recognize the claims of the Bouillons as Princes of Sedan.

Condé left the south in secret, after having organized his forces in Guyenne; he crossed the Loire with a feeble escort. The Court was ignorant of his whereabouts; he had disappeared. "His journey is like a page detached from the most extravagant novel of adventure. Nothing is wanting: surprises, unforeseen meetings, disguises, incidents in inns, roads lost and miraculously found again, night marches and countermarches, stolen horses, charges with sword or pistol, hunger, thirst, suffering, the gout of La Rochefoucauld, etc." Condé, once arrived among his troops, soon confronted Turenne. The Duc d'Aumale gives a very graphic account of the battle of Bléneau. Turenne, seeing the movements of the enemy, who was supposed to be led by M. de Nemours, soon recognized the hand of a master, and, extending his arm, he said: "Ah! Monsieur le Prince is there." Condé in his turn could admire the manœuvres of Turenne. These two men, the greatest generals of their age, were at the head of very small forces, but they had in their hands the fate of France. If Condé had made Louis XIV. prisoner, our history would have been changed. Turenne saved his King. If he had been beaten "on the evening of the 7th of April, 1652, one would perhaps have seen M. le Prince serving Louis XIV. on his knees—like the Normans before the Pope at Civitella, like the Black Prince at Poictiers before King John—surrounding his King with respect and submission, but keeping him prisoner."

We now come to one of the most dramatic episodes in French history. Condé entered Paris, where he received a most brilliant reception; he entered also into negotiations with the Court. His pretensions were such that Mazarin could not accept them. Meanwhile the Duke of Lorraine had arrived with his little army; he entered Paris, amused the Parisians by his entrance, and was all ready to sell himself and his troops to the highest bidder. He was one of those *condottieri* who have made the name of Lorrainer synonymous with the name of traitor. Turenne drew near to Paris with the royal army, and the Duke of Lorraine thought it best to negotiate with him. "Turenne advances; he is already under the guns of the Lorrainers; Charles IV. gives the order to open fire. Almost immediately afterwards he signs the treaty and sends it to Turenne with hostages, and the army of Lorraine begins to march before the French army in battle order. In eight days the Lorrainers will cross the Marne; in a fortnight they will be out of the kingdom."

Paris now became uneasy; the misery was great. The Duke of Orleans began to waver. What will Condé do? The populace is furious; the Parlement has lost its authority. The army of the King approaches, mustering 12,000 men; Condé's army is only 6,000 strong, and retires. Paris shuts its gates on it, and Condé is now in danger of being crushed between the walls of the capital and the troops of Turenne. "Then he took a heroic resolution. No, he will not remain with his back against the fatal wall, stopped by the closed gates, at the foot of the gloomy fortress of Vincennes in the shade of its high towers. He will provoke a combat. His officers surround him: 'I do not promise you victory, but at least we will not let ourselves be killed like cattle,' and he explains his plan." The battle of the Faubourg Saint-Antoine is narrated in the most minute details by the Duc d'Aumale. The memoirs of the time have made us familiar with its principal incidents, with the bloody charge in which so many French noblemen of the highest rank were killed or wounded, with the excitement of the Parisians when they saw the wounded brought back to Paris, with the revulsion of feeling which followed, with the bold resolution of the Grand Mademoiselle, who ordered the guns of the Bastille to be fired on the royal troops. Condé was saved by her intervention. Mademoiselle had for a moment hoped to marry Louis XIV., and it was said, "Voilà un coup de canon qui a tué son mari."

Correspondence.

DUE PROCESS OF LAW IN PENNSYLVANIA.

To the Editor of The Nation:

Sir: About one hundred persons have been indicted by the last Grand Jury of this county for selling oleomargarine in violation of the Act of May 21, 1885. This state of affairs illustrates how little regard people pay to an odious law, and how easy it is to use such a law for the nasty purpose of blackmail.

The oleomargarine law in this State had its origin in the desire of the "honest farmer" for protection against the "poor man's butter." The farmers boldly asserted that the "iron kings" were so protected that they were obliged to pay tribute for their clothing and farm machinery, and that that was not "American fair play." So the iron kings, out of the kindness of their hearts, decided that the honest farmer should be allowed to get even by plucking some other poor devil. In this instance it happens to be the poor laboring man. On this highly moral platform of "you tickle me, I'll tickle you," the iron king and honest farmer joined hands and worked together for favorable legislation. Thus the high tariff is directly responsible for debauching the honest farmer, for it is obvious that when he is enabled to exact five or ten cents more a pound for his butter than he could get if oleomargarine was sold, he is getting what does not belong to him by any moral right whatsoever.

The honest farmer justifies this high-handed and piratical proceeding by saying that all substitutes for butter are unwholesome. But this whole question was thrown aside by the United States Supreme Court in Powell vs. Pennsylvania (reported in 127 U. S., p. 678). Although the plaintiff offered to prove beyond the shadow of a doubt that oleomargarine was just as healthy as butter and less likely to become rancid, yet this startling proposition was laid down: Whether the manufacture and sale of a commodity is unwholesome or injurious to the public health, or against the best interests of the community, "*are questions of fact and of public policy which belong to the legislative department to determine*" (p. 685). Courts and juries were swept aside, and now the phrase "due process of law" simply means nothing at all. It becomes a highfalutin phrase, which renders the entire Fourteenth Amendment a snare and a delusion.

When principles of law are laid down in a case, they should be followed out to their logical results as relentlessly as the decrees of fate. Otherwise lawyers can never know what the law should be in any given case. If they cannot be so followed, they are not applicable to the case and should never have been laid down at all. Prof. Langdell of Harvard has pointed out that the principles of law are few, but their application may be infinite. They are like the laws of nature and of the spheres, and, when properly grasped, can be applied to the rapidly changing business methods for all time. If the principle laid down in Powell vs. Pennsylvania is applied and carried out to its logical results, our Legislature can prevent the making of bread, the manufacture of clothing, or any other commodity, and indeed take away from the minority of our citizens every vestige of property right against their will and even in the very teeth of all constitutional guarantees. The most charitable explanation of this decision is that the air was saturated with the grievances of the farmer, and the Court made the decision under the late tendency of all courts to "disregard form and do equity."

The case of Fisher vs. the Pennsylvania Railroad Co., reported in 126 Pa. St. 293, may be cited in this connection on account of the striking analogy which it bears to Powell vs. Pennsylvania. When a jackass was killed by a locomotive, it was held that there could be no recovery, on the ground that, while it was the duty of the defendant to ring the bell and blow the whistle, yet, as all duties are reciprocal, it was the duty of the jackass to "stop, look, and listen." It did not do so, and was therefore guilty of contributory negligence. If the United States Supreme Court had decided that a jackass is the sole judge of what we can or cannot manufacture, it could not have placed autocratic power in more incompetent and reckless hands. And if our State Supreme Court had solemnly decided that the Pennsylvania Legislature should "stop, look, and listen," we might have had some hope for an early repeal of this unjust law, and an honest United States Senator.

C. P. R.

Pittsburgh, May 11, 1892.

THE ELEVATION OF BLACK AMERICANS.

To the Editor of The Nation:

Sir: In your issue of March 24 there is an article in regard to "The Elevation of the Black Americans." The writer is evidently much interested in the negro problem. It is a subject that should awaken a wider interest and a deeper sympathy. We, the white Americans, are responsible for their enslavement. We turn them loose, give them freedom, and feel as if we were heroic and had done all that

was required. We do not know, hardly care, that they were helpless and ignorant because of and through us, and that they need care and the protection and the love that are given to children in the best homes. All things must be tried for their elevation, and only the good and the noble will try anything. I lived several years in Virginia, and studied "the black Americans" with much perplexity, and had a great desire to help them. I found that those who went North year after year and worked, either sent money to their parents or bought farms, and had them improved, and cultivated them according to the best Northern methods under great limitations. They need better tools, using, as a rule, the most primitive. Therefore it seems to me a good thing to give and to induce people in the North to give them ploughs, cultivators, and several together a reaper. It works well. It gives a sense of independence. They are a proud people, and take pride in their work, and laugh a happy, merry, child's laugh to see their work better done than their white neighbors'—and this was true of many negro farmers, even when the white men came from the North. Schools, as a rule, are demoralizing. When they go to school they only learn to read and write, and then will not work with their hands. This is truer now than at the outset, for then they wanted to learn more and were not afraid of work.

A short time ago, I read an article from the pen of Mrs. Ednah D. Cheney. She thinks that "nursing would open a wide field of usefulness for the colored women of our Southern States. Their qualities of patience, sweetness, affection, are well adapted to this profession." That was an inspiration. The work for "the black American" must come from within, and then given a direction, a motive. They are the only cheerful element in America. We must help them in their own lines. Give them justice and truth and sympathy, and they will get their own moral perceptions and elevation and schools. No one writes about the negro fairly; his language is so distorted and ridiculed that no creature who sees it printed can see any reality about it. They talk just as the whites do about them.

Pardon this long communication.

B. B. Ellets.

Maryland, May 12, 1892.

Notes.

Ginn & Co. have in press 'The Art of Poetry,' embracing the poetical treatises of Horace, Vida, and Boileau, together with the translations by Howes, Pitt, and Soame; the whole edited by Prof. Albert S. Cook of Yale.

A novel, 'Calmire,' an exposition of "that scientific explanation of the basis of morals for which many are seeking outside of the historic creeds," will shortly be issued by Macmillan & Co.

Cassell will publish 'The Writings and Speeches of Grover Cleveland,' edited with an introduction by George F. Parker.

'The Lone Star of Liberia, or, Reflections on Our Own People,' by Frederick Alexander Durham, is announced by Elliot Stock, London.

A catalogue of the George P. Marsh Library will be published during the coming summer by the University of Vermont. It will make a volume of more than 700 pages royal octavo, and will fully present the contents of 13,000 volumes of that remarkable collection. A sample of it is now before us, being the bibliography of Mr. Marsh, compiled by H. L. Koopman, the Librarian at Burlington.

In the *Revue Bleue* for April 30, M. Léo Claretie gives a foretaste of a volume of unpublished correspondence of Rousseau with Mme. Boy de La Tour, from 1762 to 1773, to be published with portraits and facsimiles by Calmann Lévy. This friend and benefactress was but little known to Musset-Pathay, who records no letter to her. It will appear from the ninety-three letters now on the eve of getting into print, how freely Jean Jacques made use of his landlady (she gave him his furnished house at Motiers) for petty commissions while she was in her winter home in Lyons. Most of the letters, says M. Claretie, were evidently copied from rough drafts.

The last *Bollettino* of the National Central Library at Florence mentions the fact of a reproduction in facsimile of an anonymous MS. preserved in that library, entitled 'Libro de la vida que los Yndios antiguamente hazian, y supersticiones y malos ritos que tenian y guardavan.' This is richly illustrated with colored designs, all of which will be faithfully reproduced. The work has been undertaken by and at the expense of Miss Zelia Nuttall of the Peabody Museum at Cambridge, who first discovered the value of this MS. She will also supply an English translation, with a dedication to the next Congress of Americanists, to meet in Spain. Two hundred copies will be printed, and will be sold by the Museum.

Father G. Berthier, Professor of Theology in the college at Freiburg, Switzerland, has undertaken to prepare a new edition of the 'Divine Comedy,' with a commentary "secondo la scolastica," the first fascicule of which has already appeared (Freiburg: Universitätsbuchhandlung; New York: International News Co.). The plan of the work, which will be published in fifty instalments, is both mediæval and modern. Interpreted from the scholastic point of view, the poem is shown to be a complete moral treatise, in which the doctrine is from first to last continuously developed; from the modern point of view, however, it is a picture-gallery, recalling hundreds of persons and places. What the eye can see, Father Berthier is to represent by "at least two thousand" illustrations; to the inward eye he is to make clear the sublime doctrine of Dante and the Church by a running Italian comment. The present instalment contains a dedication to Leo XIII., a part of a somewhat garrulous preface, and the text and annotations of the first two cantos, with excellent, though not always appropriate, illustrations. We must postpone further notice of the work until the completion of the "Inferno."

Less interesting is the bulky three-volume edition of the late G. Campi (Turin, 1888–91), who edited a similar work as early as 1822. The illustrations of the present edition are reproductions of those by Ademolli and Nenci in the "Anchor" edition of 1822. The notes are mainly concerned with variants of the text. Otherwise, they are based on the older commentaries.

Prominent among the hosts of books and pamphlets relating to Dante which are continually produced in Italy, most of them badly written and badly printed polemics, is C. Ricci's 'L'Ultimo Refugio di Dante Alighieri' (Milan: Hoepli, 1891). It not only is well printed and full of good illustrations, but presents the customary mass of detailed erudition to some purpose, for, structureless as the book is, the reader really gets from it a tolerably clear picture of Ravenna, Dante's "last refuge," in the fourteenth century—the city, the court, the localities most closely associated with him, and the better-known celebrities of the time.

"From the Spanish of Pasarse de Listo" is the awkward phrase used on the title-page of 'Don Braulio'—a novel by Juan Valera translated by Clara Bell and published by the Appletons—to show that Valera's own title for the book, 'Pasarse de Listo,' has been exchanged for the one mentioned. Don Braulio is the leading character in the story, and might well enough give it a name; but the method chosen to indicate the change cannot be said to *pasarse de listo* (be too clever by half). As to the translation, on the basis of the two or three chapters we have compared with the original, we should say that it was adequate, if not very elegant, though occasional lapses arise from the translator's failure to catch a local allusion. Thus, "Madrid, since the advent of Lozoya," will scarcely convey to the reader, if it did to the translator, the idea of "Madrid, desde que vino el Lozoya"—that is, since Madrid got a supply of water from the River Lozoya. The novel is one of Valera's earliest, and is not reckoned by Spanish critics, including himself, among his best efforts in that kind of writing.

The second edition of a translation of Solomon's Song comes to us from a provincial city of Mexico—'El Cantar de los Cantares' (Aguascalientes: J. T. Pedroza é Hijos). It is the work of Prof. Jesus Diaz de Leon, and consists of an introduction, the Hebrew text with grammatical comments, and a version in Greek, Latin, German, French, English, and Spanish. The curious rather than substantial value which the latter feature gives the volume is but accentuated by the exposition, which is wholly antiquated, and written in complete oversight of the results reached by modern interpreters.

Two guide-books to Chicago were issued last year, viz., Schick's 'Chicago and its Environs' and Flinn's 'Chicago, the Marvellous City of the West.' Both of them showed a want of the highest skill in the making of such works, but the first was superior in literary merit and in typographical comeliness. Of Mr. Flinn's "history, encyclopædia, and guide" the Standard Guide Co. has just issued a second edition, which is at least a useful supplement to its rival. The lack of method is well exhibited in the case of monuments, some of which are entered and described individually in the section, "General Information," while others must be sought under the rubric *Monuments* in the same section, along with the first-mentioned; hence much trouble of reference and much vain repetition. So there is a heading *Libraries*, but the Public Library is given a title by itself. The index, instead of being in one alphabet, is classified. The best of the illustrations do not equal the best of Mr. Schick's, but the general choice is better. The map of the city, too, is more inclusive, if the scale is smaller.

Macmillan & Co. continue their reprint of first editions of Dickens with his 'Oliver Twist,' uniform with the 'Pickwick Papers' lately put forth. The younger Dickens again furnishes an historical introduction, in which the conjunction of these two issues is shown to be natural, as the novelist was engaged upon the first half of 'Oliver Twist' while writing the last half of the 'Pickwick Papers,' to say nothing of his editing *Bentley's Miscellany* and preparing the 'Life of Grimaldi' and beginning 'Nicholas Nickleby,' all before 'Oliver Twist' was off the stocks. Cruikshank furnished the illustrations for the first edition of

'Oliver Twist,' and in his latter years fancied that he had suggested the story. The etchings are reproduced in the volume before us, and the artist's pretensions are once more upset by incontestable evidence.

The Brantwood edition of Ruskin (Charles E. Merrill & Co.), since we last mentioned its progress, has grown by three volumes—the 'Lectures on Art' and the earlier 'Stones of Venice.' Prof. Norton's Introduction to the latter work (now deprived of its illustrations) contains some hard words for the modern Venetians, who have to patch up a *modus vivendi* with their ancient surroundings. It is enlivened, on the other hand, by a humorous letter from Ruskin, describing the difficulties under which he labored in pursuing his study of the Venetian architecture.

The twelfth volume of Mr. W. C. Ford's edition of the 'Writings of Washington' (Putnams) opens with the President's speech to Congress December 8, 1790, and closes with the year 1794, apart from the remarkable "Opinion of the general officers" who might be "named for the important trust of Commander-in-Chief" to succeed Arthur St. Clair (1792). In the period embraced we have the beginnings of the acquisition of the District of Columbia, the Indian troubles in the Northwest to which General Wayne gave the quietus, the Genet imbroglio, the resignation of Jefferson as Secretary of State, and the Whiskey Rebellion. More interesting than messages and letters respecting matters of state is the large body of agricultural correspondence. An autographic map of Mt. Vernon accompanies a letter from Washington to Arthur Young. In the same letter, the President speaks of the stringent British regulation of the emigration of artisans, and of his having therefore refrained from "any overtures to mechanics," though in need of them. "A complete Black Smith" was one of his desiderata, as he intimates to Tobias Lear on the latter's going abroad; yet he would avoid any collision with the English law on the subject of contract-labor engagements, to which "severe penalties" were affixed. Time has so ordered it that we now, in the name of Protection, assist England to retain her skilled labor, in spite of her having removed every restraint upon emigration.

The latest issue of the Essex Institute Historical Collections (Nos. 2, 3, vol. 28) contains a large number of extracts made by Mr. Henry F. Waters from the registry of marriage licenses granted by the Bishop of London, 1598 to 1639. The same matter, plus an index, has also been printed under the title, 'Genealogical Gleanings in England,' by the Salem (Mass.) Press Publishing and Printing Co. The field had been gone over, but very hastily and imperfectly, by the late Col. Chester, whose extracts were published by the Harleian Society. Of these, 206 reappear in Mr. Waters's transcripts, but three-quarters of them enlarged and sometimes undoubtedly corrected; and Mr. Waters has added 293 entries almost wholly postdating the year 1626, whereas the majority of Col. Chester's antedate 1627. No one can peruse these often quaint extracts, with Mr. Waters's annotations, without recognizing their very great genealogical importance. They constantly relate to wills already abstracted for the *Register*, and enlarge the scope of the Washington, Harvard, and Roger Williams investigations. We meet with the marriage licenses of John Pemberton, a cousin of the founder of Providence; of his brother, Sidrach Williams, a merchant tailor and Turkey merchant; and probably of his younger brother Robert, who came to settle in Salem. Also, of John Sadler, the father of John Harvard's wife; of George, the probable father of Samuel Purchas of 'Purchas his Pilgrimage'; of Robert Kayne, one of the founders of the Ancient and Honorable Artillery Co. in Boston; of a couple vouched for by Thomas Lechford. But it would carry us too far to attempt a list of the eminent New England personal and family names illuminated by these records, to which Mr. Waters has brought his immense knowledge and his rare intuition and divination.

The University of Chicago has prepared its programme of economic study and publication under the direction of Prof. J. Laurence Laughlin. In addition to the regular courses, which are of the widest scope, a quarterly magazine will be published entitled the *Journal of Political Economy*, the first number of which will contain original articles by Émile Levasseur, Adolf Soetbeer, Max Wirth, Francis A. Walker, and George S. Coe. Furthermore, translations are promised of Gustav Cohn's 'Finanzwissenschaft' and Léon Say's Report on the Payment of the French War Indemnity; also reprints of Hamilton's Report on Manufactures and Gallatin's Memorial on Free Trade.

We have received the first number of *Arcadia*, a journal devoted to music, art, and literature, edited and published semi-monthly by Joseph Gould, at 180 St. James Street, Montreal. It is attractively printed, and its tone is serious and refined. Its correspondence is noticeably extensive.

Mr. David D. Wells contributes to the *Popular Science Monthly* for May, under the title, "Evolution in Folk-lore," a story once current among the slaves in British Guiana, and bearing a significant resemblance to Uncle Remus's "Little Boy and His Dogs." Mr. Wells gives the music of the song of the axes and the hunter's call to his dogs. The coincidence is one of many which connect South America with our Southern States in this matter of negro folk-lore.

A New York sheet from the great national atlas of the U. S. Geological Survey, dated March, 1892, brings into one view the metropolis; Brooklyn and Long Island as far east as Willett's Point and Far Rockaway; all of Staten Island; Westchester County as far east as New Rochelle and as far north as Hastings; and New Jersey east of Orange Mountain from Elizabeth to Paterson. In this tract of 35x26 miles, a third of which is water and marshland, is housed a population at least as large as that of the thirteen colonies of the Revolutionary epoch, or from three to four millions, with a capacity of increase to ten times that sum. The map is beautifully executed, like the rest of the series, with contour lines of twenty-foot interval.

Mr. William I. Fletcher, Librarian of Amherst College, will open his department of library economy in the Amherst Summer School on July 4, for one month. The course will take the form of daily practical lectures, and will cover the whole field of library work in actual practice, no previous knowledge of this work being required. For terms, etc., Mr. Fletcher should be addressed directly.

A correspondent writes to us from Maryland in answer to the question, Did the Virginians get the "soft-swearing" phrase "dog gone it" from the Scotch, and how?—"In studying the colonial history of Virginia, I learned that the Scotch had almost the entire monopoly of the tobacco trade, and monopolized the schools of that colony as teachers. As teachers and tradesmen they were controlling influences. Perhaps with this light the answer is not difficult to find."

—*Music*, the Chicago magazine edited and published by Mr. W. S. B. Mathews, enters on its second volume with the May number, which is a particularly interesting one. The magazine has fulfilled the hopes which it excited, and the two most serious faults noticeable in the early numbers—an exaggerated patriotism, and a disposition to admit articles in which big words are more abundant than facts or ideas—are gradually disappearing. In the near future the editor promises articles on "The Evolution of Musical Journalism," "The Wagner Cult and the Art of Singing," "The Genesis of the Modern Pianoforte" and "The Modern Organ," with portraits and other illustrations. The May number contains portraits of Messrs. W. H. Sherwood, Max Bendix, C. Sternberg, W. L. Tomlins, the Mason and Thomas quartet, the leading female violinists of America, and the leading professors of the Cincinnati College of Music. The opening article is a lament on the tendency of American composers to imitate German and French musicians, instead of cultivating a national American style, based on "the psalmody of the Puritans; the reels, hornpipes, and country dances of rural New England; the melodies of the negroes; the patriotic and other songs of the people, and even the music of the Indians, in which . . . there are interesting peculiarities." Mr. G. F. Root defends the old-fashioned prima donna and her common songs, while Mr. Sternberg wants a new and revised edition of Schumann, who certainly was negligent in minor details of notation. But Mr. Sternberg should have exonerated him from the reproach of incorrect tempo marks, for it has been shown that his metronome was faulty. The editor gives an interesting description of the methods by which Mr. Tomlins has achieved such wonderful results in the vocal training of children. One of the most readable articles bears the unpromising title of "An Old Programme Book." It throws much curious light on the state of taste at the time when Mr. Theodore Thomas, Mr. Mason, and others first undertook to give New Yorkers good chamber music. What a difference, for instance, between such concerts as Paderewski, Rummel, Pachmann, and D'Albert have given here this winter, and one of Thalberg's programmes (in 1857), which was devoted chiefly to transcriptions from "Massaniello," "I Puritani," "Sonnambula," and "Norma." Most of the good music which our pianists play to-day was in existence at that time, but the public did not care for it.

—In the 'Remains of Ancient Rome' (London: A. & C. Black; New York: Macmillan), Prof. Middleton has entirely recast a work which had already passed through two editions under a somewhat different title. The book now appears in two volumes, with more than three hundred additional pages. Its nature, however, is unchanged, the chief stress being laid, as before, upon architectural matters, with particular attention to methods of construction and to building materials. But a great deal is added everywhere in the way of details, the results of recent excavations are set forth, and there are many new illustrations. The colored plans have been revised up to date, and an entirely new one of the imperial *fora* is provided. Under bibliography it is good to see that the value of inscriptional sources is more fully recognized. The author has somewhat modified his view that the necropolis

discovered on the Esquiline was a proof of the preëxistence of a purely Etruscan city on the site of Rome, though apparently he does not adopt the theory of Alban origin. It is rather hard on Nero to make Tacitus authority for the story that the burning of Rome was due to a cut-and-dried scheme of the Emperor, when Tacitus is the only ancient author who speaks of the charge as at all doubtful. The new Secular Games inscription might have helped Prof. Middleton in what he has to say about the altar of *Roma quadrata*. The index to the book is very greatly enlarged and improved.

—The remarkable religious movement in Persia known as Babism has been described in a number of European books, notably by Comte de Gobineau and by Kazem-Beg. A welcome addition to our knowledge of the subject is presented by Mr. Edward G. Browne of the University of Cambridge in his work entitled 'The Episode of the Bab' (Macmillan). The first volume gives the Persian text, the second the English translation with notes. It is a narrative of the Babist movement by a member of the sect, and not only presents it from a sympathetic point of view, but gives details which were not before known. Mr. Browne himself also, by visits to the East, obtained a very special knowledge of the movement, and in his notes makes contributions to the history not only of Babism but of the modern Persian faith in general. The main peculiarity in the contents of the narrative is the "secondary importance accorded to the Bab, whose mission is throughout depicted as a mere preparation for the fuller and more perfect dispensation of Beha." Bab speaks of himself commonly as a forerunner; and since 1867 it is Beha who has been recognized by most of the Babis as "he whom God shall manifest," their supreme and sole chief and spiritual guide. Mr. Browne visited Beha in his home near Acre, and was accorded a most friendly reception. Another claimant to the title of chief, named Yahya, is at present in Cyprus; he has his adherents, but is comparatively of small importance. Babism is a thoroughly Persian product, an attempt to engraft Aryan mysticism and pantheism on the Koran. The hold which such religious systems have on Persians is shown by the stubborn resistance made by Babism to all attempts of the Government to crush it. At present it not only maintains itself, but, in spite of persecutions, seems to be spreading. Whether it will be a permanent faith, or will succumb to the tremendous power of the Islamic organization, remains to be seen.

—The story of England's literary debt to Holland has not yet been told, though the debt is a large one. It was on the Continent that printing was invented, and that publishing first became a business separate from that of the stationer; cheap books, and plenty of them, being the rule. A scholarly treatise on literary relations between England and Germany in the sixteenth century has been given by Prof. Herford in his fascinating volume (Cambridge, 1886), in which, also, is a chapter on the influence of the Dutch school of Latin drama upon England. Holland, however, not merely served as an intermediary between Germany and England, but had besides a pronounced independent and direct influence. This was shown both in the many text-books translated directly from the Dutch, in the transfer by Caxton of the Dutch forms of world-wide literature, etc., and in the manifold phases of industrial life. By those immigrations of Flemings and Hollanders which went on pretty steadily from the twelfth to the seventeenth century, both scholars and common people were stimulated. A fresh illustration for the coming historian of this movement is afforded in the hundred-page pamphlet just issued by Dr. Henri Logeman, of the University of Ghent (1892) and published as the fifth fasciculus of the Faculty of Philosophy and Letters. It contains the Dutch original, and a nearly contemporary translation into English, of a fifteenth-century Dutch "morality." This kind of literature was widely prevalent just before and about the time of the Reformation. The translation of "Elckerlijk" (Everyman), presumably by Peter Dorlandus, is given on the page opposite to the Dutch text, so that the two may be easily compared. There are also notes on both texts. The introductory chapters are in English, and give an account of the various texts in Dutch and English, the manner of editing, and the author and date. Prof. Logeman shows that the original (Elckerlijk—Everyman) composition was Dutch, that the first translation on the Continent was into Latin, thence into Low German, and thence into Dutch again, as "Homulus." The recovery of the long-lost original text was therefore an interesting episode in the history of dramatic, literary, and (possibly) ecclesiastical history. On the final page is a reproduction of an old woodcut from an Antwerp edition, representing Death striking down, with a dart, a man in the prime of life. The argument of the morality may be best stated in the words of a title-page of one of the twenty or so books published by John Skot (1521–1537): "Summoning of Every Man. Here begynneth a treatyse how the hye fader of heuen sendeth dethe to somon euery creature to come and gyue a counte of theyr lyues in this worlde and is in maner of a morall playe." The pamphlet is issued by the Librairie Clemm, Rue de la Calandre, 5.

—When the American Library Association was in California, it heard large stories of a scheme which was to revolutionize cataloguing. One enthusiastic admirer went so far as to declare that by its aid two cents would go as far as two dollars had previously gone in cataloguing. Its inventor, Mr. A. J. Rudolph, assistant in the San Francisco Public Library, did not claim so much, but even he, or his chief, Mr. J. V. Cheney, thought it would do away with "that cumbrous thing the card catalogue," solve the long-standing problem of a universal catalogue, insure not only economy but an accuracy and fulness hitherto impossible, and great speed, too, one assistant being able to do the work of five using the old methods. The invention itself was not shown, because patents had been applied for, and the visiting librarians went away full of curiosity slightly tinged with incredulity. The patents have been obtained and the secret is now out. The San Francisco *Chronicle* of May 7 contained an apparently authorized account with cuts. It turns out that the invention is not a new method of cataloguing at all, but a new way of holding the catalogue after it is made—in fact, only a novel slip-catalogue case. It will take just as long to prepare the catalogue as before; there is no saving in brain-work, no saving in investigation, no saving in pen-work or type-writing or printing, whichever method of record is adopted; there may be a saving in the time of putting the slips into their places, but this seems to us doubtful. But when we come to the use of the catalogue, there is a great gain, balanced by a great loss. The gain is this, that the titles are presented to the reader not one by one, as in a card-drawer, but a pageful at a time, rendering consultation very much easier and more comfortable. One cannot find the part of the catalogue one wishes to consult any quicker than in a properly labelled and guided card catalogue, but, the place once found, one has a hundred titles in view at once, instead of having to pick over a hundred cards. The contrivance is this: along each edge of a slat runs a thin metallic frame. Under these frames are inserted the ends of catalogue cards. The slats are hooked together and can be drawn over a drum, turned by a crank, in such a way that each in turn passes under a glass window at the top of the case, allowing the titles to be read. Three hundred and fifty slats fill a case and hold 26,000 titles.

—The drawback to this scheme is, that the person who consults it prevents all other persons from using it at the same time. As each machine holds 26,000 titles, his obstructiveness would be greater than with an old-fashioned eight-tier catalogue having fixed drawers, eight times as great as with a catalogue having, as all good catalogues have, movable drawers, and more than fifty times as great as with the Leyden card-book catalogue now coming into use at Harvard College Library. This evil can be lessened by putting fewer titles in a case, but then there must be more cases; and what will become of the superiority over "the cumbrous card catalogue"? This difficulty would be better removed in another way, which the inventor may have thought of, though it is not suggested by the *Chronicle*—by having several copies of the catalogue mounted in different cases, which can be done without serious expense if the titles are printed. But as there would have to be eight to make it equal to a card catalogue with movable drawers, and fifty to equalize it with a card-book catalogue, the element of room becomes an important consideration. And the cost of distributing new slips through the many cases should not be overlooked. To sum up, then, the invention is an important one and worthy of careful consideration, but it makes no improvement or saving in the preparation of a catalogue, the proper work of the cataloguer; it only affords a better method of presenting it to the public. It will provide an escape from the annoyance of consulting numerous printed supplements, but it does not do this any more than a card catalogue. Indeed, one is tempted to think that the enthusiasm which this device has excited at the San Francisco Library is due to its contrast with defective methods previously in use there. The sole unmistakable advantage is that it shows from twenty to eighty titles at once, instead of one title, which is a very great advantage.

BOYESEN'S GERMAN LITERATURE.

Essays on German Literature. By Hjalmar Hjorth Boyesen. Charles Scribner's Sons. 1892.

PROF. BOYESEN more than intimates that the literature of Germany does not hold its rightful place in our culture. Goethe in particular seems to him to be neglected. "The British public" is declared not to be, in a phrase of Auerbach, "Goethe-ripe"; and not only is "the British public" in this immature condition, but the case of the learned is as lamentable. "At the English universities," says Prof. Boyesen, "a Goethe student is as rare as a

white blackbird"; and he adds that "intelligent, sympathetic study of Goethe could scarcely flourish in that atmosphere of semi-ecclesiastical mediævalism which yet hangs, like an oppressive mist, over Oxford, and, in a lesser degree, over Cambridge." After a visit to the universities "one begins to understand," he thinks, "all the malignant witticisms which Heine made on the English, and the generally unfriendly tone toward them which pervades German literature."

The matter is not much bettered when he turns to the past and inquires into the scholarship and intelligence of the last generation. We recently remarked upon the fact that Carlyle's obligations to the Germans had not been sufficiently brought out. It would appear from Prof. Boyesen that Carlyle was less indebted than would naturally be supposed. Carlyle misunderstood Goethe, so runs the criticism here, and in his essays colored the genius he most unreservedly reverenced by importing into its expression his own very different personality. The very name of the "Olympian," which in its application to Goethe seems to summarize the Teutonic conception of him, indicates how far Carlyle erred in his estimate; and the various statements that Goethe was a sage who had come to faith through unbelief, that 'Wilhelm Meister' led to the "Cross of Christ," that Goethe bade man follow his "God-given best," and the like phrases used by Carlyle only show that the latter failed in interpreting "the calm and self-poised secularism" and "the sunny and cheerful paganism" of the German poet. Especially does Prof. Boyesen attack the passages in which Carlyle declared that Goethe was "impersonal" in his works, and that he had "the devoutness of a Fénelon" and "the gayety, the sarcasm, the shrewdness of a Voltaire." There was none of all this in him whom our author himself describes as "the serene old pagan in Weimar." If Carlyle misapprehended Goethe so radically, Abraham Hayward is to be named only to be bundled out of court forthwith as a nonentity. Arnold, though praised for his eulogy of Goethe as the "greatest modern man," is reproached for coming to the subject through the medium of the criticism of M. Scherer, who is dismissed as "this malignant and disgruntled Frenchman." Hutton's essay is received with many compliments, but nevertheless set down as "a judgment of incompatibility." Prof. J. S. Blackie is the one man, "outside of Germany," who has absorbed Goethe best, and he holds much the same view as our author in regard to the impenetrability of the English mind to any German luminary. In the matter of translations likewise, Prof. Boyesen finds a similarly unsatisfactory condition of affairs; he adjudges the prize of excellence to Bayard Taylor.

This survey supports the view that "the British public," and, without reservation, the English-speaking race, is not "Goethe-ripe." There is some reason, of course, for this persistent mood other than mere density and stupidity. Prof. Boyesen indicates so much when he guardedly remarks that "the spirit that animates Goethe is very far removed from that which dominates English literature, past and present"; and he strikes the nail on the head when he quotes Hutton's words to the effect that Goethe's writings repel readers with "English views of life and duty." Goethe adopted the principle of self-culture as the rule of life, and he applied it with exceeding thoroughness. It is asserted that he could have developed his genius in no other way, and that, therefore, though he exposed himself to the charge of an overweening and at times cruel egoism, nevertheless his selfishness is to be regarded as a necessary part of his discipline. Prof. Boyesen states the facts frankly enough: "He loved his friends so long as they had something to contribute to his life, and he dropped them or shook them off when he had exhausted their educational value. This may appear a harsh statement, but it is unquestionably true. It was especially in his relations to women that he exhibited this side of his nature." In another place Prof. Boyesen adds that the sacrifice of such relations "is hardly selfishness, but a duty which every sincere man owes to himself"; if a friend ceases to be useful, and therefore ceases to be loved, fidelity under such circumstances is but a "remnant of the old feudal ideal" of external allegiance to a sovereign. Goethe was therefore "selfish to the extent necessitated by his ideal of life." Prof. Boyesen states the case of love in as extreme a form as that of friendship. This is his special plea:

> "The common callow youth, who is but a mediocre specimen of his kind (and who, to show his quality, ought to be numbered, not named), rushes blindly into the first net that the female enchanter has spread for him, and in his maudlin felicity feels not the meshes of fate in which he is entangled. He marries, reproduces his imbecility in half-a-dozen specimens of his own kind, and struggles patiently with the troubles incident upon his blessed estate. Now, it may be that this man is wise. He could probably not fulfil any higher destiny. But the rare, the exceptional man, richly endowed, who sees the benevolent imposition which Nature practises upon him, and refuses to play into her hands—is he, after all, to be so ruthlessly condemned? . . . Even so wise a man as Emerson was of opinion that the poet, the scholar, the man who was bent upon accomplishing some high purpose, had better not give hostages to fortune. . . . He may, indeed, yet accomplish much; but he will fall short of the highest achievement attainable by a man of his gifts."

This is the way in which the matter presented itself to Goethe, says our author; marriage is ordained for the mass, but the "exceptional individual" should have a way of his own and subordinate his marital as well as his friendly instincts to the perfection of his own nature. What the issue is, under the most extenuating conditions, is told us as follows:

> "What an exquisite result has, for instance, the Sesenheim episode yielded! A sweet, commonplace young girl, with a *nez retroussé* and some poor rural accomplishments, becomes, by the magic of his art, a permanent character in literature, an immortal type of all that is most touching and beautiful in womanhood. I do not say that this was to Frederica personally a compensation. But just as Faust (in the Second Part) by deeds of repentance does penance to humanity for his sin against the individual Gretchen, so Goethe, in 'Götz von Berlichingen' and 'Clavigo,' made amends to the world for the wrong he had done Frederica."

Is not the substance of this view, to put it bluntly, that ordinarily the love of woman exists for the procreation of imbecilities in a state of marriage; but in the case of men of genius it exists for the procreation of plays and novels, and the writing of such plays and novels is a "penance" done for desertion? And is this anything more than the well-worn plea that there is a law for mankind, but that genius is lawless? The power with which Goethe realized the doctrine of the unity and the universality of law is one of the main points on which his greatness is argued; is it not singular, then, to find his apologists alleging an "exception," that figment of a different school of thought? To be without loyalty to friends and without honor towards women in affairs of the heart may be consistent with being "just so selfish as was necessitated by his ideal of life," but the rule cannot be of merely personal application to the great teacher only: he cannot live one way of life and teach another, except on the plea that he fails of the ideal through defect of will. Otherwise, he must be regarded as more or less than human—which is what being an "exception" means.

The remarkable thing to a foreigner in all this is that these Goethean traits are not German traits any more than was Goethe's lack of patriotism, and that, notwithstanding this fact, the Germans so readily forgive a man who was conspicuously deficient in their people's characteristic virtues. Prof. Boyesen holds in reserve, however, the just plea that has been glanced at above. He says that Goethe's moral development was short of his intellectual perception, that "Faust" involves the growth of self-culture into self-sacrifice, and that the issue of the whole thought, both in the drama and in 'Wilhelm Meister,' is the enthronement of the altruistic in place of the egoistic conception of duty. Goethe personally, in this matter, "had reached the moral stage of *Faust* in the third, or possibly the fourth, act of the Second Part of the drama, but he had not yet entered upon the fifth or final act." This is a very different thing from allowing that Goethe's life is capable of defence, and it has its natural outcome not in excuse, but in Prof. Boyesen's last word, that "we may find much to regret, some things, perhaps, to censure, but we shall find nothing which we may not understand." To understand, in spite of the French saying, is not necessarily to forgive, except under a system of fatalism. The question of the value of Goethe's work, artistic and moral, is largely dependent on the extent to which it incorporates his better intellectual as opposed to his lower moral self, and Prof. Boyesen deals in these essays mainly with the personal instead of the literary side. Certainly the Goethean conception of self-culture is not attractive either in rationality or in honor. But enough has been said to illustrate why Goethe, as man and poet, naturally repels readers "with English ideas of life and duty."

Prof. Boyesen devotes the first half of this volume to Goethe, and has treated the subject with admirable frankness, with a desire to put the case in the most presentable way, but without any mouthing eulogy of his hero; and if he does not always carry the reader along with him, he helps to clarify judgment by the plain statement given. In the remainder of the volume, which deals with the development of the German novel, he enters on a fresher field of criticism, and, applying there full knowledge and a mind of intelligence, he has made a most helpful contribution to our comprehension of the matter. He marks at once the dominant trait of German fiction, its philosophical bent. "A German author," he says, "rarely rests satisfied until he has equipped himself with a 'philosophy'—until he has acquired definite convictions concerning a thousand things which a Frenchman or an Englishman is willing to leave to the decision of those whom they may concern." And again: "The German critic looks for it as naturally as our own remains blind to it, and he judges the value of a novel, *ceteris paribus*, by its presence or absence, by the relevancy of its types, and by the consistency with which its philosophical purpose is carried out." Goethe struck the modern note fully in 'Wilhelm Meister,' which deals with the transformation from feudal to industrial conditions; and authors of our time have followed on the line laid down. Spielhagen de-

fines the novelist's end as "to give world-pictures—pictures of their nation and its aspirations during a certain period." He deals with national problems. Freytag similarly concerns himself with the industrial movement of his generation or with historical past conditions of the people. Auerbach, on the other hand, may fail of remembrance because he "was not a sufficiently pronounced representative of anything (unless it be Spinozism) to survive as the exponent of any particular school of thought or the chronicler of any particular phase of civilization." The same touchstone is applied to other modern authors; and consequently the value of their works as documents, to use the current phrase, on the historical and realistic side is made manifest, and their corresponding defect on the artistic side equally plain.

The study of the German Romantic school is taken up at the end, and the group of essays in which it is embodied is full of interest. The school is now remote enough to be integral, and it illustrates a period of culture and a race temperament in most instructive ways. The origin of it in the reaction of the German nature against the dry rationalism of the "Enlightenment" is clearly pointed out; its fortunes are followed in the picturesque and sorry figures of its disciples, and its literary and imaginative quality, its philosophy and its essential emptiness, are effectively rendered. Nor would the picture be complete without the glance at the society of the time which is also taken. Tieck, with his facile adaptability, his impressionable and unstable nature, is lightly drawn. Frederick Schlegel, with his Dorothea and his bumptiousness, is portrayed in bolder lines; Schleiermacher, with his Henriette, his spun-out æstheticism, his musing religious reveries, and in general the extraordinary dispersive energy of his genius for mild folly, is a unique figure; and besides there were Novalis, with his 'Blue Flower,' and Wackenroder, with his 'Heart Effusions of an Art-Loving Friar,' each destined to a curious influence over mystical temperaments. These were the main members of the group who parted on the one hand from Lessing and on the other from Goethe, and returned into mediævalism, to find the promised land in the dark ages. It was a singular phenomenon in the history of culture, and is worth attention. Prof. Boyesen has presented certain aspects of it and defined its course of development in a style neither too serious nor too contemptuous; but why he should confound the Romanticists of other lands with this erratic coterie, and in consequence question whether those who read Scott and Victor Hugo possess necessarily "an intellectual enjoyment which argues literary tastes," passes our comprehension. There is a lacuna somewhere in the argument here when he passes from historical criticism to the nature of romantic art in itself. Idealism stands or falls with the German school as little as it does with the Dey of Algiers.

GARDINER'S HISTORY OF THE GREAT CIVIL WAR.—II.

History of the Great Civil War, 1642-1649. By Samuel R. Gardiner. Vol. III., 1647-1649. Longmans, Green & Co. 1891.

WHAT is the judgment which we ought to form as to Cromwell's moral character? This is the problem with which Mr. Gardiner is, in his last volume, brought face to face. He deals with it as all who know his writings would expect, manfully and honestly. He weighs with judicial calmness the charges brought against the Puritan leader, and, with a decision not very usual with our author, he sums up for an acquittal in words every one of which deserves consideration:

"Here, as in so many other knotty matters, the thread leading out of the maze is to be found by a strict adherence to chronology. It was with no little surprise that I found one charge after another melt away as I was able to fix a date to the words or actions which had given rise to hostile comments. Thus tested, the Cromwell of Lilburne and Wildman shows himself the same man as the Cromwell of the letters and the *Clarke Papers*—no divinely inspired hero, indeed, or faultless monster, but a brave, honorable man, striving, according to his lights, to lead his countrymen into the paths of peace and godliness. The investigation which I have thus conducted is the more conclusive because, whilst it shows that Cromwell was not a hypocrite, it also shows that it was the most natural thing in the world that other men should think him to be one."

This verdict of acquittal will, to many readers, seem absolutely decisive. It is delivered by a judge in whom impartiality approaches almost to a weakness. It is the result of a searching inquiry by an investigator whose knowledge of his subject is unrivalled, and, as far as such a thing be possible, complete. It is a verdict, moreover, which claims to reconcile Cromwell's integrity of character with the honesty and intelligence of the enemies who denounced him as a hypocrite and a plotter. Every one ought, therefore, whatever be his opinion of the Protector, to acknowledge that a favorable view of Cromwell's character may henceforth be entertained by honest, sensible, and impartial critics. Nor does this concession go far enough: we must admit that the verdict delivered by Mr. Gardiner agrees with the results towards which historical research has, during the last fifty years, been leading the great body of intelligent historians. Facts and dates are, when once accurately ascertained, irrefutable; they tell their own tale. The old picture of Oliver as the plotter and the hypocrite, whose life was one long intrigue, has now become incredible. He must rank, and henceforth always will rank, with the great statesmen of the world. His care for the public good is manifest. His English patriotism is as patent as his religious fervor. His breadth of tolerance, if we judge him by the standard of his age, is at least as wonderful as his marvellous insight into the requirements of the moment. In Cromwell, as with all great English rulers, are found blended zeal for practical reform with the strongest conservative instincts. We can now see distinctly that the grand object of his policy was to save the liberties and especially the religious freedom of England, while preserving the peace and power of the country.

Each of the transactions, moreover, which cast a doubt on Cromwell's integrity, admits, if taken singly, of a favorable interpretation. The seizure of the King at Holmby House, the negotiations between the King and the Independents, Cromwell's attitude of reserve, his relation towards the army and the Parliament, his approval of Pride's Purge, the terrible energy with which he finally threw himself into carrying through the trial, condemnation, and execution of the King, are all matters which need explanation, and which can be explained without convicting Cromwell of, at any rate, more than the statecraft which public opinion holds venial in a statesman. If you are to place the Protector on the level, say, of Elizabeth, of Henry the Fourth, of Richelieu, of William the Third, of Cavour, or of Bismarck, there appears, at first sight, at any rate, no reason whatever for passing on him a severer judgment than you pass upon the other political leaders of mankind. Mr. Gardiner, we may suppose, would hold, and from his own point of view hold rightly, that his apology entitles Cromwell to a higher place in the veneration of mankind than can be claimed for most of the statesmen we have mentioned. It would be, for instance, not a happy description of even the best side of Henry the Fourth to say that the aim of his life was to lead his countrymen into the "paths of godliness."

Yet it is at this point that we come across the train of thought which suggests a doubt whether Mr. Gardiner, with all his knowledge and fairness, has spoken the last word upon the moral character of his hero. If you could place him side by side with, say, to take modern instances, Bismarck or Cavour, there would be little difficulty in pronouncing a favorable verdict on his career. He and they, as the world pretty well admits, have each served their own country with zeal and devotion. He and they have each, in the course of their career, committed acts more easily defensible by a politician than a moralist. He and they have, both in their silence and in their speech, violated at moments the rules which reverence for truth is held to impose upon men of honor and honesty in the transactions of private life. But the difficulty of the case is that Cromwell's apologists, no less than his assailants, feel instinctively that he cannot take his stand on the level of great statesmen. He either rises above or falls below Bismarck or Cavour. To understand either his position or the position of his critics we must never forget that he was a religious enthusiast and the leader of a religious party. At every stage of his career his religious convictions become apparent. No one now supposes them to have been feigned; no one thinks of Cromwell's fervor as hypocrisy; no one believes, or can believe, that he was a man of the world acting the part of a saint. But as one reads his career, narrated as it is by so lenient a judge as Mr. Gardiner, it is difficult not to come to the conclusion that the mixture of genuine religious fervor with keen worldly insight was, in the case of Cromwell, as in the case of most leaders of the religious world, unfavorable to that directness and general honesty of character which sometimes distinguishes statesmen who, at a pinch, have not scrupled to tell a good downright lie.

"No one rises so high as he who knows not whither he is going." "In these words," writes Mr. Gardiner, "Cromwell revealed the secret of his life—the refusal to adopt any definitely premeditated plan of action, and the resolution to treat each occurrence as it arose in the light vouchsafed to him when the need of action was felt." In these words of Cromwell's, and in Mr. Gardiner's comment thereon, is, we will add, revealed the secret not only of Cromwell's life, but of the ineradicable and just suspicion with which Englishmen of every class came by degrees to regard the Protector. For they are the words not, indeed, of a plotter like Louis Napoleon, whose career was one long conspiracy, but of a man of profound ambition, who believed in Providence, but also believed that Providence intended him to rise to greatness. The refusal, for example, to adopt any premeditated plan of action was, looked at from its good side, the determination not to involve himself in any far-fetched scheme of policy. But, looked at from its bad side, it meant the intention to act

for himself without regard to the obligations which bound him to friends and colleagues. The resolution, again, "to treat each occurrence as it arose in the light vouchsafed to him when the need of action was felt," is, from one point of view, nothing better than the determination to pursue with the utmost vigor any course of action which at the moment promised success, and to treat the course of events and the turn of opinion as the indications of the will of God. To critics, indeed, of the eighteenth century Cromwell's appeal to Providence, his prayers, his tears, his belief that success in battle was the visible sign of divine approval, appeared to be proofs of the commonest hypocrisy. Our present firm conviction that he was no hypocrite has led gradually to the idea that his habit of mingling religious fervor with statecraft was no evil. But to a man of sound judgment who meditates on the facts detailed in Mr. Gardiner's history, it will, however, soon become apparent that fanaticism, even when perfectly sincere, tends, when blended with statecraft, to produce not hypocrisy, but a subtle form of dishonesty. The worldly statesman for example, who held that Charles ought to be put to death because his execution was required for the safety of the nation, and the Puritan soldier who saw in the death of the King the punishment of the man of blood and a sacrifice demanded by the justice of heaven, each occupied a perfectly clear and honest position; but Cromwell, who at one moment, from considerations of statesmanship, tried hard to come to terms with the King, at another, after praying and fasting with levellers and zealots, convinced himself that the punishment of the King was a religious duty, and who at last, when the dread deed was done, fell back in his own mind—if the dramatic tale told with half belief by Mr. Gardiner be true—on the plea of "cruel necessity," occupied a position compatible neither with the brutal honesty of unscrupulous statesmanship nor with the guileless sincerity of true religion.

No doubt each critical event of Cromwell's career during the years 1647–1649 as told in Mr. Gardiner's narrative admits, when taken alone, of explanation or apology. But, when looked at as a whole, these events suggest that Cromwell, who, as a matter of fact, excited the distrust of one body of friends after another, was distrusted for the simple reason that he was untrustworthy. It is possible that no blame is to be attached to him for the characteristic misunderstanding between himself and Joyce as to the arrest of the King. It is possible that Cromwell wished to deal fairly both with the Parliament and with the army. It is possible, though to us scarcely probable, that Cromwell, who approved of Pride's Purge when the *coup d'état* had been carried out, was not (morally at least) as responsible for the real destruction of the authority of Parliament as was Napoleon for the *coup d'état* of the 18th Brumaire. It is possible that Cromwell when, at the very end of 1648, he tried to save Charles from death, and when, not a month later, he was more responsible than any other single man in the country for the execution of the King, followed a course which he sincerely believed to be compatible with the demands both of honesty and of justice. Each of these things is a possibility; but look at them altogether, and it becomes certain that Cromwell's action was influenced by a strange mixture of political unscrupulousness with religious fanaticism.

One of the great merits of Mr. Gardiner's mode of treating history is that the accuracy and sincerity of his narrative enable us to correct, if necessary, the leniency of his too charitable judgments; and in the case of Cromwell we are all but convinced by the very facts which Mr. Gardiner has laid before the world for consideration, that his keen perception of the grand side of Cromwell's character, combined with a morbid dislike to the condemnation of men whose acts admit of even possible excuse, has led him to underrate the real strength of the accusations brought against the Puritan leader. The absolute acquittal of Cromwell would be, it must be remembered, the absolute condemnation of Cromwell's contemporaries. Is it conceivable that the general distrust excited by his character and career should have been unfounded? On Mr. Gardiner's own showing, we answer this question with a distinct negative. Of Cromwell's genius and public spirit we have no doubt whatever, but we equally doubt whether the men who stood nearest to him felt, or could feel, that either his genius or his public spirit enabled them to place in him the confidence which is won not by genius but by trustworthiness. But with books no less than with men one must look for the end. Mr. Gardiner has already by his judicial narrative modified the opinions of many among his readers. The completion of his great work may bring us over to his absolute belief in the integrity of Cromwell.

SWITZERLAND.

Die Bundesverfassungen der schweizerischen Eidgenossenschaft. Von Prof. Dr. C. Hilty. Berne. 1891. 8vo, 480 pp. (Also, translated into French and Italian.)

Die Anfänge der schweizerischen Eidgenossenschaft. Von Prof. Dr. W. Oechsli. Berne. 1891. 8vo, 383+327 pp. (Also, translated into French.)

Schweizerbund in Schweizermund: Gründung und Aufbau der Eidgenossenschaft, dargestellt in sechsundzwanzig Hauptmundarten. Zurich. 1891. 12mo, 160 pp.

The Swiss Republic. By Boyd Winchester. Philadelphia: Lippincott. 1891. 8vo, 487 pp.

Politisches Jahrbuch der schweizerischen Eidgenossenschaft. Herausgegeben von Prof. Dr. C. Hilty. Band 6. Berne. 1891.

THE celebration of the six hundredth anniversary of the Swiss Confederation naturally gave rise to a vast amount of literature of a festal character, most of which will disappear with the passing of the hour. Two volumes, however, which appeared under the auspices of the Federal Government, will remain as worthy monuments of the occasion. These are the constitutional history by Prof. Hilty, and the study of origins by Prof. Oechsli. The former may be called the popular and the latter the scientific contribution of the Government to the centennial literature, for both were printed at State expense and sold at very low prices; but the term popular must not be applied in a derogatory sense, as though excluding a scientific treatment. Although intended for a wider circle of readers, the constitutional history of the period has not been vulgarized, but is exhibited in rapid movement by the hand of a master.

The first century of the Confederation is much easier to describe than the second, owing to the fact that contemporary writers were so much occupied with the foreign wars and external relations of the Swiss that they had no time to record institutions and forms of government. Prof. Hilty pauses here to make some more or less melancholy reflections: "This ignorance regarding our fathers is explained by the fact, established by a recent historian, that writers do not begin to recount the life of States till the moment of decline." This doctrine, attributed to Savigny, continues to affect the author in his *Politisches Jahrbuch*, where, in reviewing the literature of constitutional history of the year, he is pained at the amount of attention Switzerland is receiving from foreign observers. He fears that it indicates a state of decline; that the climax has been reached, and that the foreigner is but the witness of an approaching fall. Governments should be like women—the less said about them the better.

This is not the place to dispute with Savigny, but in general it may be open to question whether a given period is really one of decline, or only apparently so; and as for the foreign observer, it may be suggested that, in the case of Tacitus, the decline was on the other side, and this going abroad for political research may be evidence of uneasiness and discontent at home. Mr. Hilty now and then falls into an oratorical-hortatory vein, and there are certain marks of haste in the composition of the book, but on the whole it is an excellent work, and furnishes a rapid and complete survey of the constitutional growth of Switzerland in a pleasing form. Facsimiles of the oldest Federal Compact (1291) and of the League of 1315 are attached.

Prof. Oechsli has carefully gone over the beginnings of Swiss history anew, and given us the results of the researches of expert investigators, among whom he himself stands in the first rank. He traces step by step the colonization of the Forest Cantons, the condition of landed property at the time of the first Confederation, the feudal relations in each district, and the jurisdiction of overlords and the empire in the matter of general government. As Bluntschli has well said in the same connection, it is not a matter of indifference to know the motives of the people in forming this league. Simple rebellion does not command respect, even if successful, when not justified by motives of self-preservation and the protection of acquired rights. But we have here complete evidence of the established customary rights, touching both property and jurisdiction, which were placed in jeopardy by the surrounding Powers and principalities. Other privileges were obtained by purchase or as reward for military support, and all were tenaciously defended. The Swiss exhibited in the early periods of their history a marvellous appreciation of the weakness of their adversaries, and knew to a moment when to strike for and when to buy their advantage.

Prof. Oechsli does not go beyond the League of 1315, which followed the battle of Morgarten. The Confederation becomes at that point a recognized certainty and the period of origins complete. The immense number of details required to establish the conditions of each district and class of people precludes the possibility of making such a work attractive to the popular reader, but as an example of the scientific use of historical materials the work is excellent, and will stand as a worthy monument of the sixth centennial. The author does not ask the reader to take his statements on his own authority, but in a second part devotes more than three hundred pages to a register of citations and quotations from contemporary sources touching upon the twenty-five years of which he treats. To the same facsimiles given with Prof. Hilty's book is added a large colored map of the original cantons, prepared by Prof. Oechsli himself.

Mr. Winchester will be pained to note how little is said in these two works about William Tell. In the first-mentioned the tradition is merely given a passing glance, while in the second, the scientist, dealing with documents, has omitted that hero altogether. Mr. Winchester, however, devotes a long chapter to the narration of the story as usually known, and roundly denounces those who do not believe it.

"No one can visit the lake, the rock, the fountains, the chapel, read the story painted on the wall and tower, hear the local traditions in every man's mouth, witness the annual festivals, study the history of Switzerland, and consider the character of the people, then think of Tell as a myth, more than he would say that Switzerland and all its heroic people have been a fable," etc.

Did not Goethe and Sir James Mackintosh believe it to be true? Does not the museum at Zurich contain the veritable cross-bow of Tell, and did not the Canton of Uri, in 1760, publicly burn the book of a clergyman, and very nearly the clergyman himself, for calling the deed of Tell a Danish fable?

It is unfortunate that this essay should have been put into the book, as it has no particular connection with its surroundings, and needlessly throws suspicion upon the other observations of the author. Concerning the modern institutions of Switzerland, Mr. Winchester speaks with the authority of a person who has lived among the people, and his book is a mine of valuable information. He disclaims any attempt to treat his subject historically, and when he does occasionally refer back to origins, his judgment is not always good. The style now and then reminds one too much of the note-book, but on the whole the work is interesting. Many details on education, industry, commerce, and peasant life add to what others have written of the subject; a pleasant chapter on Bern describes the points of interest and daily scenes of that capital, and the treatment of contemporary political questions is luminous and instructive.

An interesting illustration of the diversity of language existing in Switzerland is the little book 'Schweizerbund im Schweizermund.' It is a collection of stories about the foundation of the Confederation, written in the dialects of twenty-six different localities by as many authors. Eighteen of these are varieties of German, the others being divided between French, Italian, and Romansch. The tales embody more or less the traditions of each district as to its particular part in the great drama.

Hilty's *Politisches Jahrbuch* is becoming more and more indispensable to the student of Swiss affairs. It has now entered upon its sixth year, and contains, besides valuable essays and documents upon various topics touching the history of Switzerland, a complete review of the political, legal, and social movements of the year. This "Jahresbericht" is a well-ordered report, taking up external and internal federal affairs in succession, gives a complete view of cantonal legislation of a public character, and reviews the important political literature. The question of State-rights has so recently been in the acute stage that the essay by the editor on Federal Intervention, treating the subject historically, will have more than a local interest.

Geography of Africa South of the Zambesi. By the Rev. William P. Gresswell. With three maps. Oxford: Clarendon Press; New York: Macmillan. 1892. Pp. xii., 400. 8vo.

THE range of this book is wider than the title would seem to imply. Intended principally for use in schools and colleges, it gives in a condensed but readable form information on nearly every subject connected with South Africa on which an intelligent emigrant would need instruction. Naturally, the larger portion of the volume is devoted to an account of the general physical features of the country, the climate, the characteristics of the soil, its productions and resources, together with particular descriptions of the different political divisions and the more important towns. But there is also enough of history to give the student an intelligent idea of the relation of present conditions to those which preceded, with chapters upon the various Governments, the tenure of land, the industries, commerce, education, religion, and the native races. Although official documents and other sources are largely drawn upon for facts and statistics, this work is not a mere compilation. Much of it is the result of knowledge gained during the writer's seven years' residence in the country. A personal element, accordingly, is to be observed throughout, which lends a certain literary quality to the work, not often to be found in purely educational manuals.

The book gives also a general impression of trustworthiness. Prepared under the auspices of the Royal Colonial Institute, it is evidently not written in the interest of any emigration scheme. It aims to be, and doubtless is, a truthful picture of South Africa as it was in 1891. The disadvantages under which the country labors are set forth even more distinctly than are the inducements which it offers to the colonist. These are mainly the trying climate, the need of artificial irrigation for much of the arable land, the few and bad harbors, the want of easy communication between the coast and the interior, the inertia of the Boer, and the rapid increase of the natives. Agriculture is nearly at a standstill, the area under cultivation not having increased practically since 1875. This is partly due to the character of the soil, which generally seems to be better adapted for grazing than for cultivation. The principal reason, however, is that most of the land, in the Cape Colony at least, is tenaciously held by the Boers, who raise crops just large enough to supply their own simple wants, and allow the rest of their arable land to lie fallow. The natural consequence of this lack of energy and public spirit is that the Cape enjoys the unenviable distinction of "eating the dearest loaf in the world." There are many interesting notices of this singular people, the descendants of the original Dutch settlers with a large intermixture of French Huguenots. Here is a curious picture of one of their villages on occasion of the tri-monthly celebration of the Naacht-Maal, or Lord's Supper.

"Huge ox-wagons are drawn up in the public 'outspan' or square, the oxen and horses are turned out to feed on the adjoining commons, and the owners buy their market supplies for the next three months. Public auctions are held, meetings are advertised, and the storesman, as well as the strolling packman or German Jew, have a busy and profitable time. The banks advance money on mortgage, the client consults his local lawyer on some legal point, confirmations are held, marriages are celebrated, and the stoeps and verandas of these villages are full for a time of a busy gossiping crowd, gathered from almost incredible distances."

The most serious problem which the Africander has to solve is that of the natives. Under the Pax Britannica the increase in their numbers has been very great. In Natal and two small districts to the south, for instance, a native population of less than 10,000 in 1839 had grown in 1889 to nearly a million. "The great uninhabited wastes," in the East Coast region, "that every traveller of half a century ago described, are now teeming with human life." This "alarming" increase, it should be said, is apparently confined to the Bantû or Kaffir race, which Mr. Gresswell regards as of a higher type than the Red Indians or Maories, and, possibly, the Hindu and Malay races. In many parts of the country they form a very valuable class of the population, showing a remarkable energy and industry. In 1869, says an eye witness (a former Cape Minister), the Basutos "were starving savages, and there was not a trader's shop in the territory. In 1879, ten years later, the country was filled with traders, several of whom had stocks of manufactured goods from £20,000 to £50,000 in value, while clothes, saddles, ploughs, and other articles of European manufacture found ready sale." The best cultivated tract in Cape Colony is the Herschel division, inhabited by some 22,000 Kaffirs of a peculiarly peaceable and law-abiding character. "Very few police are required to keep this district in order. In 1880 there were only four native constables in it. There are no large towns or villages containing European inhabitants, only a sprinkling of traders and storekeepers—230 in all. As an example of what may be done by the natives, left almost entirely to themselves, but with the light reins of European jurisdiction held over them, Herschel is extremely interesting." It is not impossible that the future of a great part of Southern and Central Africa may lie in the hands of this interesting race.

Mr. Gresswell has chapters on Mashonaland and the Dutch republics, which contain nothing especially noteworthy. A series of thirty-two appendices gives the latest information on many of the topics treated in the text, as well as the Anglo-Portuguese Treaty and the charter of the British South African Company. There are three good maps and an excellent index.

The Siege of Lucknow: A Diary. By the Honorable Lady Inglis. London: James R. Osgood, McIlvaine & Co; New York: Charles Scribner's Sons.

THE English will never be tired, whatever other people may be, of hearing of the Siege of Lucknow. That defence of merely nominal lines made up of frail buildings and a few spadesful of earth against overwhelming numbers by a handful of men encumbered with a crowd of women and children, and at last short of provisions, was the most striking episode of the great mutiny, and it is not wonderful that legends such as that of the Highland bagpipes have been generated by the heroism of the garrison and the rapture of the relief. Lady Inglis is the widow of the officer who succeeded to the command on the death of Sir Henry Lawrence, and her Diary is supplemented by the notes of Captain Birch, Sir Henry's aide-de-camp. The interesting part of the volume, however, is the Diary itself, which gives a woman's experiences and feelings during months of mortal peril. It is remarkably calm, and so seems to have been the demeanor of the besieged, even of the women and children; though, as Cawnpore had shown, the most horrible fate, in case of the failure of their feeble defences, awaited them. The regular routine of life is kept up, with the ordinary meals, or the semblance of them; tea-parties take place; visits are exchanged. There is reading aloud, or an attempt at it. The religious services are maintained and the Communion is adminis-

tered. The children's plays and amusements harmonize with what is going on: they would make balls of earth, and, throwing them against the walls, say they were shells bursting. They slept soundly in the midst of the heaviest cannonading, and never appeared frightened.

In this coolness and freedom from fluster we have probably the key to the escape of the whole Anglo-Indian community and of the empire itself from the extremity of peril into which, partly by imprudence and mismanagement, they had been brought. It cannot be said that the women add morally to the embarrassments of the garrison; yet they are not unconscious of their danger. They debate the question whether, in case of the enemy's getting in, self-destruction would be justifiable. Some of them had poison ready for that purpose. Lady Inglis held that it would not be right, and that, "if the trial came, our God who sent it would put it into our hearts how to act." The fidelity of the native soldiers who formed a part of the little garrison is also very worthy of note. When at last some of them deserted, it was because they could no longer endure the deprivation of opium. Prohibitionists will be pleased to hear that the giving out of rum was followed by an improvement of conduct among the British soldiers.

The Diary was worth printing even after so long an interval. It sheds a ray of comparatively pleasant light on a dark and dreadful page of history.

Diary of George Mifflin Dallas. Edited by Susan Dallas. Philadelphia: J. B. Lippincott Co.

Miss Dallas has added to the diary of her father at the Court of Russia, which was published recently in the *Century*, his diary at the Court of St. James, and has introduced the volume by a prefatory note from the hand of one of the author's friends, Mr. M. Russell Thayer. The attractive illustrations which adorned the magazine publication have, unfortunately, been omitted, leaving only a portrait of Mr. Dallas for the frontispiece. While there is a certain interest attached to the pictures of diplomatic life sketched by the author, in what are, for America, fairly remote historical times, it cannot be conceded that his Diary is one of the epoch-making kind, which will be handed down to posterity because of the comprehensive view that it affords of people and things. If we consider the divisions of the Diary separately, it will be seen that this proceeds from different causes, which, however, operate with similar effect. Of both sections one objection holds good—the entries are too fragmentary to permit of the reader combining them into a comprehensible history, even of the brief periods which they cover. The author's knowledge of people, their connections and relations, is too imperfect to be illuminating to the reader who is in search of information; and his descriptions of festivals, court ceremonies, and the like are incomplete, so far as the mere seeker of amusement's aims are concerned, even when they are not also lacking in adequate understanding of the significance of the occasion.

This is notably the case with his account of Russian matters. Passing over the inaccuracies of names and places, phonetically spelled, which might have been avoided by competent revision, we find that he is careless in observation and in inquiring the meaning of what he sees. For example, he writes: "The river Neva rose to-day, under the influence of a strong wind from the southeast, three feet higher than I have yet noticed it to be." And again: "A strong northwesterly wind has brought down the ice from Lake Ladoga." Both these statements involve physical impossibilities, since the river can rise only under the influence of a westerly or southwesterly wind, and the ice must be driven out by a breeze in which east figures to a marked degree. On April 7, 1838, Mr. Dallas notes down this item:

"The day is kept by the Russians in a peculiar manner, and apparently for the especial benefit of children. The Gostenadvor [meaning the *Gostinny Dvor*] has been surrounded by booths for vending toys and nicknackeries during the last three days, and the throng there to-day was great. Among other things bought and sold are switches of a shrub I could not recognize, seemingly just vegetating, and which are said to be accompanied in their use by good luck to the person flagellated."

The explanation of this mysterious note is interesting, and might easily have been discovered by a little investigation. The nicknackeries are sold for cheap Easter "eggs," or presents, ten days before Easter; the switches of the unknown shrub are the pussy willows, which are used as palms on Palm Sunday, immediately following the popular fair. The flagellation is merely a supplementary superstition. The next entry is equally baffling, though a few words would have informed the reader that the Court festival described under date of April 16 is the famous Easter service at the palace. These are only a few of the many instances in which the writer does not understand what he is describing, as was natural, considering his inexperience. Nevertheless, the narratives of splendid entertainments at the Russian capital, at a time when thirty-one days from New York was phenomenally swift travelling for letters, are very interesting to those who are not sufficiently posted to notice the omissions.

The English part of the diary, covering three and one-half years, must necessarily suffer by comparison with the published diaries of noted Englishmen who were familiar, for a lifetime, with the social and political questions which Mr. Dallas handles as a stranger. Occasionally we find an entertaining anecdote, such as the first use made of his official seal by a new Lord Chancellor, to secure his own retiring pension in case of accidents, and the like. The incident with the negro at the International Statistical Congress, on July 16, 1860, Mr. Dallas's forecasts and comments on the exciting events in America between 1857 and 1861, and the glimpse which we get of Motley, the historian, furnish the most important items of interest in this section of the work.

A little competent proof-reading would have freed the book from many curious typographical errors, as well as from the peculiarities in the Russian words which sometimes render them almost unrecognizable. The diaries would not be accepted, by either Englishmen or Russians, as additions to their knowledge or literature, which is the crucial test for such productions. We may therefore consign the book to the list of temporarily interesting works, and decline to enter into further discussion of the reasons why it cannot be justly regarded as a contribution to standard history.

Old Touraine: The Life and History of the Famous Châteaux of France. By Theodore Andrea Cook, B.A., sometime scholar of Wadham College, Oxford. 2 vols. Imported by Charles Scribner's Sons.

In Mr. Cook's discourse the thread is architectural, but the interest is historical. The book is in plan an itinerary of the great châteaux that line the Loire from Blois to Saumur —Chambord, Blois, Amboise, Chenonceaux, Loches, Langeais, and the rest—but in reality it is much more and better than that. Most of the principal personages and events of French history in the long period from the first Plantagenets to Henry IV. are shown more or less summarily, and, when the stage admits it, are well displayed. There are effective pictures or glimpses of Louis XI. and Louis XII., Francis I., Louise of Savoy, and Catherine de Médecis, the two Marguerites of Navarre, Henry IV., Coligny, Bourbon, Montmorency, the Dukes of Guise, and a host of lesser personages; of festivities, conspiracies, assassinations; and now and then some imposing foreigner, like Gian Galeoazzo Visconti, or Ludovico Sforza, or Leonardo da Vinci, crosses the stage. It is surprising, when we see it told together, how much that was important to France and to the world went on within this narrow district and these royal châteaux. If we were to complain, it would be that Mr. Cook's stage is too crowded. We get a kaleidoscopic succession of people and things, and an affluence of detail which all his care cannot save from confusion. The scene shifts from château to château in such historical sequence as is possible, but the order of history is not geographical; the characters are always coming and going though they are dismissed, turning up in one scene after they have died in another. This does no harm to the student who knows them all and where they belong, but is an embarrassment to the general reader, who would carry away a clearer impression if much of the detail were left out, though the book might be incomplete as an itinerary. The author adds something to the difficulty at times by the sort of indirect allusiveness that used to make Mr. Freeman's enemies blaspheme. The trouble with the allusive style is that no one remembers everything, and what one remembers another forgets, or perhaps has not read. Allusion saves space, and, if judiciously restrained, is a stimulus to the reader; but to the writer it is an indulgence that calls for self-control.

The architectural descriptions are slight and secondary, based on few and well-known authorities. The book-making is excellent; the half-tone illustrations of the buildings and the reproductions of Miss (or Mrs. ?) Cook's capital drawings are good and well chosen, and the author has done well to repeat the map and index at the end of each volume.

Record of Scientific Progress for the Year 1891. By Robert Grimshaw. Cassell Co.

This volume is mainly taken up with engineering matter of no special interest from a scientific point of view; and even here the record of progress is a miserably careless one. The only sciences, properly so called, which receive any notice at all, are physics and astronomy. Now it so happens that the year 1891 was a great year for astronomers, and more general attention was directed towards this science than towards any other. In the first place, there was the discovery by Mr. S. C. Chandler of the 427-day period in the variation of the latitude—a fact which attracted the attention of all scientific men, and which will lead to the more accurate ascertainment of a good many other facts. Second, there were observations relating to the question whether the planet Venus has a period of rotation exceeding 200 days, or of about one day, as previously held. Third, there were the extraor-

dinary discoveries in the history of Babylonian astronomy by Fathers Epping and Strassmaier. There were, besides, important discoveries in stellar photography. Will it be believed that this pretended 'Record of Scientific Progress' does not mention one of these things? Dr. Grimshaw says: "There seems to have been during 1891 but little astronomical matter worthy of special chronicle." On the contrary, there is probably no scientific man who has not remarked the exceptionally great general interest attaching to the astronomical work of 1891.

BOOKS OF THE WEEK.

Abbott, Rev. Lyman. The Evolution of Christianity. Boston: Houghton, Mifflin & Co. $1.25.
Bell, Clark. Medico-Legal Studies. Vol. 2. The Author.
Berg, Louis de C. Safe Building. Vol. 2. Boston: Ticknor & Co. $5.

"*The weary brain requires some nerve sustaining element as food.*"—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physcians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y. *F. Crosby Co.*

Exhaustion.

HORSFORD'S
ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

A Guide to Homœopathic Practice
Designed for the use of families and private individuals. By J. D. JOHNSON, M.D. 494 pages. 8vo. Cloth, $2.00.
A most reliable and useful book to have in the house.

Business established in 1835.

Sciatica and lumbago are usually relieved by the use of BUFFALO LITHIA WATER.—*Advt.*

The Nation.

NEW YORK, THURSDAY, MAY 26, 1892.

The Week.

THE Democratic conventions of May 18 swept away the last traces of the forlorn Hill movement. We doubt if even Hill himself is able to regard his candidacy as being any longer alive. Even Georgia, where there has been for two years a systematic and persistent effort on foot to work up sentiment in his favor, elected a solid Cleveland delegation to Chicago. The editor of the Atlanta *Constitution*, the most devoted Hill organ that the country has had, was defeated as a delegate, and the editor of the Atlanta *Journal*, a Cleveland paper which has grown to power and prosperity in the State by opposing the Hill organ's course, was elected in preference. Georgia was the objective point of Hill's Southern tour, and if he has not a following there, he has none in any part of the country. The California Democratic Convention, which showed signs of a Hill sentiment on the 17th, developed an irresistible Cleveland sentiment the next day and selected a Cleveland delegation. The South Carolina and North Carolina Conventions were controlled by the Farmers' Alliance, and the former declared against Cleveland because he is in favor of sound finance and honest money. They are not for Hill, whatever else they may favor, and can be depended upon to give the electoral votes of their States to the Democratic candidate, no matter who he may be. So far as they denounce Cleveland as the opponent of the demands of the Farmers' Alliance, they strengthen him before the country and increase the prospects for his nomination. Eight of the North Carolina delegates are for Cleveland, and it is probable that all of them will vote for him in the Convention. Indeed, his nomination is now as much of a foregone conclusion as any future political event can be. He not only has in his favor an overwhelming majority of all delegates thus far chosen, but he is the only candidate who has any organized following whatever, or whose candidacy is a positive force in the situation.

The movement to thrust Harrison aside and nominate Blaine at Minneapolis, week after next, appears to be stronger to-day than ever before. It has the active and open support of Chairman Clarkson of the Republican National Committee, Quay, Platt, and a host of minor bosses in their respective States. It plays upon the enthusiasm for Blaine which was manifested in every Republican State convention, including even those which endorsed Harrison most loudly. It profits by the extraordinary friendlessness of Harrison, and the singular lack of admiration for the man or for his Administration among the delegates who nominally support him. Finally, it enlists the warmest efforts of the host of disappointed office-seekers—an army which must grow larger and more vindictive every four years so long as the spoils system is maintained. All this, it must be admitted, makes a combination of forces the strength of which it would be foolish to underestimate.

It would be equally foolish, however, to jump to the conclusion that Blaine will be nominated. National conventions are apt to be impressionable gatherings, and one who remembers such an incident as the nomination of Horatio Seymour in 1868 realizes that anything is possible to a body which sometimes narrowly escapes being a mob, surrounded and excited by a still larger mob. But, as a rule, there is a sober second thought, even in a national convention of nearly a thousand men, which makes itself felt. There are two objections to the scheme of nominating Blaine under the existing conditions, either of which ought to prove fatal. One is the fact that he is physically disqualified alike for a campaign and for an election—so obviously and notoriously unfit to run, in point of health, that it seems preposterous that any one should suggest the idea. A party which should nominate for President a broken-down old man, who has been unable to discharge the duties of a Cabinet officer half of the time during the last year, would be fearfully handicapped. This would be true if the invalid had no other disqualification than that of his poor health. But there is a second objection to Blaine's acceptance of the nomination which is no less serious. It would involve charges of disingenuousness, double-dealing, and treachery, which could not be met, and which would cost him many thousands of votes. In short, the nomination of Blaine would be simple madness; and while Clarkson, Quay, Platt & Co. might be capable of it, we shall not believe that a national convention of 900 men from all parts of the United States will perpetrate so gross a blunder until we see it actually done.

The Republican Senate has passed the River and Harbor Bill in substantially the same form as it was sent over by the Democratic House. Both parties thus share the blame for the reckless extravagance involved. A Republican President must soon decide whether he will also become responsible for what, considering the condition of the Treasury, is a gross outrage upon the taxpayers. The bill ought to be vetoed as a matter of principle, and this is a case where policy dictates the same course that principle demands.

Senator Cockrell of Missouri talked to some purpose last week when he reviewed the appropriations of money made or to be made by the present Congress, in comparison with those made by the last Congress. The first point made by him was that the present Congress cannot repeal the laws of the last Congress or of any former Congress; nor can it fail to appropriate the money to carry out those laws. For example, the pension legislation of the last Congress has carried the appropriation for that particular purpose from $123,000,000 to $142,000,000. Here is an increase of $19,000,000. Besides this the steamship subsidies have to be paid now for the first time, and an appropriation will be needed for the French spoliation claims. The sugar bounties must be paid, of course, as long as the bounty law continues. This item, however, was embraced in the appropriations of the last Congress. The real Billion-Dollar Congress, in short, is the one which made a billion dollars necessary to meet the public expenditures.

It is difficult to see how Congress can avoid passing the bill introduced by Senator Chandler of New Hampshire to authorize Mr. Austin Corbin and his associates to buy or procure a fleet of fast ocean steamships, and have them put under the American flag on the same conditions as those granted to the Inman steamers *City of Paris* and *City of New York*. Mr. Chandler's bill provides that the vessels so acquired shall be of not less than 7,000 tons, and capable of a speed of nineteen knots an hour, and that for each such vessel acquired abroad the company shall build one of equal or greater capacity and speed in an American shipyard. This bill is identical in principle with the one which passed the Senate a few days ago by a vote of 41 to 10. It offers new employment to American shipbuilders and workingmen, and it really promises what we have so long been striving after, namely, the restoration of the American flag in a respectable way on the high seas. Now let us see who are the real friends of the flag and the true advocates of such restoration. Mr. Corbin is able to carry out his financial undertakings, and we presume that he has not asked Mr. Chandler to push this bill merely for the fun of the thing.

The authoritative announcement that the counsel of the United States in the Bering Sea arbitration are to be ex-Minister Phelps, Mr. James C. Carter, and Judge Blodgett of Chicago, shows that our case is to be in competent hands. It also indicates that the Administration now recognizes, if it has not done so hitherto, that what the Board of Arbitration will require will be solid arguments based upon the recognized canons of international

law, and not a series of patriotic war-whoops. On May 18 it looked as if the latter mode of argument were to be the one adopted by Mr. Blaine, for we read in the *Tribune* of that day a despatch from Philadelphia, which ran as follows:

"It was announced here yesterday that Secretary Blaine had appointed, as junior counsel for the United States before the Bering Sea arbitrators, Russell Duane of this city, and has sent him a large retaining fee. Mr. Duane was a member of the class of 1891 in the law school of the University of Pennsylvania, and delivered the law oration at the commencement last June. The subject was 'The Case of the *Sayward*,' and the paper ably reviewed the whole controversy over the seal fisheries. The address was sent to Mr. Blaine, and is said to have made such an impression on him that this appointment is the direct result."

We have not seen the oration of this mature jurist, but we venture to assert that the portions of it which made such a deep impression on the legal mind of the Secretary of State consisted of shrill affirmations that if all the precedents were against the contention of this country, it was only so much the worse for them, and it was time a new set was made all around. The passing by of this legal giant for such a man as Mr. Carter is probably another instance of the President's interfering in his petty way to overrule Mr. Blaine's brilliant schemes. The international tribunal has certainly suffered an irreparable loss in being deprived of the privilege of listening to the argument of a lawyer less than one year away from his graduation.

The decision of the United States Supreme Court in the "party-rate" case helps to clear up one of the perplexities in transportation. Discrimination in the fixing of passenger or freight schedules has been one of the great causes of the enormous development of our railway traffic. The principle is a simple one in theory, though difficult to apply in practice. It consists in this, that each article should be charged for transportation exactly what that transportation is worth to its owners. Under this adjustment dry goods are discriminated from coal, and the charges of each accommodated to its own trade conditions. Thus the largest possible movement in each commodity is encouraged, with the result to the railway that it makes more aggregate profit than if it carried a small volume of traffic at an average or high rate. The Inter-State Commission has itself to thank for the decision against its contention. Its position seemed to be principally that the discrimination was unlawful in itself, and not because the terms were unjust. The opinion of the United States Supreme Court leaves open the whole subject of the justice or injustice of charging one man more than another under dissimilar circumstances. The field still left to the Inter-State Commission is a large one, and one, too, wherein the public needs the help of such a special body. Under repeated decisions against its contentions of late, the Commission may be inclined to feel that its usefulness has been much curtailed, but this is far from being the case. Unjust discriminations between one shipper and another for exactly similar services are only too common. If the Commission, turning from questions of abstract tariffs, can find some remedy for rate-cutting, it will deserve well of the whole commercial public.

Almost the last step in the process of making husband and wife not one flesh, so far as property is concerned, has just been taken by the Legislature of New York. Up to the middle of this month the law was that a married woman might contract as if unmarried with any person except her husband, but since that time contracts between husband and wife are lawful. There is nothing now to hinder the formation of ordinary business partnerships between matrimonial partners, and as such partnerships were already, to a certain extent, recognized by the courts, it is, perhaps, as well that all uncertainty as to their validity should be removed by statute. Whether it is desirable that the estates of married women should be subjected to the severe law of partnership liability may still be questioned, but there is little probability that the tendency to do away with the old incidents of coverture will be reversed. The manner in which this change in our law, which is obviously of very great importance, was brought about may seem a little remarkable to students of abstract jurisprudence. A lawyer writes to the New York *Law Journal* that he had observed that the law imposed certain partnership liabilities upon married women, and that it occurred to him that they ought to enjoy corresponding rights; whereupon he drafted such a bill as he thought would accomplish this result, and had it introduced at Albany, where it was enacted by the Legislature. Without questioning either the motives or the wisdom of the author of the act, we must say that it is not an altogether satisfactory state of affairs when fundamental changes in the law can be accomplished by individual citizens in so summary a manner.

When any important question is to come before the Presbyterian General Assembly, the election of Moderator is usually made a test of the strength of parties. If the vote at Portland on Thursday has any bearing on the Briggs controversy, it shows only, what everybody knew, that the Professor's opponents are in a large majority. No distinct issue was made, yet the Moderator chosen was the one picked out by Princeton, and is known to be a stiff conservative. Whether the merits of the famous case will come directly before this Assembly may be doubted. There seem to be good technical reasons against the power of the Assembly to take jurisdiction of the question immediately. Yet it is altogether likely that the majority will find some means of putting a seal of condemnation on the doctrines which the Briggs men either advocate or ask to have tolerated. In so doing it is certain that they would express the sentiment of a great majority of their denomination.

The report on church-going, read before the annual meeting of the Congregational churches of Massachusetts last week, has already received much attention, and is sure to receive more. This is not so much on account of the completeness of the report as of its suggestiveness. The facts reported do not begin to cover the whole field, and the causes given for the admitted decline in church-going are often only more or less vague and unverified guesses. But the important thing is the recognition thus made by an important denomination of the fact that the old test of the moral condition of the people —their church-going habits—is no longer an infallible one. If it were to be applied rigidly to Massachusetts, that State would be proved, on the strength of this report, to have alarmingly retrograded towards paganism during the last fifty years. But other good tests show that this is not the case. The assumption that church-going is always and of itself moral, while non-church-going is similarly immoral, appears to underlie this report just as it does many other discussions of the subject; but the state of things brought out in the report shows that such an assumption cannot safely be made. Not all, at any rate, of the wide variety of recreative alternatives shown to be now adopted by people in place of the former sole intellectual and æsthetic Sunday occupation, can be inferred to be of a necessarily harmful social effect.

The Association of American Authors certainly starts off with the great promise said to attach to movements of unnoticed and almost despised beginnings. We have seen no signs that publishers are struck by it with consternation, feeling that at last a strong hand is to hold their tyranny and avarice in check, nor that, on the other hand, the race of oppressed writers is hailing the birth-hour of their freedom. There was a certain ominousness in the fact, made known at the meeting for organization, that a society of similar name and of partly similar aims had been in existence in this country for more than a year without having come under the notice of the general public, or even of the majority of the specially interested authors who lent their names to the new enterprise. Will it be the fate of the latter to lead a like mute and inglorious life? The answer will depend upon the reality of the alleged grievances of authors and the acuteness with which they are felt—on both of which points the information of the Society does not seem to be as conclusive as could be wished—and upon the additional question whether

writers as such have enough in common to furnish a genuine bond of union such as is assumed to exist.

The London *Economist* of May 7 has a very sharp article in condemnation of Mr. Goschen's course in reference to the international bimetallic conference. It says that the Bank of England will *not* consent to substitute silver for gold to the extent of one-fifth of its reserve, or to any other extent, and that if the Bank itself would consent, the business community and Parliament would not. If Mr. Goschen wants a test of public opinion on this point, it says, let him bring forward his bill to renew the Bank's charter, which is about to expire. "And that or some other early opportunity," it adds, "should certainly be taken of putting a stop to misrepresentations which are placing this country in an essentially false position as regards the proposed Conference." It really looks as though the Salisbury Ministry had "put its foot in it" in two places—in the matter of silver as well as in the matter of protection.

Lord Salisbury is prone to make trouble for his supporters whenever he delivers a speech, but his performance at Hastings on Wednesday week was an almost incredible piece of political folly. England, he declared, was suffering from the protective tariffs of other nations. They were excluding her from their markets and trying to kill her trade. They were negotiating among themselves and obtaining concessions from one another, but "none is anxious about the favor of Great Britain, because Great Britain has stripped herself of the armor and weapons with which the battle is to be fought." England's attitude "in regarding it disloyal to the glorious and sacred doctrines of free trade to levy duties on anybody for the sake of the good we get thereby, may be noble," he sarcastically observed, "but it is not businesslike." If England wants to hold her own in the conflict of tariffs, she must be prepared to refuse nations that have hostile tariffs access to her markets.

Apparently at this point Lord Salisbury was startled at the length to which he had gone, for he at once added that he was not prepared to inflict dangerous wounds upon England in order to punish other countries. He would not venture to inflict such dangerous wounds as would be caused by raising the price of food and raw materials, and, therefore, it was not practicable to exclude the products of the United States. Still, he seems to have thought, if it would not be wise to inflict dangerous wounds upon England's prosperity, there was a chance to administer some moderate cuts and slashes. Duties might be imposed upon wines, and silk, and gloves, and laces, and in this way access might be secured to the neighboring markets. The idea that favorable markets might be gained if England would inflict some slight wounds on herself, irresistibly suggests the proceedings of the prophets of Baal, who "cut themselves after their manner with knives and lancets, till the blood gushed out upon them." Of appeals like this to the modern Baal, Protection, it will probably be true that there is "neither voice, nor any to answer, nor any that regarded." The effect of this speech upon the Liberal-Unionists cannot fail to be demoralizing. They have put up with a good deal in acting with the Tories, but they can hardly put up with such doctrine as this. As the *Chronicle* says, "the Gladstonians ought formally to pray Lord Salisbury to deliver a series of addresses until the brink of the election."

A very gloomy picture of the finances of the Australasian colonies is drawn in the *Investors' Review*. Fifteen years ago these seven States had a population of 2,400,000, and a public debt of £70,000,000. To-day their population is not quite 4,000,000 while their debt is nearly £200,000,000. But, in addition to the debt of the States, the *Review* contends, there should be reckoned the debt of municipalities and other corporations, so far as it is held abroad, as well as British deposits in colonial banks. Including indebtedness of this kind, the total is made to be £280,000,000, or £280 per family of four persons; nothing approaching which is to be found elsewhere. It is admitted that this debt is to a great extent represented by productive works, but, in spite of the revenue derived from these, the rate of taxation in 1890 was over £3 per head—10s. more than the average of both local and imperial taxation in the United Kingdom. Undoubtedly the trade of these countries is very large and their apparent prosperity very great. But the *Review* argues that both traffic and prosperity depend upon the constant supply of new capital. So long as £8,000,000 or £10,000,000 of new capital could be borrowed every year it was hard not to show signs of prosperity. But capitalists have had a fright, and borrowing must be suspended for a time. If prosperity continues, it will establish beyond question the wisdom of the borrowing policy; but the present signs are that it will not continue.

It is instructive to contrast the financial condition of Australasia with that of a country in one sense younger, in another sense older. In 1861 the new kingdom of Italy assumed £125,000,000 of debt previously contracted by its constituent elements. In 1867 the debts of Lombardy and Venice were added, as well as the debt incurred in the war of 1866, and in 1870 the debt of the Papal States was assumed. In this way the debt of the kingdom was increased to more than £200,000,000, but in 1872 the total amounted to £360,000,000, the difference being chiefly due to expenditures for railways and other public works. Including railway, provincial, and communal debts, the total burden is now not far from £600,000,000, involving an annual charge of £24,000,000. Since 1878, according to Signor Rudini, £73,000,000 have been spent upon railways by the State, an operation which he compares to that of a farmer who borrows money at 6 or 7 per cent. in order to improve land so as to get a return of 2 per cent. Here, then, is one important difference between Australasia and Italy. The Italian railways pay a very small return upon the capital invested in them, while the colonial railways pay upon the whole a large return. The other important difference is of course in military expenditure. In Italy the debt and the war establishment account for two-thirds of the expenditure, while one-tenth of it is on public works, so that little more than one-fifth is applicable to the civil administration. The burden of debt per head is considerably less than in the countries of Australasia, being perhaps £18 to £20, but the rate of taxation can be hardly less than £2 per head. Italy has been extravagant in her military establishment and in public works; Australasia has been extravagant only in the latter respect. In the latter case the extravagance may prove to be not a serious matter; but in the case of Italy there is no future development to count upon.

One of the most discouraging features in the present political position of Brazil is the persistence of the military government which has practically existed ever since the so-called republic was set up. The army and its commander-in-chief are really the rulers of Brazil to-day. The country has never, of course, had a great degree of self-government, or developed a large number of men familiar with public affairs and capable of conducting them according to the recognized methods of civil government. Yet it had a few such—men who had made a name for themselves as financiers or administrators—but they are now all retired to private life. We believe it is safe to say that not a single member of the present Cabinet has had more than a limited experience and reputation in governmental matters. With the trained men sent below and a lot of green hands in command, it is no wonder that the course of the ship is so erratic and alarming. The *Rio News* of April 19 says on this point:

"Up to the present moment, Brazil has been nothing more than a military dictatorship, and it is now rapidly drifting into a hopeless state of anarchy. Its Constitution, notwithstanding its fine phrases, is a mere fiction, for there has not been a day since its promulgation which has not seen it disregarded and broken. It is inoperative and dead, for every one of its fundamental principles regarding the Presidency, the States, the finances, and personal guarantees, is disregarded and broken. Thus far the effort to create a republic has been a total failure."

A LESSON IN SELF-GOVERNMENT.

In one of the most striking passages of his 'American Commonwealth,' Mr. Bryce comments upon the alternation of despondency and hope aroused by the spectacle of our political life. "A hundred times," he says, "in writing this book have I been disheartened by the fact I was stating; a hundred times has the recollection of the abounding strength and vitality of the nation chased away these tremors." There is in the American people "a reserve of force and patriotism more than sufficient to sweep away all the evils which are now tolerated, and to make the politics of the country worthy of its material grandeur and of the private virtue of its inhabitants." It is good to dwell upon this judgment. There is a continuous stream of invective poured out against our rich men and our educated men because of their neglect of their political duties, but much of this invective is indiscriminate and unjustified. Many of these men are as deeply concerned in the welfare of the country as their critics, and they would gladly devote a large share of their time and energy to its service if they saw how it was to be done. They have political strength and virtue, but it is held in reserve, as Mr. Bryce says. And it is held in reserve partly because the demand for it is generally not very great, but chiefly because of the difficulty felt in applying it.

This difficulty is not of a novel character: it is as old as human society. It is the difficulty of meeting organized force with unorganized force. In human society nothing great can be accomplished by individual effort; there must be combination. The familiar lesson of history is that of the success of the organized few against the unorganized many; and the progress of liberty consists largely in the development among the many of the capacity for organization. Where this capacity exists or is developed, self-government, as it is called, becomes possible; and where it is not manifested, nothing but despotism can prevail. That this capacity is rare or is not easily developed is proved by the monotonous annals of oppression. There have always been enough men of virtue and wisdom in every considerable State to secure good government if they acted together; but they have seldom been able to unite, and the defeat of isolated and sporadic attempts at revolution has served to increase the power of despots.

We have learned in the course of the century which has passed that representative government is not necessarily free from the vices of despotism. Apparently, when the people choose their rulers, oppression is impossible; but the old difficulty reappears in connection with the machinery of choice. A great number of people, occupying an extensive territory, cannot meet for consultation as to whom they will choose to rule over them. There must be a smaller number, a manageable mass, which shall undertake this duty, and this smaller number becoming, after a time, thoroughly organized, naturally becomes the true governing body. In its hands is the party organization, the machinery of nomination and of election. This is our present condition. We have the forms of liberty, it is true. Any citizen may vote for whom he chooses as a ruler, and generally his vote will be counted. But practically he is shut up to a choice between the nominees of two great parties—that is, to the election of nominal rulers selected by the real ones.

The ordinary remedy prescribed for this evil is to "attend the primaries." But the remedy does not begin far enough back. A sprinkling of discontented but disorganized voters at a primary is as helpless as a mob before the police. There must be a prior organization in order to decide upon a fixed course of action; and just here is our difficulty. It is an immense undertaking to form a political organization that shall be effective. It not only must consist of a large number of men, but must exist in a large number of places. There must be a clearly defined purpose in order to make the organization coherent; and every one who has witnessed an attempt to start a "movement" of any kind has been convinced of the truth of the proverb, "Many men, many minds." Even if a common purpose exists, it is an enormous labor to find it out. There must be numberless conferences and consultations, and, in the rush of modern events, if too much time is spent in learning the possibility of organization and determining its scope, the time for action will have passed.

In the light of these principles, the movement that is now taking place in the State of New York among those who have hitherto voted for the candidates of the Democratic party is a wonderful and most cheering spectacle. The rulers of that party suddenly find themselves in the position of a despot who has relied upon his army to suppress revolution, and finds that it is deserting him. Honest and decent and patriotic citizens have at last met organization by organization. They are at last "going to the primaries"—not to primaries that have been already "fixed" by the party rulers, but to primaries called to express freely and fairly the common purpose by which they are animated. In its way this is as fine an exhibition of political capacity as the formation of a volunteer army of patriotic citizens in 1861. The emergency has not been extreme, there has been little in the situation to inspire the imagination, and the expense and the drudgery of creating an organization with nothing to build upon have been great. Under these circumstances, the orderly and deliberate combination of more than 200,000 men into a disciplined force, simply in response to the feeling of indignation aroused by the arrogance of their rulers, is exceedingly impressive. We do not believe that the inhabitants of any other country are capable of such a feat, and we should scarcely have believed it possible here.

Apart from the immediate practical results of the movement—and it may decide the policy of the national Government for many years—several important lessons are to be learned from it. In the first place, we may derive hope from it as to our country's future. Nothing can mar that future but our own misgovernment, and this uprising shows that very gross misgovernment can be and will be stopped. Many persons have professed confidence that the "popular heart" was right, but now we have proof not only of this, but also that the popular heart is guided by a popular intelligence. The great cloud upon the future has been the tyranny of party organization, and it has been shown that when this organization was apparently most perfect and complete and powerful, it could yet be overthrown. When a people proves that it has the capacity to create a party organization within the space of three months, it is time for every existing party organization to look to its ways. Party rule is necessary, and so are party rulers. But that they are not so necessary that they cannot be changed has been established by this movement. They can keep their power if they will give us good government, but they have had warning that their tenure is during good behavior. We do not hesitate to say that the men who have unselfishly given their time and strength to this movement have rendered their country as great a service as if they had flown to arms in her defence. Their achievement will not bring them fame, or even insure them the gratitude of their own generation, but they may rest assured that, whether they are honored or not, they have deserved well of the Republic.

THE MACHINE VS. THE POPULAR WILL.

The comments which Congressman Blount of Georgia makes upon the defeat of the Hill schemers in his State are both instructive and illuminating. He calls attention to the fact that the two most powerful Democratic newspapers in the State, two Democratic United States Senators, several Democratic members of Congress, the President of the Farmers' Alliance, and other presumably powerful political leaders, were for months engaged in a systematic effort to prevent the State Democratic Convention from electing a Cleveland delegation, and then says of the complete triumph of Cleveland sentiment in the Convention: "It looks like the assertion of the popular feeling in defiance of the men who tried to manage the Convention. When such an array of talent falls short of success, the reason is not far to seek."

What was attempted by the Democratic Machine politicians in Georgia is precisely what their brethren in other States have been attempting for months past. From one end of the country to the other the

politicians of the Democratic party have been devoting all their energies to a combined effort to prevent the masses of the party from nominating the man of their choice. At no time since the elections of 1890 has there been a particle of doubt as to Mr. Cleveland's being the choice of an overwhelming majority of the members of his own party. The only question has been whether or not the politicians of his party would consent to his nomination. The reasons of their opposition to him were never disputed. They do not wish to see him nominated simply because they know they cannot use him for their purposes after election. They began their campaign for the defeat of the will of their own party with the "snap" convention at Albany on February 22, and have fought desperately in every State convention which has been held since that time. The Hill Machine gave them their only victory, and it proved to be the political death of the man who won it. In every other State in which they have closed with the popular will, they either have been routed completely, or have come off with only a few delegates to show for their struggle. There is no question that if they were to let the party will have free expression, every State in the Union would send a solid Cleveland delegation to Chicago.

The pretences which have been made for opposing Mr. Cleveland's candidacy have been as absurd as the efforts to defeat the popular will have been futile. It was declared at first that he was not the choice of his party, but merely the favorite of a few Mugwumps and Democratic "soreheads"; but as State convention after State convention has come together, so irrepressible with enthusiasm for him that the full power of the Machine could not keep it down, this pretence has had to be abandoned. Now the only argument remaining is, that he cannot be elected since he cannot command the united support of his party. What queer reasoning is that which claims that the candidate who has the largest popular strength in his party is his party's weakest candidate! The masses of the party are so determined to nominate him that the party Machine is powerless to prevent it, and yet some other candidate, whom the masses of the party do not want and will not take, would be a stronger candidate! If this is the wisdom of "practical politicians," wherein does it differ from that of fools?

That the popular will, which has triumphed in the State conventions, will triumph in the National Convention cannot be doubted. The fight of the Machine to smother the party's voice has been made and lost. "The popular feeling all over the country," says Mr. Blount, "will make itself felt in the National Convention as it does in the State conventions. The almost universal bent of the party towards Mr. Cleveland is due, not to any kind of hero worship, but to the fact that he represents to the public mind, as no other man in public life does at the present moment, the principle of tariff reform. The people believe in that and in him as its representative, and they are sweeping down everything which gets in their way." This is made plain by the delegations which have been chosen by twenty-six of the forty-four States. Mr. Cleveland is the only candidate who has any following which can be called either definite or permanent. All the alleged opposing candidates come under the head of "scattering," and there is not the slightest hope for the nomination of any one of them. What a position the party would be in were its politicians able to defeat the one candidate whom the masses of the party desired to nominate!

The defeat of the Machine in this contest is a distinct triumph for popular government and for our national-convention system. There have been times when it looked as if the day were near at hand when a national convention would become nothing more than a mere recording instrument for registering the will of the Machine; but this year's experience shows that such a perversion is possible only when the people have not a definite choice of their own. Primary machine methods may triumph in a State convention, but in the nation at large they are powerless to overcome the popular will, or to divert it from its purpose.

NEW FIELDS FOR THE CLERGY.

THE activity of Dr. Parkhurst in the movement against crime and criminal politics in this city is only the most striking of many recent signs of a noteworthy departure in the general view of clergymen as to their obligations and duties. They are waking up to a realization of the fact that they are citizens, and that they have something more laid upon them than simply "to preach religion." They are to do their part in the struggle to maintain good government and to right social wrongs, and their weapons are to be of unclerical modern pattern and their methods of scientific devising. As the Chicago correspondent of the *Congregationalist* said in reporting a recent address by Dr. Graham Taylor before the Congregational Club of that city: "The leading idea of the address was that the work of evangelization must now proceed along the line of sociological laws. This is a modern study in which Christians ought to be experts."

The extent to which this spirit of practical citizenship is animating the clergymen of the country, though constantly illustrated in the news despatches as they drift by, escapes general attention, which is arrested by what is startling or sensational. The average reader notices that a clergyman is turning his attention to citizenship only when he takes a hand in politics, or appears in the rôle of "crusader" against vice, like Dr. Parkhurst, or like the Rev. John L. Scudder of Jersey City in his war upon Guttenberg and other race-tracks. But the tendency is seen in many different illustrations of a quieter type. On a recent Sunday in Chicago, for example, a mass-meeting was held in Bricklayers' Hall to denounce "the sweating system." The *Inter-Ocean* reports that "the Rev. Jenkin Lloyd Jones presided. He read letters from the Rev. Charles E. Cheney of Christ Church and the Rev. S. J. McPherson of the Second Presbyterian Church, denouncing the system in unmeasured terms and regretting their inability to be present." In this connection it will be recalled that a Boston clergyman not long ago preached a series of sermons denunciatory of "the sweating system," which, unless we are mistaken, led to the recent Congressional investigation of the subject. Another illustration is the consideration by the Methodist preachers of Chicago, at a regular Monday meeting, of the early-closing movement for clerks. The debate was given a curious theological twist, or justification, by the Rev. N. H. Axtell, who said, according to the report of the Chicago *Herald*, that "these clerks were especially needy of relief because for the most part they were employed by Jews who do not recognize the Christian Sabbath." The general sentiment seemed to be that preachers ought to instruct their congregations that it was a Christian duty to "shop earlier." A committee was appointed to visit employers and bring the hardships of the clerks to their attention. In Milwaukee, it seems, the law against selling liquor to minors has been generally and notoriously violated. This evil was taken up at a recent Monday meeting by the Ministerial Association, composed apparently of pastors of various denominations. A committee was appointed to secure a prosecuting agent. The plan, according to a despatch from Milwaukee, is "to hire a man for a period of four or five years at a good salary, who will devote his entire time to watching the saloon-keepers and causing their arrest and prosecution for all violations of the law."

But perhaps the most curious illustration of all is to be found in the subject considered by the Central North Chicago Ministerial Association, when it met on a recent evening in the Belden Avenue Baptist Church—the important subject, "How to get our streets cleaned." J. M. Burke, "Superintendent of the Streets"—as the Chicago *Herald* describes him—appeared before the meeting to advocate his special plan, which was to raise money for street-cleaning by a special assessment, levied on the adjoining property benefited instead of by a general tax. In the course of his speech Mr. Burke gave the clergymen this "practical pointer": "The way to get this thing through is by talking to your Aldermen. I can't do it, for I am a politician. If I go to the Alderman from this ward, he would say, 'Well, Jim, that's a dodge to get Republican votes.' But I'll guarantee that if you go to him, he'll do what you want." A committee of five was appointed "to confer about the matter."

To consider the question of street-cleaning is perhaps no more incongruous for modern clergymen than was, when delivered, Dr. Horace Bushnell's famous sermon of years ago in favor of certain road improvements in Hartford. The "halfway covenant," no doubt, was the direct cause of Jonathan Edwards's historic quarrel with his church in Northampton. Yet his attempt to regulate the reading of the younger members of his flock, his denunciation of certain books as immoral, was a contributing cause which could hardly be classed as too "remote," as they say in law. It would be a very interesting question to trace out how far the modern view, which confines a clergyman's activities to "religion," and forbids him as a citizen to do anything more than deposit his ballot as unobtrusively as possible, is a case of evolution, springing from the voluntary system, which holds a clergyman neutral because of the differing views of the many who pay him his stipend. Certainly this view is in marked contrast with the view, at that time, of the old New England clergyman, who was often "a pope in his parish," as well as with the popular view in England, where clergymen of the Established Church are prominent as citizens of influence and sometimes as magistrates, and the dissenting ministers are working politicians as a rule.

The growth of a spirit of independence and active citizenship among American clergymen, whether its manifestations are always wise or not, is certainly in the direction of a return to the clergyman's original status.

THE POPE'S LETTER TO THE FRENCH CARDINALS.

THE great rent in the Christian Church caused by the Reformation has rendered it difficult in these modern days for Catholics and Protestants to appreciate each other. This is especially true in the case of the Protestants of English descent, for difference of speech has coöperated with political influences to make the gulf more impassable. The great mass of Protestants in this country—certainly those who are animated by sincere religious feeling—are strongly affected by a traditional hostility to the "Pope of Rome," and probably entertain much the same feeling about him as was long since expressed by John Bunyan. That sturdy writer, it will be recollected, with a curious mixture of contempt and bitterness, said of "Giant Pope," that "though he be yet alive, he is by reason of age, and also of the many shrewd brushes that he met with in his younger days, grown so crazy and stiff in his joints that he can now do little more than sit in his cave's mouth, grinning at Pilgrims as they go by, and biting his nails because he cannot come at them."

Yet, while the Pope has been shorn of his temporal sovereignty, many events could be cited to show that as a spiritual power he is by no means so decrepit as Bunyan represented him. Those who recognize his authority have greatly increased in number in the Protestant countries, and in the German Empire it has been found safer to conciliate than offend him. In times past the Papacy has resisted political reform, and it steadily opposes the advance of the scientific spirit; but with a wonderful adaptability it acquiesces in the inevitable, and the defeat of its attempts in some directions seems only to increase its success in others. There are many causes for the remarkable vitality of this institution; but there is one in particular which is strikingly manifested in the letter just addressed by the Pope to the Cardinal Archbishops of France in confirmation of his recent encyclical.

It is unnecessary to refer to the position of the Catholic Church in France further than to say that the Royalist sentiment there is identified with Catholicism. There are Catholics who are not Royalists, but all Royalists are Catholics. Hence there has prevailed among the believers in republican institutions in France a sentiment towards the Catholic clergy not unlike that which animated the English after the expulsion of the Stuarts. All Catholics were looked upon as hostile to the new Government; indeed, they were presumptively traitors. They were harried for fear of a Stuart restoration, and they are now harried in France for fear of a restoration of monarchy. Persecution has seldom accomplished very much when directed against convictions supported by reason; and while there was a possibility of reëstablishing monarchy the repressive measures of the Republic only intensified the Royalist spirit. But the death of the last Bourbon, the Comte de Chambord, and the disgraceful connection of the Orleans princes with Boulanger, extinguished all rational expectation of a return of the old order. To maintain the hostile attitude of the French clergy towards the Republic became, therefore, not only useless, but absurd. It was natural that they should not be willing to confess that the cause for which they had struggled and suffered so long was lost. Perhaps they could not see that it was so; but the Pope has seen it, and has instructed them accordingly.

That these instructions should be characterized by tact is no more than would be expected from the Vatican; but they also indicate the possession by the Pope of a very high degree of political wisdom. He points out that the supreme end to be attained by the Church is religion, and that, under the adverse circumstances prevailing in France, it is hopeless for Christians to struggle for this end unless they are united. There must be no more parties among them; they must forget their differences in devotion to the cause of Jesus Christ. They must therefore accept, "with that perfect loyalty becoming in Christians," the civil power in the form in which *de facto* it exists. The reason for such acceptance is that "the common weal of society makes it preëminent over any other interest," as being the creative principle and the conservative element. It is true, the Pope continues, that, although the political power is always from God, the divine appointment does not always and directly affect the modes of transmission of that power, or the forms it assumes, or the persons who are the subjects of it. There are incessant changes in political forms, which may not be legitimate at the start; yet the supreme criterion of the common weal and public tranquillity requires the acceptance of these new governments established *de facto* in the place of other governments which *de facto* have ceased to exist.

Having laid down this most sound and salutary doctrine, the Pope next draws a distinction which is not the less important because it is not understood by a large and influential school of political theorists. The sovereignty of the State, he points out, is not absolute. It is the duty of the subject to accept the established political authority; but this does not imply acceptance of legislation on points where the legislator, forgetful of his mission, sets himself in opposition to the law of God and of the Church. "And let all bear in mind," he continues, "that to display activity and use influence to induce Government to change for the better iniquitous laws void of wisdom is to give proof of a devotion to the country alike intelligent and courageous, without evincing a shadow of hostility to the authorities deputed to govern public affairs. Who would think of denouncing the Christians of the first centuries as adversaries of the Roman Empire because they did not bow to its idolatrous proscriptions, but endeavored to effect their abolition?"

In short, the Pope recognizes that the end of civil government is the preservation of order, not the enforcing of opinions, and that the higher law of conscience is controlling upon the members of every human polity. This is not the quarter towards which Protestants would naturally look for such doctrine, but the skill with which the Papacy knows how to adjust principles to circumstances is one great cause, as we have said, of its perennial vitality.

AMERICANS IN CHINA.

WISCONSIN, May 15, 1892.

THE Chinese are more sinned against by us than sinning. How they are treated in this country nobody needs to be told, but their relations at home to Americans on their soil are not so well known, and may be somewhat elucidated by one who has been a looker-on in the seats of recent outrages and elsewhere in China. A few months before the disturbances began, I went up the Yang-tse to Han-Kow, the Celestial St. Louis, lingered there, as well as in Kiu-Kiang, Chin-Kiang, and Wu-hu, where the first outbreak occurred. In all these cities and several others I walked about as at home, often alone, sometimes with an

American lady, or was carried in an open sedan, called at shops and whatever other places I chose, and was nowhere molested. I was frequently a phenomenon, in dress and physiognomy, such as had been scarcely seen, and hence the observed of all observers. Sometimes jostled in the crowded street, and sometimes laughed at, I was never insulted or maltreated. In Chin-Kiang I saw beautiful new buildings just completed for a foreign consulate by the Imperial Government, to replace others which a mob had destroyed. Similar edifices are now building there or in other cities where mobs have destroyed the property of foreigners.

A government which feels liable to indemnify foreigners for the destruction of their property cannot countenance mobs against them. An article admitting such a liability and specifying that of travelling missionaries was long since inserted in a treaty with France, and hence French priests have gone to and fro at their ease. In treaties with the United States, however, there is no such clause. An American female physician, Miss Fulton, on a tour in the interior, was assaulted and robbed of many valuables. Damages were claimed through Charles Seymour, the American Consul. They should be granted, said the Viceroy, if it were so nominated in the bond. "It is," said Seymour, "for our treaty reads that as to all particulars not mentioned the United States shall stand on the footing of the most favored nation; therefore we are entitled to such indemnities as you grant to France." He obtained what he sought; and in these last years our missionaries, as they journey, feel secure and are safe so far as the powers that be can protect them. But if we trample on treaties, how long will the Chinese reverence them? They must say with *Shylock*, "The villainy you teach us we will execute; and it shall go hard but we will better the instruction."

The imperial officials have done something in aid of missionary endeavors to rectify false notions which have infuriated the populace against foreigners. The Viceroy at Canton had need of a surgical operation which baffled native skill, called in Dr. Kerr of the Peter Parker Hospital, and was promptly relieved. His gratitude was fervent, and he begged to know how he could help the hospital. The Doctor said: "I have translated several medical tracts which I am anxious to keep before your people," and he went away happy in a publishing-fund of twelve hundred dollars from the Viceroy and his retinue. A prevalent delusion, which was refuted in the tracts, was the opinion that the only panacea for sore eyes must be made out of eyes—eyes of the living, the young, and the healthy. In nothing has the success of missionaries all along from 1839, when their first hospital was established, been more conspicuous than in ophthalmic diseases. The slander that they abducted children and plucked out their eyes was all the more naturally suggested and easily believed. It is an error that dies hard. It was the exciting cause of uprisings and atrocities last year which convulsed millions and echoed through the world. The following is a translation of a placard, the original of which is in my hands, which was posted abundantly on the house-walls in Canton in 1891:

"There is a Roman Catholic chapel at Mai Mar Street, where foreign devils and native Christians are united in society for the purpose of extracting the two eyeballs of our Chinese youths to prepare their medicines. From the beginning to the present the cases have been ten thousand. Even stone-carved lions hearing of them would shed tears. Judging from the strength and vastness of our Ta-ching dynasty, can she with unruffled sleeves stand by as a looker-on? Brothers from the four directions, let us together take revenge," etc.

Similar inflammatory appeals—sometimes pictorial, showing a crucified hog, sometimes doggerel, saying that seventh-day meetings were for mutilating women and children—had been pasted beforehand on walls wherever any anti-foreign riots occurred. Such riots were averted in Canton, in the judgment of Consul Seymour, through every foreigner and native convert being on the watch to discover and destroy or bring before the police every such malicious handbill. Analogous slanders on the Chinese, if posted on all our walls, would not move our Government to raise a finger. But the Imperial Government feels a responsibility unknown to us. Hence, Consul Seymour of Canton writes to me: "I have never yet called for a man-of-war or gunboat, but I am a firm believer in the resources of diplomacy, and have always found that getting the attention of the authorities to threatening placards which always precede outrage was an effective way to prevent trouble." Chinese officials were ready to punish the authors of the scandalous posters, but those incendiaries long lurked undetected. Accordingly, the Rev. Griffith John, a veteran Welsh missionary of Han-Kow, is thought to have dealt persecution a death-blow by proving that the anti-Christian libels were paid for by wealthy Chinese in Hunan on the upper Yang-tse, and ascertaining the name of the mandarin who was most active in organizing the work of distributing this mischievous literature. The disclosures made by Dr. John might easily be paralleled from the annals of Chinese on our Pacific Slope; but when we expose such American assaults, the only response is, "What are you going to do about it?" They order this matter otherwise in China. Exposure there will secure from a Government more sinned against than sinning indemnity for the past and protection for the future.

GALLANT LITTLE WALES.

LONDON, May 6, 1892.

THE excesses of the French Revolution led in these countries for more than a generation to a reactionary régime in which perished for the time all hopes of reform and advancement. Irish self-government went down, as had Scottish a century earlier. The kingdom was governed for a class and by a class, which regarded its own interests as supreme and as equivalent to the interests of the nation. That class, constituted of men belonging to the same church, educated at kindred schools and universities, drawing their incomes mainly from the same sources, connected socially, imbued with the same prejudices, actuated by the same desires, entertained no other ideal than that all portions of the British Islands should be reduced to a dead level of institutions, law, and order under their own rule. The protests of Scott, in his "Malachi Malagrowther," against this system, appeared as vain as the pathetic regrets of Grattan from his garden at Tinnehinch.

With the death of the last of the Georges the clouds broke, and reform became possible. The rule of the great proprietors and highly paid officials partially gave way to that of the political philosophers. These were cultivated men, actuated by high motives, well fitted theoretically for the task of government, imbued with lofty ideals and sincere desires for the good of their fellow-men. But they regarded humanity from too abstract and philosophic a point of view. The 'Wealth of Nations' was their gospel, *laisser-faire* the doctrine that was to lead mankind to prosperity and happiness. It was doubtless due to the predominance of such minds in the forties that we owe the free trade we enjoy. Under these men, even more perhaps than under the old Tories, was the United Kingdom to be governed simply as a unit. (Their heirs and representatives, the "professors" of to-day, are among the bitterest opponents of home rule.) National aspirations within the borders of the British Isles were to be set aside as childish dreams, unworthy the philosophic manhood of the age. Through all, underneath all, burned in the hearts of the "common people" of different portions of the kingdom national feelings and separate necessities and desires—in Ireland, regarded as treason, and in Scotland and Wales as the dreams of the bards. Education, bringing the commonalty forward, the ballot, giving them power, have, however, changed all that, and have compelled practical politicians to guide their actions more by the actual prejudices and wishes of the majority than by abstract reasonings. The people are now being represented by men of their own class, or imbued with their own feelings; and even if an overtaxed central legislature did not call for decentralization, the different nationalities themselves demand it in one form or another.

In the United States and the United Kingdom apparently opposite tendencies assert themselves—in the one, perhaps, a process of centralization which, however, cannot result in homogeneity; in the other, a process of decentralization which cannot result in separation. It is to be feared that the attempts of Scotland and Wales to participate in the advantages of decentralization may retard the progress of Irish home rule. England might make up her mind to the change regarding the sister island; but if as a concomitant within her own borders she must face changes upon somewhat similar lines, she may be slower to concede the principle. Ireland has struggled so long, and suffered so much, that she naturally regards with some jealousy these other laborers who have not borne the burthen and heat of the day, and who yet come forward demanding like reward. However this may be, these claims are certainly being made in other parts of the kingdom besides Ireland.

It is Wales we now propose to consider. Her self-assertion and resurgence, as it were, are to outsiders an unexpected phenomenon. A century ago the principality was but little visited, and was regarded as a remote, uncivilized district, whose inhabitants had been rescued by Wesley and Whitefield from the materialism in which they had been left by the unfaithfulness of the Church of England. It was believed that English civilization, advancing over the Welsh borders, would before long as completely eliminate all traces of the old language and peculiarities as those of Cornwall had been eliminated. Wales is, however, to-day as dissenting as Ireland is Catholic. She has clung to her language with a desperate tenacity; while in Ireland the people have discarded the older form of the Celtic, which one hundred years ago was spoken in every corner of their land. Wales comprises the eleven western counties of England, south of the estuary of the Dee, north of the estuary of the Severn. She covers 5,000,000 of the 37,000,000 acres commonly known as "England," and has 1,500,000 out of its 29,000,000 inhabitants. Her population has increased just in the proportion that Ireland's has diminished

within the decade. She returns thirty members to Parliament, twenty-eight of whom are enthusiastic Gladstonians.

It is opined that one form of Celtic was originally spoken throughout Great Britain and Ireland. It branched into two families, now more widely different than the Germanic and Scandinavian divisions of the Teutonic stem—into (1) Irish, Scottish, Manx; into (2) Welsh, Cornish, and the Armoric of Brittany. Irish is the most archaic form; it is richest in ancient records. It alone has adopted a different form of letter from the ordinary Roman, and the orthography is simpler than that of Scottish or Welsh, in that the modifications at the beginnings of the words are effected for the most part by accent and not by radical alteration in the spelling. Scottish-Gaelic is practically the same as Irish; so was the Manx (now practically extinct) until modified by communication with Wales after the Anglo-Norman conquest of Ireland. Phonetically Welsh, in its tendency to labiation, stands to Irish as Greek stands to Latin—the Irish *ben*, a high mountain, becomes in Welsh *pen;* the Irish *mac*, son, *map*. Welsh is the oldest of its branch of the family, and differs from Cornish (one hundred years extinct) much as French differs from Spanish. The Cornish differs from the Armoric of Brittany much as Spanish differs from Portuguese. Welsh is more spoken than ever before; it is the language of fully three-fourths of the inhabitants of the principality, and of this proportion the greater number cannot speak English. It is the only tongue except English ever heard in the lobbies and libraries of the House of Commons. Government forms and returns in Wales are issued in both English and Welsh; so also are the notices outside post-offices and churches.

The leaders of Welsh thought are determined to make and preserve their country bilingual. The great English proprietors, with estates in the principality, who see the necessity of maintaining their influence among their tenants and neighbors, now engage Welsh-speaking governesses for their children. Forty-four years ago it was possible for a writer in *Blackwood* to declare that "there is no Welsh literature worthy of the name," and that there were only 405 books circulating in the language—309 religious and poetic, 50 scientific, 46 general. There were few newspapers, and they had only a small circulation. At present there are printed in Welsh no fewer than seventeen weeklies, with circulations ranging from 1,500 to 23,000. There are besides several monthlies and quarterlies, one of which prints 37,000 copies. There is an ever-increasing library of Welsh books, covering all departments of literature and representing every science and turn of thought. A Welsh-English dictionary is now being published, the first volume of which, running to 400 quarto pages, and comprising only the first letter of the alphabet, sells at half a guinea; £18,000 has, with profit, been spent upon the production of one Welsh book. The sales of one firm alone in the vernacular trade reach £36,000 per annum. The total annual value of such literature is said to amount to £200,000. The establishment of a lively *Welsh Review* (in English, it is true) in London is not the least striking sign of Cambrian vitality.

The Welsh members of Parliament sit for the most part below the gangway. There is among many of them a certain family type. They are a lighter, brighter, more boyish, alert-looking set of men than the ordinary British and Irish by their side. Their pronunciation is somewhat labial—it has somewhat the distinctness of an acquired language. Some of these members made a distinguished stand over the Tithe Bill of last year. A measure for the disestablishment of the Church in Wales was brought forward by them this session. London and Birmingham (the one 170, the other 70 miles distant) are vying for the possession of certain Welsh watersheds, whence to draw their water-supplies. The Welsh members are fiercely watchful to guard the interests, present and prospective, of some of their own rapidly increasing centres of population, and of the present owners and inhabitants of the districts proposed to be preëmpted. In the inquiry about to be held into the financial relations of England, Scotland, and Ireland, the Welsh desire to have their interests considered apart from the rest of "England." They have this session brought in a National Institutions Bill for the principality. It proposes the appointment of a Secretary of State for Wales, the constitution of a Welsh education department, of a Welsh university and a national museum, and the creation of a national council to control waste lands, foreshores, woods and forests, railway and private bills, charities, the appointment of county-court judges, and the application of "provisional orders" to Wales. Inquiries seem to show that there is a large body of opinion in the district desirous of even greater powers—such as the appointment of magistrates.

Wales is, after all, more populous than any one of twenty-eight of the United States, and than any one of the self-governing British colonies, except Ontario. The principal supporter of this bill, Alfred Thomas, Member for East Glamorgan, declares in the course of a recent magazine article:

"My firm opinion, based on the fullest knowledge, is that the Welsh people do not desire home rule on the same lines as what has been demanded and proposed for Ireland. They will be content with something very different, and, in the view of many, more moderate. But all the same it is home rule. The great feature in the national spirit of Wales in the past is that all attempts to absorb Wales into England have only hardened and strengthened our national characteristics. And the British Empire is all the better for the tenacity with which Welshmen cling to their language and institutions, and the patriotic pride they cherish for the land of their fathers. If the National Institutions Bill, which has received endorsement from such a large number of representative Welshmen, should be passed into law, it would lay the foundation for a future development of Wales, and for such a material progress of the principality as would enable Welshmen to develop those great natural abilities which are unsurpassed by any other race or people."

However this may be, the steady current of national feeling in Wales must lead to important developments, and the solution of a "Welsh question" will doubtless before long engage the attention of Imperial Parliament.

D. B.

THE LONDON EXHIBITIONS.

LONDON, May 2, 1892.

I WISH that I could look at the year's exhibitions in London with the fresh eyes of Mr. Charles Dudley Warner. He has but recently been telling us, in the Study in *Harper's Magazine*, that only last summer he found the desire to be striking, to astonish, to do something odd in color and composition, the distinguishing characteristics of English as well as foreign galleries. This shows the advantage of looking at pictures from the literary standpoint. Last summer it seemed to me that, from the sad level of depressing mediocrity in the London exhibitions, perhaps half-a-dozen canvases stood out with something like distinction. I should therefore be glad to hear Mr. Warner's verdict this year, when I have searched the Academy, the New Gallery, the New English Art Club in vain for one striking painting. There is not even a "picture of the year" for the crowd to gape before, like the sentimentalities of Mr. Dicksee and Mr. Fildes that made such a stir a twelvemonth ago. The universal poverty is proved by the excitement among critics over an open-air study by a certain Russian prince, exhibited in the New English Art Club show—a second-rate imitation of men like Besnard, Zorn, and Roll, but such a novelty here that it served at the Academy banquet as butt for the witticisms of Prof. S. H. Butcher, whose art criticism, founded on wide knowledge of literature and complete ignorance of art, has been hailed with rapture by the Ruskinians of the press.

The honest failure of a man seeking to solve some interesting problem of color or form, of light or atmosphere, would be a relief among the neatly turned-out exhibition pictures which fill the Academy. It is the non-existence of true artistic endeavor which is so dispiriting, the apparent willingness of exhibitors to keep on turning out regulation pieces of sentiment, landscapes and portraits, all as much of a pattern as if they were machine-made. It would be better if Americans who send to Burlington House understood that mediocre productions are practically lost in the prevailing mediocrity. Mr. Sargent does understand this, and is sure to be represented by work that tells on the Academy walls, so that his absence this year is the more conspicuous; but then Mr. Sargent is an artist and could not help being distinguished. There are others, however, who, knowing that the Academy average is proverbially low, seem content to contribute anything that happens to be in the studio. Mr. Bridgman, it is true, makes a new departure in deserting the East for a thoroughly western "Lawn Tennis Club," but unfortunately this same subject was not so long since much more cleverly treated by Mr. Lavery, one of the Glasgow group, in a picture which now hangs in the Munich Pinakothek, and which cannot soon be forgotten by those who saw it when it was exhibited in the Goupil Gallery here. Mr. F. D. Millet's "Between Two Fires," one of his carefully studied interiors, is by far the best thing of the kind in the collection; but this is not saying much, and it would have to be better still to assert itself with preëminence even in its present surroundings. One wonders if, but for his sitter, Mr. Beckwith's portrait of Mark Twain, curiously hard and leathery as it is, would have been hung at all; while Mr. Mosler scarcely does himself justice, and Mr. Shannon, if, indeed, he can be called an American, gives unpleasant signs of drifting entirely into the manufacture of fashion plates. Even Mr. Hitchcock's poppy field suggests that the painter had the Academy in view when he was at work on it. Decidedly the best showing by Americans is made by Mrs. Stanhope-Forbes—a Canadian—in her true, if somewhat perfunctory, rendering of a "Minuet" in a dimly lighted room, and Mr. F. Morley Fletcher in "The Shadow of Death," which, with its rich color and the fine lines of its composition, was no less notable when exhibited in the Salon. But not one of these contributions is either so fine a failure, or so startling a success, as to redeem the commonplaceness of the show.

Even stranger than the total lack of distinction is the fact that whatever improvement is revealed comes from within the Academical

ranks. The pictures which are really the most interesting are the work of three or four Academicians and Associates, more especially of the latter. It is wearisome year after year to dwell on the trivialities, the crudities, the vulgarities which the many writing the magic initials after their name produce. From them nothing else has ever been expected, or if, like Sir John Millais, they once did better things, one remembers the past with regret. Only a few still continue to work successfully on the old lines. Mr. Orchardson, Mr. Henry Moore, Mr. J. W. Waterhouse send excellent variations of the old themes, about which there is absolutely nothing new to be said. Mr. Tadema's arrangement of marble and blue skies and seas, called "A Kiss," has more of that quality which gave value to his earlier classical compositions, but which is not invariably found in his later canvases. Sir Frederick Leighton's "Garden of the Hesperides"—the one noteworthy of his five contributions—is filled with the decorative stateliness and harmony which make up in a measure for his thinness of color, his weakness when he attempts realism, and the inevitable waxiness of his surfaces. And Mr. Watts is at his best in a portrait of Mr. Walter Crane in the New Gallery, rich in its sombre browns, simple and vigorous in its handling, though it is to be feared that if, like so many of his pictures, it remains long in his studio, it will suffer, as they have, from his mania for retouching and repainting. But it is really two of the youngest Associates whose work presents the most obvious justification for the existence of such an institution as the Royal Academy.

It is encouraging to find that the election of Mr. Stanhope-Forbes, the latest comer, has not been the signal for his immediate degeneracy. On the contrary, he has made a distinct step forward with "Forging the Anchor," which justly is given one of the chief centres of honor. Having begun his career brilliantly, his tendency latterly has been towards the painted-photograph effect—the ideal, apparently, of the Newlyn School. This unpleasant photographic suggestion is not wholly got rid of in his Forge, in which the Newlyn tricks of perspective—the floor running up at such an angle that it looks as if everything must slide down it—are also evident. One or two figures are superfluous, and the arrangement of light falling from a furnace to the right on a boy is a tiresome repetition of what Norwegian painters have done again and again. But when all these defects are pointed out, it must still be admitted that he has succeeded in giving the glow of the red-hot iron and the action of the men around it with a truth never yet attained by the many painters who have attempted the same problem, not even by Menzel. And this in itself is an achievement, though perhaps not the highest. Mr. David Murray is the other Associate who deserves credit for resisting the deadening influence of the Academy. Too often his landscapes are marked by a facile commonplaceness and a weak striving after Corot. But this year he has literally leaped into originality. It is still clear that Corot is his master, but he proves at last that he can adapt the master's methods to his own ends, and thus produce an artistic result; and, after all, what more can be said of the most original men? It is in his "River Road" that he shows himself most accomplished, and it seems a pity that this, the best landscape of the year, could not have been secured for the nation by the Chantrey Bequest Trustees, instead of the flaunting purple-and-white mountain meadow by Mr. MacWhirter, or Mr. Arthur Hacker's version of the Annunciation. It may be said that Mr. Murray is already represented by one canvas in the Chantrey collection, but this argument was not used in previous years against the purchase of a second work by Sir Frederick Leighton or Mr. Herkomer. And if Mr. Hacker's is a very praiseworthy effort, the object of the Chantrey Bequest is to collect good work, not good intentions. Indeed, it would be wiser to buy no pictures for a season or two than to keep on misappropriating the funds. As I write, I hear that Mr. Millet's picture has also been bought; he now enters, after Mr. Sargent, into the Gallery of British Immortals.

Outside the Academical ranks, matters are not much more cheerful. I never remember such a scarcity of passable portraits. At the Academy and New Gallery alike the walls are barren. At the latter, besides the Watts, the only portraits which attract attention are two of Paderewski, and they are being talked about not for artistic reasons, but because Princess Louise painted one and Mr. Tadema the other, and the comparison furnishes a fine text for dinner talk. At the Academy, where Mr. Herkomer shows a group which will be remembered—if remembered at all—as the most fearful and awful confusion in perspective and light, there are good portraits by Mr. Lavery and Mr. Furse, but they are so quiet in color and treatment, and are hung so badly, that it is easy to pass them by. Mr. Lavery has already made his name as a portrait-painter among people who really care for art. Mr. Furse is as yet but the careful and intelligent student of Mr. Whistler; but at the New English Art Club he has two canvases which, Whistlerian though they be in color and treatment, give promise that he may eventually come to the fore upon his own merits.

The landscapes are almost as depressing. It is pleasanter and easier to turn to the few men who have either gone in search of new impressions and effects, or who have given a new treatment of their old motives, than to point out the innumerable proofs of the English landscape-painter's misconception of his art. Mr. Alfred Parsons sends to the Academy an orchard in early springtime, in which he succeeds in getting the effect just missed in several of his late canvases; and Mr. Alfred East, who is, as a rule, too pretty and trivial out of deference to his public, this year is beginning to look at nature with his own eyes instead of those of the British picture-buyer. Mr. Noble and Mr. Corbet are always serious and sincere in their work, painting what they see and not what other people would like them to, which is no small virtue in a country where the standard of art is based upon the random word-painting of Mr. Ruskin, or the yearly votes for the best picture at Whitechapel exhibitions. I ought also to mention Mr. Muhrman and Mr. Johnstone, both Americans, who are the most original of the exhibitors at the present New English Art Club show.

It is, however, because this show has proved such a disappointment that the outlook for British art seems just now more hopeless than ever. To the members of the New English Art Club, during the last six or seven years, one has looked for that vitality, that new life, which the so-called British school of painting so sorely needs. They are young, they are enthusiastic, they are daring. But their daring has never yet led them beyond clever imitation, and in their successive exhibitions one has been forced to note a gradual falling off, until this spring they have failed to be interesting even in their echoes of other and greater artists. There is almost as little distinction here as at the Academy. Mr. Furse's portraits are exceptions because they are such clever copies of another painter's methods; Mr. Starr's, because a man of reputation, like Mr. Harold Frederic, sat to him. It is but fair to add that the water colors of Mr. Brabazon, an artist almost unknown, are the only examples in that medium in any gallery which are of the slightest importance, and that the drawings of cats by Mr. Arthur Tomson, together with a little study of the nude by Mr. George Thomson at the Academy, can alone be said to represent worthily the black-and-white work of the day.

It is to the sculpture one must go for whatever vitality exists in contemporary British art. The contrast between the sculpture and the picture galleries is enormous. The thousands of paintings are dull and lifeless; the hundreds of busts and statues and reliefs are full of character and vigor. It is clear that the painter paints to meet a passing fashion while fair prices can be commanded; that the sculptor does his work because he has something to say which can be said in no other way, by no other medium. The average is high; there is not talent only, but genius in the work that rises above it. Foremost, of course, is Mr. E. Onslow Ford's Shelley Memorial, which has been refused a place in the little graveyard under the pyramid of Caius Cestius, and will, it is likely, yet be refused admittance to the grounds of University College, Oxford, to which Lady Shelley next presented it. There is little enough encouragement for the sculptor in England; he sees the statues of second-rate men, who rejoice in court patronage, set up in the streets of London; when he ventures to allow his genius free play, when he gives proof of his originality, his work runs the risk of never finding a place outside of his own studio. Mr. Ford's design has been much talked of because of its unconventionality, because his Shelley lies extended, unclothed, undraped. But less has been said of the fine modelling of the outstretched figure, of the grace of the pose, of that touch of human pathos and feeling which is so intensely modern in sculpture, which only a few sculptors like Rodin, and Ford, and Gilbert have yet been courageous enough to express, in defiance of all tradition. Less has been said, too, of the harmony and repose of the whole design, with its winged lions in bronze supporting the marble on which the body lies, and its Muse weeping over the lyre in the centre just below the figure. Anything short of unqualified success with so unconventional a conception must have made it border on the ridiculous. The solemn impressiveness of the memorial, which strikes you more and more the longer you look upon it, can leave no doubt of Mr. Ford's triumph.

There is nothing else to be ranked with this, but there is other work of lesser importance: Mr. Gilbert's busts, large in treatment, individual in character, with here and there, in the lace ruffles or wand of some high official, the minute decorative detail of which he is a master; Mr. Harry Bates's long, narrow, low relief of Endymion and Selene, and his small silver door-knocker (for, like Mr. Gilbert, he is the accomplished decorator as well as sculptor); small bronzes by Mr. John M. Swan; examples of Mr. Frampton, Mr. Pomeroy, Mr. Pegram. But it is impossible to go through the list, not for lack, but for excess, of material. When I glance over my catalogue, I find page after page in the painting galleries with blank margins; in the two sculpture rooms there is scarce a name without an accompanying note. If only Medicis instead of Guelphs

reigned in England, modern London could be made a fair rival of the Florence of the Renaissance. N. N.

Notes.

Mr. Charlemagne Tower, Jr., of Philadelphia, is engaged upon a work on Lafayette in the American Revolution, and will be obliged to any one possessing letters of Lafayette written during that struggle who will send copies of them to him, in care of the Historical Society of Pennsylvania, Philadelphia.

T. Y. Crowell & Co. will publish in book form six essays on the theme, "What, if any, changes in existing plans are necessary to secure an equitable distribution of the burden of taxation for the support of national, State, and municipal governments?" Three of them won the prizes offered by the publishers of *Public Opinion* for the best essays on this question; and the other three were favorably considered.

"How to Get Good Judges" is the subject of a "study of the judicial systems of the States, with a plan for a scientific judicial system," by John A. Wright of the San Francisco bar. The volume will be published in that city by the S. Carson Company.

Ginn & Co. have in press 'Selections for Memorizing,' for school use, by Superintendents Sherman Williams and L. C. Foster; and 'Addison's Criticisms on Paradise Lost,' edited by Prof. Albert S. Cook of Yale.

Dr. George Curry's 'Manual of English History for Schools,' edited by Dr. W. J. Rolfe, will be soon brought out by Charles E. Merrill & Co.

There can be only words of welcome for the new edition of Jane Austen's novels which Roberts Bros., Boston, have begun to issue in a size convenient for the hand and in a style most agreeable to the eye. The series opens with 'Sense and Sensibility' in two volumes, each provided with a delicately designed and etched frontispiece; and this has been followed by 'Pride and Prejudice,' likewise in two volumes and illustrated. The type is clear, the binding wholly commendable for its taste. It is safe to augur a revival of popularity for these classics from their taking garb.

Swan Sonnenschein & Co., London, have added to their Social Science Series 'Principles of Social Economy,' by Yves Guyot; 'The Destitute Alien,' by Arnold White; 'The Student's Marx,' by Edward Aveling; and 'The Dawn of Radicalism,' by J. Bowles Daly, all imported by the Scribners. We may mention at the same time 'The Alien Invasion,' by W. H. Wilkins, which is published by Methuen & Co. Of these volumes the most considerable is that of M. Guyot, which, however, is more valuable for its facts than for its principles, containing much information as to the industry of the past as well as the present not hitherto conveniently accessible. But economists will be interested in examining the forms in which the author expresses the fundamentals of political economy. Mr. Daly's book is a readable presentation of various incidents in the lives of Horne, Wilkes, and other warriors in the struggle for free speech in England, and gives a view of the political history of the period. Dr. Aveling presents to students a comparatively brief analysis of a part of Marx's 'Capital,' which, considering the enormous dimensions of that work, must be commended as a "labor-saving contrivance," in spite of the obnoxious character of such inventions to the economic theories of these writers. Dr. Aveling, it may be explained, considers the work of Marx to be on a par with that of Darwin, and regards it as not doubtful that the nineteenth century will be remembered, as far as its thinking is concerned, by these two names. The two works on the immigration of aliens into Great Britain are not of a character to throw much light upon the problem involved or to aid in its solution, and can be of service only to those who desire a somewhat emotional treatment of statistical investigations.

Prof. Alfred Marshall has published through Macmillan an adaptation of the first volume of his large work to the needs of junior students, under the title, 'Elements of Economics of Industry; being the first volume of "Elements of Economics."' It is certainly to be desired that Prof. Marshall should cultivate the art of abbreviated expression, but it seems to us a mistake for him to expend his energy in adapting for young students the first part of an uncompleted work. If these students are to suspend their study of economics, after mastering this book, until the remainder of the subject has been completed and adapted for them, they must remain for a considerable time, and (*absit omen*) possibly always, with a most imperfect and unsystematized knowledge of the science.

The Swiss devices known as the "Referendum" and the "Initiative" are described by Mr. J. W. Sullivan in an essay entitled 'Direct Legislation,' issued by the Twentieth Century Publishing Co. The appearance of such a book is not without political significance, and Mr. Sullivan's collection of data is convenient to have; but he does not seem to us to make out a case for transplanting these institutions to America.

A compact manual entitled 'American Citizenship and the Right of Suffrage in the United States' has been prepared by Mr. Taliesin Evans of Oakland, Cal. The subject of citizenship in this country, State and Federal, on account of the negro and Chinese troubles and the vast immigration from every known part of the earth, is a highly complicated one, and this treatise, which is based upon statutes and judicial decisions, will be found convenient for reference.

Mr. W. M. F. Round, Secretary of the Prison Association of New York, is writing a series of "Papers for Parents," to be published by the Order of St. Christopher, No. 135 East Fifteenth Street. The wide experience of Mr. Round with young criminals has impressed upon him the responsibility of parents for much of the misbehavior of their sons, and in the first of these tracts he insists upon parental duty with so much earnestness and force as to bespeak for the whole series an extended circulation.

The Department of Political and Economic Science of the Brooklyn Institute is considering a proposition recently laid before it to establish in that city a School of Political Science, fully equipped with both elementary and advanced courses of instruction in civics, economics, sociology, and history, at merely nominal tuition rates. The Executive Committee of the Department have had the matter referred to them with power; and if sufficient financial encouragement is offered by citizens of Brooklyn and others interested in the movement, and if properly qualified instructors can be engaged, elementary courses in some or all of the subjects above named may be offered in 1892–'93.

We called attention some months ago to the proposed memorial in honor of the late Prof. von Holtzendorff of Munich. We may say again that in order to pay proper tribute to his services as an author on penal and reformatory laws and institutions, it is intended to raise a fund with which to encourage active investigations of the same subjects. A large committee has been formed, consisting of representatives of the leading public bodies engaged in the work to which Holtzendorff gave his whole life. A recent report gives a list of subscriptions thus far received, and not one appears from the United States. The whole amount collected up to date was slightly more than $3,000, and to this there have been subscriptions of $100 each from the German Lawyers' Convention, the Legal Society of Berlin, and that of Munich. The Grand Duke of Baden heads the list with $25, an anonymous subscriber gave $250, but the 193 subscriptions are mostly of very modest amounts. The list of subscribers includes representatives from Germany and France, from Sweden and Denmark, from Russia and Greece, from Switzerland and Holland, from Great Britain and Italy, from Spain and Austria.

'The Investigations of the New England Meteorological Society for 1890' have lately been issued as a reprint from the "Annals of the Harvard College Observatory," in which they have been published for several years past. The present number contains the usual tables and summary for the year, with a particular account of the cyclonic storms (or "areas of low pressure" of the weather maps) that determined New England weather. This is followed by a tabulated statement of the mean temperature and precipitation in five-year periods for all New England stations from the earliest records, by J. Warren Smith of the Weather Bureau, who for two years past has been detailed as assistant in the weather-service work of the Society. The Lawrence, Mass., tornado of July, 1890, is discussed in three chapters by W. M. Davis of Harvard College, H. H. Clayton of Blue Hill Observatory, and H. F. Mills of Lawrence. This paper is illustrated by views of the destruction caused by the tornado and by a map of its path.

The future work of the New England Meteorological Society will be limited to its meetings and investigations. The duty of collecting weather records and publishing them in monthly bulletins has been lately transferred to the National Weather Bureau of the Department of Agriculture, with the object of continuing this undertaking under the title of the New England Weather Service, whose headquarters will be in Boston. In this connection mention may be made of a conference of the officers of agricultural colleges and experiment stations held in Boston on May 5, for the purpose of coördinating their work in the best interests of applied meteorology. The subjects considered were: (1) extension of observations to be gathered and published by the New England Weather Service; (2) distribution of weather predictions furnished by the National Weather Bureau and announced by flags and other signals; (3) investigations, among which the protection of tender crops from frost received the fullest consideration. An organization of limited membership was formed, under the title of the New England Association for Applied Meteorology; Prof. G. H. Whitcher of Durham, N. H., being chosen President, and J. Warren Smith, Secretary.

Among the essays recently published in the *Forschungen zur Deutschen Landes- und Volkskunde*, is one by Dr. F. Wahnschaffe of the German Geological Survey, entitled 'Die Ursachen der Oberflächengestaltung des Norddeutschen Flachlandes.' This deals almost exclusively with the glacial deposits to which the form of the North German lowlands is so largely due. It is the best general discussion

of the region that has yet appeared. An excellent review of the essay comes from the competent hands of Prof. R. D. Salisbury in the May number of the *American Geologist.*

A new monthly, to be called the *Republican Magazine*, is to be launched in this city next month. The editor, Mr. F. B. D. Curtis, is vouched for as a good partisan, and the arched design on the cover shows "Protection to Labor and Industry" to be the keystone of his doctrine.

The International News Company sends us *Fashions of To-day*, the London edition in English of the innovating French monthly, *La Mode Pratique.* What strikes the eye even of the uninitiated is the plates, whether colored or in the text, which are obviously from photographs of real women and children dressed for the occasion, and not the ridiculous simpering figures of the conventional fashion-plate.

Under the title, "La Comédie d'aujourd'hui," M. F. Lhomme makes a savage attack in *L'Art* for April 15 on Pierre Loti, apropos of his recent indiscreet reception address before the French Academy, in which Octave Feuillet "was so badly embalmed," his successor "having found nothing better to say of him than to compare him to himself." M. Viaud's provinciality as the cause of his bad manners is well rubbed into him, and it is predicted that his successor will find that "la saugrenuité, l'attirance et l'endeuillement," which Loti has made French words, are all that remains of him.

We learn that a tablet has been placed on the front of the old Paine house at Lewes, England. The inscription, written by Mr. Moncure D. Conway, is as follows: "Thomas Paine, b. 1737, d. 1809, author of 'Common Sense,' 'Rights of Man,' 'The Age of Reason,' a founder of American independence with pen and sword, lived in this house, as Exciseman and Tobacconist, 1768–1774."

—The fourteenth general meeting of the American Library Association just held at Lakewood, with adjournments to Baltimore and Washington, differed from previous conferences in that the short time of preparation had led the managers to decide against having papers and to arrange for introduced talks. The exclusion of papers (which, however, was not absolute, for the President's address and two or three others were read) gave great liveliness to the proceedings. Mr. Fletcher presided, as was to be expected, with vigor and snap. Discussion was interested and eager, and, notwithstanding the absence of papers, had frequently to be cut short in order to give a chance to all of the subjects set down. For there was the old difficulty of a too-crowded programme, crowded this year in part with subjects that could not be postponed—the revision of the Constitution, the World's Fair library exhibit, and the Public Documents Bill pending in Congress. The discussion of the first and last was finished, but they are not subjects that will give permanent value to the published proceedings. The second, unluckily, was little considered. With the feeling that a large body could not properly decide the details of an exhibit, the matter was referred to a committee with power to act, when a better course would have been to invite suggestions by a full discussion in committee of the whole, with the understanding that no vote should be taken. At every conference some subject has attracted chief attention. In the early times fiction was a burning question. Twice—at Washington and at San Francisco—architecture has taken the lead. On one occasion Poole's Index was born, or rather reborn; on another, Fletcher's Essay Index; on another, the A. L. A. Catalogue—a project for a select annotated list of books suitable for a small library, which roused the greatest enthusiasm, but which, for want of a worker who could devote a great deal of time to it, has never come to anything. The publishing section, which, with limited means, has done a little excellent work, was instituted at Milwaukee. The proper distribution of public documents to public libraries shared with architecture the attention of the San Francisco meeting. At Fabyan's the coöperation of trustees was enlisted, and steps were enthusiastically taken to raise an endowment fund for publication. This year Mr. George Iles proposed that a committee of the Association should select, from publications announced as forthcoming, books for review, send them, if possible, sheet by sheet as printed, to competent and just reviewers for the preparation of a short critical notice to be printed on a card or cards following the title-card in the library catalogue. This note he would have state whether the book is elementary or advanced, compare it with others in the same field, telling wherein it is better or not so good, and note important errors. At the same time a fuller review should be prepared for simultaneous issue in a syndicate of newspapers throughout America.

—Mr. Iles sees several advantages in his plan, and first an increase in the responsibility of authorship; for though reviews biassed by friendship or enmity or interest, or simply irresponsible and incompetent, will still continue to appear, here, he hopes, will be a body of criticism to which the serious public will turn more and more for guidance. There would, too, be an increase in the responsibility of reviewing, from the signature of the reviews; and, most important of all, there would be an increase in the result of study and research, because it would be easier to confine them to really valuable books, and the time wasted in finding out what is valuable would be lessened. Better books would be selected by the reader from the stock in the library, and better books would be bought by the librarian with less expenditure of time. Moreover, these notice-cards distributed to libraries would constitute a select bibliography of each subject, and would guide purchase when at any future time it should become possible to fill up gaps in the library's collections. The greatest gain, however, would be for students, enabling them to see quickly which are the best books on their subjects. Of course, if the scheme should succeed for current literature, it would lead to going over past productions, and the result would in effect be the publication at last of the much-desired and long-delayed A. L. A. Catalogue. Unhappily, such a work cannot be performed for love alone, nor would author or publisher consent to the piecemeal publication of a work, nor would impartial reviews be procurable if signed, nor would they be written on this condition by the most competent experts, nor is the editorial discrimination capable of assigning so vast a range of works to the proper critics a common possession. In short, we must regard the scheme as purely Utopian. A far simpler plan would be to select a half-dozen leading critical Reviews, and record on the title-card their judgment as pro or con, in the manner of our pronouncing dictionaries. The next Conference will be held at Chicago in July. It is hoped that it will be international. Many English librarians have spoken of coming, and undoubtedly at least commissioners will be present from Germany, Italy, and France.

—The annual report of the Providence Public Library, just published, gives some reason for the belief that an important change in the use of public libraries is gradually taking place. Mr. Foster's statistics show that the number of books circulated has increased during the past year. An examination of the figures reveals the fact that this increase is wholly in the books consulted in the library, and that the number taken for home use has fallen off more than a thousand. This fact by itself would be of slight importance, but an examination of the report of the Boston Public Library adds materially to its significance. In this latter institution the number of books taken for home use has decreased during the year by more than 100,000, apparently a full tenth of the average circulation. This was equally true of the central library and of all its branches, the deficit ranging from a little more than 1,000 in the Roxbury branch to more than 40,000 in the Lower Hall, although there was an increase of more than 17,000 volumes used in the Bates Hall (not taken from the building). It is impossible to tell whether the "hall use" of the branches has increased, as the practice now prevails of including under this head the newspapers and magazines read. By this questionable means, it may be noted here, the sum total of the circulation is swelled to an extraordinary amount. By comparison with the figures in the report for 1889, it will nevertheless be evident that the true amount of the circulation of the library was, not, as would naturally be inferred from the report, 1,812,432, but about a million. These facts seem clearly to show that both this library and, in a far less degree, that at Providence are being gradually used less by the people at large and more by scholars and persons making special researches. This may be accounted for in two ways: the reading of magazines and papers is probably largely taking the place of book-reading, and it may also be a fact that too great a proportion of the library funds is used for the purchase of books for special students, to the neglect of the legitimate demand for popular books, not fiction. It would be interesting to learn from the Boston Public Library, with its liberal practice of purchasing books on request, whether in this particular it treats the general reader and the specialist impartially.

—It would be easy to dilate on the contents of the sumptuous quarto volume entitled 'The History of the Centennial Celebration of the Inauguration of George Washington as First President of the United States' (D. Appleton & Co.). Two-thirds of its 551 pages of text is taken up with the narrative, by several hands, of the inception and conduct of the brilliant celebration in this city in 1889. Introductory to this is a straightforward account, with many original documents, of the ratification of the Constitution, the slow gathering of the First Congress, the election of Washington and Adams, their respective journeys, amid popular demonstrations, to New York, and the inaugural ceremony, from the pen of Mr. Clarence W. Bowen, the editor of the volume; and a second chapter, involving even greater labor, of biographical sketches of the members of the First Congress, compiled by Mr. Paul Leicester Ford. These hundred pages are profusely illustrated with heliotype portraits in a most interesting variety, and so are the pages which follow, not to speak of numerous cuts and plates of historic buildings and relics, to which belong the fifth chapter, on the Loan Exhibition of portraits and relics at the Metropolitan

Opera-house, by Mr. William A. Coffin, the efficient manager. From the galleries and cases of this unrivalled collection a large part of the material for illustration was obtained, but much had to be sought abroad. Nearly 150 pages of notes on the portraits, by the editor, and an admirable index in 121 pages by Mr. Robert H. Kelby of the New York Historical Society, complete the work, which the Messrs. Appleton have printed, without profit to themselves, in a noble style, and made a monument of the mechanic art of the day. The History itself preserves for posterity one of the few occasions on which New Yorkers feel the existence of a civic and a public spirit not quite submerged by an alien population and a government by the dangerous classes for the dangerous classes. It also worthily embalms the discourse of Bishop Potter, recalling forgotten standards of official honor and official trust as exemplified for all time by the first President of the Republic.

—Mr. Bowen's notes on the portraits deserve very high praise. He enumerates at the outset the series here reproduced, as far as possible from originals, showing a total of nearly 550. Of these there are 208 which represent 78 of the 96 members of the First Congress—a very remarkable proportion to be thus commemorated, and indicative, it may fairly be said, of the station and quality of the public men in question. There are 80 portraits of great ladies of the time. Washington's face is repeated 29 times, Jefferson's 21, Hamilton's 16, Adams's 14; but Franklin's 53. Mr. Bowen wisely refrains from any attempt to pronounce on the value as likenesses of this vast array of paintings and statuary, but the grouping enables one to discover the mannerisms of the more prolific artists, like Trumbull, Stuart, and C. W. Peale, and to form a judgment as to their respective ability and credibility. For the rest, he cites a good deal of family testimony and tradition, which may be taken for what it is worth. Noticeable is Josiah Quincy's well-grounded opinion that Savage's portraits of Washington, though not the best art, were the best likenesses. It is a pity that the display adopted in the notes on Washington, by which each portrait is named in order and in a line by itself, so that it is easy to turn back to the print of it, was not observed throughout; especially as so many more portraits are recorded in the notes than are exhibited in heliotype. A final word must be given to the instantaneous "process" views in the text, which will transmit to posterity the features, figures, presence, and action of the dignitaries of the present day, from President Harrison down, together with the contemporary aspect of the harbor and streets of New York, the shipping, etc., etc. All concerned in this laborious production should regard it with satisfaction and receive for it the grateful acknowledgments of their fellow-citizens.

—Prof. H. Tallichet sends us a pamphlet, reprinted from part iv. of *Dialect Notes*, entitled "A Contribution towards a Vocabulary of Spanish and Mexican Words Used in Texas." He has collected the words "among people, mostly Americans, who had spent most of their life in the State—surveyors, cattlemen, prospectors, land agents, and old settlers on the border, who used the words introduced as they would words already naturalized in English." The result is an enumeration of something like 175 words, almost all of which relate to the commoner points of contact between the receding Mexican and the advancing English element. Thus there are many names of ordinary plants and animals, many others referring to the processes of agriculture (particularly horse and cattle-breeding) and to housekeeping, and a goodly proportion to weapons and the ruder forms of justice. In fact, the vocabulary is highly suggestive of the degree of civilization and the terms of intercourse of the two races at the time when the *lingua franca* sprang into being of which the remains on the American side are here given. As regards pronunciation, Prof. Tallichet appears to be under some misapprehension in respect to the variations from the recognized Spanish standard which are common in Mexico, and, indeed, in all Spanish America, and so to have attributed some corruptions to Texas which really have their origin elsewhere. For instance, the elision of *d*, especially between two vowels, the sharp sound given to *c* and *z* before *e* and *i*, and the sounding of *ll* like *y*, are each the ordinary thing in all Spanish America. They are peculiarities of the Andalusian dialect, and point to the fact that the majority of the early Spanish explorers and settlers came from the southern provinces of Spain. *Tresillo* is called "a Mexican game of cards," but Mexico probably took it from Spain, where it has long been a common and popular game. Under *Zopilote* (turkey buzzard), we read "the national bird of Mexico." This is rather hard on those Mexican designers who have had no better luck, it seems, in representing *their* eagle than our own artists who turned out our "buzzard dollars." Prof. Tallichet can never have seen those filthy scavengers of Vera Cruz which are known as "zopilotes." His contribution, however, is one of great interest and real value.

McMASTER'S THIRD VOLUME.

A History of the People of the United States from the Revolution to the Civil War. By John Bach McMaster. In five volumes. Vol. III. D. Appleton & Co. 1892.

At the inception of his projected 'History of the People of the United States,' to be comprised in five volumes, Prof. McMaster assured us that while much in the course of his narrative must needs be written about wars, conspiracies, and rebellions, about Presidents, Congresses, embassies, and the rise or fall of great parties in the nation, yet the history of "the people" would be his "chief theme," and that at every stage of the progress "which separates the America of Washington and Adams from the America in which we live," it would be the author's purpose to describe "the dress, the occupations, the amusements, the literary canons of the times; to note the changes of manners and morals; to trace the growth of that humane spirit which abolished imprisonment for debt and reformed the discipline of prisons and jails," etc., etc. In the volume before us, the third in his projected series, the writer brings his narrative down to the outbreak of the war of 1812 with England, thus allowing himself, according to his plan, only two volumes in which to recount the political and social history of the eventful period which extends from 1812 to 1860. It becomes plain, in the presence of this fact, that there is some defect in the original projection of the work, or that there will be some want of symmetry and ensemble in its execution.

Indeed, the want of symmetry and ensemble becomes apparent in the volume before us, devoting in it, as the writer does, so much more attention to the purely political than to the distinctively social aspects of American history. This inversion of the author's original purpose seems only the less necessary in view of the fact that, on the political side, he travels over the same ground which has been so carefully and critically covered by Mr. Henry Adams in his copious history of the same period. Mr. Adams does his work so thoroughly that little more than a slender sheaf can be expected to reward the industry of the gleaner who follows him in quest of new materials, while, if regard be had exclusively to a political appreciation of the same facts, the views of the two historians, so far as we can discern, would seem to be generally coincident.

It is certain that this coincidence of opinion comes to expression in the judgment pronounced by each on the resultant tendencies of the two great political parties which divided public sentiment in the United States from the formation of the Constitution to the end of Jefferson's first term. Prof. McMaster sees as clearly as Mr. Adams that, with the opening of the new century, there came "what, in the toasts of the day, was fondly called the triumph of democratic principles." He sees, too, with Mr. Adams, that "it was a real triumph, and not a mere party success; that new ideas did take hold on the minds of men; that new truths were discovered; that society did go forward; that a great reform in manners, in customs, in institutions, in laws was under way; and that the day when there should be in this country a government of the people, by the people, was beginning to break." Yet he seems to hold with Mr. Adams that this *avénement* of the American democracy was poorly expressed in the administrative measures of President Jefferson, and that if a fusion of the Federalist and the Republican parties had been practically effected at the close of Jefferson's first term, it was a fusion which should be ascribed "not merely to the republicanizing of the Federalists, but to the federalizing of the Republicans." "After the lapse of four years [under Jefferson], the Government," says Prof. McMaster, "was as Federal in principle as it had been in the days of the Black Cockade and the 'Addressers.' Never was the Constitution more broadly construed than when the Judiciary Act was repealed and the purchase of Louisiana effected. Never was the Executive power more extended than when Jefferson was given despotic sway over the Territory of Orleans. Never was the Constitution more impudently disregarded than on the day when one rate of tonnage duty was laid on the ports of Louisiana and a very different one on the ports of the States."

Mr. Adams reminds us, in his 'Life of Albert Gallatin,' that in recent times there has been a general disposition to explain away and to soften down the opinions and passions of party contention in the United States during the Administration of John Adams. But he insists that such a treatment of history "makes both parties ridiculous," and he further reminds us that the two brilliant men, Hamilton on the one side and Jefferson on the other, who then led the two great divisions of national thought, were not mere declaimers; that they never for a moment misunderstood each other; that they were both in deadly earnest, and that each saw that no compromise ever was or ever would be possible between them. "Jefferson meant that the American system should be a democracy, and he would rather have let the world perish than that this principle, which to him represented all that man was worth, should fail. Hamilton considered democracy a fatal

curse, and meant to stop its progress." Where there was such a marked antithesis between the typical Federalism of Hamilton and the typical Republicanism of Jefferson, and where it is now so easy to see that the latter was working with the tendencies of the future, it would seem that Prof. McMaster, in confining himself more strictly to the special motive of his work, might have shown that these tendencies, as then manifested, were social and evolutionary rather than purely political, since they did not come to full effect in the purely administrative measures of the man who, above all others, was their professed exemplar. In this direction there was room for a really luminous *aperçu* which might have shed much useful light on the real significance of Jeffersonian Democracy. As it is, we are landed by Prof. McMaster in a sort of *cul-de-sac*, where we are told on one page that the "triumph of Democratic principles at the opening of the present century was a real triumph, and not a mere party success," while on another page we are told that, at the close of Jefferson's first term, "scarcely a Federal institution was missed, and not a Federal principle had been condemned." Such a summarizing of principles is a little too summary.

And sometimes in summarizing the substance of legislative debates on a topic of contention between the two parties, Prof. McMaster hardly does full justice to the respective attitude of each, not at all from any want of candor, but from want of care in making his abstracts. We were especially struck with this want of care in noting his abstract of the debate had in Congress on the proceedings taken to give effect to the Louisiana purchase and to provide for the temporary government of the new Territory. The Federalists had especially inveighed against the constitutionality of the seventh article of the treaty with France, which provided that for twelve years French and Spanish merchant ships should be allowed to enter the port of New Orleans "without being subject to any other or greater duty on merchandise, or other and greater tonnage, than paid by citizens of the United States." The Federalists denounced this article as being in palpable violation of the provision in the Constitution that "no preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another." It was charged, and truly charged, that this regulation gave a "preference" to French and Spanish ships entering the port of New Orleans over French and Spanish ships entering the port of New York or Boston; because at the latter the tariff duties and tonnage rates prescribed by law continued to be enforced, to the comparative disadvantage of Northern and Eastern commerce. Prof. McMaster tells us that the Republicans sought to parry the force of this objection by alleging that "the Constitution is made for the States and not for the Territories"; that "it does not extend to the Territories," and that a "preference" inhibited as to "the ports of *one State* over those of another" did not carry with it a like inhibition as to a port in *one of the Territories*.

It was impossible that the Republicans should have argued that "the Constitution did not extend to the Territories," when, as Prof. McMaster shows, they argued that Congress, under the Constitution, had plenary power over the Territories. And they made more than a merely technical defence of the "preference" given to the port of a "Territory." It was a preference, they said, given by treaty stipulation and not by Congressional enactment; it was a preference given in exception to statute law and not in violation of the Constitution; and, finally, considered as a preference given to the port of a *Territory*, it wrought no disparagement to the common weal, because the Territories were the common property of the United States—a public stock in which they all had a common share. Moreover, it was argued by John Randolph, in his usual *tu-quoque* and nagging style, that the mouths of the Federalists were stopped on this score, as in their support of Jay's treaty they had given their assent to this pretension of the treaty-making power in its extremest form, seeing that the third article of that treaty gave a "preference" to the ports of certain *States* adjacent to Canada over the ports of other *States*.

The author, as was to be expected, continues to make a plentiful use of contemporary newspapers and of pamphlet literature as sources of his history. Duane's *Aurora*, the Scioto *Gazette*, the Alexandria *Expositor*, figure in the foot-notes side by side with the 'Anas' of Jefferson, with the 'Cabinet Memoranda,' with the 'Annals of Congress.' We do not at all object to the use of these sources. It is only to the too uncritical use of them that we some times feel tempted to take exception. It may be well that the gravity of history should be sometimes relieved by picturesque descriptions like those which are here drawn from the newspapers: to tell us how, in the month of September, 1804, one of the most terrible cyclones which have ever visited our coast appeared at the Bahamas on the 5th of that month; how two days later it struck Charleston and passed up the seaboard to Maine; how "spires of churches, roofs of houses, trees, buildings, went down before it"; how "stage-coaches were overturned, ships were beaten to pieces, docks and warehouses destroyed, and half the rice crop and what little the caterpillar had left of the cotton was destroyed"; how "Fort Greene, off Savannah, was all but blown away"; how "a cannon weighing two tons was moved forty feet, a bar of lead weighing three hundred pounds was moved a hundred feet, and the whole of Cockspur Island was covered with muskets"; how "the water was banked up till it was ten feet deeper at low tide than it ever had been at high tide"; how, "when the floods went down, Gunboat No. 1 was left high and dry in a cornfield eight miles from her moorings"; how the commanders of gunboats were thereafter cautioned by the Federalist wits to "beware of cornfields," and how, at a great dinner given to Rufus King, in Boston, the merry symposiarch set the table in a roar with a toast to "Gunboat No. 1—If our gunboats are of no use upon the water, may they at least be the best upon earth." In the case of newspaper chronicles like these, no harm is done to the essential "truth of history" if the cannon lifted by the cyclone might have weighed a little less than two tons, or if it was moved a little less than forty feet. It relieves the tedium of pedestrian prose to know that the newspaper wags of the time sometimes "dropped into poetry" over the humors of the embargo; that one writer thought it ought to be called the "Dambargo"; that one read it backwards and got the phrase, "O-grab-me"; that another made an anagram of it and got from it the "mobrage" which it was so well fitted to produce.

The Tory reviewers of *Blackwood* complained, we remember, of the too free use which Macaulay made of song and ditty in compiling the praises of King William. But it seems to us entirely proper that the historian of a people should make requisition for his historic contingents on newspaper scraps, on popular facetiæ, on electioneering cries, on *quicquid agunt homines*, so far as they can furnish a genuine contribution to the age and body of the time. But where statements of alleged fact are made which, instead of moving in "local color," are seen to involve grave reflections on public or private character, it is obvious that the chronicles of the newspaper must be carefully sifted and conscientiously verified before they are allowed to enter into the staple of the narrative. Prof. McMaster, we are sure, has sedulously sought to observe this canon of historical criticism. But it seems to us that he sometimes follows "the Froudes and Macaulays of the press" a little too incautiously. For instance, in writing down Judge Harry Innes (his name should be so spelled and not "Innis") as a Kentuckian who, in 1806, "had long been a pensioner of Spain; who had been as deep as Wilkinson in the Spanish plot, and had been charged with conspiracy by the *Western World*," Prof. McMaster not only indulges in an anti-climax, but gives the imprimatur of history to two counts of an indictment which were never proved, if they were ever distinctly formulated in the newspaper controversies of the day. We suppose ourselves to be pretty familiar with the charges brought against Judge Innes by John Wood, the editor of the *Western World*, and by Humphrey Marshall, the historian of Kentucky; and we can easily believe, with Judge Bibb, an eye and ear-witness in the discussions of that period, that Judge Innes yielded too far to the temper of his times, and to the warmth of his friendship for Judge Sebastian, a convicted "pensioner of Spain." But in view of the fact that Innes declined "unequivocally" to engage in the Spanish plot in 1797, and then declared, when approached with an offer from the Spanish agent, that he would not be concerned, "either directly or indirectly, in any attempt that may be made to separate the western country from the United States," we think the reader is entitled to ask what authority there is for now placing a stigma upon him as one who in 1806 "had long been a pensioner of Spain." Judge Innes, it is known, in view of the charge that he had at one time been engaged in the Spanish plot, asked the Kentucky Legislature to call officially for an investigation of his conduct by the constituted authorities of the United States; and when the matter was thus officially brought to the notice of the popular branch of Congress, the committee to whom it was referred made report that the accusation was not sustained by sufficient proofs to call for further procedure.

We have been specially pleased with the sixteenth chapter of this volume, in which Prof. McMaster describes the uses that have been made of the public lands in the United States; with the seventeenth chapter, in which he celebrates the spread of democratic ideas under our system of government; and with the twenty-second chapter, in which he portrays with much detail the economic state of the people from the close of the Revolution to the end of Jefferson's first term. We are at a loss, however, to perceive what relevancy the last twelve pages of this twenty-second chapter can be said to have to the rubric under which they are placed, when, describing, as they do, the Indian wars of the period at the West and at the South, they might have more appropriately served as a preface to the next chapter, in which the Government is described as "making ready for war" with England.

The proof-reading of the volume, in spite of

the list of "errata" with which it is accompanied, leaves much to be desiderated on the score of accuracy. Where reference is made to the Disunion essays of "Pelham, Gustavus, and Raleigh" in the *Connecticut Courant* of 1797 and later, we presume that "Raleigh" is miswritten for "Burleigh," a famous Disunion pseudonym in that journal. The name of Thomas Pinckney, our Minister at London under Washington, is misspelled "Thomas Pinkney," and the name of William Pinkney, our Minister at London under Jefferson, is sometimes spelled correctly and sometimes misspelled "William Pinckney." The name of James Sloan on page 230 is elongated into "Sloane" on page 235. On page 552 we are told that the Federalists of Dedham, Massachusetts, at a Fourth of July celebration, toasted Jefferson as "Jeroboam, the son of Nebat, who made Israel to sin," and Madison as "Nadab, the son of Jeroboam, who walked in the way of his father." A few lines lower down we find Madison, as "Nadab," changed by the historian into Madison, the "Nahob" of the Dedham Federalists!

WAGNERIANA.

Wagner as I Knew Him. By Ferdinand Praeger. Longmans, Green & Co. Pp. 334.

Richard Wagner; A Sketch of His Life and Works. By Franz Muncker. Translated from the German by D. Landman. Revised by the Author. Illustrations by Heinrich Nisle. Bamberg: Buchner. 1891. Pp. iv, 106.

FERDINAND PRAEGER, who was a personal friend of Wagner's for over a quarter of a century, died eight months ago, before he had been able to put the finishing touches to his reminiscences. He was himself a prolific, if a minor, composer (The "Praeger Album" contains forty-eight of his pianoforte pieces, and among his MSS. are as many as thirty-six sonatas), but, like many of his class, he will be remembered chiefly by his contributions to criticism and biography. Although he was born in the same city as Wagner, and only two years later, the two never met personally until Wagner went to London, in 1855, to conduct the Philharmonic concerts. Praeger had been in that city for twenty years, busy as a teacher and with his pen, one of the papers which he supplied with London letters being Schumann's *Neue Zeitschrift für Musik.* He had long enjoyed a special source of information about Wagner, namely, the revolutionary Roeckel, Wagner's most intimate friend in Dresden, who was locked up for thirteen years —a fate which Wagner would have shared had he not escaped by what he himself describes as a mere accident. Long before he knew Wagner, Praeger corresponded with Roeckel, whose letters, printed in this volume, throw some new light on an important episode in Wagner's life.

Praeger's book begins at the beginning of this life. Less than half of it (from page 218) is devoted to a narrative of Praeger's personal experiences with Wagner, and the title of it might, therefore, be called a misnomer, were it not for the fact that the well-known biographic facts which take up the first seventeen chapters are interlarded with various anecdotes related to Praeger by Wagner himself, and not embodied in the biographies of Glasenapp, Jullien, Dannreuther, and others. New is the anecdote (p. 17) about Wagner's reckless escapade in climbing through a ventilator on to the school-house roof to get a cap which a classmate, in his joy at an unexpected holiday, had thrown up. Later in life, "the roof of the Kreuzschule was not infrequently referred to by me; and when Wagner proposed some venturesome undertaking, I would say, 'You are on the roof again.' 'Ah, but I shall get safely down again, too,' was the answer, accompanied by his pleasant, boyish laughter." A charming glimpse of Wagner's domestic character is given on the following page, where Praeger justly attaches a biographic significance to the scene in which *Siegfried* asks *Mime*, "Who was my mother?" "Every allusion to his mother in this scene is expressed in the orchestra with an ethereal refinement and originality of conception to which one finds no parallel in the whole range of music of the past. I verily believe that Richard Wagner never loved any one so deeply as his 'liebes Mütterchen.' All his references to her of his childhood period were of affection amounting almost to idolatry."

Wagner worshipped other women besides his mother, but his recorded love affairs are not as numerous as those of some other composers, chiefly, perhaps, because he married at the early age of twenty-three. Yet the actress Minna Planer, whom he married, was not his first love. That distinction belongs to a Jewess of rare Oriental beauty, named Leah David. The unprepossessing appearance of the Polish Jews who came to trade in Leipzig had inspired Wagner early in life with an aversion towards that race, but the beautiful Leah for the time changed all that. Wagner frequently called at her house, where his passion was hardly suspected, he being looked upon as a mere boy. One day, at a soirée musicale, a young Dutchman, a cousin of Leah, played on the piano. He had technical skill and little else, but was nevertheless overwhelmed with flattery. This aroused the jealousy of Wagner, who launched out about "absence of soul," etc., and, on being laughed at, wound up with some rude remarks and left the house. The next day he received a letter from the young Jewess, announcing her engagement to his rival. It would be absurd, however, to suppose that this disappointment had anything to do with Wagner's subsequent notorious writings on "Judaism in Music." Praeger devotes a whole chapter, a very sensible one, to this question, and, while showing wherein Wagner went too far, he nevertheless points out and proves that never was charge more groundless than that which attributed Wagner's attacks on Jewish composers, especially Meyerbeer, to jealousy born of anger at the success of his rivals. After quoting one of his paragraphs on Meyerbeer, Praeger says:

"This criticism upon Meyerbeer is caustic and unsparing. Yet even now public opinion has testified to its veracity. It is not making too bold a statement to say that no musician of tas e, no musician—it matters not of what nationality or school—of to-day will accord Meyerbeer that exalted position he occupied when Wagner had the temerity to show the sham and unreal art in the man."

To which may be added that nothing, surely, could be more ridiculous and dishonest than the postulates of certain critics that Wagner should not have criticised Meyerbeer's music unfavorably, because that composer had aided him a little in getting his "Rienzi" accepted at Dresden. Gratitude is a virtue, but justice is above it.

The most valuable chapters in Praeger's book relate to the revolution in Dresden and to Wagner's four months in London in 1855. Praeger's account of the Dresden insurrection is much fuller and more graphic than those given in Glasenapp and Jullien, and the following incident, which was told to Praeger by Hainberger, and subsequently corroborated by Wagner, is new:

"It was in the morning, about eight o'clock; the barricade at which Wagner and Hainberger were stationed was about to receive such morning meal as had been prepared, the outposts being kept by a few men and women. Among the latter was a young girl of eighteen, the daughter of a baker belonging to this particular barricade. She stood in sight of all, when, to their amazement, a shot was suddenly heard, a piercing shriek, followed by the fall of the girlish patriot. The miscreant Prussian soldier, one of a detachment in the neighborhood, was caught red-handed and hurried to the barricade. Wagner seized a musket, and, mounting a cart, called out aloud to all: 'Men, will you see your wives and daughters fall in the cause of our beloved country and not avenge their cowardly murder? All who have hearts, all who have the blood and spirit of their forefathers, follow me, and death to the tyrant!'"

The two chapters on Wagner's life in London are of especial interest as showing the true character of the man; for, while in London, Wagner spent much of his time with Praeger, who became a sort of Boswell and host for the time, and minutely noted all his peculiarities: his love of animals, his sincere hatred of sham and commonplace in art, his contempt for fashion in dress and conduct, combined at the same time with a curious love of silks and finery. In a letter to Praeger, Wagner once wrote: "I am luxurious, prodigal, and extravagant; much more than Sardanapalus and all the old emperors put together." Praeger breaks a lance for Wagner's first wife, who, he thinks, has been somewhat misrepresented by biographers. He gives also the programmes with full details of the seven Philharmonic concerts that Wagner conducted in London, including some very amusing criticisms from the leading newspapers. The *Musical World*, for instance, found that "Wagner is not a musician at all," while the *Sunday Times* calls him "a desperate charlatan," adding: "In composition it would be a scandal to compare him with the men of reputation this country possesses." To fully understand the fun of this, one must know that at that time Wagner had already almost completed half of his Trilogy. But to him it was no fun, and he had to console himself with the sympathy and admiration of the Queen, a few personal friends, and a part of the public.

It is no depreciation of Praeger's efforts to say that the most valuable pages in his book are those which contain the numerous letters to him by Wagner here printed for the first time. One of the shortest (p. 315) is also one of the most interesting, for it implies that King Ludwig helped to suggest in Wagner's mind the idea of his last tragedy, "Parsifal": "The King loves me with a love beyond description. . . . He is so strikingly handsome that he might pose as the King of the Jews (and—this in confidence—I am seriously reflecting on the Christian tragedy; possibly something may come of it)."

About a year ago we called attention to the German original of Muncker's little work, and commended the admirable manner in which it combines biography and criticism in a concise sketch of the composer's career as a man and an artist. Prof. Muncker has a far more terse and lucid style than the great majority of German authors, and the translation of his writings into a foreign tongue ought to present no difficulties. The English version now before us has evidently not been done by a person "to the manner born." Not only is the wrong word often used, as "portent" for *import* in

the sentence beginning, "Of what portent is this fact" (p. 37), but the construction is uniformly clumsy, and many-jointed Germanisms stretch their unwieldy length and sprawl over every page. A collector of linguistic curiosities would find here some queer specimens of solecisms illustrative of English, if not "as she is spoke," at least as it ought not to be written. On the very first page of the preface, Glasenapp's Life of Wagner is spoken of as "an *exhausting* book." Such sentences as "a mythically coquettish and catholicly frivolous tendency," "the idea of the original, from all tendencies unmarred folk-legend," "the general, in some of its parts already detailed plan," and "the, by Wagner's opponents unmeritedly exaggerated essay on the jews," are of constant occurrence. This excessive literalness not only obscures the sense and makes the book dreadfully hard reading, but sometimes actually reverses the author's meaning, as, for example, when on p. 20 *nichts weniger als* is rendered "nothing less than" instead of "anything but." The use of small initials instead of capital letters in proper names and adjectives, such as "jews," "german," "french," "european," "viennese," produces an odd and decidedly unpleasant effect. Qualifying phrases are, as a rule, far too remote from the verbs which they are intended to modify: "he set a text-book, which he himself had written, to music"; "he understood to reproduce the atmosphere of sultry sensuality, which lies over the Venusberg, in a masterly manner"; "eyes turned longlingly to France, where the revolutionary war, for some time already, was raging against all, that until now in state and society, in religion, art and science had appeared as law." Surely, it were easy to avoid awkward and often ambiguous constructions of this sort, which even the veriest tyro in literature ought not to commit.

On the whole, Landman's translation is faithful and generally intelligible, and will serve a useful purpose as a source of trustworthy and interesting information to the hosts of American and English tourists who now make periodical pilgrimages to the *caaba* of Wagnerism in the capital city of the former Franconian margravate. The zincographic illustrations, more than thirty in number, comprise portraits of Wagner at different periods of his life, views of the principal houses in which he lived, facsimiles of his handwriting, and of the original score of the "Walküre," a plan of the Bayreuth Theatre, and numerous sketches of the stage scenery of the "Nibelungen" and "Parsifal." These illustrations are the same as those in the German original, but superior to them in artistic execution. There is no table of contents, and the index is not as full as it ought to be, but even this is an improvement on the German volume, which lacks both.

NEW NOVELS.

Grania: the Story of an Island By the Hon. Emily Lawless. 2 vols. London: Smith, Elder & Co.; New York: Macmillan. 1892.

Jonquille, or The Swiss Smuggler. Translated from the French of T. Combe, by Beatrix L. Tollemache. London: Percival & Co.

Eline Vere. Translated from the Dutch of Louis Couperus, by J. T. Grein. With an introduction by Edmund Gosse. D. Appleton & Co.

San Salvador. By Mary Agnes Tincker. Boston: Houghton, Mifflin & Co.

A Capillary Crime, and Other Stories. By F. D. Millet. Harper & Bros.

Miss Lawless has again established her claim to take foremost place among living delineators of Irish life and character. It is refreshing to be able to read through an Irish story without once so much as finding mentioned constabulary, Nationalist, Orangemen, or Land Leaguers. It is a relief in a book relating to the Islands of Aran (to which a map is prefixed), to find that no attempt is made to impose upon us archæological or topographical disquisitions regarding that richest mine of archæology in the United Kingdom. Archæology, scenery, maps, and descriptions, are alone meant to serve the story. In view of Miss Lawless's family predilections (the sister of one of the noblemen who have been in bitterest conflict with the Land movement), the extraordinary fairness of her 'Story of Ireland' has already been commented upon in our columns. 'Hurrish' and 'With Essex in Ireland' still further displayed the same qualities of mind. It appears to us that the present is her ablest work, and, acquainted as we are more or less with the islands, we have read her volumes with unmixed admiration. It would be easy to point out minor mistakes and shortcomings; we might desire that some of the descriptive passages had been somewhat curtailed; but, taken as a whole, the work is admirable, and the author's conceptions of character are true and lifelike. Amid the mists, the storms and sunshine that envelope those far islands, those masses of gray rock, with their superb scenery on island and mainland; amid vestiges of the successive waves of civilization from remotest times, Irish peasants of our day are made to live and move with a truth and fidelity seldom surpassed. The story is of the simplest. The characters are few. There is no plot. We have, it is true, one catastrophe, doubtless suggested by an overwhelming bereavement which notoriously came to the author while the story was in progress. No one could read of the sweet, fierce Grania, of the saintly self-abnegation of Honor, of the bombastic selfishness of Murdoch, the noble gentlemanliness of the elder Durane, without deeper sympathy being evoked for the Irish peasantry and a better understanding of their modes of thought and their lives being impressed upon the mind; and this all without apparent intention or attempt to draw a moral. Therein lies the especial merit of the work. Sad the story is, as are all true stories relating to Ireland. What there is of abiding joy and satisfaction in the lives of persons of the class depicted, we cannot know until one of them arises to explain to us upon what such joy and satisfaction are based. Perhaps we have the key in Honor's life; in the delineation of her character we may the better understand what Catholicism has been and is to the masses of the Irish people:

> "She was at last upon the verge of that looked-for, that intensely desired country; a country which, if to most of us it seems but a dream within a dream, a floating mirage, a phantom made up of love and faith, of hope and of yearning desire—unthinkable, untenable, all but impossible—was to Honor, and is to such as Honor, no phantom, no mirage, but the soberest and solidest of solid realities; the thing for which they live, the hope for which they die. . . . Already, even while the priest stood beside her, while the prayers she had so longed for, those prayers which Grania had died to obtain for her, were being uttered, she was drifting across its borderland; already its sounds rather than his voice, rather than any earthly voices, were in her ears; already her foot was upon its threshold. And upon that threshold, perhaps — who knows? who can tell?—they met."

We trust Miss Lawless will continue true to her genius, in exercising which she is, perhaps all unconsciously, doing more than most persons whose names are before the world in attracting intelligent sympathy towards Ireland, and in there reconciling class to class.

The struggle of a vigorous nature against the fettering limitations of its environment is a fascinating study. In the development of the tragedy so often involved in such a struggle, much depends upon the writer's temperament, which necessarily modifies his insight, and sometimes leads him to bring about complications that cause a feeling of revulsion on the part of the reader. No such effect, however, is produced by the reading of 'Jonquille.' While true to the legitimate requirements of the characters he has created, the author is free from morbidness, and the story is developed naturally and reaches its conclusion inevitably. The style is simple and dignified, and brightened by touches which show an intimate acquaintance with Nature and a sympathetic comprehension of the effect of her varying moods upon human souls.

The borderland between France and Switzerland is the scene of the story. In one of the Swiss villages of the Jura lived Manuel, the son of a watchmaker, whose restless mind, and physique altogether out of proportion to the uses of his inherited trade, make his apprenticeship a rebellious one and his father's stubborn determination a rock of difference between them. The pressure of circumstances forces Manuel to work steadily at his hated trade until his faculties become so benumbed that he believes himself to have grown reconciled to his life. But the budding of the lilacs and the flight of the swallows in early spring waken him from his lethargy soon after his father's death, and the old longings for freedom press upon him. He determines to subdue his energies to the earning of sufficient money with which to emigrate to America; but, on the occasion of a holiday, he meets a comrade who is carrying on a smuggling business, by proxy, and who invites him to join the active members of the band. Manuel's instinct for adventure urges him, and, the ethical question of smuggling being disposed of by ingenious arguments, he joins the party at their rendezvous, an inn in a lonely valley near the French border. The innkeeper has a daughter, Jonquille, a beautiful, high-spirited girl, who from her inspiring influence over the smugglers is called their captain. The two impetuous natures, Jonquille and Manuel, are first repelled by, then attracted to, each other. Their marriage soon follows, and Manuel's love and stirring, adventurous life fill the measure of his happiness. As winter advances, however, the sunless mountain gorge and his enforced inactivity leave room for the old spirit of restlessness. A fierce struggle now goes on between the conflicting forces of his nature, in which Jonquille's invalid brother plays a pathetic part. The end comes quickly and tragically, yet leaves no sense of violation.

New pastures are open to English readers in a series of Dutch novels, the first volume of which, Grein's 'Eline Vere,' has recently appeared. Heretofore the intellectual life of Holland has been more generally known through other forms of art, the rather heavy style of Dutch fiction having prevented its gaining a hold on popular regard outside of its own country. But a younger generation of writers has sprung up full of vigor, and impatient with the traditions of the older writers. Their work will be watched with interest,

as it will reflect, necessarily, the good and evil of the modern spirit. The present volume is steeped in modern realism. The influence of heredity and environment in shaping character and affecting destiny is vividly shown. Indeed, so skilfully is this done, and so penetrating is the atmosphere of doom, that a feeling of leaden despair settles down upon the reader, and he wonders if the healthy vigor and steadfast purpose supposed to characterize the Dutch were not, after all, a myth. But the life depicted in 'Eline Vere' is the fashionable life of The Hague, as aimless and enervating and colorless there as elsewhere, yet flaming up fitfully at times with a lurid light. The two brief chapters depicting rural scenes glow with the soft beauty of Dutch landscapes, and awaken the hope that the succeeding volumes will give us pictures of brighter phases of Hollandish life, with a more distinctive national coloring. Mr. Edmund Gosse furnishes an introduction to the volume, but presumably has not had editorial oversight, as very crude errors of translation are left uncorrected.

'San Salvador' describes not only a castle in Spain, but a whole community as well; and an ideal community, as befits that land of dreams. It is, doubtless, the old Adam in human nature, but it is nevertheless a fact that fiction having for its motive the picturing of ideal communities is apt to pall upon the taste. To palates accustomed to the highly seasoned food furnished by tales of modern society, in which doughty deeds are performed in fields of finance and politics, the simple annals of a social state where plain living and high thinking prevail naturally seem insipid. But 'San Salvador' is so daintily wrought out that it ought to please even those who read merely to experience a pleasurable sensation. The conception is a bold one, the original members of this ideal state having been social outcasts; but the happy results that have followed the application of certain new methods in the treatment of criminals brings this idea within the bounds of possibility. Throughout the whole, the poetry and prose of life are so interwoven as to form a fabric of most harmonious coloring, and so beautiful a love-story is threaded through that the love-making of the ordinary novel seems crude and commonplace by comparison. Once or twice the author comes dangerously near the dividing line between true and false sentiment, but, on the whole, she has managed a difficult subject well.

To those who are fond of gruesome tales the collection to which 'A Capillary Crime' gives its name will prove a rich feast. They are graphically written, and have such an air of probability about them that it makes one's flesh creep to read them. In 'A Capillary Crime' (perhaps the best of the collection) the law of capillary attraction is, by an ingeniously constructed plot, made an engine of destruction, and afterwards serves as a mute witness in a case of circumstantial evidence. Strangely enough, a case has recently been reported in which the action of a natural law under unusual, but somewhat similar, conditions brought about results as curious as those which Mr. Millet's imagination has depicted. In reading these stories one is impressed by the darker aspect of student life abroad, which even the brightness of the sunny days of Bohemia does not wholl light up.

GREEK LYRICS.

The Nemean Odes of Pindar. Edited, with Introduction and Notes, by J. B. Bury, M.A., Fellow of Trinity College, Dublin. Macmillan & Co.

Greek Lyric Poetry. A Complete Collection of the Surviving Passages from the Greek Song-writers. By George S. Farnell, M.A. Longmans, Green & Co.

THE novel feature of Mr. Bury's work is the extent to which he pushes a theory in regard to Pindar's use of certain echoes and "responsions" of words in successive strophes. That Pindar occasionally lays stress upon names and emphatic words has been noticed by many editors and is sufficiently clear to any careful reader. The exigencies of the dance movement and of music required a skilful accentuation of significant words or phrases—required that "high lights should be thrown on them," as M. Croiset puts it; and the result was very useful and practical in bringing out with distinctness for the ears of listeners the prominent thoughts of a poem in which not every word, perhaps, was caught during a first performance. The words were surely not slighted, in our operatic manner, during the performance of a triumphal ode—far from it; yet this would not exclude a judicious and cunning distribution of emphasis. So much is granted and insisted upon by Pindaric scholars generally. Mezger has gone a little further than this. He has pointed out that it is a practice of the poet to repeat some word, or a variation of it, in the same verse and foot of different strophes. This he takes to be partly a mnemonic device for the guidance of the chorus, partly a sign and guide to the course of the poet's thought. Mr. Bury, following Mezger, outdoes him. He finds "verbal echoes everywhere, independently of the metre." He believes that these echoes indicate the train of Pindar's thought, that they are one of the keys to his method of composition and to his interpretation. In one ode the word *brass* or *brazen* is repeated in each metrical system. "Brass lends itself," says Mr. Bury, "without constraint to the central idea of this hymn, as an emblem; for, associated with contention, and as a baser metal than gold, it could suggest the state of a mortal not yet deified, or of an athlete not yet an Olympic victor, such a victory being symbolized by gold elsewhere." In another ode, "the parts of the argument are connected by *golden* links"; in another, "silver has a special significance." Other poets, Mr. Bury thinks, use this device as well as Pindar. Sophocles, in the first ode of the "Oedipus Rex," rings the changes on *gold*, *golden*, and *brilliant;* and Mr. Bury illustrates his hypothesis by applying it, in detail, to the second stasimon of the "Agamemnon," supporting an emendation of Mr. Housman by the correspondences he discovers.

Curiously enough, the more Mr. Bury explains this powerful ode, the less one understands it. The unsuspected complexities of thought and language he discovers are neither felicitous nor enlightening, nor do they add to our conception of the genius of Aeschylus. We do not deny that such threads might be interwoven in the pattern of the Greek ode; but Mr. Bury is bound to show that if they really exist, they exist for some reasonable purpose. The quality of reasonableness, ἐπιείκεια, enters so largely into the workings of the Greek mind that it is hard to believe that Pindar permitted himself puerilities or mystical undermeanings and conceits. One can believe it of Dante, on his own confession and because it belonged to the spirit of his time. We believe that Mr. Bury's process, applied resolutely and ingeniously to almost any poem, might be made to yield similar results. In glancing over Gray's ode "On a Distant Prospect of Eton," we observe half-a-dozen echoes and "responsions" between the stanzas neither worse nor better than those of Mr. Bury's finding. In short, as Prof. Gildersleeve remarks, "the discovery of the recurrent word is not the end of all controversy—there are too many recurrent words." Some years ago Mr. Piazzi Smyth wrote a work on the great Pyramid, in which he proved that the proportions of the Pyramid in different places were intended to enshrine the value of π, the exact diameter of the earth, its distance from the sun, and various other scientific data. No one hears now of Mr. Smyth's speculations, which doubtless might have been evolved with the same laborious fancy out of the proportions of the Eiffel Tower. Now Mr. Bury's speculations remind us of Mr. Smyth's. But if his hypothesis is mainly such stuff as dreams are made of, what becomes of some of the emendations he has fortified by aid of it? In this matter his temper is daring, and one cannot always agree with his estimate of "certainty."

The notes of this edition are abundant, and often unnecessarily so; the translations, though worded with nicety and taste, are often superabundant. The introductions to the odes applying in detail Mr. Bury's favorite theory are painfully elaborate, and show what M. Croiset calls "la manie de tout expliquer." The vestibule overshadows the edifice. Somehow, for enjoying poetry, there is no way like reading it; for enjoying your rose, there is nothing like smelling and looking at it again and again.

It happens that we have touched first on Mr. Bury's faults. It would be a great injustice to speak of nothing but faults. His work shows many admirable qualities: enthusiasm, taste, literary skill, painstaking study of his author—we wish we could add, judgment. We should be sorry if the promised editions of the Pythian and the Olympian Odes, which will doubtless exemplify the good qualities we have enumerated, should pursue the same bizarre fancies which make the present edition somewhat untrustworthy.

Mr. Farnell's book fills a lacuna in English aids to the study of the classics. It presents all that can be called readable of the fragments of "melic" poetry, relegating to the appendix for purposes of reference those single words and half lines which are gathered in Bergk's complete collection, and omitting the Epinician odes of Pindar, which are accessible in their entirety in many special editions. The Elegiac and Gnomic poets are not included in the collection, because their poems are not "melic," that is, originally adapted for music. The apparatus, drawn with care and judgment from many sources and sufficiently full for the purposes of the student who is not a specialist, comprises dissertations on the dialects, the metres, and the development of Greek lyric poetry, biographies of the more important poets, and a body of notes which furnish all the explanations necessary for understanding of the text. The plain, businesslike style, notwithstanding its occasional dryness and awkwardness, is satisfactory enough to the reader who has a healthy appetite for facts and prefers to be left sometimes to make his own reflections. The most obvious of these, as he runs his eye over the pages, is the thought of the ruin which has befallen this branch of literature among the Greeks—a ruin, indeed, approaching desolation. Of all the specimens here offered, not a single poem of

the best age, except Sappho's famous ode, is complete. As Mr. Farnell puts it, the case is much the same as if in English we had lost all our songs from the days of Ben Jonson and Herrick and Suckling down to Shelley and Keats and Tennyson. From these fragments we can only guess dimly the merits of their authors—we should not be safe in basing any final judgment of Archilochus, or Sappho, or Alcæus, or Simonides, upon the passages that survive, brilliant and striking as some of them undoubtedly are. We must reinforce our judgment by the testimony of antiquity, and by the hints we derive from echoes of their style and manner in Horace and Catullus. A fragment of a poem does not bear witness of the workman so satisfactorily and surely as a fragment of a statue. Hence the necessity and usefulness of Mr. Farnell's critical and introductory essays.

Another curious fact in this connection is, that, long before the dawn of Athenian greatness in literature, Sparta was the nurse and patron of lyric poetry—the foster-nurse and the importer of a genius which she seems never to have originated to any great extent. The Lesbian school, on the other hand, was by far the most powerful and original fountain of this style of composition; and here again Mr. Farnell makes an instructive comparison between the period of Alcæus and the age of Elizabeth. The general ferment and activity, the commercial intercourse, the sight of strange lands, the love of adventure which sent the brother of Sappho to Egypt and the brother of Alcæus to the army of Nebuchadnezzar—all these causes may have inspired and stirred the Lesbian mind as they did the contemporaries of Shakspere. Certainly that school has for us a strong and natural interest, because, more than Pindar or Simonides, it was akin to the modern spirit—it struck that personal and "subjective" note which is the very essence of the modern conception of lyric poetry. In this respect, Alcæus and Sappho and Archilochus need no introduction and no commentary.

Mr. Farnell touches lightly on the ever interesting riddle of Sappho's personal history and character, about which he very sensibly draws no conclusion, not feeling called upon to decide whether she would now have been an acceptable guest at the Queen's drawing-room. In substance, this was the question which agitated the breasts of Welcker and Col. Mure in the hot discussion to which Mr. Farnell alludes, and of which just one word may be said, viz., that both scholars were in the wrong. The amiable chivalry of the one and the cynicism of the other were equally misplaced, for each was applying a standard and a code of morals which Sappho and her contemporaries would neither have recognized nor understood. Apropos of this controversy, Mr. Farnell would have done well to note that the reading κοὐκ ἐθέλοισα in the first ode is Bergk's own, and to write Maximus Tyrius instead of "Maxim. Tyrannus" and "Max. Tyrann" (pp. 151 and 152).

In the dissertation on "Sapphics Greek and Horatian," Mr. Farnell discusses the peculiar cæsura which Horace adopted after the fifth syllable, as in

"Jam satis terris nivis atque dirae."

Almost all his earlier Sapphics are of this type—the type which, by the way, gave rise to the bastard rhythm of Canning's "Knife-Grinder." The later odes follow oftener the rapid and passionate movement of the normal Sapphic verse; and this rhythm Mr. Swinburne, with his usual skill and delicacy of ear, has reproduced, as far as our language permits, in one of his 'Songs before Sunrise,' entitled "Sapphics."

Skating. By F. M. Heathcote and Others. [Badminton Library.] Boston: Little, Brown & Co. 1892.

If the word skate was borrowed from the Dutch *schaats*, it is tolerably certain that the art of skating is not a Dutch invention. We are told in the chronicles that iron runners were attached to a species of snow-shoes by the early inhabitants of Norway and Sweden, and that, before the iron age, bones were used for the same purpose, as is shown by some well-worn specimens in the British Museum; and it is entirely probable that the art of skating was introduced into England by the Anglo-Saxons or the Danes. Certain it is that it was a common amusement as early as the twelfth century, and that it became fashionable among the upper classes after the Restoration, when the Duke of Monmouth, who had learned to skate in Holland, disported himself on the ice in St. James's Park. The first roller-skates were made by a Belgian named Joseph Merlin, who visited England in 1760. They were probably very crude machines, and nearly caused the death of the inventor, who boldly essayed to use them at a masquerade, with disastrous results to himself and Mrs. Cornelly's furniture. At intervals during the next hundred years, improvements were attempted, but it was not till 1863 that Mr. Plimpton patented the roller-skate of to-day, which is available for both speed and figure-skating. The craze for roller-skating which existed a few years ago has largely died out, but there is much to be said in favor of this sport; and any one who learns to skate figures on rollers will find it comparatively easy to execute the same figures on the ice.

Ice-skating consists of two quite distinct parts, namely, figure-skating and speed-skating. The latter, in these days of keen competition, requires youth, great natural powers of endurance, and systematic training; but one great merit of figure-skating is that it is quite within the reach of those who have arrived at that uncertain period of life which we call middle age, and, moreover, while it is of course an advantage to have acquired some facility in boyhood, much may be done by those who make their first start in later years. As in certain other sports, individual physical peculiarities do not preclude a high degree of success, and in fact it may be said that no two skaters execute a figure in precisely the same style. But the enthusiast who takes up figure-skating after reaching years of discretion should bear in mind that certain figures are peculiarly liable to lead to falls. It is recorded of one gentleman that, after several unsuccessful attempts to master the inside back three, involving a turn from the inner edge back to the outer edge forward, he declared he would give up skating because it was too *sedentary* an occupation. On the other hand, to any one who has strong ankles and the natural instinct of balancing himself, almost anything in figure-skating is not only possible but easy, and the effect of these performances on the unsophisticated beholder is sometimes remarkable. An Irish peasant woman, watching a lady who had learned in Canada how to skate that most bewitching of all figures, the "grapevine," was heard to remark: "Sure, now, and I think the Devil is in her feet, God bless her!" The account of figure-skating given by Mr. Witham is admirably illustrated by diagrams, and leaves nothing to be desired. The reader may, perhaps, take exception to the statement that "Great Britain is far in advance of any other nation in combined figure-skating," and if he has had any experience of combined figure-skating in this country or Canada, he will make due allowance for what Mr. Herbert Spencer calls the "patriotic bias," the existence of which in other volumes of this series has been already pointed out.

Coming to the second branch of the sport, speed-skating, it is interesting to note that as long ago as in 1821 a mile was skated for a wager in 2 minutes and 53 seconds, which is the present world's record; but in the case in question the skater was allowed a flying start, which would make a difference of at least ten seconds. The very remarkable performances of Mr. J. F. Donoghue of Newburgh (not Newbury, as here stated) are of necessity referred to by Mr. Tebbutt, but his marked superiority to all English and European amateurs is somewhat grudgingly admitted. The facts, however, speak for themselves. Not only does he hold the English record at 1½ miles (4 minutes, 46 seconds), having beaten James Smart's professional record of 4 minutes 52 1-5 seconds, but he also holds the world's records at 2, 3, and 5 miles.

In order to complete the cycle of ice sports, this volume contains an interesting account of curling, ice-boating, tobogganing, and bandy. On the whole, the work has been admirably done, and the illustrations are quite above the average of English performance.

Little Brothers of the Air. By Olive Thorne Miller. Boston: Houghton, Mifflin & Co. 1892.

Wood Notes Wild: Notations of Bird Music. By Simeon Pease Cheney. Collected and arranged with appendix, notes, bibliography, and general index by John Vance Cheney. Boston: Lee & Shepard. 1892.

Mrs. Miller's work might be appropriately termed the history of the nursery life of the birds. She has observed with great care the home life and family manners of many of the birds one meets with commonly in the summer in the New England States, and she tells what she has seen in a very entertaining way. The great charm of the book, however, lies not in the facts observed, but in the interpretation put upon those facts. The actions of the birds are measured by human standards, and the various emotions of astonishment, perplexity, or joy which men and women would feel if confronted by the difficulties, duties, and pleasures that cross the paths of the different "little brothers," are so skilfully attributed to the birds as to make their brotherhood with human beings seem very real, and to make you wonder why you never interpreted the actions of the "little kings" and "the comical crow baby" in the same way.

'Wood Notes Wild' was intended for the young people of New England, as the editor tells us in the preface, and it is an attempt, not wholly successful, to set forth in print the rhythm and melody of the music of the birds. The simpler and more regular songs are well represented, and bring up the familiar calls very distinctly. This can hardly be said, however, of the complicated and rollicking melody of many of the birds whose songs are recorded in the volume. Indeed, it is difficult to see how the bubbling music of the bobolink, the purple finch, and others that might be mentioned, could be accurately set down by any

system of notation that we possess. Mr. Cheney's style is quaint and pleasing. He wrote with the combined enthusiasm of a musician and a lover of nature. But one cannot help regretting that he did not give us more about the manners and customs of the birds as they sing, instead of confining himself so closely to the songs themselves.

No pains have been spared, apparently, to make the book a complete record of what has been done in the investigation of the music of the birds, and herein consists its greatest value. There is a voluminous appendix, which is to a considerable extent a commentary upon what others have said of the songs of birds, together with the author's own ideas of the scope of his chosen field, all of which is expressed in a vigorous and animated way. Finally there is a helpful bibliography for any one disposed to pursue further the fascinating but difficult study of bird music.

Electric-Light Cables and the Distribution of Electricity. By Stuart A. Russell. London: Whittaker.

Mr. Russell's small volume is intended for the use of practical electricians, but contains a great deal of matter of quite general interest now that the applications of electricity are becoming subjects of ordinary conversation. It treats only of the distribution of electricity, a subject now constituting almost a special branch of science, the importance of which may be imagined when we reflect that at this very time not only is it proposed to transmit power from Niagara Falls to Chicago for the Exhibition of 1893, but the details of the methods by which this can be done are being worked out, and the problem will certainly be solved. The subject of distribution is here regarded both from the purely scientific point of view and in the light of actual experience. The development of the subject is first treated historically. Then we have a chapter on the material of conductors, and this is followed by others in which gradually all the very numerous details of the several methods of distribution are discussed. Probably the chapters relating to underground lines will excite the most general interest, in consequence of the disfigurement of the streets of cities and towns by the long rows of hideous telegraph, telephone, and electric-light poles. Constant reference is made to the work of American electricians. The book is very interesting and valuable, and forms not the least of the important series of electrical manuals now in process of publication.

BOOKS OF THE WEEK.

Alger, W. R. The Sources of Consolation in Human Life. Boston: Roberts Bros. $1.50.
Austen, Jane. Pride and Prejudice. 2 vols. Boston: Roberts Bros. $2.50.
Barrie, J. M. Auld Licht Idylls. M. J. Ivers & Co. 25 cents.
Beard, Dan. Moonlight and Six Feet of Romance. Charles L. Webster & Co.
Calmire. Macmillan. $1.50.
Campbell, W. W. A Handbook of Practical Astronomy. Ann Arbor, Mich.: *Register* Publishing Co. $1.50.
Churchill, Lord R. S. Men, Mines and Animals in South Africa. Appletons.
Dana, Prof. E. S. Descriptive Mineralogy. John Wiley & Sons. $12.50.
Duplessis, Georges. Les Audran. [Les Artistes Célèbres.] Paris: Librairie de l'Art; New York: Macmillan.
Hinsdale, Prof. B. A. The American Government, National and State. Ann Arbor, Mich.: *Register* Publishing Co. $1.50.
Hussey, Prof. W. J. Logarithmic and Other Mathematical Tables. 2d ed. Ann Arbor, Mich.: *Register* Publishing Co. $1.
Jannet, Prof. Claudio. Le Capital, la Spéculation et la Finance au XIXe Siècle. Paris: Librairie Plon.
Landon, M. D. Thirty Years of Wit, etc. Cassell. 50 cents.
Maxwell, J. C. A Treatise on Electricity and Magnetism. 3d ed. 2 vols. Oxford: Clarendon Press; New York: Macmillan. $8.
McClure, A. K. Abraham Lincoln and Men of War Times. Philadelphia: *Times* Publishing Co. $2.
Miller, Rev. O. D. Har-Moad; or, The Mountain of the Assembly. North Adams, Mass.: Stephen M. Whipple.
Murray, George. Poems. New York: The Author.
Naegeli, Prof. Carl, and Schwendener, Prof. S. The Microscope in Theory and Practice. 2d ed. Macmillan. $2.60.
Netto, Prof. E. The Theory of Substitutions and its Applications to Algebra. Ann Arbor: *Register* Publishing Co. $3.
Parkman, Francis. A Half-Century of Conflict. 2 vols. Boston: Little, Brown & Co. $5.
Payne, Prof. Joseph. Lectures on the History of Education, with a Visit to German Schools. Longmans, Green & Co. $2.50.
Sharp, W. Flower o' the Vine, Romantic Ballads, and Sospiri di Roma. Charles L. Webster & Co. $1.50.
Shoemaker, Mrs. J. W. Delsartean Pantomimes. Philadelphia: Penn Publishing Co. $1.25.
Skeat, Prof. W. W. A Primer of English Etymology. Oxford: Clarendon Press; New York: Macmillan. 50 cents.
Slosson, Mrs. Annie T. The Heresy of Mehetabel Clark. Harpers.
Smith, F. C. Introduction to Commercial German. Macmillan. $1.
Smith, F. Hopkinson. A Day at Laguerre's, and Other Days. Boston: Houghton, Mifflin & Co. $1.25.
Spalding, Susan M. The Wings of Icarus. Boston: Roberts Bros. $1.25.
Stearns, Rev. L. F. Henry Boynton Smith. [American Religious Leaders.] Boston: Houghton, Mifflin & Co. $1.25.
Sybel, H. von. The Founding of the German Empire. Vols. III., IV. and V. Thomas Y. Crowell & Co.
The Last Words of Thomas Carlyle. Appletons.
Winter, W. Shadows of the Stage. Macmillan. 75 cents.

PACKARD'S GUIDE TO THE
STUDY OF INSECTS,
and a Treatise on Those Injurious and Beneficial to Crops. By A. S. Packard, Professor in Brown University. Beautifully illustrated. 8vo, $5.00.

Entomology for Beginners.
For the use of Young Folks, Fruit-Growers, Farmers, and Gardeners. By Prof. A. S. Packard. Illustrated. 12mo, $1.75.

Henry Holt & Co., Publishers,
NEW YORK.

Rare Engravings and Etchings.
FREDERICK KEPPEL & CO.,
20 EAST 16TH ST., NEW YORK.
A large collection of fine Colored Prints by Bartolozzi and his pupils has just been received from Europe; also a number of rare old Mezzotints and other Engravings. Correspondence invited; pictures sent for inspection free of charge.
N. B.—Illustrated Catalogue No. 9, descriptive of Modern Etchings, ready this month; free by mail on receipt of ten cents in stamps.

Our new **Book Catalogue** not only gives the size and price of all the standard works on Homœopathy, but an interesting description of each, together with opinions of the press and of physicians. Mailed free.
BOERICKE & TAFEL,
Homœopathic Pharmacists and Publishers,
1011 Arch Street, Philadelphia.
Established in 1835.

A Loan of 5,000 dollars is wanted, for five years or less,
